

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

A DICTIONARY, GEOGRAPHICAL, STATISTICAL, AND HISTORICAL.

HUNGARY.

HUNGARY (Hung. *Magyar Ország*), a kingdom of Central or S.E. Europe, which, taken in its widest acceptation, includes, besides Hungary Proper, Croatia, Slavonia, the military frontier provinces, and Transylvania. In a more limited sense, it denotes Hungary Proper, with Croatia and Slavonia, to the exclusion of the other parts. Hungary, thus considered, is situated between $46^{\circ} 5' 0''$ and $49^{\circ} 30' N$ lat., and between $14^{\circ} 30'$ and $23^{\circ} 30' E$ long. The chain of the Carpathians forms the boundary of Hungary on the N.W., N., and N.E. They stretch from the Danube, near Presburg, in the form of a circle, towards Moravia, Galicia, and Transylvania, until they meet the Danube a second time at the river called the Iron Gate. On the S., the Danube and the Save separate the kingdom from the Turkish provinces of Servia and Bosnia, to the junction of the latter river with the Tisza, which thence continues to mark the boundary. Hungary may be considered generally as a large plain sloping to the S., and surrounded on every side by heights of different elevations, but most considerable in the N. sections of the kingdom.

Mountains.—The first group of hills from the Danube, near Presburg, is the *Carpathians*, and is of small extent and elevation. Granite and gneiss, overlaid from a large portion of this group, group, named the *Savaria*, is also common. A third group, called the *Jablonka*, rises high from the Pass of Jablonka, three miles from the valley of the Wang. The formations in the last-named group are granitic on primitive limestone, which reaches a height of 1,000 to 1,500 ft. On the E. side of the Jablonka Pass a chain of mountains commences, which stretches E. to the banks of the Danube. The formations of this chain are, as far as Neumarkt, the same with the Jablonka, the summit being all of limestone, with granitic superimposed. At Neumarkt the great sandstone formation commences, and, for an extent of more than 600 m., constitutes the leading feature of the E. Carpathians. Between the Danube and the Paprad, a branch of the *Magura* chain, situated altogether in Galicia, stretches to the S.W. and connects with the chain now described an isolated group of lofty mountains, the naked summits of which rise, like so many gigantic sugar-loaves, from the vale of the Wang and the plain of Zips. This is the *Tatra* group, in which some of the highest summits of the Carpathians are found. The summits of the *Tatra* are of granite and gneiss, bare of vegetation, and varying annually in elevation, from the effects of thunderstorms and the melting of the snow which covers them for a great portion of the year. The large mountain group, of which the *Krausna Horn* forms the highest summit, covers a large portion of N.W. Hungary. On the E., the *Tatra* chain is bounded by the valley of the Gran, on the W. by the Wang. The principal portion of the *Tatra* group is *Ilkova* formed of trachyte, tinged occasionally with granite.

Branching from the N. Carpathians, in the beginning only as a succession of heights, traversing the level country of Zips, another trachyte mountain chain of considerable elevation runs S. between the rivers *Hersod* and *Bedrog*, and joins the *Tatra* near *Tokay*. This mountain chain, named the *Nagyalla*, is famous for the opals found within it, as well as for the wine grown upon

its S. slope. On the E. bank of the *Paprad*, a long unbroken chain of the Carpathians stretches E. as far as the sources of the Save, and thence S.E. to the sources of the *Theiss*.

On the W., Transylvania is divided from Hungary by a chain of heights, lying between the *Sannos* and the *Mares*, two rivers which flow W. to join the *Theiss*. Though the summits of this chain are where exceed 3,000 ft., it is yet extremely rugged and precipitous. In the N. part, limestone rises above the sandstone, and in the S. schists, gneiss and granite break through the upper strata.

These hills are composed of *Jura* limestone, resting on transition limestone and mica slate, with occasional interruption of *gneiss*, *porphyry*, and other volcanic matters, rich in veins of metal of various kinds. They stretch between the *Mares*, *Cerna*, and *Danube*. The frontier of the Banat, towards *Wallachia* and *Transylvania*, is formed by the last effects of the Carpathians towards the Danube, in the valley of which river the mica slate of the Banat gives place to limestone. The rocks that close in the river as it leaves Hungary and which are named the *Chasera*, are composed of limestone, traversed by broad veins of quartz. This passage, between the E. Carpathians and the N. effects of the *Alps*, which meet them on the Servian side, is more than 70 m. in length, and ends with the dangerous rapid named the *Iron Gate* (see *Danube*.)

On the S. side of the Danube, near Presburg, are the *Leithe* mountains, which form the boundary towards Austria, and are effects from the *Alps*, as they subside from Styria towards the Danube. Granite and gneiss appear in the highest summits, on which sandstone and limestone formations lie superimposed. The *Bahony* Forest hills stretch from the Danube towards the S., dividing the lower from the great plain of Lower Hungary. Near the mouth of the *Drava*, this chain, dividing that river from the Save, subsides to the plain, but rises again after on the right bank of the Danube, which turns E. as soon as it reaches these heights. The summits of the greater part of these effects from the *Alps* are limestone, overlaid by tertiary formations, except on the banks of the Danube, where *serpentine* and *schist* rise in bold masses above the secondary rocks. This chain of heights, called the *Frasha Gora*, terminates at *Stankamon*, opposite the mouth of the *Theiss*.

The *Julian Alps* and their effects cover Croatia and the Hungarian coast districts, the *Capella* and *Villich* being the last branches of this range towards the S.

Valleys.—In the N. of Hungary, the valleys are very numerous, and highly picturesque. The glens in the *Tatra* mountains are wildly romantic, offering every variety of rocky scenery, and being interspersed with numerous lakes and waterfalls. The valley of the Wang is most extensive being more than 200 m. long. The rocks of *Sulyo*, where the Wang crosses the ridge of the *Tatra*, are amongst the most picturesque in Europe. The valley of *Kohlbech*, that of the *Jablonka* Pass, and of the five lakes in the high Carpathian groups, the vale of the *Cerna*, in the hills of the Banat, near the baths of *Mohadia*, are all highly beautiful, and, in mountain chains of less extent, would be deemed grand. The valleys of the *Save* (the *Syrus*) and the *Drava* contain some of the finest land and scenery of Europe. The climate is like that of the N. of Italy, and the fertility of the soil is unparalleled.

Plains.—The plains of Hungary are very remarkable,

the greater part of the kingdom consisting of two extensive levels. The plain of Upper Hungary, by far the smaller of the two, is bounded N. by the Lesser Carpathians and the mountainous districts of the N.W. counties; W. by the Leitha mountains, and the offsets of the Styrian Alps, which, as well as the Croatian Hills, confine it also on the S.; the Bakony Forest forming its E. boundary on the E. as far as the Danube. This plain is traversed by the Danube from W. to E., and is watered besides by the Raab, Waag, and Neitra. The Lake of Neusiedler-See, at the foot of the Leitha hills, issues from great marshes lying between it and the Danube. The soil of this plain is more fertile on the N. than on the S. side of the Danube, but it every where produces good and abundant crops of corn.

Near Buda, the Danube, breaking through the mountains of the Bakony Forest and the Matra chain, enters the large plain of Hungary, which it traverses N. to S., from Waitzen to Dalya, whence its course is E. The great plain is bounded W. by the Bakony Forest hills; N. by the Hegyalla, and offsets of the Carpathians; the frontier hills of Transylvania bound it E.; and the high lands of Servia and Slavonia on the S. The extent of this plain is estimated at 1,700 sq. German miles, or 36,000 sq. English miles, and is consequently about 4,000 sq. m. larger than Ireland. In the whole plain scarcely a single point is more than 100 ft. above the level of the Danube, which, in this part of its course, is 300 ft. above the Black Sea. This plain is watered by the Danube and its tributaries, the Drave and Save, the Theiss, with its affluent the Szamos, Maros, Körös, &c. The fall is every where very trifling, and the greater part of these streams have a winding course, through a country flooded by the slightest increase of their waters. Many, such as the Körös and Theiss, form a succession of swamps, and the whole marshy land of the plain is estimated to cover a surface of 2,425 sq. m., which is wholly reclaimable. The Balaton Lake lies at the S.W. extremity, at the fall of the Bakony Forest hills. With the exception of some extensive sandy tracts near Debreczin, and in the co. of Pest, the whole of this plain contains some of the richest soil of Europe.

Rivers.—The numerous rivers which water Hungary fall, with one sole exception, into the Danube, which traverses the kingdom in a general S.E. direction. The distance along the stream, from Presburg, where it enters, to Orsova, where it leaves, Hungary, is 580 m. Its direction from Presburg to Waitzen is E.; but here it makes a sudden turn S., and runs S. to the juncture of the Drave, from which point its general course to Orsova is E. by S. Of the 30 navigable rivers which are its tributaries, several of the largest belong to this country. The largest and most important is the Theiss, 420 m. long, rising in Transylvania, and flowing N.W. to lat. 48° 30' N., and long. 22° 10' E., whence it runs S. by W., in a very irregular channel, which, for about 180 m., is parallel to that of the Danube. Its chief tributary is the Maros. (See THEISS.) The other affluents on the N. side are the Waag and Neutra, the Gran and the Eipel. Of the S. affluents, the most important is the Drave, which rises in the Pusther-thal of the Tyrol, and has an E. course of 380 m. through a plain country; it is navigable from Villach, in Carinthia. (See DRAVE.) The second in size is the Save, which rises in the Julian Alps, and runs E. by S., joining the main stream near Belgrade. Length about 340 m. The Raab is of considerable size; but the rest are unimportant. (For further particulars, see DANUBE.)

The only river which rises in Hungary and does not belong to the region of the Danube, is the Poprad, the source of which is in the Krivan, very near that of the White Waag. The Poprad traverses the level country of Zips, passes through the mountains near Muzsyna, into Galicia, and unites with the Dumajec, which falls into the Vistula. At Lublo, in Zips, the Poprad is navigable for rafts.

Canals.—No country is better adapted for, or more needs, canals than Hungary. The greater number of those hitherto made have been cut to regulate the courses of winding rivers. Such are the Leitha canal, in the co. of Wieselburg; the Albert-Karaszca canal, in the co. of Barany, and the cuts for the regulation of the Körös, in Heves co., and of the Bersava, in the Banat. Other cuts, on a large scale, regulate the course of the Latorca in the co. of Beregh, and of the Surviz, in the co. of Wespriem, Sthulweissenburg, Tolna, and Szűmegh. The most remarkable canal in Hungary, however, is the Francis or Bacs canal, between the Theiss and the Danube. It is nearly 70 m. long, and at the level of the water is 8 ft. deep and 60 ft. broad. The difference between the levels of the Danube and the Theiss is 27 ft., which is carried off by locks. The entire cost of this undertaking was 300,000. A similar canal between the Theiss, near Szegedin, and the Danube, near Pest, is projected.

The Bega canal, between the Temes, near Temeswar, and the Theiss, near Tittel, is on a smaller scale, but a

most useful undertaking, and a source of great prosperity to the Banat.

Lakes.—Hungary possesses two of the largest lakes of Europe;—the Neusiedler-See (Hung. *Fertő-Tava*), in Upper Hungary, lying S. of the Danube, in the cos. of Oedenburg and Eisenburg, is 25 m. long, 12 m. broad, and from 9 to 13 ft. deep. Its waters rise and fall without apparent cause, often receding from the banks, and then again filling and overflowing them. Lake Balaton, situated in the great plain, at no great distance from the Neusiedler-See, is nearly 50 m. long by 10 m. broad, and receives the river Syala on the W. side. The water is very slightly tainted with salt. Besides large lakes, Hungary possesses an almost inconceivable number of stagnant sheets of water. Some in the Carpathian mountains, though small, are especially worthy of notice; these are the White, the Green, and the Red lakes. The Green Lake is 4,764, the White Lake 5,224 ft. above the sea, and both are enclosed by high and precipitous granite rocks. There are many mineral springs in Hungary, the principal of which are at Mehadia, in the Banat, at Trentchin on the Waag, and at Bartfeld, in the N. chain of the Carpathians.

Climate.—The climate of Hungary is of three kinds, varying according to the surface of the country. The climate of the Carpathians, including the high lands of N.W. Hungary, is coldest, and that of the great plain is the warmest; the climate of the high lands S. of the Danube being a mean between both. The mean temperature of Buda, which represents the mean climate of Hungary, is stated to be 16° Reaumur, or 54° 30' Fah., corresponding nearly with the mean temp. of Nantes. At Nantes, however, the difference between the winter and summer averages is 15° Reaum., and the range is 17°; whereas, at Buda, the average difference is 21°, and the range 23°. In the great plain, the mean temp. is 12° 48' Reaum., or the same as at Milan. (*Berghaus*.) The mean fall of rain at Buda is 16 inches, the number of rainy days being about 112; the average of all Germany being 150 days. In the high Carpathians, the yearly average is doubtless very much greater; whereas the summer and autumn, in the low lands, are usually seasons of drought, unfavourable alike to agriculture and river navigation.

Vegetable Productions.—The products of Hungary embrace all the plants indigenous to Europe, from the Iceland moss, gathered on the Carpathians, to the rice and cotton plant, so successfully cultivated in the Banat, and the olive, which thrives in the coast district. In the hills, especially in the Carpathian district, fir forests abound; but along the plains and valleys of the Save and the Drave, extensive oak and beech forests are found. The oak forests yield large quantities of gall apples, and large herds of swine are fattened on the acorns and beech mast. The increase of pop. every where introduces improved fruit plantations, and the S. slope of every elevation is found covered with vines and orchards. The well-known liqueur *Sárvíz* (*Sárvíz* plum) is made from the plums grown in the S. parts. The grapes are of various kinds, and one species, the *formint* grape, of which the Tokay wine is made, is peculiar to Hungary. The extent of the wine country, including the fall of the hills, to the two plains and the valleys of the Save and Drave, is more than 2,000 English miles long, measured in a straight line. Many districts, such as the Fraska Gora hills in Slavonia, and the hills near Buda, yield a heavy red wine, which, with care, might easily be fitted for exportation. The water melon in the great plain has obtained a kind of national celebrity; it often attains a weight of 30 lbs. and upwards. Tobacco is particularly fine. Dye-plants of all kinds, madder, woad, and safflower, succeed wherever they are cultivated; but what is of far more consequence, the soil is particularly adapted to the cultivation of wheat, which is largely exported. Of other cereal plants, little more is grown than is required for local consumption, excepting maize, much of which is sent to Italy. Rapeseed and hemp, also the produce of the marshes, are objects of trade; and popples, for oil, are much cultivated. The laurel, the *laurus linus*, arbutus, cedar, and other evergreens, are too tender to bear the winter cold.

Animals.—Among the animals, the bear of the Carpathians is the most remarkable; and in autumn he often visits the oak and beech forests of the low countries: wolves are more numerous. The small lynx, wild cat, and wild boars are found in all parts. There are many varieties of the dog; one of the finest is the wolf-dog, found in every shepherd's cottage. The chamois and marmot are inhab. of the Carpathians; and stags, roebucks, foxes, and hares are common, though seldom preserved for game. Among birds, the golden eagle, as a stray visitor, and the stone eagle, more frequently, various kinds of kites, hawks, bustards, and woodcocks, partridges, and black game; and all kinds of domestic fowls thrive remarkably in the S. parts, and have beautiful plumage. Herons' plumes are taken as rent in some parts of Transylvania. Fish abound in the rivers of Hungary, espe-

cially in the Theiss, which is said to be the richest fish-river in Europe: amongst these, the sturgeon, and the fogasch of Lake Balaton (*Perca lucio-perca*) are much esteemed. The entomology of Hungary is richer than in any other part of Europe, owing to the extensive forests and large swampy tracts of the warmer districts. In the forests along the Save, cantharides are gathered. Wasps and hornets build enormous nests in the sandy plains, which are not exterminated without difficulty and danger. Swarms of gnats of peculiar kinds occur in the Banat. One kind, which is harmless, is peculiar to the river Theiss, and increases so rapidly at the breeding time, as to cover the stream like a thick coat of moss, and even to impede the navigation. In this state, the masses of insects are collected by the peasantry, and given as food to the cattle. Another more formidable insect, the *Co-lumbacx* gnat, issues from the caverns of the limestone rocks on the banks of the Danube, and spreads in swarms over the adjacent plains, to the great annoyance of the cattle. Locusts are often met with; and the destruction of their eggs, which they lay deep in the earth, is a work of great labour. The leeches of S. Hungary, especially those from the Neusiedler-See, form a considerable article of trade. (*Page's Hung.*, i. 29.)

Minerals.—The minerals are very important. Nearly all the metals are met with in the kingdom. They are mostly found in the central trachyte groups of N.W. Hungary. Gold is found at Schemnitz, in a whitish compact limestone, alternating with syenite and porphyry. At Königsberg, Telke Banya, and in the still richer mines of Nagy Banya, on the frontier of Transylvania, the ore is found in small conglomerations, or thin veins, in soft sandlike masses of decayed pumice-stone, lying on and in excavations of the trachyte, or on the porphyry, exactly under the same circumstances as the ores described by Humboldt, in the Mexican mines of Villalpando. Silver, copper, and lead are found mingled with gold at Kumnitz, Schemnitz, Nagy Banya, Telke Banya, in the trachyte group of the Hegyalla, near Tokay, and in the Banat. A solution of copper, locally known as cement-water, is found in many parts; and from this copper is easily obtained. Sulphur and arsenic are found at all the above-named places; the former in masses at Radoboi, in Croatia. Another mineral peculiar to the trachyte and porphyry rocks is the alum-stone, found in the breccias of Beregh, near Tokay, and Parad, in the N. part of the Matra mountains, under similar circumstances of position and quality with the alum-stone of the Apennines. Cobalt is a valuable mineral, which occurs in many parts, but especially at Dobschau, in the N. of Hungary. In the extensive sandstone hills stretching from the Dunajec to the Transylvanian frontier, coalbeds occur, containing large quantities of the carbonate of iron, some of which yield 31 per cent. of metal. Mineral salt is found extensively in the same sandstone in the N. of Hungary and Croatia. The richest mines are those of the county of Marmaros. Indeed, the remarkable fertility of the great plain of Hungary is by some attributed to the abundance of the various salts, muriates and others, that mingle with the soil, and which serve to explain the appearance of the numerous ponds which yield soda, and from their colour are termed *white lakes*. These soda-lakes are scattered over the great plain, from the county of Szathmar to that of Bacs; and on the W. side of the Danube, in the counties of Stuhlweissenburg and Oedenberg. Nitre is found in these counties in sufficient quantities to supply the whole empire. The last mineral production to be mentioned is opal, found in clumps of a siliceous stone, met with in pearl-stone rocks. (*Boudant*.) The pearl-stone presents itself in connection with trachyte and porphyry, in several parts of Hungary, over a range of 600 sq. m.; and rising 900, and even 1,200 ft. above the adjacent plains. The clumps above mentioned are hollow, the inside surface coloured, and consisting of delicate siliceous substances,—sometimes chalcedony, sometimes the stone called half-opal. The opal is found within it, lying in the hollows, like a kernel in a nutshell, exactly as Humboldt, in similar geological strata, found the *fire opal*, at Zimapan, in Mexico. The hyalite partakes both

of the nature of the opal and of the chalcedony; and, as well as the garnet, is found in the clefts of the pearl-stone rocks. The greatest extent of pearl-stone rocks occurs in the Hegyalla, or Tokay group, where the celebrated opal mines of *Czernewitza* are situated, not far from Eperies, which annually yield a considerable quantity; but, being farmed by a private speculator, nothing is suffered to transpire respecting their product. The most beautiful are the Iris opals, which are seldom found larger than a franc piece, and whose beauty seems to depend on the water with which they are saturated, as they lose their brilliancy on being heated, but regain it when laid in water. The largest opal of which we have any account (weight 17 oz.) is preserved in the mineralogical cabinet of Vienna. The fire opal is next in price; then come the half-opals, the jasper opal, and wood opals, which are very abundant, and which, as was before observed, are found in many other spots; not being, like the Iris opal, confined to the hills of Czernewitza.

Area and Population.—The official population returns of Hungary, as given by the Austrian government, are founded on a survey of the country made in the reign of Joseph II., to which additions have been annually made. There is reason, however, to believe that these returns are very inaccurate, both as respects the area and population. In the subjoined table the area of the counties is taken from *Stein's Handbuch der Geographie*, and the population from the government returns. The estimates of the latter by Feuyes show a discrepancy of at least one million and a half, or about a ninth part of the whole. [See Table at the top of next page.]

These statements differ widely; but the estimate of Feuyes is entitled to more credit than the loose calculation of the official return, which has no pretension to accuracy. In the latter, no account is taken of the ravages of the cholera, to which, according to the *National Encyclopædia*, no less than 300,000 persons fell victims, and which is said to have been preceded and followed by a bad state of health for some years before it broke out, and after its violence subsided. The statement of Feuyes would make the pop. of Hungary 10,000,000, exclusive of the military frontier; this account was drawn up from returns furnished from the respective counties, and nearly coincides with the calculation made by M. Czoernig, in a very interesting communication in the *Austrian Archiv*. According to the last-named writer's correction of the statements of M. Nagy, the pop. of Hungary was, in 1827, 9,756,512 souls, and this number would show down to that period a most rapid rate of increase. The pop. was,

According to a census in 1787, 7,120,394.			
Do.	Schwartner, 1805,	7,961,414,	incr. in 18 yrs. 12 per cent.
Do.	Csaplovics, 1820,	8,904,717,	— 13 — 12 —
Do.	Czoernig, 1827,	9,756,512,	— 7 — 9.5 —
Do.	Feuyes, 1835,	10,000,000,	— 8 — 2.4 —

Hungary contains several large cities. Pest has 60,000 inhab.; Buda, on the bank of the Danube, immediately opposite, 35,000; Debreczin, 50,000; Szegedin, 32,000, &c. Several towns count between 20,000 and 30,000 inhab.; and even many villages are equally populous. In winter, the rural pop. is usually collected in the villages; but in summer they are scattered according to their occupations and possessions, living either in small houses on the Pusz-tas, where the cattle graze, or in detached farming establishments, which are often at a considerable distance from the villages. During the grazing season, the peasants, in large numbers, spend their time with the flocks and herds intrusted to them, in the extensive pastures. The increasing subdivision of property has a tendency to diminish this nomadic system. The herdsmen are distinguished by different names, such as the horse-herd, the cow-herd, and the swine-herd.

The people of Hungary consist of seven distinct races. The numbers belonging to each race are given in the following table, founded on the estimate of Feuyes, in round numbers. The military frontier, and the recently added counties from Transylvania, are not included; nor is any account made of the Greeks and Albanians (10,000), the Ziguener or Gipsies (30,000), and numerous naturalised foreigners.

Nations.	On this Side the Danube.	On the other Side the Danube.	On this Side the Theiss.	On the other Side the Theiss.	Haiduck Towns.	Croatia, Slavonia, &c.	Total.
Magyars	851,000	1,319,000	817,500	930,070	193,000	150,000	4,400,700
Slowacks	1,173,000	15,000	418,000	59,000	—	—	1,665,000
Croatians	186,000	214,000	1,400	162,600	—	750,000	1,314,000
Germane	—	407,000	87,600	307,400	—	200,000	802,000
Wallachians	—	—	—	891,000	—	—	891,000
Rusniaks	6,800	—	316,200	107,000	—	—	430,000
Jews	73,000	42,000	51,000	37,000	—	50,000	253,000

Condition of the People.—In the provs. on this side the Theiss, the Magyars come into contact with the Rusniaks; in the prov. beyond the Theiss, with the Wallachians and Illyrian or Servian Slavonians; in the prov. on this side the Danube, with the Croatians, and in that beyond the Danube with the Slowacks, or Slavonians. The Magyars

thus occupy the heart of a country bounded on every side by other nations, which, separately taken, are inferior to them in point of numbers, and are, besides, disunited by religious differences. Of the 4,250,000 Magyars, more than 2½ millions are Protestants; the Calvinistic confession being that most spread amongst

We subjoin the estimate of the present pop. of Hungary, exclusive of the military frontier, according to the able statistic Fenyér, whose statements, we believe, have greater pretension to accuracy than those of the official returns, which afford, at best, only an approximation to the actual amount:—				Since 1839, incorporated from Transylvania:—			
Prov. and Distr.		Pop.		Middle Szolnok . . .	839	122,680	116.2
I. Hungary on this side the Danube . . .		2,591,541		Inner Szolnok . . .	1,335	85,570	61
II. Hungary on the other side the Danube . . .		1,993,975		Krasna . . .	415	19,550	47
III. Hungary on this side the Theiss . . .		1,690,614					
IV. Hungary on the other side the Theiss . . .		2,392,597			2,589	227,600	87.9
Cumania, Jazygia, &c. . .		306,285					
Transylvanian counties . . .		198,337		To which add, for Slavonia, Croatia, & milit. frontier . . .	24,810	1,992,400	80.3
Slavonia . . .		322,023		Hungarian Littoral . . .	138	41,800	303
Croatia . . .		537,746			106,359	12,733,800	119
Total . . .		10,036,118					
Berghaus estimates the pop. of Hungary (exclusive of the military frontier and the Transylvanian counties), on the 1st of Jan. 1839, at 11,788,190.							

them. They are a manly and active race, possessing frankness of character, and many other estimable qualities. Their general manner is serious; but in the hours of gaiety and feasting they indulge in tumultuous joy. The advantage possessed by the Magyar over his neighbours of other races, is altogether one of character, for in learning, the peasantry, as well as the middle classes, are behind the Germans. The hussar jacket, with light pantaloons, and the *cxicsmen*, or light boots, and a huge brimmed hat, form the costume of the lower orders. The Hungarian costume, as worn in full dress by the higher classes, is well known, and has been adopted in part for the uniform of hussar regiments in almost every country. The *attila*, or frock, and the *monte*, or long surcoat, trimmed with fur, are often substituted for the *dullman*, or short hussar jacket. The *kakpak*, or fur cap, with the costly heron's feather, forms the national headgear; and on official occasions the sabre is an indispensable addition to a gentleman's attire. The Slowack, or Slavonian inhabitant of the N.W. parts of Hungary, belongs to the same family with the Moravians, whom he resembles in appearance, and whose customs and language he preserves. The government project of inducing the Slowack peasantry to adopt the Magyar language, has been detrimental to the improvement of the lower orders in these counties, and has introduced divisions in the primary schools. (See below, under *Education*, and also *Page*, i. 315.; and *Gleig's Germany and Hungary*, iii. 344.) The Croatian peasant is not so fortunate in the tenure of his land as the Slowack, and feels more acutely the pressure both of his temporal and spiritual lords. Still the Wallachs in E. Hungary, and the Russniak Slavonians of the N., are far behind both the Slowacks and Croats in point of education, and have a language that has no literature. The Wallachians almost universally profess the Schismatic, and the Russniaks the United Greek, confession. The Illyrians, or Servian emigrants of the Banat, use a Slavonian dialect, similar to that of the Croats, and the majority of the books printed in Servia are written in this province. In fact, the written characters constitute the only difference, the Servians using the Russian, while the Croats adhere to the Roman character. The exter-

nal appearance of the Wallachians at once declares them to be strangers amongst the Slavonian and Hungarian inhabitants. Their light active figures, dark complexion, and the resemblance to Italian in their dialect, proclaims their Romanic descent. They name themselves *Romouni*, are poor, light-hearted, but mostly ignorant peasants, fond of brilliant colours in their dress, when their means allow of it, and submissive under oppression.

The nobles and landed proprietors, with the exception of the few foreigners who have purchased property in Hungary, are of Magyar origin in the Hungarian provinces, and mostly Slavonians in Croatia and Slavonia. Their privileges are more extensive than those enjoyed by the nobles of the Continent generally, and the rank is held by great numbers, whose property does not exceed that of a peasant. Their numbers can only be learned approximatively, as they refuse to submit to any continued registration. Of late years, the higher classes have been laudably active in endeavouring to ameliorate the condition of the lower orders by the foundation of schools, the distribution of useful works, attention to the state of prisons, &c.; and their private beneficence has been effectually aided by the grand legislative measure of 1836, which so much extended the civil rights of the peasants. By the act of the Diet of that year, called the "*Urbairam*," the nobles gave up in principle two of the most obnoxious privileges of their order—freedom from taxation, and the right of being judges in their own causes in manorial courts; and agreed that disputes between peasants and their lords should be referred to a court formed of indifferent proprietors of magisterial rank, headed by the *Vice-shakbrichter*, or deputy-lieutenant of the county. The former heavy penalties for slight offences were modified, and appeals were admitted from these to the higher courts of the kingdom. The exemption from taxation was waived, not by a voluntary acceptance of burdens, which would have occasioned a vast revolution in property, and endangered one of the most valuable advantages of the Hungarian constitution, but by the enactment, that if a noble purchased a peasant's holding liable to taxation, the noble should continue to pay the impost. In some respects the lords were

placed in a disadvantageous position by the new law, as the peasants may leave, sell, or transfer their holdings at will, whereas the lord has no power over them, except that of execution for rent. The amount of rent payable for peasants' holdings was then, also, fixed by the custom of each county. The extent of a session, or full peasant's holding, varies in different parts: 16 jochs of arable land, with 6 jochs of pasture (together 30 acres), being the smallest, and the largest (in the county of Arva) being 40 jochs. The right of drawing wood from the seignorial forests, of fattening pigs on the acorns, and other privileges, still remain to attest the patrimonial tie which once existed between the lord and his dependants. The peasant gives for his holding one day's labour in the week, with a waggon and two horses, or two days hand-labour in all counties excepting the Banat and Slavonia. These last-named districts have peculiar customs respecting tenures. A small sum of money, and a part (1-7th to 1-9th) of the produce, are likewise paid to the lord, which may be redeemed, or converted into a rent-charge. The small tithe and the tithe of reclaimed land were abandoned by the landlords. (See *Paget*, i. 296—316.) To this decree of the Diet, which, as a voluntary act of self-renunciation by the nobles, has no parallel in the annals of any other nation, other measures have since been added of scarcely less importance. A decree of the Diet of 1839 secures to the peasant the right of disposing by will of all kinds of property. In 1840 the Diet passed a bill, declaring Catholics and Protestants to stand upon an equal footing in contracts of marriage, neither confession being suffered to impose restraints upon the other, and admitting Jews to equal rights with other commoners throughout the kingdom. It cannot be matter of wonder, if the Hungarian nation set a high value upon a constitution which has procured them so many advantages, without exposing the country to the trials and disturbances to which states under a strictly monarchical government are constantly subject. To the Magyars as a nation, rather than to the Slavonians, is the merit due of firmly upholding their national institutions. One instrument of oppression, however, which is liable to great abuse, still remains to be abolished,—the power of the county courts to summon the peasants to do county work, such as road-making, building and repairing churches, &c., and which is universally condemned by the enlightened classes throughout the kingdom. The Germans, as settlers, are most numerous in the county of Zips, in the Banat, and in the mining districts: they are chiefly found in the towns, where the greater part of the trading population is German. In the country parts the inn-keepers are mostly Germans.

Mr. Paget, in his able and interesting work, *Hungary and Transylvania*, gives the following description of the various customs of the peasantry: "The cottage of the Hungarian peasant (Magyar), for the most part a long one-storied building, presenting to the street only a gable-end, which is generally pierced with two small windows,—or rather peep-holes, for they are very rarely more than a foot square,—below which is a rustic seat, overshadowed by a tree. The yard is separated from the street, sometimes by a handsome double gateway and stately wall; sometimes by a neat fence formed of reeds, or of the straw of maize; and sometimes by a broken hedge, presenting that dilapidated state of half freedom, half restraint, in which pigs and children so much delight, where they can at once enjoy liberty, and set at nought control. Passing through the gateway of one of these cottages, we entered the first door which led into the kitchen; on either side of which was a good-sized dwelling-room. The kitchen, whitewashed like the rest of the house, was itself small, and almost entirely occupied by a hearth 4 ft. high, on which was blazing a wood fire, with preparations for the evening meal. The room to the left, with the two little peep-holes to the street, was evidently the best, for it was that into which they were most anxious to show us. In one corner was a wooden seat, fixed to the wall, and before it an oaken table, so solid that it seemed fixed there too; on the opposite side stood the large earthenware stove; while a third corner was occupied by a curious phenomenon—a low bedstead, heaped up to the ceiling with feather-beds. The use of this piece of furniture completely puzzled us—to sleep on it was impossible; and we were obliged to refer to the count for an explanation, who assured us it was an article of luxury, on which the Hungarian peasant prided himself highly. For sleeping he prefers to lay his hard mattress on the wooden bench, or even on the floor; but, like other people, who think themselves wiser, an exhibition of profuse expenditure in articles of luxury—feather-beds are his fancy—flatters his vanity. These beds are generally a part of his wife's dowry. In the favourite corner we commonly observed—for the peasants of Zinkendorf are Catholics—a gilded crucifix, or a rudely coloured *Mater dolorosa*, the *Penates* of the family;

while all round hung a goodly array of pots and pans, a modest mirror, perhaps even a painted set of coffee-cups, and sometimes a drinking-cup of no ordinary dimensions. A Protestant peasant supplies the place of saints and virgins with heads of Kaiser Franzel and Prince Schwartzenberg, and not unfrequently Napoleon and Wellington look terrible things at each other across the room.

"The corresponding apartment on the other side of the kitchen was furnished with more ordinary benches and tables, and served for the common eating and sleeping room of the family. Beyond this, but still under the same roof, was a store-room and dairy, and below it a cellar. The store-room well deserved its name; for such quantities of *suro* (kind of cheese), lard, fruits, dry herbs, and pickles laid up for winter use, I never saw; and in some houses the cellar was not less plentifully supplied, and that too with very tolerable wine. The cow-house was rarely without one or two tenants: the stable boasted a pair, or sometimes four horses; the pigsties, it is true, were empty, but only because the pigs had not yet returned from the stubble-fields; and to these, most of the houses added sheepfolds and poultry-pens—presenting altogether perhaps as good a picture of a rich and prosperous peasantry as one could find in any part of the world." (i. 287.)

"It would be easy," adds the same writer, "to find a contrast to this:—Take G—, a small village of the N. of Hungary, difficult of access from the bad roads in the neighbourhood, and not favoured by nature with the richest of soils. The peasants love the brandy-bottle and hate their landlord. The Baron B— lives in Vienna, and lets his village to a greedy Jew, who grinds out of the people every particle of possible profit, no matter how injurious ultimately such conduct may prove to them or to their master. The dingy cottages are built of unhewn fls, carelessly put together, and plastered with mud on the inside; they rarely consist of two, and generally only of one chamber, where the whole family must live. Attached to the house is a shed for the oxen and pigs; horses and sheep they have none. I confess I cannot speak so minutely of the interior of the cottages here as at Z—; for in going towards them, I stepped up to the knees in a mass of putrescent hemp; which, with the filthy appearance of the children crowding the threshold, effectually cooled my curiosity. Such are the varieties to be found among the Hungarian peasantry; nor have I in Z— or G— chosen exaggerated instances of either class." (i. 291.)

Of the Slowack peasantry, Mr. Paget does not give so favourable a picture. "The peasant's house is almost always built of the unhewn stems of the pine, covered with straw thatch, carelessly and ill made; its interior is not over clean, and the pig, oxen, and goats are on far too familiar terms with the rest of the family. It is rare amongst them to see those neatly fenced farmyards, large barns and stables, and well-made cornstacks, which are so often met with among the Magyars. How far this may depend on the poverty of the soil, it is difficult to say; that it does not depend on any greater severity of the landlord in one case than in the other, as I have heard insinuated, my own observations convinced me. The men are in general about the middle size, strongly formed, of a light complexion, with broad and coarse features half-shaded by their long flaxen hair; in some particular districts, however, there are found among them singularly fine and handsome men—as a military friend of mine observed, ready-made grenadiers. The peasant women when young sometimes are pretty, but hard labour and exposure to the sun soon deprive them of all pretensions to comeliness." (i. 86.)

The Wallachians, according to the same authority, stand still lower in the scale of civilisation. "The Magyar peasant holds the Wallacks in the most sovereign contempt. He calls them a people who let their shirts hang out, from the manner in which they wear that article of clothing over the lower part of their dress; and classes them with the Jews and Gipsies. Even when living in the same village, the Magyar never intermarries with the Wallack.

"That the Wallack is idle and drunken, it would be very difficult to deny. Even in the midst of harvest, you will see him lying in the sun, sleeping all the more comfortably because he knows he ought to be working. His corn is always the last cut, and it is very often left to shell on the ground for want of timely gathering, yet scarcely a winter passes that he is not starving with hunger. If he have a waggon to drive, he is generally found asleep at the bottom of it; if he have a message to carry, ten to one but he gets drunk on the way, and sleeps over the time in which it should be executed. But if it be difficult to deny these faults, it is easy to find a palliation for them. The half-forced labour with which the Hungarian peasants pay their rent, has a natural tendency to produce, not only a disposition, but a determination, to do as little as possible in any given time.

Add to this, that at least a third part of the year is occupied by feasts and fasts, when, by their religion, labour is forbidden them; that the double tithes of the church and landlord check improvement; that the injustice with which they have been treated has destroyed all confidence in justice, and every sentiment of security; and it will not then be difficult to guess why they are idle. The weakness of body induced by bad nourishment, and still more by the fasts of the Greek church, which are maintained with an austerity of which Catholicism has no idea, and which often reduces them to the last degree of debility, and sometimes even causes death, is another very efficient cause. Like the Turks, the Wallacks ornament their burial-places by planting a tree at the head, and another at the foot of every grave; but instead of the funeral cypress, they plant the *Sweetchen*, or plum, from which they make their brandy,—a very literal illustration of seeking consolation from the tomb. For the death of near relations they mourn by going bare-headed for a certain time,—a severe test of sincerity in a country where the excesses of heat and cold are so great as here." (il. 215.)

The dress of the Wallachian women consists of a long white linen shirt, embroidered with red or blue wool at the collar and cuffs; two aprons, bound before and behind, serving in place of petticoat and gown; and these aprons are not unfrequently formed of coloured laces, hanging down like a fringe to the ankles. The colours are sometimes very brilliant; and the stripes run both horizontally and perpendicularly, forming the pattern of a Scotch plaid. The Wallachians of Transylvania dress more showily than those of Hungary; and their costume is often ornamental, and even rich. A small sheep-skin jacket, trimmed and richly embroidered, at times, is occasionally worn by the women in both countries.

Of late years, the exertions of writers in the Magyar language have furnished elementary works fitted for schools, as well as newspapers and other periodicals. The foundation of the National Casino at Pest, which originated with Count Stephan Szechenyi, furnished the inhab. and visitors of the capital for the first time with a place of meeting; and the example has been imitated by nearly every town in the kingdom. The national prints, with German and French newspapers and reviews, are now to be found in these clubs, in remote corners of the country; and small provincial theatres are, perhaps, more numerous in Hungary than in any other country. Scientific societies have also sprung up of late years; that for the Magyar language and literature was endowed by Count Szechenyi with the sum of 60,000 fl.; and this noble example was followed, though on a smaller scale, by other magnates. A scientific institution, to be named the *Ludovicum*, has long been projected, and even subscribed for; but has hitherto been delayed by a difference of opinion between the founders and the government with respect to its operation. An Illyrian society of literature at Pest has recently been founded, under the patronage of Count Tököly, with a capital of 20,000 fl. The Archduke Joseph, palatine and viceroy of the kingdom, has established a pattern farm at Alcsut, not far from Pest; and a college for instruction in the theory and practice of agriculture, by the Archduke Charles, has been opened at Altenburg, near Wieselburg. Two similar institutions exist in Upper Hungary; one at Keszthely, near Lake Balaton, founded by Count Festetics; and one at Rohancz, by Counts Curoly and Batthyany. To improve the breed of cattle, many of the rich proprietors send bulls and stallions to fixed stations, and the greater part of the estates in their own hands are as scientifically farmed as those of any country in Europe.

Agriculture.—Agriculture, owing to the richness of the soil, is the most important branch of national industry; and there can be no doubt, that if a market could be found for the produce, the resources of the land would be fully developed, which is not the case at present, 1-4th part of the best land lying wholly uncultivated. (Páger, il. 613.) The soil, indeed, constitutes a source of wealth in Hungary, which bad laws alone prevent from being adequately worked. In the N.W. counties, among the hills, the Moravian systems of farming are met with,—a natural consequence of the Slowack's general resemblance to the Moravian in customs and language. This part of Hungary does not produce corn enough, in ordinary years, to supply its own consumption, and imports corn, &c. from the adjoining level districts. The lesser plain of Upper Hungary contains many fertile tracts, especially N. of the Danube, as well as the islands "Gross and Kleine Schütt."

The following is said to be a pretty correct statement of the way in which the soil of Hungary is distributed:—

Arable land	-	-	4,897,220 jochs.
Gardens	-	-	639,000
Vineyards	-	-	911,200
Meadows and pasture	-	-	7,715,230
Ponds	-	-	850,000
Forests	-	-	8,943,000

The rich soil of Lower Hungary is productive and ge-

nerally well tilled. The black vegetable mould of the Banat, or the district between the Maros, Theiss, and the Danube, extending also over the counties of Bacs, Arad, Bekes, and Csongrad, is peculiarly well adapted to the growth of wheat, which consequently is grown as often as possible, that is, according to the present system, once in three years; a crop of summer corn follows, after which the land either lies fallow or is sown with maize. The following particulars respecting the cost of tillage, &c. were gathered by a traveller in the year 1839 from the books of some well-managed estates:—

	First Year.	Fl. Kr. (in silver).
Cost of ploughing, 1 Austrian joch (equal to 1.46 English acre) in fallow in June	-	1 0
Seed-ploughing in October, harrowing and sowing	-	2 34
Weeding in April and May, four labourers one day (children)	-	0 36
Cutting the corn at the end of June	-	2 36
Cartage to the treading-place	-	1 0
Hire of labourers for treading (1½ to 2 metzen per joch at 1 florin)	-	2 0
Cartage to the granary	-	0 36
Screening	-	0 18
Seed, 1½ metzen at 1 florin	-	1 30
Total	-	12 0 = L. 1 2s. 0d.

The immense tracts sown with grain in the great plain present a singular spectacle at harvest, owing to the great number of hands requisite to get in the crop. A square piece of ground is usually well beaten at one end of the field; and if horses and oxen can be got to tread out the corn immediately, it is carried thither at once, and trodden out by their unshod hoofs. This practice of treading out the grain is, however, most wasteful: not only is the work badly done, but, being performed in the open field, it exposes the crop to the chance of plunder, and to all the vicissitudes of the weather. Sudden thunder-storms often destroy the greater part of a crop.

Notwithstanding the abundance of the crops in many parts of the plain, and the difficulty of finding a market for produce, but little money is invested in farm buildings to preserve the grain. Holes dug in the earth, and shaped something like a bottle, with a narrow entrance or neck, are dried by burning straw in them, and after being lined with fresh straw, are filled up with wheat dried in the sun. These rude granaries are common in the plain N. of the Theiss, but have given way in the Banat to regular granaries, as the foreign trade in that fertile district has gradually become regular.

The average of a number of years well ascertained gives a produce of 16 metzen per joch, which, valued at 1 florin in silver (about 11s. 4d. per quarter) would leave 4 fl. per joch (or about 6s. per acre) profit to the landholder. Small tracts of land, let on short terms to peasants in the best-cultivated parts and in the neighbourhood of towns, are sometimes paid for at the rate of 4, and even 6 or 7 fl. per joch; but large estates are farmed out by the government at 1 fl. per joch, or about 1s. 6d. per acre. From the end of June the ground lies idle till the following April, sheep being turned into the stubble after the September rains. The grazing of the second year is more valuable, and may be let at about 2 fl. per acre, where wool-growing does not form a regular part of the farming system. In April it is common to sow half the fallow with maize, the expense being as follows:—

	Fl. Kr. (in silver).
Ploughing, harrowing, and sowing, about 24th April, 1 joch	2 34
Stacking (four labourers one day)	1 20
Earthing up the plants (six labourers one day)	2 0
Breaking the heads when ripe (six labourers)	2 0
Cartage from the field	1 0
Separating the grain from the head	1 0
One quarter metzen maize as seed for 1 joch	0 15
Total	9 59 = 19s. Engl. nearly.

The produce of a joch is estimated at 20 Presburg metzen, which, consequently, nets to the landlord only 25 kreutzers, or about 10½ per metzen, or about 10 per imperial bushel in labour. With this grain he feeds his pigs, poultry, and even his horses, which latter, however, are more frequently obliged to content themselves with the straw. Barley and oats are only cultivated for domestic use, as they are in no demand for exportation. Half the fallow is often cultivated with cow-grass or tares: the expense of this crop is—

	Fl. Kr.
Ploughing, harrowing, and sowing 1 joch	2 34
Mowing and sowing	1 12
Cartage	1 0
Seed, 5-8ths of 1 metzen	2 0
Total	6 36 = 3s. 7d. Engl.

The crop of tares and beans usually produces from 40 to 45 Austrian cwt., or 2½ to 3 tons of hay, which cost in labour, as above, about 13s.

The great drawback on the landowner's profit in these productive countries is the difficulty and expense of forwarding the produce to market. The soil of the great plain is so singularly free from stones, that road-making

is extremely difficult, and demands a large outlay. The navigable rivers and canals are by no means in a state to allow of their being used at all seasons; and these difficulties, added to the wasteful manner of getting in the corn crops, make it wonderful that as much as 16-fold can be returned from the ground. Manure is in these parts scarcely used, as it makes the plant too rank, and forces it up into straw. In the greater part of the great plain cattle-dung is cut into bricks like turf, and used for firing. Wheat-straw is likewise used for fuel, as wood is scarce.

Tobacco is successfully cultivated, especially in the counties of Heves, Szeged, and Csongrad, and it has a high character in Germany. The annual produce is reckoned at 250,000 centners, of which only 60,000 are kept for home consumption. On being exported, it is subjected to heavy imposts, levied by government. The annual produce of the Hungarian vineyards is said to be 24,000,000 eimers, or 96,000,000 gallons. These wines, which are strong and fiery, requiring to be kept before they reach perfection, are of two sorts; the sweet wines (*Ausbruch*), and the red and white table wines. Of the former, the Tokay (grown about Tokay, on the Theiss) is unequalled for delicacy and flavour. It is a sweet, rich, but not cloying wine, strong, full-bodied, but mild, bright, and clear, seldom to be procured of the finest quality, and then only at the private tables of the nobility. There are three distinct kinds of Tokay. The annual produce of the Tokay vineyards is 250,000 eimers, of which only 1-5th part is of the best quality. Good old Tokay costs, even in Hungary, from 5s. to 8s. a bottle. Next to Tokay comes the Ménes wine and the Ruast, Carlowitz, and St. Georg. Of the red wines, that of Buda (*Qffier-Wein*) is considered equal to the best Burgundy; and next to it are the Pösing, Soxö, Mirkolcz, Neustadt, and other wines. The best white wines are those of Somly and Nessmély, which, it is alleged, equal any of the white wines of France, except champagne. (*Paget*, l. 481., and ii. 610—612.) The cultivation of the mulberry-tree for silkworms was introduced by the Empress Maria Theresa; and in the military frontier a large quantity of silk is produced; but neither this article, nor the cultivation of dye-plants, such as woad, madder, saffron, &c., is well attended to. The farmers, discouraged by the various difficulties in the way of a

sale for their crops, have of late years devoted themselves to sheep-grazing, and the breed has been greatly improved by the introduction of the Merinos. The number of sheep grazed in Hungary is said by Czaplovics to be 20,000,000; and the quantity of wool exported in 1837 was 200,000 centners of 123 lbs., which, at the ordinary medium price of 100 florins the centner, would amount to 2,000,000. The horned cattle bred on the Hungarian plains are among the largest and handsomest in Europe; they are a race peculiar to the country, grey-white in colour, with wide-spreading horns. The horses generally are small and weak, and of an inferior breed; but in some parts considerable attention is given to breeding, especially in the county of Csanad, where nearly 10,000 horses are kept, and stallions of all the best breeds in Europe. Hundreds of thousands of swine are bred in the forests, and on the great heath of Debreczin there are some millions of geese. Poultry and game of every kind abound throughout Hungary.

Manufactures and Trades.—Hungary, as a trading country, is quite insignificant, and there is but little prospect of her importance in this respect being speedily increased. She publishes no trade lists, nor any special details concerning her manufacturing industry. Becher states the principal linen manufacture to be carried on in the N. and mountainous districts; but they do little more than supply the home consumption of the district. He names but one cotton factory at Sussin, in the county of Mitrá, which produces 30,000 pieces in the year. Wool is every where manufactured into coarse cloth, for country consumption. At Pest there is a silk factory. Tobacco, leather, paper, soda, alum, and salt-petre manufactories, with numerous iron-works, close the industrial list.

Mines.—Mining industry ranks next to agriculture. It would be a source of far greater profit to the country if entirely in the hands of private companies. The expensive management of the Oberst-Kammer-Gräf, assisted by a numerous council of subordinates, and the charges on internal communication, swallow up all the gains, and by keeping the price high, diminishes the consumption in the country. The produce of the various mines of Hungary during the last few years will be seen in the following table:—

Mineral Products.	Districts where obtained.	Quantities obtained in Ten Years (from 1819—1828).	Quantities obtained in 1837.
Gold . . .	Schemnitz, Kremnitz, Neusohl . . .	14,760 marcs	2,419 marcs
Silver . . .	Schemnitz, Nagy-Banya, Banat . . .	673,762 —	64,224 —
Copper . . .	Neusohl, Schemnitz, Banat . . .	268,737 centners of 123 lbs.	37,928 centners of 123 lbs.
Lead . . .	Neusohl, Schemnitz, Nagy-Banya . . .	148,373 —	14,942 —
Litharge . . .	Nagy-Banya, Banat . . .	66,457 —	7,642 —
Zinc . . .	Banat . . .	9,794 —	1,717 —
Antimony . . .	Neusohl, Schemnitz . . .	28,674 —	4,350 —
Iron . . .	Neusohl, Banat, Schemnitz, Nagy-Banya . . .	1,874,547 —	295,343 —
Alum . . .	Nagy-Banya . . .	66,576 —	12,301 —
Cobalt . . .	Schemnitz . . .	152 —	2,082 —
Coal . . .	Neusohl, Banat . . .	2,643,587 —	—

Considering the metallic wealth of the Hungarian mountains, this amount of produce is astonishingly low; and certainly the resources of the country are little understood, more especially as respects iron and coal. *Paget* considers the Hungarian coal to be equal to the English for all manufacturing purposes. (ii. 608.) The number of individuals employed in the mines on government account in 1835 was 18,611, of whom 692 were officers. The salt-works employed 1,510 individuals, including 71 officers. The salaries of all amounted to 2,196,883 florins in silver. From the abundance of ore in many of the mining districts, a most thriving trade might be opened; but, to insure this, the means of transit must be improved, and government exactions must cease. The mines are divided, from their position, into four districts: the Schemnitz, Schemnitz, Nagy-Banya, and Banat, of which the first is by far the most considerable; and hence Schemnitz is considered as the mining capital of Hungary. This town possesses an excellent school for miners. Each of the districts has its government and separate establishment of smelting-houses; but all send their produce to be assayed to Kremnitz, in the Schemnitz district. (*Paget*, l. 333.)

River Communications.—The trade by way of the Black Sea was not commenced till the establishment of the steam navigation of the Danube. The Hungarian peasant, with corn, wool, and flax about him in abundance, lives in poverty, for want of a market. The articles imported from Wallachia and Moldavia are wax, honey, wool, bristles, some metals, &c. The agricultural produce of the great plain along the Save is conveyed to Szissek, in Croatia, whence the more expensive articles are forwarded along the river to Agram, and thence, by land carriage, to Laibach and Trieste; those more bulky are sent up the Culpa to Carlstadt, and thence conveyed to Fiume by the Louisa Road. (*See Fiume*.)

The navigation on the rivers is as well managed at present as the peculiar circumstances of the country

will allow. The barges are of great size, usually from 100 to 150 ft. long, by 17 to 24 ft. broad, and drawing 5 to 6½ ft. They are built of Croatian oak, either at Szissek, on the Save, or at Szeged, on the Theiss, and cost between 600l. and 700l. They have a high pointed roof, like a house, and serve the purpose of granaries in the interior of the country. The peasants bring their corn for sale to the river's bank, and it is at once laden in sacks into the barge, and sorted into various partitions. These barges load from 1,500 to 2,000 qrs. of wheat. They are drawn up the Danube or the Save by 20 to 25 small horses, and are often months on their way from the mouth of the Theiss to Raab, or Wieselburg, or Szissek, when the water is low; but, under favourable circumstances, the trip from the Theiss to Szissek may be made in 14 or 15 days; and the freight is commonly 15 kreutzers, or 6d. per cwt. All navigation up the stream is, of course, interrupted during floods or hard frosts, and thus there are many months in the year when no navigation is possible. The improvement of the beds of the Save and the Culpa, the use of steam tow-boats instead of horses, and the adoption of smaller craft, would much increase the traffic along the rivers of Hungary. It was estimated in 1839 that 60 barges of various sizes, between 40 and 400 tons, belonged to various shipping stations on the Theiss: 60 of a smaller description to the Besa Canal, between Temeswar and Becskerek; 58 of the larger kind to the lower Danube, at Panschowa, Semlin, and Neusatz; and 100 to the Save, including craft of all sizes, owned at Mitrovitz, Brod, Gradiska, Jasenowitz, Szissek, Carlstadt, and Agram, making a total of 278. The number of men employed is usually 4 for smaller, and 6 or 10 for larger craft. The bad condition of the beds of the rivers makes the steersman (*Gyormann*) a person of great importance, demanding high wages.

A considerable trade is carried on along the course of the Danube, the grand highway of Hungary; which, of late years, has received a considerable impetus from the

employment of steamers. (See Vol. I. p. 246.) Still, however, the central situation of the country, and its great distance from the ports accessible to foreign ships, lay its commerce under great disadvantages. The exports consist almost wholly of raw produce, inc. corn, wool, wine, tobacco, cattle and sheep, timber, &c. The imports comprise most species of manufactured goods, with colonial products, dye-stuffs, spices, hardware, &c. The principal trade is carried on with the Austrian dominions, inc. Galicia; and is facilitated, not only by the Danube and other rivers, but, also, by the railways which unite the W. parts of the kingdom with Vienna, &c. Fiume, the nearest port on the Adriatic to Hungary, is an open roadstead, in which ships cannot lie when either the Bora or Scirocco winds are violent; and, independent of this, its great distance from the productive districts makes it almost useless; and there seems little chance of effecting the projected railway communication between it and the more productive portions of Hungary.

Hungary has no commercial town to compare with Cracow or Vienna for bill and banking business; but the transmission of money, &c. is much facilitated by branches of the National Bank of Vienna established at Pest and other places.

Coins, Weights, and Measures.—The Hungarians use the same standards as the Austrians, in most respects. The florin of 60 kreutzers is equal to 2s. English. The gold ducat of Kremnitz, consisting of 4½ florins, is worth 6s. 6d. English. The *ort* contains 12 kreutzers, and the polturock 1½ kr. The Hungarian yard, used in measuring cloth, is 4-5ths of the Austrian yard, or about 34 Engl. inches. The joch, or Austrian acre, contains 1,600 sq. klaften, and is equal to 1.46 Engl. acre. The metz of Presburg, commonly used for measuring dry substances, is 1.75 imp. bushel. The eimer (for liquids) varies; for the wine eimer is equal to 19½ Engl. gallons, while that used in Lower Hungary is equivalent only to 15 gallons. The antal, used in the Tokay district, is equal to 13.8 Engl. gallons.

Constitution and Form of Government.—The following account of the Hungarian constitution is given in the official report drawn up for the use of the emperor's cabinet by Baron de Baldacci, and may be looked upon as a declaration of the rights of the nation on the part of the crown:—"The constitution of Hungary is monarchical, limited by the power of the aristocracy. All that concerns the security of the country against foreign attacks, in other words, the defence of the nation, is monarchical in principle. The armed force is consequently altogether dependent upon the king. The internal government of the nation is a mixed monarchy and aristocracy. Laws can only be enacted by the joint consent of the king and the diet; and, although the executive power be said to lie with the king, yet the sovereign has only the nomination of lords lieutenant (*Obergespanne*) of counties, and administrators; since every other public officer is either elected by the county itself, or named by its lord-lieutenant,—a nomination, however, which is often successfully disputed. Justice is administered on the principle, *rex est fons et origo jurisdictionis*, in the name of the king, who has, however, no further influence than the power of appointing the president and councillors of the Curia Regia, that is, of the septemviral and royal courts; but to these courts the crown dignitaries likewise depute their representatives. The king nominates the presidents and counsellors of the district courts, watches over the course of justice in all courts, and enjoys in civil suits the exercise of certain prerogatives, and the power of issuing mandates founded upon them; such are the power of ordering a suit to be recommenced (*mandatum novi cum gratia*), and of issuing *moratoria*: in criminal cases the king has the power of pardoning.

"The royal dignity is hereditary in the house of Austria (1526), and is confirmed to all perpetuity (1547) in the female as well as the male lines (1723). Since 1723, the succession to the throne of Hungary is placed upon the same footing with that of the other hereditary states of the empire. The chief prerogatives of the crown are,—1st. The power of making laws, after consulting the estates assembled in the diet, and in common with them. The king assembles the diet, and dissolves it at pleasure. 2d. The highest executive authority in every thing which is in accordance with the laws, or which involves no violation of them. 3d. The right of patronage, or the nomination to all bishoprics and other clerical dignities. 4th. The highest judiciary authority, which the crown, however, only mediately exercises through its officers. 5th. The full power of declaring peace and war. 6th. The right of levying troops, of erecting fortresses, and of demanding warlike subsidies. 7th. The right of calling out the general insurrection of the country for its defence, in the prescribed legal manner. 8th. The right of pardoning. 9th. The right of coining money. 10th. The right of granting patents. 11th. The right of nominating to all offices, except those of palatine of Hungary, of the two guardians

of the crown, and of the county offices above mentioned. 12th. Of legitimising bastards. 13th. The *ius præfectionis*, or the power of transferring the right of succession to a daughter, on the extinction of male heirs in a family. 14th. The *ius successionis*, or the inheritance of all noblemen's estates when there are no male heirs. 15th. The right of abrogating decrees of infancy pronounced by the courts of justice. 16th. Of granting letters of prosecution. 17th. The supreme guardianship of orphans. 18th. The post. 19th. The right of sending special commissions to inquire into the faulty administration of the counties, by which the authority of the lord-lieutenant is suspended; as the royal commissary presides in the congregations or county meetings, abrogates their previous resolutions in the king's name, causes them to be taken out of the lists of protocols and destroyed, suspends the county officers, and institutes legal proceedings against them. The royal authority watches, further, over the disposition of the domestic fund of each county; the accounts of this fund, which has a revenue of more than 3,000,000 florins, are revised by the general-accountant at Ofen (Buda), who sees that they are sent in complete.

"The private rights of the king comprise the enjoyment of,—1st, the regalia, in which the customs' revenue (*Dreßsigstämter*), the title of mining produce, &c., are included; 2d, the crown lands; 3d, the national lands (*Kammergüter*); 4th, the lands in the possession of the Fiscus.

"The prelates, magnates, nobles, and free cities are comprised under the name of estates. The free cities are regarded as nobles in their municipal capacity; their rights are expressed in the 93d table. There is no proper charter or constitutional code. King Stephen was the founder of a regular constitution, which he modelled according to the forms of government existing at that time in many countries of Europe, but his constitution has experienced many modifications in the course of time. The Golden Bull, issued under very unfavourable circumstances by Andrew II., changed the form of government, which had until then been almost autocratic, into an aristocratic monarchy. The vigorous steps taken by some kings, as for instance by Charles I., Louis the Great, and Matthias Corvinus, to extend the royal prerogatives, were retraced at the close of the 15th century, under the reign of Uladislav II.

"The *opus tripartitum*, published by Verbocz in the beginning of the 16th century, was not on its first appearance, nor for more than a century afterwards, looked upon as legal authority, nor has it ever formally received the royal sanction. The collection of ancient decrees by Bishop Motzky (1585) cannot be looked upon as any thing more than the compilation of a private individual; and in many diets, even in that held in 1609, propositions were made for the drawing up of a regular code of laws. Under the kings of the reigning house, a great portion of Hungary and of the annexed districts was conquered from the Turks, by great exertion on the part of the other imperial states; and many important alterations, in the relations of the king and the estates, took place at different times. What are called the cardinal privileges of the nobles and of the clergy, who are looked upon as equal to the nobility, have been preserved to the present day to an extent unparalleled in any country in Europe."

Such were the claims asserted and the privileges allowed by the king of Hungary in 1831. That the political privileges of the nobles have been maintained, should, perhaps, be matter of rejoicing, when the services they have recently conferred on their countrymen are taken into account; and still more when they have been the means of preserving what will no doubt become, in the end, a really free system of government. At present, except the right of election, which is vested in the 267,300 nobles, there is no political privilege which the lowest Hungarian does not enjoy in common with the inhab. of the other constitutional states of Europe. The liability to taxation is now a territorial distinction, and not one of birth; and the moderate imposts thus raised are, in reality, only a part of the rent, which goes into the treasury instead of the landlord's pocket. In extraordinary contributions, of late years the nobles have assessed themselves for their share of the burden.

Religion.—The pop., considered in relation to its religious belief, is divided into four grand classes. The religion of the state is Rom. Cath., to which faith 6-10ths of the pop. are attached. The Protestants amount to 2,576,000; the adherents of the Greek church to 2,155,000; and the Jews to about 253,000. By the decree of Joseph II., who dissolved 600 monasteries, and endowed with their funds various universities and schools, religious toleration, if not absolute equality, was granted to the professors of all Christian creeds; and this liberal policy has been maintained by his successors. The Rom. Catholics are spiritually governed by 3 archbishops and 14 bishops, who are all members of the diet: these are well provided for; but the inferior clergy are

poor, and are not remarkable for their liberality of feeling, or exemplary morals. (Paget, i. 111.) The Archbishop of Gran, who has a very large revenue, is primate of all Hungary. The United Greeks have 4 bishops, and the Orthodox-Greek churchmen, 1 archbishop (Abp. of Carlowitz) and 6 bishops, all of whom have had seats in the diet since 1792. The Protestants are not under episcopal jurisdiction, but have 8 superintendents or presidents of synods. They are divided into two classes; the Lutherans, who adhere to the confession of Augsburg, and the Reformed, who follow the doctrines of Calvin. The former are principally found in the N., and among the Slovaks; the latter are almost entirely Magyars, and chiefly inhabit the towns and villages of the Puszta. There are upwards of 200 Jewish synagogues in Hungary. By the law of 1840, they are admitted to all civil rights and privileges.

Education.—So minute a survey cannot be given of the educational institutions of Hungary as of those in other provinces of the empire, owing to the more local character of the Hungarian municipal and parish jurisdictions. The University of Pest is one of the most richly endowed of Europe, but its services are by no means in proportion to the magnitude of its revenues. The family of Maribany has the credit of founding 100 bursarships for poor students. There are Rom. Catholic lyceums or colleges at Agram, Kaschau, Grosswardein, Presburg, Raab, and Erlau; and Protestant colleges at Presburg, Oedenburg, Kaesmark, Eperies, Raab, Debreczin, Saros Patak, and Papa: they have faculties of law and arts. The largest of these is at Debreczin, founded in 1792. (See Paget, ii. 42.) The colleges of Szegedin and Stein am Auger have faculties of arts only. At Schemnitz is a mining college, similar to that at Presburg, supported by government, with 7 professors and 54 scholarships, endowed with 10,800 fl.; but its efficiency is very doubtful, and its degrees are no sure test of merit. (Ib. i. 333—335.) The Ludovici academy at Waitzen, and 67 Catholic and 13 Protestant gymnasia or grammar-schools, complete the list of higher schools. The academy at Carlowitz, intended to educate the priests of the Greek Schismatic confession, belongs strictly to the military frontier. There are, moreover, 2 boarding-schools for sons of nobles, 1 at Agram and 1 at Kaschau; 24 Catholic and Greek united clerical seminaries, with 1,081 students; 14 regimental schools, with 798 pupils; a nunnery for education at Pest; and an excellently conducted school for the deaf and dumb at Waitzen. (Ib. i. 321.) Besides this, every village has its elementary school (*Trivialschule*), and the larger villages more than one, where instruction is given in the language of the inhabitants; but it is very limited, and has little tendency to improve the social state of the peasantry. In Pest and other places subscription infant schools have been established.

Any estimates of the state of crime in Hungary must be extremely loose, owing to the want of proper returns. The poverty and ignorance of the lower orders are undoubtedly great inducements to offences against property. Cattle-stealing is a common offence, and the insecurity of gardens and field-crops is much complained of by the industrious peasant. Murder, however, is of rare occurrence, except in cases of popular tumult, the last of which was the memorable epoch of the cholera in 1830 and 1831, when the phrenzy of the populace vented itself in fearful enormities. The new enactments in favour of the peasantry will operate gradually to obviate these consequences of national degradation.

The prisons, formerly wretched, have of late years attracted attention in Hungary, not less than in other countries. The landowners of the country have raised the sum of 30,000 florins by subscription, for the erection of a penitentiary on the American system. A society of ladies has likewise raised the sum of 16,000 fl., to erect a workhouse for mendicants. At Gyarmet, Arad, Szexard, Miskolcz, and Jaszbeny, the old system of imprisonment has been changed, at the expense of the nobles, into the better one of prison labour. This laudable spirit is spreading rapidly in all parts of the kingdom. The castle of Munkacs is used as a state prison, and Szegedin is appropriated by the Austrian government to the confinement of criminals from Lombardy.

The court of lowest jurisdiction for the peasant is the manorial court of his lord; but in disputes between the peasant and the manor, a special court is formed from members of neighbouring manorial courts, with the "Vice-stuhlrichter," or police magistrate of the district, and from their decision an appeal lies to the "Stuhlrichter's" court. This court is the tribunal of first instance for the nobles; but causes involving more than 2,000 fl. come before the court of the "Vice-gespann," or sheriff of the county, whence an appeal lies, as well as from the "Stuhlrichter" to the "sedes judiciaria," or "*sedria*," the proper county court of session, and thence to the royal table, or court of king's bench. The "*Septem-wiraltafel*" is so called from its having formerly consisted of 7 judges; it is now composed of 4 prelates, 10 magnates, and 4 nobles, or their representatives, of whom 11

must be present to form a court. This is the highest tribunal of the kingdom, but death-warrants must be signed by the king. In civil trials, the greatest drawback on the due administration of justice is the power given to an unsuccessful plaintiff of renewing his action after the lapse of 32 years from the former trial. This, with the impossibility of selling noblemen's lands in execution for debt, has completely deprived landed property of all credit, and has rendered commercial transactions in Hungary so insecure, that they are usually carried on only upon usurious conditions. To remedy this evil, a bill was brought into the diet in the session of 1840, to allow creditors on bills of exchange summary redress. This measure, so loudly called for by the wants of the trading interest, has contributed to increase the commerce of Hungary.

Finances.—The taxation of Hungary is extremely moderate. The sum of 3,903,704 fl. for Hungary and Transylvania is raised for the support of 31,500 soldiers; besides which, Hungary pays 100,000 fl., Croatia 4,000 fl., and Transylvania 10,000 fl., for the maintenance of the Hungarian noble guard at the emperor's court. Further, Hungary pays towards the expenses of recruiting 79,225 fl., and 38,533 fl. for king's dues. Another tax, amounting to 2 millions of fl., is raised to indemnify the peasants who supply forage at a low rate to the troops quartered in the kingdom. Thus, what may be called the direct taxes of Hungary amount to about 7 millions of fl., or 700,000*l.*; but they are levied according to an old law, which makes them fall very unequally on the different towns and counties. Other imposts are raised from the clergy, and separate tributes are levied on the royal towns and from the towns of Zipa. The Jews pay a tax for toleration, which amounts to 160,000 fl. The profits of the monopoly of salt have, most probably, been rated far too high by the author of the *Neueste Beschreibung*, &c., whom Mr. Paget quotes. The entire produce of the mines does not exceed 1,240,000 cwt.; so that the revenue from it cannot well exceed 10 millions. If the domains be supposed to yield 1,200,000 fl., the mines and mint 1,096,000 fl., the post 500,000, although each of these items appears overrated, Austria may draw altogether from Hungary the sum of 20,100,000 fl., about 2,000,000*l.*, annually.

In the general distribution of taxes, the share that falls upon each county and upon the great towns is only decided upon. The apportionment in the former is determined at the county meetings; and the rural districts and smaller towns seek each to throw on the other, by no very honourable tactics, the greatest share of the burden. Each county and town has also its "*cassa domestica*," or local rates, and the value of property of course varies with their amount. Thus, a peasant's session in the county of Czongrad pays 14 fl. annually for all taxes; whereas in Saros, where the sessions are much smaller, each pays 20 fl. a year. Many of the royal cities, such as Pest, Debreczin, Szegedin, &c., have most extensive town-lands; which, if properly managed, ought to produce large revenues, but which, under the present municipal systems, do not defray the charges of lighting and paving. The town-lands of Szegedin exceed 10 German sq. m. in extent, and yet 4 strong horses are scarcely able to pull a carriage through the streets of the town, so much are they neglected.

With respect to indirect taxation, the king claims the right of levying customs' dues at will; and has surrounded the country with a barrier of protecting duties. Still the excise and octroi, or consumption dues, levied on the larger Austrian towns, are either unknown in Hungary, or are raised by the municipalities as town-dues, for local purposes. Salt and playing-cards are royal monopolies. Tobacco is free. Even the tithe of all minerals claimed by the crown in the other states of the empire is, as has been seen, disputed by the owners of iron and coal mines. A peculiar feature of Hungarian financial economy is the pride which the nobility feel in not being compelled to pay road and bridge tolls. The principle of this absurd exemption has, however, been abandoned in the new chain-bridge between Pest and Buda, where all classes are to pay toll indiscriminately.

The county meetings, which are the nursery of patriotism in Hungary, are of two kinds, *restorations*, and *congregations*. In the former, the county officers are elected; in the latter, accounts are passed, and the county business discussed. The number of nobles or electors is between 200,000 and 300,000; and as their qualifications are limited neither to property nor instruction, the tumultuous scenes which present themselves at elections, and on other occasions, bear a good deal of resemblance to the occurrences in England at such like meetings. The magistrates have an ingenious way of manufacturing votes for their friends. On the candidate's demand to vote, the claim, if opposed on the ground of non-qualification, is referred to the county court as a disputed point, where the magistrates generally have

influence enough to settle the matter as they wish. In this way the number of the nobles is annually increased. Whoever purchases land of the crown becomes, by so doing, a noble. At the county congregations a large amount of business consists in the making out of instructions for their representatives during the session of the diet: these are, in fact, *delegates* without any will of their own, being bound to adhere to that of their constituents, to whom they apply for directions on all doubtful and difficult questions. The county meeting may also recall a refractory member, and send another in his stead. The rights of the nobles are based on the "Aurea Bulla," granted to the armed barons by King Andreas, in 1222, in a manner similar to the Magna Charta of England. (Paget, i. 399—412.) The nobles, being mostly Magyars, it follows that the Magyar nation has been chiefly instrumental in maintaining the constitution during so many centuries.

The internal management of the cities is wholly dependent on the government, which has power to appoint and remove their officers: they are on this account a constant object of jealousy to the nobles, who consider this dependence as opposed to the principle of constitutional liberty. They reproach the citizens for their financial economy, and for allowing the majority of the inhab. to be excluded from a voice in all public business. The distribution of Hungary into counties is attributed to King Stephen, about the year 1000. The *Fo Ispan*, or lord-lieutenant, is the only officer named by the crown. The *Al Ispan*, or deputy-lieutenant, of whom there are usually two, is, however, the common president of the county meetings: he holds the supreme direction of the county police, and presides as chief judge in the county courts; being, in fact, a kind of sheriff. The small salary attached to all county offices seems rather intended to defray extra expenses, than as a remuneration.

The most important national institution, next to the county meetings, is the diet, at which the prelates and magnates formerly assembled with the deputies from the counties and the towns. Since 1562, the chambers have been divided. The chamber of magnates is composed of the prelates, with the archbishop of Gran, as primate, at their head; the "barones et comites regni," or peers of the realm, in two classes; the great officers of the crown, with the lords-lieutenant of the 52 counties; and the barons, summoned by royal letters, including every prime count and baron of 25 years of age. Mr. Paget states, that "the upper chamber has at present no power of bringing forward any measure, nor, I believe, of proposing amendments on those sent up from below; the power of veto or approval is all that is granted to it. But the most extraordinary anomaly is the undecided privileges of some of their own body. It is questioned whether the nobles deriving seats from their titles only, have an equal right to vote with those deriving their seats from their offices and estates. In consequence of this, the palatine, on some occasions, is said to have decided against the absolute majority: 'Vota non numerantur, sed ponderantur,' was declared to be the principle, and it was for him to hold the scales." The palatine is the president of the chamber of magnates. Magnates who are absent depute representatives, as do also the widows of magnates; but these deputies sit in the second chamber, where they can speak, but have no vote. The business transacted in the lower chamber is previously discussed in a kind of committee of the whole house, called a "circular session," in which strict forms are not observed, and each member speaks as often as he can get a hearing. The speeches in both chambers are now usually made in Hungarian. Among the magnates some few speak Latin; but this language has almost entirely fallen into disuse. The "personal," or president of the lower chamber, who is at the same time chief judge of the "royal table," is appointed by the crown. When the diet assembles, the *propositions* of the crown are first presented to it for consideration, and these form the great business of each session; but proposals also originate in the lower chamber, which, when agreed to by the magnates, are also sent to the king, who, if he approve them, communicates his assent by a royal "resolution." Many propositions rejected by the crown are voted anew in every diet, under the title of *Gravamina*; and their number has accumulated to such an extent as to make it expedient to make a selection of the most pressing, which are denominated *preferentialia*. Mr. Paget thus describes them:—

"They demand that Dalmatia, Transylvania, Galicia, and Lodomeria should be reincorporated with Hungary; that the military frontiers should be placed under the command of the palatine, and governed by Hungarian laws; that the duty on salt should be reduced; that the edicts of government to officers of justice should be discontinued; that the laws respecting the taxes on the clergy should be observed; that the Hungarian chancery should be made really, not merely nominally, independ-

ent of the Austrian chancery; that the coinage should bear the arms of Hungary, and that the exportation of gold and silver should be prevented; that the paper moneys should be abolished, and a return made to a metallic currency; that the Hungarian language should be used in all official business; that the fiscal estates, such as have fallen to the crown on the extinction of the families to whom they were granted, should, as the law directs, be given only as the reward of public services, and not sold, as at present, to the highest bidder; and, lastly, that spies should not be employed and trusted by the Austrian government in Austria."

The Hungarians attach great importance to their country's being recognised as an independent kingdom. The sovereign is styled "king" in all public acts, and the regalia of the crown are guarded by a special corps appointed for the purpose in the palace at Buda, whence they are only removed, and that with great ceremony, for the sovereign's use on state occasions. The grand officers of the court and household are numerous, and are termed "aulæ ministeriales." These are the grand justiciary (*index curiæ*), the ban of Croatia, the arch-treasurer (*avernicorum regalium magister*), the great cupbearer (*pincernarum reg. mag.*), the grand carver (*dapiferorum reg. mag.*), the master of the household (*agazonum reg. mag.*), the lord chamberlain (*cubiculariorum reg. mag.*), the grand porter (*janitorum reg. mag.*), the master of the ceremonies (*curiæ reg. mag.*), and the captain of the body-guard (*capitaneus nobilis turma prætorianæ*). The king is represented by his viceroy, the palatine, who resides at Buda, but the grand chancery of the kingdom has its seat at Vienna, where the government business is transacted. The exchequer is managed by the "Hofkammer," which has its seat at Buda, and under which are the collectors of taxes, the mining boards, and the directions of the crown domains.

The soldiers voted by the diet amount to 38,000 men, consisting of 15 infantry, 12 hussar regiments, and 1 regiment of artillery; but there are generally 60,000 men quartered within the kingdom. On great emergencies, every nobleman turns out as a soldier, in what is called "the insurrection." The Hungarian body-guard, to wait upon the king's person, consists of 62 young nobles presented by the counties. A course of instruction in military sciences and languages accompanies their duty at court, and the ostensible destination of the officers is to prepare a number of young men to head "the insurrection," whenever it may be necessary to call it out.

History.—The oldest inhabitants of Hungary, mentioned in history, were known to the Greeks and Romans by the name of Pannonians. Of its history during the time of the Western and Eastern empires, and the various wars and invasions which are said to have taken place between the third and tenth centuries, there is no certain information. Hungary, however, had assumed the form of an independent kingdom in the eleventh century, the sovereign power being vested in the house of Arpad, a chief of the Magyar race. This family having become extinct in 1301, the Hungarians, through the influence of Pope Boniface VIII., elected Charles of Anjou, brother of Louis IX. of France. One of his sons became king of Poland in 1370, and thus his dominions extended from the Baltic to the Adriatic. A few reigns subsequently, under Matthias I., Hungary comprised about 256,000 sq. m., the extent of the present Austrian empire. The Turks, soon after their establishment in Europe, began to assail Hungary. They were, for a lengthened period, vigorously resisted, particularly by the famous John Hunniades. In 1526, however, Louis II., king of Hungary, was totally defeated and slain by the Turks, in the battle of Mohacz, and a large part of his dominions fell into their hands. On his death, Ferdinand I. of Austria, his brother-in-law, succeeded to the throne, and was crowned king of Hungary in 1527, since which time the monarch has always been emperor of Austria: but the Turks continued for many years to hold the greater part of the kingdom. The despotic conduct of the Austrian princes was most distasteful to the Hungarian nobles; and so great was their antipathy to the Austrian yoke, that, in 1683, they rose, with Tekeli at their head, and called upon the Turks to relieve them from servitude. Austria, however, succeeded, by the help of John Sobieski and Prince Eugene, in expelling the Turks from these countries, and they were finally secured to it by the treaties of Carlowitz and Passarowitz, in 1718. Hungary has since been on amicable terms with the Austrian royal family; and it seems to have been the policy of the emperors, for many years, to concede liberal measures, though perhaps not to the extent desired by such men as Szechenyi, Bathany, Wesselenyi, and other able politicians and reformers in the Hungarian diet.

P. S. Since these paragraphs were written Hungary has been the theatre of revolution and of civil war. Some very important reforms had been effected by the Diets of 1836 and 1839; and

* The prelates are, 35 archbishops and bishops of the Rom. Cath. church, 1 Greek archbishop, 9 bishops, and 2 abbots.

others were in progress, which, had they been constitutionally followed up, would have been of great public utility. Latterly, however, revolutionary opinions and projects had begun to make their way into the Diet. The old opposition, which, though sometimes violent, was of an essentially conservative character, was gradually superseded by one animated by a far less cautious policy. The emancipation of Hungary from the dominion of the princes of the House of Austria, and the rendering of Magyar influence paramount in the Croatian and Slavonian provinces connected with Hungary, were the real and latterly the avowed objects of the new opposition. They might not, however, have been willing, or if willing they might not have been able to precipitate matters to a crisis, but for the revolution in France, in February 1848, and the revolutionary proceedings that followed soon after in Vienna. But it then appeared to the opposition leaders that the time for carrying their favourite schemes had arrived; and, after some violent preliminary measures in the Diet, they at length proceeded, on the 14th of April, 1849, formally to depose the House of Hapsburg-Lorraine.

But, though in great peril, the Austrian monarchy was not overthrown. In no very lengthened period the revolution in Vienna was suppressed; and government was able to direct a considerable force, inc. that led by the Ban of Croatia, against the insurgent Hungarians. It is doubtful, however, whether the latter might not have succeeded, had it not been for the interference of the Russians, in erecting themselves into an independent state. But Austria having applied for assistance to Russia, it was willingly rendered. And a powerful Russian army having been marched into Hungary, the insurgents were speedily compelled to give up the contest in which they had so rashly engaged.

But though the government has been re-established, it is impossible that its old forms should be again renewed. They will necessarily require to be very greatly modified. And it is believed that the Austrian cabinet will see that it is for its advantage to establish a constitution which, while it secures the tranquillity of the country, may, at the same time, provide for its progress in wealth and civilisation.

HUNGERFORD, a market town and par. of England, partly in co. Berks, hund. Kintbury Eagle, and partly in co. Wilts, hund. Kinwardstone, on the Kennet, 36 m. E. Bath, and 64 m. W. by S. London. Area of par. 6,940 acres; pop. (including the hamlets of Eddington and Sandon-lee), in 1841, 2,724. The town consists chiefly of one long street, in the centre of which is the market house, open below, and having a room above for the transaction of the town business. The church, which stands at the end of a shady avenue on the W. side of the town, is a handsome structure, erected in 1816, and near it is the grammar-school. There are also places of worship for Wesleyan Methodists and Independents. Hungerford has no manufactures; but there are some extensive breweries, and a considerable traffic arises from the circumstance of the Kennet and Avon Canal passing close to the town. It is a bor. by prescription, and is governed by a constable elected annually by the inhabs., who are called together by a brass horn, known as the "Hungerford Horn," and given by John of Gaunt with the charter. Hungerford Park, at the E. end of the town, is a finely-wooded domain, with a mansion in the Italian style, recently erected on the site of a house built by Queen Elizabeth, or the Earl of Essex. Markets on Wednesday; fairs, last Wednesday in April, Aug. 10., and Monday before Michaelmas.

HUNTINGDON, an inland co. of England, partly included within the great level of the Fens; being surrounded by the cos. of Northampton, Cambridge, and Bedford; the latter bounding it only on the S.W. Area, 238,000 acres, of which about 220,000 are said to be arable, meadow, and pasture. Surface in the W. and S. parts gently varied, but the N. and N.E. portion, included in the Fens, is almost quite flat. This latter portion of the co. is mostly in grass, the other parts being about equally divided between tillage and pasture. Chief crops, wheat, oats, and beans. Agriculture, though much improved, is not very advanced. The land is ploughed in immense ridges, by which a great deal is lost: and it is frequently also foul and out of order: turnips little cultivated. A good deal of fine cheese and butter is made. The sheep, the stock of which is estimated at about 200,000 head, produce long combing wool. Estates generally extensive: there are many large farms, but small ones predominate. Average rent

of land in 1843, 2½d. an acre. Pigeon-houses are extremely abundant. There are neither minerals nor manufactures of any importance. Principal rivers, Ouse and Nene. There are in the fens two shallow lakes, Whittlesea Mere, and Ramsey Mere; the former containing above 1,550 acres, and the latter about half as much: measures, however, are now in progress for draining the former. Huntingdonshire has 4 hundreds and 103 pars.: it sends 4 mems. to the H. of C., 2 for the co. and 2 for the bor. of Huntingdon, the principal town in the co. Registered electors for the co. in 1849-50, 2,892. In 1841, Huntingdon had 11,860 inhab. houses; and 58,549 inhabs., of whom 29,072 were males, and 29,477 females. Sum contributed for the relief of the poor, in 1846-47, 29,608*l*. Annual value of real property in 1818, 325,964*l*; do. in 1843, 401,684*l*.

HUNTINGDON, a parl. and mun. bor. and market town of England, co. Huntingdon, of which it is the cap., hund. Huntingstone, on the Ouse, 57 m. N. London, and 17 m. N.W. Cambridge. Area of parl. bor., which includes the old bor. and the adjoining par. of Godmanchester, 6,820 acres: pop. of do., in 1841, 5,500. The town, which stands on a gentle slope N. of the Ouse (crossed here by a causeway and bridge of six arches), "consists principally of a long range of respectable brick houses running from N. to S., which commence immediately from the bridge, and line each side of the N. road from London. A few streets and lanes branch off on each side; but these are mostly composed of inferior houses. It is paved and lighted with gas, and there is an appearance of general improvement and increase." (*Bowd. Rep.*) Of 15 churches once standing, only 2 remain, though there are 4 parishes. Both are built in the perpendicular style, and one of them has a beautiful pinnacled tower, and a fine W. entrance. There are 4 places of worship for dissenters, an old grammar-school, with 2 exhibitions at Cambridge, attended by 80 boys, a green-coat school for 30 boys and 12 girls, a national school with 160 children, and 3 Sunday schools. The town-hall, behind which are the shambles, is a stuccoed building, comprising 2 court-rooms, and an assembly room; and close to it is the county gaol. A small theatre and a race-course furnish occasional amusement in summer. "No manufacture is carried on in Huntingdon, nor is there any trade of importance, except in wool and grain: its prosperity, therefore, is mainly attributable to the business connected with posting, which it owes to its favourable position on the great N. road." (*Mun. Bowd. Rep.*) Godmanchester, on the opposite side of the river, which seems to have been once an important bor., is now a mere suburb of Huntingdon, chiefly inhabited by farmers and farming labourers, and having a pop. of 2,152 in 1841. Both towns were chartered in the reign of John: the present officers in each are 4 aldermen and 12 councillors; but neither of the bors., as now constituted, has a commission of the peace. The county magistrates hold petty and quarter sessions in the town-hall, the chief local act of the town being that of 25 George III. Huntingdon has sent 2 mems. to the H. of C., since the reign of Edward I., the franchise, till the passing of the Reform Act, being vested in freemen by birth, grant, or purchase. The boundaries of the present parl. bor. include the entire parish of Godmanchester, as well as the old borough. Registered electors in 1849-50, 406. Markets at Huntingdon on Saturday: Godmanchester cattle-fair on Easter Tuesday.

HUNTLEY, a bor. of barony, market town, and par. of Scotland, co. Aberdeen, on the peninsula formed by the confluence of the Deveron and Bogle, 35 m. N.W. Aberdeen. Pop. of the town and par. in 1801, 2,668; in 1841, 3,642. Pop. of the town only in 1841, 2,731. It is neatly built, consisting of two principal streets crossing each other at right angles, having a handsome square or market-place in the middle. The Deveron is crossed by an ancient bridge of a single arch. On occasion of the great floods of 1829, when the waters of the river rose 22 ft. above their usual level, only 6 ft. of the arch remained unoccupied; but it received no injury, and stands apparently as firm as ever. A modern bridge of three arches spans the Bogle. In addition to the par. church, the Episcopalians, Catholics, and Independents have each chapels. In the immediate vicinity of the town are Huntley Lodge and Huntley Castle; the former a seat of the late Duke of Gordon; the latter, which is in ruins, an ancient seat of the Gordon family: both are now the property of the Duke of Richmond, feudal superior of the town. Huntley was once celebrated for its manufacture of linen; but it has nearly disappeared. There is a thriving bleach-field on the banks of the Bogle. The business of brewing and distillation is carried on to a considerable extent in the town and neighbourhood. There are here three branch banks.

HURDWAR, HARI-DWAR, or GANGA-DWARA ("the gate of the Ganges"), a town of Hindostan, presid. Bengal, prov. Delhi, in lat. 29° 57' N., and long. 78°

2° E; 105 m. N.E. Delhi, and famous from its being one of the principal places of Hindoo pilgrimage, and the seat of the greatest fair in India. The town, which is but inconsiderable, is situated on the Ganges, at the point where that sacred stream issues from the mountains. The pilgrimage and the fair are held together, at the vernal equinox; and Europeans, nowise addicted to exaggeration, who have been repeatedly present on these occasions, estimate that from 200,000 to 300,000 strangers are then assembled in the town and its vicinity. But every twelfth year is reckoned peculiarly holy; and then it is supposed that from 1,000,000 to 1,500,000, and even 2,000,000, pilgrims and dealers are congregated together from all parts of India and the countries to the N. In 1819, which happened to be a twelfth year, when the auspicious moment for bathing in the Ganges was announced to the impatient devotees, the rush was so tremendous that no fewer than 430 persons were either trampled to death under foot, or drowned in the river! The foreigners resorting to Hurdwar fair, for commercial purposes only, consist principally of the natives of Nepaul, the Punjab, and Peshawar, with Afghans, Usbeck Tartars, &c. They import vast numbers of horses, cattle, and camels, Persian dried fruits, shawls, drugs, &c.: the returns are made in cotton, piece goods, indigo, sugar, spices, and other tropical productions. The merchants never mention the price of their goods, but conduct the bargain by touching the different joints of their fingers, to hinder the bystanders gaining any information. During the Mahratta sway, a kind of poll-tax and duties on cattle were levied; but all is now free, without impost or molestation of any sort. Owing also to the precautions adopted by the British government, the most perfect order is preserved, much to the surprise and satisfaction of the natives; for, antecedent to our occupation of the country, the fairs usually ended in disorder and bloodshed. (*Private Information; Hamilton's E. India Gazetteer.*)

HURON (LAKE), one of the five great lakes of N. America, belonging to the basin of the St. Lawrence, second in size only to Lake Superior, and intermediate in position between that lake and Michigan, on the N.W. and W., and lakes Erie and Ontario, on the S. and S.E. It is of a somewhat triangular shape, extending between lat. 43° and 46° 15' N., and long. 79° 30' and 85° W., surrounded, W. and S.W., by the Michigan territory, and on all other sides by the territory of Upper Canada; and divided into two unequal parts by a long peninsula and the Manitoulin chain of islands, the parts to the N. and E. of which are called North Channel and Georgian Bay. The total length of Lake Huron, N. to S., is rather more than 200 m., and its greatest breadth about the same. Area estimated by Darby at 19,000 sq. m. Elevation above the surface of the ocean 596 ft., or less by 45 than that of Lake Superior, and by 4 than that of Lake Michigan. (*Gordon, N. York Gaz.* p. 11.) Greatest depth towards its W. shore at least 1,000 ft., and its mean depth is estimated at 900 ft., or about 300 ft. below the level of the Atlantic. In various parts it abounds with islands, their total number being said to exceed 32,000, the largest, the Great Manitoulin (Evil Spirit) island, is nearly 90 m. long, and in one part almost 30 m. wide. Lake Huron receives the superabundant waters of Lake Superior, by the river St. Mary, at its N.W. angle, and those of Michigan at Michilimachinac; and discharges its own towards Lake Erie, by the St. Clair, at its S. extremity. Lakes Nipissing and Simcoe communicate with it by the Francis and Severn rivers, except which, however, Lake Huron receives no river worthy of mention. The banks of this lake are mostly low, especially along its S. and W. sides. Few or no towns of consequence exist on its shores, and its navigation is rendered dangerous by sudden and violent tempests. (*Darby, View of the U. States; New York Gaz.*, &c.)

HYDERABAD, a town and fortress of Hindostan, prov. Sinde, of which it is the cap., though not the largest city. It stands upon a rocky precipice upon an island formed by the Indus and the Fullalee, one of its tributaries, 48 m. N.E. Tatta; lat. 25° 22' N., long. 68° 41' E. Pop. estimated by Sir A. Burnes at 20,000. The fortress (of which there is a view in *Burnes's Bokhara*, vol. ii.) has an imposing appearance, and is considered very strong by the Sindians; but it could not oppose any effectual resistance to European troops. Its shape is an irregular pentagon; its walls, which are of brick, are about 25 ft. high, very thick at the bottom, but tapering to the top, and flanked with round towers from 300 to 400 paces apart. On one side it is enclosed by a ditch about 10 ft. wide, and 8 deep. In its centre is a massy tower unconnected with the works, in which a great portion of the treasures of Sinde are deposited. When Colonel Pottinger visited the place, about 70 pieces of cannon were mounted on the ramparts, and there were formerly 2,500 houses and several handsome mosques within the citadel; at present, Sir A. Burnes says, the fortress is a mere shell,

and its walls are going rapidly to decay. N. of it is the *pettall* or unfortified town, in which most of the inhabs. reside in mud huts: there are, however, some well supplied shops. Hyderabad has manufactories of arms of different kinds, employing about 1-5th of its inhabs.; and others of embroidered cloths, leather, &c. (*Pottinger's Beloochistan; Burnes's Sinde, and Trav. in Bokhara*, &c.)

HYDERABAD, a city of the Deccan, Hindostan, cap. of the Nizam's dom.; on the Musah, a tributary of the Krishna, 197 m. W.N.W. Mausulipatam, 270 m. S.E. Aurungabad, and 190 m. W.S.W. Bejapoor; lat. 17° 15' N., long. 78° 35' E. Pop., including its suburbs, estimated at 200,000. (*Hamilton's E. I. Gaz.* i. 683.) It is about 4 m. in length by 3 in breadth, and surrounded by a stone wall, capable of resisting the attacks of predatory cavalry, but no adequate defence against artillery. Streets narrow, crooked, and badly paved; houses mostly of one story only, and built of wood and other combustible materials. A large arched bridge, wide enough for two carriages abreast, here crosses the Musah. The chief public buildings are the palace and numerous mosques, Hyderabad having long been the stronghold of Mohammedanism in the Deccan. Within the city are also some large magazines belonging to the Nizam, filled with European manufactures. Hyderabad (then called Baunuggur) was founded by Cuttub Shah, about 1585. It was taken and plundered in 1687, by the troops of Aurungzebe. The late Nizam transferred the royal residence from Aurungabad thither, as more in the centre of his dom., and since having been the seat of gov. and the court, it has progressively increased in wealth and population.

The territory of which Hyderabad is the cap., known as the Nizam's dom., extends between the 15th and 21st degs. of N. lat. and the 75th and 82d degs. of E. long.; embracing, together with the provs. Hyderabad and Beeder, part of Bejapoor, Aurungabad, and Berar; having an area of 108,000 sq. m., with a pop. of at least 8 millions. By all accounts, this territory was very badly governed by its native princes, and insurrections were frequent. But, according to a treaty made in 1800, it was provided that the military power of Great Britain should be employed not only in the suppression of rebellion, but also in the collection of the revenue. The British bound themselves to protect the Nizam against all enemies, and to secure the lawful succession to the throne; and the Nizam engaged to receive and maintain a subsidiary British force, to abstain from all connection with other states, and to carry on no negotiations except through the British gov.; to refer to us, and to abide by our arbitration, on every occasion of dispute with any other power, and to assist us with his troops and resources on occasions of just war. (See *Crawford, Edmonstone, &c., in Parl. Report, Append. Political; Hamilton's E. I. Gazetteer.*)

HYDRA, an island of the Grecian Archipelago, off the coast of Argolis, from which it is 6 m. distant; lat. 37° 20' N., long. 23° 30' E. Area, 59 sq. m. Pop., according to Thiersch, in 1834, 20,000. It is a mere rock, so utterly barren as to contribute nothing whatever to the maintenance of its inhabitants, nor, in all probability, would it ever have been peopled, unless its insular situation and the excellence of its harbour had pointed it out as a safe place of refuge from the oppressions of the Turks, and a favourable situation for commercial pursuits. The town of Hydra, which, with the exception of two adjacent villages on the coast, is the only inhabited part of the island, is situated on the N.W. side, and rises in successive tiers, like an amphitheatre, over the harbour, presenting from the sea an extremely beautiful prospect. The streets are precipitous and uneven; but the houses are most substantially built of stone, with spacious and well-furnished interiors, and are extremely neat and clean. The harbour, defended by a battery, is crescent-shaped, and though small, is deep and safe; it is lined, through its entire sweep, with storehouses and shops, most of which, however, are now empty, only showing, by their number, the former consequence of the port. Several Greek churches (two of which have fine marble steeples) and a hall of commerce are the chief public buildings; and the educational establishments, instituted in the days of Hydra's prosperity, comprise a well-regulated college, for instruction in the classical Greek and the modern languages, several elementary schools, and a mathematical seminary. The commerce of Hydra before the war of independence was very considerable, employing, in 1816, according to Pouqueville, 120 vessels, and more at a later period, trading in wheat with Spain and Portugal, and in oil, wine, and other goods, with different ports of the Mediterranean; but it has now greatly fallen off, and in all probability will never recover its former prosperity, having been chiefly transferred to the more advantageously situated ports of Nauplia and the Piræus. The Hydriots, most of whom are Albanians, and not true Greeks, were, during their prosperity, which com-

parted to the beginning of the French war. The United States of all Greece and acquired their name by prearrangement. During the war of independence they desired the character of being the most efficient and energetic authors in the Greek navy and their territory was situated in a most degree to the commercial basis of that country. - (Hist. Press. 1844, vol. 10, p. 10)

[illegible]

L

THAMRA, a town of Siam, is a delightful place, on the Pegu river, at the foot of the eastern Sierrra, on a M B Quay, and on the high road between this city and Pagan. Lat 9° 31' N long 101° 0' E. The Pegu river is but barely estimated at 1000 ft. We found it 1200 ft well built, and has a large and well built church, across opposite a college, formerly belonging to the Jesuits, an hospital and many good private residences. Without the city are some suburbs, inhabited by the Indian people, in considerable numbers and other houses. The district of which it is the capital, produces sugar and wheat of the finest quality and a good deal of cotton the weaving of which into shawls, caps, etc. employs many of the people.

REPLACES a large vessel under the direction of De-
mark to the Atlantic Ocean on the condition of the
prime estate, generally considered as belonging to Europe.
On which stands other portions to returned to Amer-
ica, between the 60° 37' and 60° 47' N and long 10°
and 10° W. It is of a very irregular triangular shape
and is estimated to contain about 10,000 sq miles. Pop-
ulation 10,000 supposed to be spread over about two
thirds of the island, the eastern portion being nearly ex-
hausted, and imperfectly explored. Limited appears to
be its attempts to civilization recently begun, and to

1950 The general aspect of the country is the most dramatic and diverse imaginable. The heights of very few of the mountains have been correctly ascertained, and those said to attain an elevation of 7,000 feet are not the most lofty. The valleys, or depressions between mountains, are

Among the growing attractions, the most attractive of them is the Grand Valley to the E. It has behind the region which has the S.E. coast, and forms, with little or no interruption, a vast chain of low and more continuous covering a surface of perhaps 1,000 sq. m. The W. quarter contains almost entire lofty heights, the Grand Valley, 4,000 ft. high. In the E. the mountains are still very high, but in the E. the Grand Valley, 4,000 ft. in elevation, is the great valley of which may perhaps be said, more has been obtained. The celebrated volcano Huila is in the S.W. quarter and about 10 m. inland. It is very remarkable for the frequency and violence of its eruptions, but for the situation, which is only about 4,000 ft. (see above).

The bays and harbors along the coast are important and receive the little harbors or bayonnas. The most are those of Bayanna on the W., Bayanna on the E., and Bayanna on the W. coast. The rivers which are numerous and comparatively large, have usually a N. or S. course, although sufficiently wide, they are generally obstructed by rocks and shoals, and are too rapid to admit of navigation. There are several large lakes, of which Bayanna Lake to the N. E. is the most extensive. It is surrounded on three sides by low hills, and has upwards of 50 islands composed of lava. It is usually very calm, and the water is so warm as to be used, or spread over a large surface. Besides more than 50 volcanic mountains, there exists an immense number of small rocks and craters, from which streams of molten substances have been poured forth over the surrounding regions. Volcanoes were active during the last century, & to the W. and the west being nearly in a direct line along the E. coast. Young's three eruptions of them are recorded along the coast, the eruption of the island of Bayanna, the first of these occurred in 1800. The most extensive and devastating eruption ever experienced in the island happened in 1800. It proceeded from the Bayanna Volcano, a volcano of rather extensive tract having several outlets into the center of the country. This eruption did not destroy more than about 100 persons. It destroyed or burnt more than 5 villages and 5000 houses, but it was the first part of the then group of the island. On the E. and W. coasts, numerous islands have been from time to time thrown up, some of which still remain, while others have receded beneath the surface of the ocean, leaving dangerous rocks and shoals. The volcanic islands, which lie about 15 m. from the E. coast, are a group consisting almost entirely of barren volcanic rocks; only one of them is inhabited.

Tracts of low-lying land extend to the east in almost every direction. The substance chiefly serves to sustain streams, having apparently flowed from the mountains, but in some parts there are calcareous rocks, and along the E coast the soil is tinged the lower that spread over the country have been ejected from great cones rising immediately from the surface. The ground in this part is frequently broken by boulders and clumps, some of which are more than 5 m in length and upwards of 100 ft in width. Besides the common (Linn.) localised strata in other detached masses indicative of an igneous origin, of these the most prominent are tuff and calcareous lava, algalite, scoriae, &c. While specimens of tuff occur in every part, Dr. G. Harbidge observes that the fragments of tuff occupied by the two (or three) of accumulation in any rock in the island of the calcareous appearing to have been subjected to a degree of being sufficient to reduce them to tuff, and that within, if not all the lower (or middle) strata, which are not the products of extrusive eruptions, are really calcareous laves. The rocks not bearing volcanic marks of lava are mostly of trap and consist in the western of another rhomboid, granitic porphyry, &c. the calcareous duffin following calcareous sand is based chiefly on the E coast. Rhomboid calcareous sand in many parts, especially on the W coast where they form several gullies, and that of Staggan bears a great resemblance to the one of Fingoe to the island of Skath.

Two samples are sent out by train and express to be tested. The samples are sent out by train and express to be tested. The samples are sent out by train and express to be tested.

By the same remarkable phenomena of Ireland are the interesting hot springs and whys in several parts, and of all degrees of temperature. The water in some of these springs is at various seasons thrown into the air to a great height. They have thence received the name of geyers; from the Icelandic verb *geysa*, to gush. The most celebrated of these springs are situated in a plain about 16 m. N. from the village of Skatholt. The great geyser or principal fountain of this kind, rises from a hole or aperture, 70 ft. in perpendicular depth, and from 6 to 10 ft. in diameter at the bottom, the gradually ascending (iii) & terminating in a

capacious basin. After an emission, the basin and funnel are empty. The jets take place at intervals of about 6 hours; and when the water, in a violent state of ebullition, begins to rise in the pipe or funnel, and to fill the basin, subterranean noises are heard like the distant roar of cannon, the earth is slightly shaken, and the agitation increases till at length a column of water is suddenly thrown up, with vast force and loud explosions, to the height of 100 or 200 ft. After playing for a time like an artificial fountain, and giving off great clouds of vapour, the funnel is emptied, and a column of steam rushing up with great violence and a thundering noise, terminates the eruption. Such is the explosive force, that large stones thrown into the funnel are instantly ejected, and sometimes shivered into small fragments. (For an explanation of this phenomenon, see *Lyell's Geology*, ii. 309. 3d ed.) Some of the hot springs, near the inhabited parts of the island, are used for economical purposes; food is dressed over them; and in some places huts are built over small fountains, to form steam baths. In other parts of the island vast cauldrons of boiling mud are seen in a constant state of activity, sending up immense columns of dense vapour, which obscure the atmosphere a great way round.

That Iceland had formerly some extensive forests is apparent from authentic records, but they no longer exist: in fact, the climate seems to be now unsuitable for the growth of trees, those that are found at present being stunted and diminutive, and little better than underwood. Vast quantities of *surtrbrand*, or fossil wood, are frequently found buried at a great depth beneath the surface.

Of the wild animals, foxes are the most numerous. Reindeer, which were introduced from Norway in 1770, in the intention of being domesticated, have increased very rapidly; but they are entirely wild, and are very difficult to kill. Bears are frequently brought down from the arctic regions on masses of floating ice; they sometimes commit great devastations, but are generally destroyed almost immediately after making the land. Nearly all kinds of sea-fowl inhabit the coasts and islands; and plovers, curlews, snipes, and a variety of game, are found in the interior. The elder duck is very plentiful; and the down taken from the nest is an important article of export. The birds are so familiar as to build their nests all round the roofs, and even inside the huts. A severe penalty is inflicted on those who kill them. The peasantry entertain a superstitious reverence, mingled with aversion, for the seal. The coasts, rivers, and lakes produce an abundance of fine fish; and it is from the sea that the Icelanders derive great part of their subsistence. Their fisheries are prosecuted with great activity; and at Niardvík, one of the fishing stations on the E. coast of the island, there are said to be 300 boats. Cod and haddock are plentiful on the coasts: of these, as well as of the other sea-fish, part is salted for exportation, but by far the greater part is dried for winter provision. The herring fishery is much neglected, as well as the inland fishery on the lakes and rivers.

The climate is more variable than that of the same latitudes on the continent. Great and sudden changes of temperature often occur; and it has frequently happened that after a night of frost, the thermometer during the day has risen to 70° Fah. The intensity of the cold is much increased by the immense quantities of floating ice, which, being drifted from the polar regions, accumulate upon the coast. Fogs are frequent; but the air, on the whole, is reckoned wholesome. Thunder is seldom heard, but storms of wind and rain are frequent; and the *aurora borealis* and other meteors are much more common and brilliant here than in countries further to the S. The sun is visible at midnight, at the summer solstice, from the hills in the N. parts of the island. There is a prevalent opinion in Iceland, that the seasons in former ages were less unfavourable; but there is probably no good foundation for this belief. The summers are necessarily short; but Dr. Henderson states that the cold is rarely more intense than in the S. of Scandinavia, and the winter he passed in the island was as mild as any he had experienced in Denmark or Sweden.

No grain is now cultivated, though traces exist of its having been formerly raised. Agriculture is limited to the rearing of various grasses for cattle, and haymaking is consequently the most important branch of rural industry. Potatoes have been introduced with some success; and several kinds of culinary vegetables are raised, but, with the exception of red cabbage, few attain perfection. The grasses are of the sorts common in other N. climates, and keep horses and other cattle in good condition during the summer. Many of the low mountains are covered with a coarse grass, which yields pretty good summer pasturage; and the meadows and valleys through which the rivers flow produce grass in tolerable abundance, which, when the weather allows of its being harvested, is made into hay. Seaweed and moss are eagerly devoured by the cattle in winter, when

other food fails, which is often the case. In 1834 it was estimated that there were about 500,000 head of sheep; from 36,000 to 40,000 head of black cattle; and from 50,000 to 60,000 horses in Iceland: goats are kept only in the N. The number of sheep appears to be increasing; they have remarkably fine fleeces, which are not shorn, but cast off entirely in the spring. The horses are hardy and small, seldom standing more than 14 hands high. There being no carriages of any description, they are principally used for carrying burdens; and the poorest peasant has generally 4 or 5 of these animals. Rents are paid mostly in produce; on the coasts in fish, in the interior in butter, sheep, &c. Tenants who are in easy circumstances generally employ one or more labourers, who, besides board and lodging, have from 10 to 12 specie dollars a year as wages. The whole pop. is employed either in fishing or feeding cattle, or both; those who breed cattle being, as compared with those who live by fishing, nearly as 3 to 1.

No manufactures, of any kind, are carried on for the purpose of trade. Every branch of industry is domestic, and confined chiefly to articles of clothing, such as coarse cloth, gloves, mittens, stockings, &c. The peasantry supply themselves with such furniture as their cottages require, and some manufacture silver trinkets and snuff boxes, and forge implements of iron. Every man can shoe his own horse; and, in this land of primitive simplicity, even the bishop and chief justice are sometimes employed in this necessary occupation! The greater part of the trade is carried on by means of barter; the quantity of money in circulation is very small, few of the peasants possessing any. The merchants receive the articles for exportation at regulated prices, according to the state of the market, and pay for them in such foreign commodities as the inhab. may require. The peasantry of the neighbourhood assemble annually at Reikiavik and the other principal settlements, and bring down with them wool, woollen manufactured goods, butter, skins, tallow, Iceland moss (*Lichen Islandicus*), and sometimes a few cattle. In return for these they take back coffee, sugar, tobacco, snuff, a little brandy, rye, rye bread, wheaten flour, salt, soap, &c. The better class purchase linens and cotton goods, which have latterly come more into use. Those who live near the coasts bring to market dried cod and stock fish, dried salmon, whale, shark, and seal oils, seal skins, &c. The domestic produce has, of late years, been considerable, and the export of wool amounts to from 3,000 to 4,000 skipponds annually.

The Icelanders are of Norwegian origin; they are tall, have a frank open countenance, a florid complexion, and flaxen hair. They seldom attain to an advanced age, but the females generally live longer than the men. They are hospitable; devotedly attached to their native land; remarkably grave and serious; and, indeed, apparently phlegmatic, but extremely animated on subjects which interest them. They have retained, with few innovations, the ancient modes of life and the costume of their race. Their principal articles of food are fish, fresh and dried, bread, made of imported corn, great quantities of rancid butter, game, and, in some parts, a porridge made of the Icelandic moss. They sometimes use the flesh of the shark or sea-fish, when it has become tender from putrescence. Their huts, though larger, are not unlike those of the Irish: their dampness, with the darkness, filth, and stench of the fish, render them uninhabitable by strangers. The Icelandic, or original Scandinavian tongue, has been here preserved in all its ancient purity. The Icelanders are extremely attentive to their religious and domestic duties, and display in their dealings a scrupulous integrity. Perhaps there is no country in which the lower orders are so well informed. Domestic education is universal; and there are very few among them who cannot read and write, and many among the better class would be distinguished by their taste and learning in the most cultivated society of Europe. Even many of the peasantry are well versed in the classics; and the traveller is not unfrequently attended by guides who converse with him in Latin! In winter nights it is customary for a whole family to take their places in the principal apartment, where they proceed to their respective tasks, while one, selected for the purpose, reads aloud some of their *sagas* (ancient tales), or such other historical narrative as can be found. Their stock of books is not large, but they lend to each other, and frequently copy what they borrow.

The island was formerly divided into four *amts*, or provinces, answering to the four cardinal points. The N. and E. are now merged into one, and the W. is presided over by the governor in person. This officer has the title of *slifamtman*; he is sometimes a native, but more frequently a Dane. Under him are the *amtmen*, or provincial governors, who possess a similar jurisdiction over their quarters. Each province is divided into *sýssels* or shires, presided over by *sýsselmenn*, with authority similar to that of sheriffs; these collect taxes, hold petty courts, regulate assessments, &c. Under the

syndicates are everywhere, who are managers of the poor competition. As you descend, or climb justice, hills, with two mountains, a winding coast at Hotham, and very few more are tried in the island, and all capital practitioners are collected at Loughborough. (There are very few) that are distributed are the same amount, the latter has been manufactured mainly by the action of the market, which has still the same.

The latest configuration was designed by the village's clergyman and several other persons. There are about 100 persons, but the clergyman is opposed to any more. The women are very small and they are frequently doing the work of the men. The only church, his institution, is his hospital, for the reception of those afflicted with leprosy, which is the form of the disease. The hospital was formerly very prevalent, though now it is almost entirely extinct. There are no more. The work and poor living almost universally supported by their own families. The principal school is at the village, and the W. school, but there are no more. The village is the only one of the kind in the district. The principal school is at the village, and the W. school, but there are no more. The village is the only one of the kind in the district. The principal school is at the village, and the W. school, but there are no more. The village is the only one of the kind in the district.

The early and successful application of the Islanders to the cultivation of sugarcane is an interesting feature in the history of learning. When most parts of continental Europe were in a state of rude ignorance the habits of this remote island were well acquainted with industry and economy. The most flourishing part of the Island (sugarcane) appears to have been from the 15th to the end of the 18th century. During the last three centuries, however, business has produced many learned men, some of whom have done to great advantage. The literature of the Island in the present day may perhaps be said rather to have changed the character than declined from its ancient state; the inhabitants are almost all to be found members of learning than to the pastoral and domestic occupations of the ancient Islanders. Domestic education is carefully attended to, there is no want of modern books in English, and a printing press is entirely employed in the Island of Tahiti.

The discovery of Iceland by Norwegians is attributed to a Norwegian priest, about the year 1000, but the earliest permanent settlements were effected by the Norwegians in 1794. In 1795 more than half a century after the events were narrated by authors and about the year 1790 the English learned something of the existence and establishment of the colony of General Assembly of the Nation which was held annually at Thorsholm, in the S. W. and not abolished till 1825. The Icelandic continued their independence for nearly 400 years but during the 13th century became subject to Norway and on the annexation of that kingdom to Denmark, Iceland was incorporated along with it. See *U. MacDonald's Property, History & Poem on Iceland Norway & Feroe Islands, 1813 & Captain's Voyage to Iceland & Greenland, 1819. History and Geography, &c.*

(1811) A town of the Austrian empire, a Rhyta district Carinthia, above Schladming, is a valley of the Carinthian Alps 30 m N by S of Innsbruck Pop 1400, 6,163. The inhabitants are particularly engaged in mining, the greatest vein of silver belonging to the Austrian government being after those of Schemitz in Rhyta the richest and most celebrated in Europe. They raise annually from 3,000 to 4,000 rets of metal, about a sixth part of which is consumed on the spot into various manufactures and other preparations of commerce. The silver is rather more than 1000 to the ounce. The town, in which it is situated is sometimes threatened by lavas falling with the debris to which latter work the quicksilver is bound. It is also partly pure in glacial mining the stone but it is chiefly based in combination with sulphur forming calcs of chlorides in which very greatly is the same. The strata are considered to be pure to be wrought which it contains only from 1 to 16 per cent. of quicksilver and is there usually obtained in shreds of a better vein. The strata are pure from 10 to 10 per cent. of metal. From 100 to 100 workmen are employed, of whom about 100 are miners. They are married to a wife and have a regular uniform. They are divided into three sections, which receive each other like working before the 6 hours in the 11 and the work is generally going on. Within 10 to 12 hours, the labour is required to perform a certain measurement of work, for which to receive 17 shillings nearly to 10 to perform less or more than the measured weight. Its pay is proportionally reduced or increased, but the number of those who gain less than the fixed sum is greater than of those who gain more. Besides that money pay the miners get an allowance of one centime for themselves and their families, and to Vienna, gratuitous medical aid. No industry is found there, but they may produce all a government drive a number of articles of mine no.

family, of fixed charges, generally below the ordinary market price. The income usually covers the interest on 10 years of age. After 40 years interest on mortgaged houses is made them they are allowed to retire on full pay and other various privileges. The salaries and expenses of income are entitled to a pension, and about 10 per cent. are then expended generally. The process of retiring is said to be very satisfactory. One kind of the same coming from the up to the 10th. Improvements in the atmosphere with constant survey which were events all the characteristic efforts on the maintenance of the income. In some parts the land is so great and the atmosphere is stated that the workers are obliged to relieve each other every two hours. The same is easy clean, and its lower parts remarkably dry. In 1881 a violent conflagration broke out in the mine destroying the works with several of the workmen.

every produced in life a small part goes to him it is exported chiefly to America, but equal portion is sent to France, partly for of course, but principally for the use of the or citizens of Hungary and Transylvania. I hope life was certainly a place of for those prisoners and prisoners who were to work in the mines. It is an no longer, to card, and no citizens are sent thither the supply of laborers possessing to be admitted is considerably greater than can be received into the mining. The work and duties of life is a mining industry with the own possessions consisting of a diverse general, an Imperial village, that of peasants a military general, and their possessions, who experiment all the departments of the public service, under the control of life in Vienna. life has some German primary and other schools, and a small church. It had a school for the provision is doing but it was abolished in the restoration of the life mine to Austria. The aspect of the place is thus described by Fouché:— We possessed the whole church with its three simple porch on a small green field and not far from it another isolated height covered with an antique-looking park, created by the Fouchés during the time that they possessed life, and which was served as a residence for the Emperor in direction of the mine and for the government officers concerned therewith. Between them two heights, the two struggles along on very unequal ground with a stream rushing through it, a moral battle is a sort of open market place some large buildings connected with the public administration, but wherever any good thing or private house. Machinery—steam power is however unknown. The mine was discovered by accident in 1811. It was afterwards wrought by a company of Prussian merchants and purchased by the Duke of Saxe, who granted the mine considerable privileges in 1834, since which the prosperity of life has been generally on the increase. See the statistical documents of Prussia to the *Reichstag*, vol. 1, pt. 6, Fouché's *Plan* 1, 211, 212, *Reichstag*, October 1855, *Reichstag*.

[illegible]

11. (C) 100 YR. a few months ago, and pay of Reg-
ment on Government bond. The interest on the 100 of 100
shares of the same is divided: 10 to R. Thayer, and
10 to W. B. W. London. Area of land and pay 100
shares in 1881, including 10 shares in the land.

035 The town comprises 1 manufacturing establishment, and has but two public buildings. The church is remarkable for its architecture, being a national school, and structure for 4 women are the only public charities. The court house is handsome and conveniently arranged. The post built on Howard's place is large, and well regulated and capable of accommodating upwards of 25 prisoners and was lately got up but when employed as barracks for a state prison and house of correction. It is now chiefly used for criminal prisoners and contains the custody of females occupying 25 cells. *Super. Rep.* The town, which has no manufacturing, and made trade deriving its chief importance from the fact that a large portion of the county business is transacted here, the district being held at Lebanon alternately with Tazewell, Wells, and Livingston. It is distinguished, however, in a few specialized skills, and mentioned in an

the increase. Ilchester is a bor. by prescription, and sent 2 mems. to the H. of C. from the 26th of Edw. I. down to the passing of the Reform Act, when it was disfranchised: it was a mere nomination bor., in the patronage of the Duke of Cleveland. Markets on Wednesdays. Distinct traces of a Roman station, and the discovery of numerous Roman coins and antiquities, have led to the belief that this town occupies the site of the *Ischalis* of Ptolemy, the principal military station of the Romans in the West of England. It had 108 burgesses at the time of the Norman conquest. Still later, it was a place of considerable consequence, and was made, by patent of Edw. III., the assize town of Somerset.

ILDEFONSO (ST.), or LA GRANJA, a celebrated palace of the sovereigns of Spain, Old Castile, prov. Segovia, 42 m. N.N.W. Madrid, and 5 m. S.E. Segovia, on the N. declivity of the Sierra Guadarrama, built by Philip V. as a place of retirement during the hottest months of summer. "It is placed in a spot where the mountains fall back, leaving a recess sheltered from the hot air of the S. and from much of its sun, but exposed to whatever breeze may be wafted from the N.; the immediate acclivity towards the S. being occupied by the garden, which, though somewhat formal, is full of shade and coolness." (*Inglis*, i. 283.) The palace, which is of brick, plastered and painted, occupies three sides of a square, in the centre of which is the royal chapel. The principal front, looking towards the garden, is 530 ft. long, having 2 stories, with 12 rooms in a suite; the great entry, with its iron palisade, very much resembling that of Versailles. The interior is, in every thing regal: the ceilings of the apartments are painted in *fresco*, the walls decorated with noble mirrors, and the floors chequered with black and white marble, while the furniture, though somewhat antiquated, is highly enriched with jasper, verd-antique, and rare marbles. The upper rooms are adorned with the works of the first masters, chiefly of the Italian school, the lower apartments being used as a repository for sculpture. Many, however, of the best specimens once belonging to this palace, both in painting and sculpture, have been removed to the royal gallery of Madrid, which now possesses one of the richest collections in Europe. The gardens are laid out in the French style, with formal hedges and walks; and the trees, notwithstanding the labour with which the formation of these grounds was attended, are poor and starved; the chief feature, indeed, in these gardens is the quantity of fine water, disposed in a variety of ways, and especially in the formation of fountains and works. "These," says Swinburne, "surpass all that I ever saw, not excepting the finest at Versailles. The *jets d'eau* send forth a clear crystal stream, which falls around like the finest dew: the most remarkable are eight fountains, dedicated to the chief heathen deities, one of which, Fame, seated on a Pegasus, throws up from a trumpet a stream to the height of 132 ft. There are various other water-works, all adorned with statues of lead, varnished in imitation of brass; and the whole supply of water is procured from reservoirs on the hills above." (*Swinburne*, ii. 230.) The expense of constructing the garden alone, a large part of which was made by blasting out of the solid rock, must have been very great; and the entire expenditure on the palace gardens and water-works is stated by Townsend to have exceeded 6,000,000*l.* In the town, which lies at a little distance below the palace, is a manufactory of mirrors, supported by the government, which at the time when Townsend visited it, "proved a devouring monster, in a country where provisions were dear, fuel scarce, and carriage exceedingly expensive." *Inglis* says that the largest mirrors made there were 13½ ft. long, 8 ft. broad, and 6 in. deep. (*Townsend*, vol. ii.; *Dillon*, p. 85; *Inglis*, i. 281-285; *Minaffo*.)

ILFRACOMBE, a sea-port, market town, and par. of England, co. Devon, hund. Branton, on the Bristol Channel, 9 m. N. Barnstaple, 41 m. N.W. Exeter, and 172 m. W. by S. London. Area of par., 3,620 acres. Pop. (1831), 3,201. The town, consisting of one long street and a noble terrace facing the sea, extends W. from the harbour along the shore. The church, which stands at its upper end, is a large plain building containing some fine monuments: the living is attached to a prebend in Salisbury Cathedral. There are places of worship for Independents and Wesleyan Methodists, a large national school, and a girls' school of industry. The harbour is a natural basin formed by the curve of a very rocky shore, and a bold mass of rocks stretching nearly half way across the entrance of the recess shelters it from the northern storms. A battery and lighthouse stand on the top of this rocky mass, and the harbour is further defended by a pier 850 ft. in length, which has been lately put in excellent repair. There is safe anchorage for vessels of 200 tons, and ships can easily enter here when they cannot get up the Taw to Barnstaple; the consequence of which is, that Ilfracombe has taken away a great part of its coasting trade. The trade with Bristol, Swansea, and other ports in the Bristol Channel is considerable; and

many vessels are employed in the herring fishery. This port, in 1838, had 63 ships, of the burden of 3,897 tons. Oats, barley, and fish are the chief articles of export. The town, however, depends in a great measure for its support on the numerous wealthy families that resort thither in summer since it has attained celebrity as a watering-place. The bathing is excellent, and the neighbourhood abounds with romantic scenery. Steam-packets run daily to and from Bristol, and at less frequent intervals, to and from Swansea, Tenby, and Milford. The town is governed by a portreeve appointed by the lord of the manor. Markets, well supplied with fish, on Saturdays: fairs April 14., and the first Saturday after Aug. 22.

ILLE-ET-VILAINE, a marit. dep. of France, in the N.W. part of the kingdom, formerly included in the prov. of Brittany; between lat. 47° 38' and 48° 42' 30" N., and long. 1° and 2° 15' W., having W. Côtes-du-Nord and Morbihan, S. Loire Inférieure, E. Mayenne, and N. La Manche and the English Channel. Length, N. to S., about 70 m. Area, 668,697 hectares. Pop. (1836), 547,250. The Menez mountains run through this dep. from E. to W.; but they rise to no great height, and the surface elsewhere is not hilly. The chief river is the Vilaine, which has mostly a S.W. course, and falls into the Atlantic in the dép. Morbihan: the Ille is one of its affluents. The Rance, which has its mouth in this dep., is connected with the Ille by a canal, extending from Dinan to Rennes, 52 m. in length, and wide and deep enough for vessels of 70 tons. Climate temperate, but very damp; fogs are frequent, and from 36 to 38 in. rain fall annually. Soil thin, and not generally fertile. In 1834, 397,496 hectares of land were arable, and 73,349 in pasture; forests, heaths, and waste lands occupying 146,078. Agriculture is in a backward state. Throughout the greater part of the dep. the land is parcelled out into small farms, one of 30 hectares being considered large. In 1835, of 143,550 properties subject to the *contribution foncière*, 60,920 were assessed at less than 5 fr., and 26,058 between 5 and 10 fr.; the number of considerable properties is much below the average of the depts. Principal crops, rye, oats, and barley; the dep. is not so suitable for wheat; and but little maize is grown: the annual quantity of grain produced is about 3,436,000 hectolitres, which is scarcely sufficient for home consumption; and the peasantry add to their corn chestnut flour, potatoes not being in general use: 13,200 hectares are in gardens and orchards; fruit is plentiful, and some very good cider is made; but the agricultural products of the greatest importance are flax and hemp, and the linen thread of the dep. is very highly valued. Both cattle and horses are of good breeds; many oxen from this dep. are fattened in Normandy for the Paris market. Dairy husbandry occupies a good deal of attention, and the *beurre de Prevalaye*, made in the neighbourhood of Rennes, is highly esteemed throughout France. The sheep are of an inferior kind. The sole, cod, mackerel, and other fisheries on the coast are extensive; and Cancale Bay is celebrated for its oysters, with which Paris is in great part supplied. From 50 to 60 boats go annually from this dep. to the cod fishery of Newfoundland. Some copper, iron, argentiferous lead, and coal mines, and quarries of marble, granite, slate, limestone, &c. are wrought, but apparently not to any great extent. The manufactures consist chiefly of hemp and linen thread, packing and sail-cloth, cordage, flannels at Fougères, leather, &c. In the arrond. of Fougères there is a large government glass factory, partially wrought by steam, some of the products of which are equal to any made in Lyons. This dep. is divided into six arronds.; chief towns, Rennes, the cap., St. Malo, Fougères, Redon, Montfort, and Vitré. It sends 7 mems. to the ch. of dep. Number of electors (1838-9), 2,128. Total public revenue (1831), 11,116,307 fr. This dep. has produced many celebrated men, including M. de la Bourdonnaye, Maupertius, Savary, Vauban, Chateaubriand, and Broussais. (*Hugo*, art. *Ille-et-Vilaine*, &c.)

ILLINOIS, one of the U. States of America, the fourth in the Union in point of extent; between lat. 37° and 42° 30' N., and long. 87° 30' and 91° 30' W., having N. the Wisconsin territory, E. Lake Michigan and Indiana, S. Kentucky, from which it is separated by the Ohio river, and W. Missouri and the Sioux territory, the Mississippi forming the whole of its boundary on that side. Length, N. to S., 380 m.; average breadth about 155 m. Area estimated at 59,000 sq. m., 50,000 of which are supposed to be susceptible of cultivation. Pop. (1845), 643,482, since which it has rapidly increased. In the N., its surface is uneven and broken, and in parts of the S. also it is hilly; but, on the whole, next to Louisiana and Delaware, Illinois is the most level state in the Union. It consists mostly of vast undulating prairies, or rich plains, called by the settlers, "barrens," producing stunted oak, hickory, pine, and other trees. Many tracts in the S. are densely wooded, especially those lying along the rivers; and the prairies are sometimes interspersed with copees, though much more frequently studded with isolated trees at short distances.

The state is well watered; next to the Mississippi and Ohio, the chief rivers are the Illinois, its tributary, the Sangamon, the Kaskaskia, Great Wabash, and Rock River. The Illinois rises in the N.E. part of the state, and intersecting it in a S.W. direction, falls into the Mississippi, 25 m. above its junction with the Missouri, after a course of 450 m., most part of which is navigable for steam-boats. The Sangamon has a course of about 180 m., with a boat navigation of 120 or 130 m. The Kaskaskia rises in the centre of the state; runs with a S.W. course for nearly 200 m., and falls into the Mississippi 150 m. below Vandalia, to which city it is navigable. The Great Wabash belongs more properly to Indiana, but it forms the lower 2-5ths of the E. boundary of Illinois, and falls at its S. E. angle into the Ohio. The Rock River runs through the N.W. portion of the state. It has a S.W. course, like the Illinois, Kaskaskia, and other tributaries of the Mississippi, which river it enters about lat. $41^{\circ} 30'$, after a course of nearly 400 m., for about 200 of which it is navigable. The total length of the navigable rivers is estimated at 4,000 m. Small lakes are numerous, and in the N. is Winnebago Swamp, a considerable extent of marsh-land.

In the W., and probably throughout most of the central and N. parts, the geological strata succeed each other in the following order: — a vegetable mould from 8 to 20 in. in depth, clay, limestone, shale, bituminous coal, generally from 4 to 5 ft. thick, soapstone, and sandstone. Limestone appears to be a universal formation; and coal and sandstone are found almost every where. In the N.W. a mineral district, very rich in lead, &c., extends for 100 m. N. and S., by a breadth of half that distance, communicating with a tract of a similar character across the Mississippi. The smelting of lead ore on the banks of the Rock River began only in 1822, from which period to Dec., 1835, 70,420,357 lbs. of lead had been obtained in the state of Illinois and the adjacent Wisconsin territory. The produce of that metal is at present estimated at from 18,000,000 to 20,000,000 lbs. a year. After lead, — iron, copper, coal, salt, and lime are the chief mineral products. Copper and iron are found in various parts; and, in 1837, 200,000 lbs. of the first were raised from the mines on the Pekatonica, a tributary of Rock River. The salt springs near Shawneetown yield 60 lbs. of table salt from 160 galls. of water. Other salt springs, and sulphureous and chalybeate mineral waters, are found in many places. The climate is healthy, except in the marshy tracts along the rivers or elsewhere. The winter is, in most parts, short and mild; and the summer heat not oppressive. Probably no portion of the territory has a mean annual temperature of more than 54° Fahr.; and the mean of the state at large is not above 51° .

This state is supposed to possess a larger proportion of first-rate cultivable land than any other in the Union. All the grains, fruits, and roots of temperate regions grow luxuriantly; and in none of the W. states is corn raised with greater facility and in more abundance. Wheat yields a good and sure crop, especially on the banks of the Illinois and in the N. It weighs upwards of 60 lbs. a bushel, and is preferred in the markets of New Orleans to the wheat of Ohio and Kentucky. Indian corn is a great staple, and hundreds of farmers grow nothing else. Its average yield is 50 bushels an acre, and sometimes the produce amounts to 75 or even 100 bushels. Oats, barley, buckwheat, common and sweet potatoes, turnips, rye for horsefeed and distilleries, tobacco, cotton, hemp, flax, the castor bean, and all other crops common in the middle states are raised. Hemp is indigenous in the S., and succeeds well every where. Tobacco is good; and cotton is grown both for exportation and home use. Fruits of various kinds are very abundant, and the climate of the S. is favourable to the growth of the vine. Great numbers of cattle are reared in the prairies, and hogs in the woods. Sheep generally thrive well; but little has been done to improve the breed by crossing. Poultry are abundant, as are also bees, and the silkworm succeeds well. Deer roam the prairies in large herds. In the Military Bounty tract, in the N.W., large tracts of land of the best quality may be had at the government price of $1\frac{1}{2}$ dollar an acre. This tract was, at a former period, mostly appropriated, by the general gov., in grants to the soldiers who served in the war against Great Britain; but a great part of it has again come into the possession of the gov., having been resumed for arrears of taxes, or disposed of by those to whom it had been granted. All lands in this state purchased of the general gov. are exempted from taxation for five years after purchase. The great fertility of the soil in Illinois, in common with the adjoining part of Missouri, has attracted thither so many emigrants of late that the pop. of this state was supposed in 1847 to have reached 700,000, and in the present year (1840) it has been estimated at nearly a million. (*American Almanack*.)

Many large and flourishing settlements have been formed in its W. part since the introduction of steam navigation on the Mississippi; these, however, are almost

exclusively agricultural. Manufactures are yet few, and principally domestic; though there are some of cotton fabrics and yarn, woollen cloth, &c. In 1838, the state possessed 916 mills of different kinds, many impelled by steam, and 142 distilleries. In every town and county artisans in all the trades of prime necessity are to be met with; and boat-building is carried on to some extent on the Mississippi. Grain, cattle, butter, cheese, and other agricultural products form the chief articles of export; and sugar, tea, coffee, wines, woollen cloths, and other manufactured goods are the chief imports. The external trade is carried on principally through New Orleans, to which emporium the articles of export are forwarded by the Mississippi, the imports being also received by the same channel. Illinois presents great facilities for a most extensive system of inland navigation; and various plans for improving the means of communication are now in progress of execution. The government has not been backward in endeavouring to further this object; and has granted 300,000 acres of land for the construction of a canal to unite Lake Michigan with the head of the steam navigation on the Illinois. This canal, which was begun in 1830, is to reach from Chicago to the town of Peru, a distance of 95 m. Several sums of money have been also appropriated by the government for the improvement of the river navigation. Three railroads have been commenced by private companies, many more being projected at the charge of the state. The *American Almanack* for 1840 reports that, in the preceding year, more than 1,300 m. of railroads, and 100 m. of canals, were in process of formation.

Illinois is divided into 70 coes., in 60 of which courts are held. Vandalia, on the Kaskaskia, was the cap. till, in 1837, the seat of government was removed to Springfield, near the centre of the state. Jacksonville, Chicago, Kaskaskia, and Albion are the other chief towns. The legislative part of the government is vested in a senate, composed, in 1836, of 40 mems. chosen for 4 years; and a house of representatives, having in the same year 93 mems. All white male inhabs. above the age of 21, having resided in the state for 6 months, are privileged to become electors. Elections for representatives and the sessions of the legislature are held biennially. The executive duties are discharged by a governor and a lieutenant-governor, chosen by universal suffrage every 4 years. The high judicial functions are exercised by a supreme court composed of a chief justice and three inferior judges. The governor and judges of the supreme court constitute a council of revision, to which all bills that have passed the assembly must be submitted. If objected to by the council of revision, the same may, notwithstanding, become law by the vote of the majority of all the members elected to both houses. Slavery does not exist, having been prohibited by the constitution of 1818. This state had, in 1837, 4 banks of its own, and 6 branch banks, with a united capital of 2,800,000 doll. A 26th part of every township of land, and a tax on some reserved lands belonging to the U. S. government, have been appropriated for public instruction, the funds and claims on account of which amounted, in 1837, to about 3,000,000 doll. A college, founded at Jacksonville, occupies two extensive buildings, and is usually attended by about 65 students; and many other lyceums and seminaries are established in different parts of the state. In 1839, 33 periodical publications were issued in Illinois. The prevailing religious creed is the Methodist Episcopal.

During most part of the 18th century the name of Illinois was applied to all the country N. and W. of the Ohio. The territory comprised in the present state was discovered in 1670 by a party of French colonists, who made their first permanent settlements at Kaskaskia and Cahokia in 1673. This tract of country was ceded by the French to the English at the same time with Canada, in 1763, and by Virginia to the U. States in 1787. It was admitted, as a state into the Union in 1818; and sends 3 delegates to congress. (*Illinois in 1837*; *Mitchell's U. States*; *Stuart's Three Years in America*, ii. 334—402; *Hoffman*; *A Winter in the Far West*, i. 294—301; *Darby*; *American Almanack*, 1837-8-9-40, &c.)

ILLYRIA (KINGDOM OF), a portion of the Austrian empire, comprising the provs. of Carinthia, Carniola, and Istria, the islands of the Gulph of Quarnero, and the Illyrian Littorale. It lies between lat. $44^{\circ} 25'$ and $47^{\circ} 7'$ N., and long. $13^{\circ} 14'$ and 16° E., having N., Austria and Styria; E., the latter prov. and Croatia; W., the Tyrol and Italy; and S., the Adriatic Sea. It is divided into the govts. of Laybach and Trieste.

The divisions, with their extent and pop., are as follow: — [See top of next page.]

Its N. part is covered by the central chain of the Alps, and likewise by various offshoots, constituting the southern limestone girdle of the Alpine system. The S. portion of the kingdom, comprising the gov. of Trieste, occupies the S. slope of this mountain-range towards the Adriatic. The main chain at the Gross Glockner (14,000 ft. high) takes the name of the Noric Alps, stretching its lo^g

Circles.	Area in sq. m.	Towns.	Villages.	Pop.	Chief Towns.

peaks, here called *Tauern*, as far as the Ankogel, 10,131 ft. high. All this region contains extensive ice fields and glaciers. At the Ankogel the Noric Alps, taking a N.E. course, enter Styria; but a branch bounds the vale of the Drave on the N., and that of the Lavant on the E., separating their waters from those of the Mur. The Carnic Alps form the S. boundary of the valley of the Drave, dividing it from that of the Save. Various summits in this chain are from 6,600 to 8,000 ft. high; and over one of them, the Loibell, the emperor Charles VI. constructed the road connecting the Drave and the Save valleys: its summit-level is 5,477 ft. above the sea. At Mount Terlgrou, the Julian Alps break off, running S.E. towards the Adriatic and Dalmatia; E. of Idria they decline in height, forming an elevated plateau, remarkable for drought and sterility, owing to the porous nature of its constituent limestone. Besides the pass over the Loibell, various others connect the fruitful valleys of this romantic country, the most remarkable being the Katscher, 5,230 ft. high, between the Drave and the Lungau; the Wurzen, 3,100 ft., and the Pass of Tarvis 2,800 ft., leading from the valley of the Drave to that of the Tagliamento. The valleys of the Gail (an. *Vallis Julia*), the Lavant, and Jaun (*Vallis Junonis*), in Carinthia, and of the Save and Wocheln in Carniola, offer all the varieties of Alpine beauty, while in the S. those of the Isonzo and Wippach, especially the former, present a picture of the richest Italian cultivation. The only level tracts of any considerable extent lie S. of the Julian Alps towards the Adriatic, and in the Istrian peninsula.

The Carnic and Julian Alps are perforated by very numerous subterraneous cavities, which, by draining the surface of water, condemn whole districts to a melancholy sterility. Several of these caverns are celebrated for their great size and curious natural phenomena, as the Cave of Adelsberg in Carniola, the neighbouring Magdalen cavern, in which the "*Proteus Anguinus*" is found, &c. Through several of these the mountain torrents find subterraneous channels, to the great detriment of agricultural prosperity. (See ADELSBERG.)

The N. portion of Illyria is well watered. The Drau or Drave, rising in Tyrol, traverses Carinthia in all its length, and receives tributaries from both the N. and S. mountain barriers of that province. It is navigable from near Klagenfurt to its mouth in the Danube. The river second in importance is the Sau, or Save, which traverses Carniola with an E. course parallel to that of the Drave. The banks of the Upper Save are mostly level; but the mountains close in on the river near Reichenberg. It is navigable from near Laybach; and receives various affluents, both in Carniola and Croatia. The rivers falling on the S. side of the Alps to the Adriatic, are the Isonzo, Ausa, and Timavo. The Isonzo, traversing the beautiful vale of Friaul, and taking near its mouth the name of Sdoba, falls into the sea near Monfalcone. The Ausa falls into the sea near Buzo; and the Timavo (*Timavus*), with a course of scarcely more than 1,500 yards, is navigable up to its source. Istria is very scantily watered: the Quileto, its principal stream, falls into the sea near Cittanuova, and, as well as the Arsa on the E. side of the peninsula, is navigable for some miles of its course.

There are several lakes in the N., but none of any great extent. The Lake of Klagenfurth, 11 m. long, is united with the neighbouring city by a canal. At a short distance from it is the Osslach lake, 7 m. long, and connected with the Drave by the Laybach. Further N.W. lies the Muhlatdt lake, 10 m. in length and 1 m. broad, with very picturesque banks. The Weissensee, the Feldeser-see, (an. *Lacus Auracius*), and, lastly, the remarkable Zirknitz-see, are of smaller extent. The lake of Zirknitz has 2 islands, and receives its waters through subterraneous channels. During the spring, and the autumnal rains, it presents a sheet of water 4 m. long, and 1 m. broad; but in summer the waters recede, and leave a dry fertile surface, either used for hay, meadows, or raising summer corn. The openings by which the water rises and retires are then visible, and various names have been given them by the peasantry; such as *Kottur* (the kettle), *Betschek* (the cask), *Reitie* (the corn sieve), *Rescheto* (the great sieve), *Sittazza* (the hair sieve), &c. When the lake is full, it has an abundance of fish, which disappear and return with the water. In Istria

there is only one lake, that of Zeppitsch, near Chersano. The climate of Carinthia is most inclement. The mean temp. of the year at Klagenfurth is estimated by Blumenbach at 7° Réaum.; while, at Obervillach, the mean is 6°. The snow lies in the lower parts of the valley of the Drave till the middle or end of April; but in the valley of the Save, the climate is much milder. At Laybach, the temperature of the year is 8.7 Réaum. The temperature of the government of Trieste presents a great contrast to that of the mountain districts. In the valley of the Isonzo, as well as in Istria, the olive, vines, and other productions of a southern climate, are largely cultivated.

Occupations of the People.—Agriculture.—Illyria has two distinct agricultural systems; that of the N. government, which is Alpine, and that of the S. districts, which are cultivated in the Italian fashion. The mountainous districts of Carinthia, situated in a cold and damp climate, and having a short summer, are tilled with difficulty. Rye and summer corn are the most usual crops; and the three-course system, according to which 1-3d part of the land is in fallow, is generally prevalent. The corn, in order to dry thoroughly, requires to be hung up on poles or railings, of a peculiar construction; and these erections (called *Harsen*, Germ., and *Stog* or *Kosow*, Slav.) are often covered with a roof like that of a house. The most productive corn region is the valley of the Lavant, and the district of Krappfeld. In the higher parts of the valley of the Drave, near Gottschee, the climate is so severe as not to allow of winter crops. Carniola, on the other hand, especially the valley of the Save, and the circle of Idria, has a warm climate, and is highly cultivated. Excellent wheat and maize, especially the "conquantino," are grown to a great extent; and there is a judicious rotation of crops. Blumenbach states that the usual succession of crops on good farms is:—First year (with manure) maize, potatoes, flax, or millet; 2d year, wheat or barley; 3d year, oats; 4th and 5th years, clover. The ground is broken up both with the plough, and by hacking. The quantity of land under cultivation, and its produce in 1837, in the gov. of Laybach, are thus stated. (*Official returns.*)

Distribution of Surface.	English Acres.	Produce.
Arable land	668,490	Wheat - 88,320 imp. qu. Maize - 187,640 — — Oats - 352,400 — — Barley - 120,000 — —
Vineyards	23,540	Wine - 8,050,000 gallons.
Forests	2,140,520	Timber - 1,132,606 cub. toises.
Meadows and gardens	779,760	
Commons	1,069,390	

The S. part of Illyria differs essentially both in its productions and cultivation from the N. As soon as the traveller enters the valley of the Isonzo, the most charming landscape is presented to his view. The fields are in the highest state of cultivation, and being covered with rows of mulberries, or with elms and poplars, around which the vines cluster, the country bears an aspect of profuse fertility, superior even to that of central Italy. The mode of irrigation pursued in Lombardy, however, is not practised in Friaul; and on advancing E., good husbandry is found to diminish. In Istria, which has a climate as well calculated as the Milanese territory for raising oranges and lemons, if they were covered during the winter, the farming system is execrable. Olives and sumach afford the principal crops both to the landowner and his *coloni*. The *métayer* system of farming for half the produce of the land, prevails likewise in this part of the empire. In this government the cultivated land and its produce were, in 1837, as follows:—

Distribution of Surface.	English Acres.	Produce.
Arable land	334,133	Wheat - 73,970 imp. qu. Maize - 127,040 — — Barley and Rye - 91,520 — — Oats - 22,500 — —
Vineyards	36,384	Wine - 18,000,000 gallons.
Olive grounds	11,526	Olive oil - 261,840 — —
Forests	444,144	Timber - 264,040 cub. toises.
Meadows	228,226	
Commons	739,212	

From these statements, it appears that the grain produced in Illyria is insufficient for its consumption: in the district of the "Litorale" wood for fuel and building must be procured from other districts.

Good flax is grown in all the valleys, and hemp chiefly in Friaul. Fruits of all kinds, especially chestnuts (*maroni*) and figs, are abundant in the coast district. The best wines are those of Monfalcone and the Prosecco, grown near Trieste; but very little wine is exported. The oil of Istria is considered equal to that of Provence. The stones and refuse of the olive are used for fuel, and are even exported to Ancona. The olive is also extensively cultivated in the Quarnero islands, especially Veglia and Cherso.

Cheese is a considerable article of farming produce, and a good deal is exported. Silk is an increasing product. The two spinning establishments at Farra furnished, in 1832, 11,891 lbs. of raw silk. The silk produced in Istria during the same year amounted to 4,500 lbs.; but till 1837 this article was not included in the land-tax returns of the province.

The chief wild animals of the northern districts are the chamois, red deer, and roebuck, and less frequently the wolf, bear, and small lynx. In the S. provs. the ortolan and the common partridge, quails, water-fowls, and birds of passage are common. The fishery in the Gulph of Quarnero, and in the channels between the islands, furnishes an abundance of fish peculiar to those waters.

Mines.—The chief wealth of Illyria consists in the rich metallic veins found in its mountains. The N. mountain chain separating Carinthia from Styria consists of transition formations, overlying mica slate, which composes the great spine of the Noric Alps, and contains vast quantities of a very superior iron ore. This chain opens S. into several valleys, sending tributaries to the Drave; and in these secluded districts the various mining operations are carried on, favoured by the water-power afforded by the mountain-torrents. In the valleys in the Liezer, Gurk, Olsa, Metnitz, and Lavant, iron is the chief product. The mountains near Huttenberg are rivalled in productiveness only by the most prolific of the Swedish veins. The ore is chiefly the carbonate of iron. The usefulness of these mines to the country is much impeded by the interference of the government with the industrial occupations of its subjects. In fact,

the limitations on the export of iron, and the vexatious hindrances to enterprise, are such as to cramp all speculation; and the quantity annually produced corresponds neither with the wealth of the mines nor with the wants of the empire. In Carniola the same description of ore is found, near Feistritz, in the valley of Woechein; at Sava and Jauerburg, in the valley of the Save; and in Lower Carniola, near Hof. There are rich mines of lead at Bleiberg, in Carinthia, and of quicksilver at Idria. The latter are situated in the E. portion of the Julian Alps, on the right bank of the Isosno. The ore is found in a schistose rock, breaking through the predominant limestone of that chain; and as the veins get deeper, they are said to become richer. Blasting is the usual method employed for obtaining the ore; and the workmen, on account of the depth and consequent heat of the mines, work by relays of eight hours each gang. The lowest point in the mine is 300 ft. below the bed of the adjacent Idritza. The following is the return of the produce of the mines of Illyria for the year 1837:—

Gold and silver	-	-	3 marks	} value L.300,000.
Lead	-	-	54,487 cwt.	
Iron	-	-	391,323 —	
Coal	-	-	92,653 —	
Alum and graphite	-	-	120 —	} value L.75,000.
Quicksilver (from Idria)	-	-	3,326 —	

The other occupations of the people, though less important, exhibit an annual increase. The following table shows the increase in the number of registered manufacturers and traders between 1829 and 1837:—

Districts.	Manufactories.		Comm. Establishments.		Trades.		Special Occupations.	
	1829.	1837.	1829.	1837.	1829.	1837.	1829.	1837.
Carinthia and Carniola -	149	221	265	326	24,564	25,665	798	707
Gov. of Trieste, excl. of capital -	22	48	164	190	6,218	6,800	797	957
	171	269	419	516	30,772	32,465	1,595	1,660
Total, in 1829 -	-	-	35,257	Ditto, in 1837 -		-	-	34,910

Most of the manufacturers in the above table are employed in converting the metals into hardware, &c. There is no return of the commercial establishments in Trieste, inasmuch as that city is not included in the tax registers of the kingdom, its taxes being commuted for a payment of 60,000 florins annually. Flax-spinning and linen-weaving are the common and supplementary employments of the peasantry during their leisure from tillage labour, and the quantity annually produced for home consumption and exportation is considerable. Common woollen fabrics are likewise manufactured for home consumption; and fine cloths are made at Klagenfurth. There are 21 glasshouses, but only 2 cotton factories in Illyria.

In the trade returns of Illyria, Trieste, being a free port, is usually excluded. Its exports are chiefly metals and timber. The inhabitants of the district of Gottschee are almost all pedlars, who travel through foreign countries with their wares. The trade of Carinthia, Carniola, and the Illyrian coast, exclusive of Trieste, according to the official report for 1837, was as follows:—

Imports	-	-	7,304,367 florins.
Exports	-	-	7,197,595 do.

The amount of the trade of Trieste with the rest of the empire during the same year was:—

Imports	-	-	31,281,533 florins.
Exports	-	-	12,712,882 do.

The exportation of metals is chiefly confined to the other provinces of the empire, Germany and Italy. Formerly a considerable export trade was carried on with England; but it has almost ceased since the interruption occasioned by the continental blockade, and the increased production of iron in England. The present customs-regulations, which prohibit by extravagant duties the exportation of raw steel, have also been most prejudicial to the iron trade of Illyria. The shipping lists, in 1837, gave the following report:—

Port.	Vessels.	No.	Tons.	Crews.
Trieste	Ships	376	70,889	4,591
	Coasters	172	6,930	918
	Barks	221	2,110	692
Rovigno	Coasters	377	8,982	1,674
	Barks	181	1,540	670
Total	-	1,327	90,451	8,545

Since 1837, great activity has prevailed in the shipping interest, chiefly owing to the exertions of a joint-stock company, named "The Austrian Lloyd's," which has 10 steam-boats running between Trieste and the harbours of Dalmatia, and the Levant. The Illyrian coast has many excellent harbours, few of which, however, are

made available for purposes of commerce. Istria abounds with ports, many large enough to shelter whole fleets, the principal of which are, Capo d' Istria, Pirano (Porto Rose), Quileto, Pola, Parenzo, Rovigno, &c., but these are now only frequented by the barks conveying salt, wine, oil, gall nuts, charcoal, bark, and other productions of the peninsula to Trieste and Venice. There are likewise some tolerable harbours in the Quarnero Islands, among which the Port of Lussin Piccolo is, perhaps, the most capacious.

The roads of Illyria are as good as in most parts of the Austrian empire. The valleys of the Drave and Save are used for communication between Tyrol and Salzburg, and Carinthia and Carniola. Two main lines of road lead from the capital to Trieste, one by Klagenfurth and Goritz, the other by Laybach. From Goritz the former has a branch to Venice and other parts of Italy, while the latter is connected by roads following the vales of the Save and Drave, with Hungary and the military frontier provs. The internal navigation is limited to rafts on the Save and Drave, by means of which rivers and their tributaries, much timber is floated down from the forests to the Danube.

Population.—The pop. of Illyria, in the course of 20 years, has increased in Carinthia and Carniola at the rate of 17·4 per cent., and in the Litorale at 30·3 per cent.

The inhab. (with the exception of the German settlers and of the Italians who have immigrated into the southern circles) are of Slavonian origin, and the vernacular language of Carniola, which is used as a written dialect, is one of the purest of the Slavonic idioms. Carniola is divided into Upper and Lower, the seats of the *Gorenzi Krainzi* and the *Dolenzi Krainzi*; the former of which are the mountaineers of the Julian Alps, the latter the inhab. of the valley of the Save. The *Viparzi*, in the valley of the Wippach; the *Kraschovzi*, on the Karst; the *Piuzchene*, in the Poik valley; and the *Zoitze*, are perhaps only local names. The general denomination for the Illyrian Slavonians is "Windi or Wenden" (*Venedi*). The inhab. of Friaul call themselves "*Fur. lani*:" the peninsula is occupied by the "*Istriani*," and the Quarnero islands by "*Liburnzi*." Nearly one million of the inhab. are Slavonians.

The condition of the Illyrian pop., though certainly improving, is by no means prosperous. Like so many of the Slavonian inhab. of the empire, they speak a language which has not for centuries been the vehicle of intellectual improvement, and from an early period they were governed by tyrants, who availed themselves of their feudal rights, to the injury of the people, without conferring on them any of the advantages incidental to that system. In fact, the Illyrians had no national existence till the time of Napoleon. The ephemeral kingdom of Illyria which he established infused a spirit into all classes,

which awakened them from the lethargy of ages. Much still remains to be done towards ameliorating the condition of the peasant, yet the change in his condition for the better within the present century is very great. The mountaineers of Carinthia and Upper Carniola are the poorest and worst fed of the inhab. Amongst them, "cretins," or idiots, are of frequent occurrence, and are recommended to their neighbours' charity by the superstitious notion that their presence in a family indicates good fortune. *Gottre* is common amongst the mountaineers, and the mortality is so great as scarcely to admit of any increase in the pop. The inhab. of the valleys, especially those living near the Save, are in a better condition, and in the district of Goritz enjoy a considerable degree of prosperity. Istria, with all its natural advantages, is worse cultivated, and less civilised, than the rest of Illyria. The dress of the mountaineers resembles that of the peasant of Tyrol and Salzburg. The women wear peaked, bread-brimmed hats; and in Carinthia, instead of stays they wear a red girdle, sewn to the linen tunic or shift, which is seen between the upper part and skirts of the gown worn over it. Formerly the men of the Gall valley wore a gay dress of motley colours, from which the costume of Harlequin in the Italian comedy is said to be derived; indeed, many of the figures in pantomimes are believed to have been originally caricatures of the Illyrian peasantry.

The institutions for education have greatly improved within the present century, and consisted, in 1837, of 3 lycea, or colleges, with 431 students; 7 gymnasia, or grammar-schools, with 1,074 scholars; and 476 elementary schools for both sexes, attended by 38,254 children, or about one fourth of those who, from the statistical returns, were of a legal age to frequent the schools: 479 Sunday and repetition schools are attended by 19,648 young persons of both sexes. The criminal returns for the same year do not exhibit a greater proportion of crime to pop. than in the other provinces of the empire. Murder, and crimes of violence, however, are frequent; for of 691 criminal investigations, 85 were cases of murder and manslaughter, 44 of stabbing, 12 of arson, and 34 of riot and outrageous conduct; making a total of 175 offences against the person. Illyria has three penitentiaries: one at Laybach, for Carinthia and Carniola; one at Capo d' Istria; and one at Gradiska; containing altogether 472 prisoners, of whom 20 were sentenced for less than 1 year, 397 for less than 10 years, 171 between 10 and 20 years, and 4 for life, and 33 were in the gaols of the various criminal courts.

The prevailing religion is Rom. Cath. in both governments; but in Carinthia there are 17,500 Lutherans, chiefly in the circle of Villach, and about 400 communicants of the Greek church. In the gov. of Trieste there are about 1,650 persons of the united Greek confession, 800 Protestants, and 3,000 Jews.

The Rom. Caths. are under 5 bishops: those of Goritz, Laybach, Trieste, Gurk, and Lavant; the last two of which are suffragans of the archbishop of Salzburg. There are 37 monasteries and convents in the kingdom, tenanted by 321 monks and 207 nuns; the number of the secular catholic clergy is 2,431, performing the pastoral duties of 987 parishes. The administration of this province is the same with that of the other German and Slavonic provinces of the empire. The cities of Laybach and Trieste are the seats of the respective governments; but the general court of appeals for civil and criminal cases throughout the kingdom is held at Klagenfurth, where also is the mining court for Illyria. The city of Trieste has besides its prætor's court, a sanatory commission, with two lazarettos in the harbour, and numerous deputations at various places along the coast. (For further particulars, see CARINTHIA.)

ILMINSTER, a market town and par. of England, co. Somerset, hund. Abdick and Bulstone, on the Ivel, 10 m. S.E. Taunton, 4 m. S. by W. Bath, and 127 m. W. by S. London. Area of par., 4,390 acres; pop., in 1811, 3,227. The town comprises two streets, intersecting each other at right angles, one of which is nearly a mile long: the houses are irregularly built, some being of stone or brick, and the greater part merely thatched. The church, formerly conventual, is cruciform, in the decorated Gothic style, and has a square embattled and pinnacled tower. There are also places of worship for Wesleyan Methodists and Independents, to which, as well as to the church, are attached well-frequented Sunday schools. A free grammar-school was founded in 1550, and endowed with considerable estates; there is also an hospital for the maintenance of clergymen's widows. Ilminster was formerly an important woollen clothing town; but its industry is now confined to the weaving of narrow cloths, and is of little importance. Lace-net mills have been recently established, and give employment to several hands. Petty sessions are held in the market-house. Markets on Saturday: fairs for horses, live-stock, cheese, &c., the last Wednesday in August.

IMOLA (an. *Forum Cornelii*), a town of N. Italy,

Papal States, legat. Ravenna; on the Santerno and the Emilian way, 18 m. N.W. Forlì, and 20 m. S.E. Bologna. Pop. about 9,000. It is a town of some consideration; being a bishop's see, surrounded by ancient walls and ditches, and further defended by an old castle. It is tolerably well built, and has a cathedral and 15 other churches, numerous convents, a hospital, theatre, college, and a literary academy, of some celebrity, termed *de' Industriosi*, which has included among its members several distinguished individuals. It has manufactures of cream of tartar, called *tartaro de Bologna*, &c., and some trade in agricultural produce.

INDIA (BRITISH), a very extensive empire, chiefly situated in the central portion of S. Asia, comprising the greater part of the peninsula of Hindostan, or India within the Ganges, with the island of Ceylon, the provs. of Assam, Cachar, Jynteah, Aracan, Martaban, Tavoy, Ye, and Mergui, in India beyond the Ganges, acquired from the Birmanese in 1826; Prince of Wales's Island (Pulo Penang), Malacca, Singapore, &c., or the straits' settlements, situated on, or adjacent to, the Malay peninsula. These vast dominions lie between lat. 1° 20' and 31° 15' N., and long. 71° 45' and 140° E.; their principal boundaries being, N.W. the Indian Desert; N. the Himalaya, which, in the upper provs. of Agra and in Assam, separates them from the Chinese empire, Nepaul, and Bootan; E. the Birman empire and Siam, and S. and W. the Indian Ocean, the Bay of Bengal, and the Arabian Sea. The area and pop. of the principal divisions of British India have been estimated as follows:—

Divisions.	Area in sq. m.	Pop.
<i>In Hindostan:—</i>		
Presidencies of Bengal and Agra	455,000	74,000,000
Presidency of Madras	130,400	15,000,000
Presidency of Bombay	130,000	8,000,000
Island of Ceylon	24,450	1,500,000
<i>In India beyond the Ganges:—</i>		
(a) Provs. conquered from the Birmanese (under the Bengal presid.):—		
Assam	18,200	602,500
Jynteah	10,350	270,000
Cachar		70,000
Aracan	16,250	230,000
Tenasserim coast { Martaban		
Tavoy and Ye	22,500	85,000?
Mergui and Archipelago		
(b) Straits' Settlements:—		
Penang, or Prince of Wales's Island, and prev. Wellesley	1,570	200,000
Malacca		
Singapore		
Total	818,720	99,957,500

To the foregoing territories, under the immediate rule of the British, there may be added the tributary states of Berar, Oude, Mysore, Travancore, Cochin, Sattarah, the dom. of the Nizam, of the Rajpoot and Bundelcund chiefs, &c., which are substantially administered by British rulers, and are either entirely or in part surrounded by British territories, are estimated altogether to comprise about 433,000 sq. m., and a pop. of about 41,000,000.

The physical geography, products, inhabs., industry, &c. of the several divisions, provinces, and districts of British India, will be found treated of under the head HINDOSTAN, and in separate articles appropriated to each. The present article will, therefore, be principally occupied with those topics, such as the general government, the judicial and revenue systems, army, commerce, &c. of British India, that could not be conveniently introduced under any other head.

Government.—Previously to 1773, the government of that part of India that then belonged to the British was vested in the E. India Company. The body of proprietors of E. India stock, assembled in general court, elected 24 directors, to whom the executive power was entrusted, the body of proprietors reserving exclusively to themselves all legislative authority. A vote in the court of proprietors was acquired by the holders of 500*l.* of the company's stock; but to be a director, it was necessary to hold 2,000*l.* stock. The directors, with their chairman and deputy chairman, were chosen annually, and subsequently subdivided themselves, for despatch of business, into 10 separate committees. As early as 1707, the three principal presidencies into which British India is divided—those of Bombay, Madras, and Calcutta, were in existence. Each was governed by a president or governor, and a council of from 9 to 12 members, appointed by commission of the company. All power was lodged in the president and council jointly, every question that came before them being decided by a majority of votes. In 1726, a charter was granted, by which the company were permitted to establish a mayor's court at each of the presidencies, consisting of a mayor and nine aldermen, empowered to decide in civil cases of all descriptions, with an appeal from their jurisdiction to the president and council. The latter were also vested with

the power of holding courts of quarter sessions, for the exercise of penal judicature, in all cases excepting those of high treason, as well as a court of requests, for the decision, by summary procedure, of pecuniary questions of inconsiderable amount. Added to this, the powers of justices of the peace were granted to the members of the council, and to them only, the president being, at the same time, commander-in-chief of all the military force stationed within his presidency. It will thus be readily seen that the officers of the company were recognised as the judges in their own cause in all cases; and that, notwithstanding the establishment of the mayors' courts, they still held all the judicial as well as the executive functions, both civil and military, in their own hands. An individual who became a member of the council was not debarred from subordinate functions; and from this circumstance especially it might have been expected that abuses would prevail; and to the abuses which thence arose, in fact, Mr. Mill attributes the embarrassments in which the affairs of the company afterwards became involved.

In 1772, the great increase in the territorial possessions of the company attracted the attention and excited the cupidity of the government at home; while the financial embarrassments of the company, and the abuses which had crept into the government of India, furnished ample grounds for interference. In consequence, the ministry introduced two bills into parliament, distinctly asserting the claim of the crown to the territorial acquisitions of the company, raising the qualification to vote in the court of proprietors from the possession of 500*l.* to that of 1,000*l.* stock; giving to every proprietor possessed of 3,000*l.* 2 votes, of 6,000*l.* 3 votes, and of 10,000*l.* 4 votes; limiting the annual election of the whole 24 directors to that of 6 only; vesting the government of Bengal, Bahar, and Orissa in a governor-general, with a salary of 25,000*l.* a year, and 4 councillors, of 8,000*l.* each; rendering the other presidencies subordinate to that of Bengal; and establishing at Calcutta a supreme court of judicature, consisting of a chief justice, with 8,000*l.* a year, and three *puisne* judges, with 6,000*l.* a year each, appointed by the crown. As subsidiary articles, it was proposed, that the first governor-general and councillors should be nominated by parliament in the act, and hold their office for five years, after which the patronage of those great offices should revert to the directors, but still subject to the approbation of the crown; that every thing in the company's correspondence from India which related to civil or military affairs, to the government of the country, or the administration of the revenues, should be laid before ministers; that no person in the service either of the king or of the company should be allowed to receive presents; and that the governor-general, councillors, and judges should be excluded from all commercial speculations and pursuits.

Mr. Pitt's famous India bill of 1784 established the board of control, consisting of six members of the privy council, appointed by the king, two of the principal secretaries of state being always members. The president of the board is, in fact, secretary of state for India, and is the officer responsible for its government, and for the proceedings of the board. The superintendence of the latter extends over the whole civil and military transactions carried on in India. It revises, cancels, or approves all despatches, letters, orders, or instructions proposed to be sent out by the court of directors to the government in India; it may also require the court to prepare and send out despatches on any given subject, couched in such terms as it may deem fit; it may transmit, in certain cases, orders to India, without the inspection of the directors, and has access to all the company's papers and records, and to all proceedings of the courts of directors and proprietors. It is clear, therefore, that from 1784, when the board of control was established, the real sovereignty of British India was taken out of the hands of the company, and placed in those of ministers.

Under the act of 1833 (3 & 4 William IV. cap. 85.), the company holds, under the superintendence of the board of control, the political government and patronage of British India, till the 30th of April, 1854; but its exclusive commercial privileges are no longer in existence. The supreme authority is vested in the governor-general, who is also governor of the presidency of Bengal. He is nominated by the court of directors, the nomination being subject to the approval of the sovereign, and is assisted by a council of five members, three of whom are appointed by the court of directors, from amongst persons who are or have been servants of the company; the fourth is also chosen in a similar manner, but from amongst persons unconnected with the company; and the fifth is the commander-in-chief, who takes rank and precedence immediately after the governor-general. The other presidencies have also their governors and councils, subordinate to the governor and council of the Bengal presidency; the presidency of Agra, however, comprising the upper provinces of Bengal, is at present

administered by a lieutenant-governor only. The governor-general in council is competent to make laws for the whole of British India, which are binding upon all the courts of justice, unless annulled by higher authority. Parliament reserves to itself right to supersede or suspend all proceedings and acts of the governor-general; and the court of directors has also power to disallow them. The foregoing remarks do not, however, in any way apply to Ceylon, which is quite independent of the jurisdiction of continental India, being placed directly under the colonial secretary of Great Britain. By the act of 1833, the salaries of the principal civil officers in India were fixed, that of the governor-general at 24,000*l.* a year; the governors of the Bombay and Madras presidencies, 11,600*l.*; the ordinary members of the head council, 9,600*l.* each; and the members of the other councils, 6,000*l.* each yearly. (*Parl. Acts, Reports, &c.*; *Mill's Hist.*, &c.)

Judicial System.—When, in 1793, the Marquis Cornwallis undertook his reform of the judicial and revenue systems of British India, that territory was in a most deplorable state. "The administration of justice through all its departments was most pernicious and depraved; the public revenue levied upon principles incompatible with the existence of private property; the people sunk in poverty and wretchedness; more than one third part of the country a desert, and the rest hastening to desolation." (*Mill*, v. 438.) Under the orders sent to India in 1786, the same individuals combined the business both of judicature and finance; being at once collectors of revenue, judges, and heads of the police. Lord Cornwallis endeavoured to separate these apparently incompatible offices, and distributed them amongst different individuals. He gave to native commissioners power to determine civil suits amongst natives to the value of 50 rupees, several of whom he established in each *zillah* or district, giving an appeal from their decisions to the *zillah* court, held in the principal town of the district, of which one of the company's servants was appointed the judge. The latter functionary was assisted by a registrar, and some other members from among the junior servants of the company, and natives duly qualified to expound the Hindoo or Mohammedan law. These courts had jurisdiction in cases to the amount of 1,000 rupees. From them appeal might be made to four provincial courts established at Calcutta, Patna, Dacca, and Moorshedabad. These courts consisted of three judges, chosen from the civil department of the company's service, a registrar, one or more assistants from the junior European servants of the company, and three expounders of the native law—a *cawzee*, *mufiti*, and *pendit*. A higher tribunal, that of *Sudder Dewannee Adawlut*, was established at Calcutta, composed of the governor-general, his council, the head *cawzee*, two *mufitis*, two *pendits*, a registrar and assistants. All suits of Europeans were exclusively tried in this court: appeal from it lay only to the king in council, in cases above the amount of 50,000 rupees. Four tribunals were erected in the four provincial courts, for criminal judicature, at which the judges, &c. of the civil tribunals officiated every month; the penal judicature was administered in most of the country districts only twice, but in that of Calcutta four times a year. The superior criminal tribunal was the *Nizamat Adawlut*, held at Calcutta, and constituted almost similarly to the *Sudder Dewannee Adawlut*.

But with all this machinery of legislation, nothing like a code of laws was promulgated. The Hindoo and Mohammedan pop. were governed by the rules laid down in their respective sacred books,—the *Shasters* and the *Koran*,—as interpreted by the ever varying opinions of the *pendits* and *cawzees*. The courts established on the European model were infected with all that multiplication of technical forms, which forms the worst feature of our own legal code, and all that delay and expensiveness of process, which tend to destroy the ends of justice, followed as a matter of course. The errors in the system adopted were great; but, considering the state in which Lord Cornwallis found affairs, it may be truly said that he effected a vast deal of good. He was actuated by the purest and most benevolent motives; and wisely endeavoured to respect, in as far as possible, the different legal codes of the various sects and nations comprised in the pop. of India.

Of late years, however, a disposition has grown up to unite again the judicial, magisterial, and revenue authorities which Lord Cornwallis had separated. A considerable change of this description was introduced by Sir T. Munro in the Madras territories, and more recently by Lord W. Bentinck in Bengal. (*See Revenue and Judicial Selections*; *Asiatic Journal*, &c.)

Within the cities of Calcutta, Madras, and Bombay, and also within the settlements of Penang, Singapore, and Malacca, English civil and criminal law is administered to both natives and Europeans, with the exception of their own laws of inheritance being preserved to the former. But beyond the limits of the above-mentioned cities, on the continent of India, the native laws have been made binding on Europeans as well as natives. The charter of

1833 provides, that no one shall, by reason of his nation, colour, or faith, be disqualified from holding office under the company, and that, henceforth, there shall be no distinction of blood or nativity. "Upon this ground," says Mr. Crawford, "the legislative council of India, without waiting for the code of laws which, under direction of the same statute, was in course of preparation, passed a law subjecting Europeans to the same tribunals to which natives are subject, although these tribunals administer their own domestic laws respectively to Hindoos and Mohammedans, are cognisant of no others, repudiate expressly the laws of England, and are presided over by natives, or by unprofessional European servants of the E. I. Company, the first of whom rarely know a word of English; while the proceedings of the courts are both conducted in the native languages, to the express exclusion of the English tongue. This act, from its unpopular character, is commonly called by Europeans in India, the 'Black Act.'"

There can be no doubt that, under the act of 1833, Europeans gained great advantages by the abolition of the E. India Company's monopoly and trade, the power to possess land, and the comparatively ample field which is thus opened to their enterprise. It is alleged, however, that, in so far as respects their rights, liberties, and laws, they are in a less favourable position than under the old system. Under the latter, British subjects, within the special jurisdiction of the king's courts, could only, like the natives, be tried by their own laws, and the local government could enact no new law for their government not in accordance with the "laws of the realm." But by the new system, the governor-general in council may enact any laws whatsoever, that shall be binding on British subjects, whether the same be consonant with the "laws of the realm," or otherwise. Under the old law, an appeal lay to the privy council, which any individual might institute. This privilege is now, however, cut off, and under the modern system, nothing short of an act of parliament can repeal a law that has the sanction of the Indian authorities. Under the old system, British-born subjects in the provinces, that is, beyond the special jurisdictions of the king's courts, were, in civil cases, amenable only to courts presided over by their countrymen in the commission of the peace. Under the new system, they are amenable, to the extent of 5,000*l.* in value, to the petty native tribunal, presided over by a Mohammedan or Hindoo, — judges equally ignorant of their manners, laws, and language, and, with few exceptions, viewing their religion with hatred or contempt. The appeal to the king's courts, which was a guarantee for their own laws, is taken away from them; and it lies to the chief native tribunal, — of which the judges indeed are Englishmen, but in which the proceedings are in the native tongue, — in which there is no one to advise the judges, and where an English barrister is not even permitted to plead. Under the old system, an appeal lay, even from the competent tribunals of the king's courts, to the king in council; under the new system, no such appeal lies from the native tribunal, unless the value be above 12 times as much as it was before the innovation.

We believe, however, that, practically, little inconvenience has arisen, or is at all likely to arise, from most of these regulations. We may be quite sure that the power given to the governor-general and council of enacting laws will not be rashly or capriciously exercised. How exalted soever, these functionaries are not merely responsible to parliament, but to public opinion: the free press, now established in India, will not fail to advertise them of any error they may be likely to commit; while the growing attention given to Indian affairs at home will tend to make them wary in their proceedings. We are less able to judge of the expediency of making British-born subjects responsible to the native tribunals; but even this is, we believe, less objectionable than it might appear to be.

Revenue system. — The land tax constitutes the principal source of the revenue of British India, as it has always done of all eastern states. The governments of such countries may, in fact, be said to be the real proprietors of the land; but in India, as elsewhere, the cultivators have a perpetual, hereditary, and transferable right of occupancy, so long as they continue to pay the share of the produce of the land demanded by the government. The value of this right of occupancy to the rural pop. depends on the degree of resistance which they have been able to oppose to the exactions of arbitrary governments. In Bengal and the adjacent provs. of India, from the peculiarly timid character of the inhabs., and the open and exposed nature of the country, this resistance has been trifling indeed, and, consequently, the value of the right of occupancy in the peasant, or *ryot*, (an Arabic word, meaning subject,) has been proportionally reduced. This, also, may be considered, though with some modifications, as being nearly the condition, in this respect, of the inhabs. of every part

of the great plain of the Ganges, comprising more than half the pop. of Hindostan. But where the country is naturally difficult, the people have been able more effectually to resist the encroachments of the head landlord, or state, and to retain a valuable share in the property of the soil. This has been particularly the case along the ghauts, as in Bednore, Canara, Malabar, &c.; the inhabs. of which provs. not only lay claim to a right of private property in the soil, but have been generally ready to support their claim by force of arms. There can be no question, indeed, that the same modified right of property formerly existed every where; and it is indeed impossible that otherwise the land should ever have been reclaimed from the wilderness. But, in those parts of India which could be readily overrun by a military force, the right of property in the soil has long been little else than the right to cultivate one's paternal acres for behoof of others, the cultivators reserving only a bare subsistence for themselves.

Under the Mogul emperors, the practice in Bengal was to divide the gross produce of the soil, on the *métayer* principle, into equal shares, whereof one was retained by the cultivator, the other going to government as rent or tax. The officers employed to collect this revenue were called *zemindars*; and in the course of time their office seems to have become hereditary. It may be remarked that, in Persian, *zemindar* and landholder are synonymous; and this etymology, coupled with the hereditary nature of their office, which brought them exclusively into contact with the *ryot*, or occupier, as well as with the government, led many to believe that the *zemindars* were in reality the owners of the land, and that the *ryots* were their tenants. This, however, it is now admitted on all hands, was an incorrect opinion. The *zemindars* in reality were taxgatherers, and were, in fact, obliged to pay to the government *nine tenths* of the produce collected from the *ryots*, retaining only one-tenth as a compensation for their trouble; and, so long as the *ryots* paid their fixed contribution, they could not be ousted from their possessions, nor be in anywise interfered with.

But notwithstanding what has now been stated, the perpetual or *zemindary* settlement, established by Lord Cornwallis in Bengal, in 1793, was made on the assumption that the *zemindars* were the proprietors of the soil. His lordship, indeed, was far from being personally satisfied that such was really the case; but he was anxious to create a class of large proprietors, and to give them an interest in the improvement and prosperity of the country. It is clear, however, that this wish could not be realized without destroying the permanent rights of the *ryots*, for, unless this were accomplished, the *zemindars* could not interfere in the management of their estates. The interests of the *zemindars*, and the rights of the *ryots*, were plainly irreconcilable; and it was obvious that the former would endeavour to reduce the latter to the condition of tenants at will. But this necessary consequence was either overlooked or ineffectually provided against. The *zemindars* became, under condition of their paying the assessment, or quit-rent, due to government, proprietors or owners of the land. The amount of the assessment was fixed at the average of what it had been for a few years previously, and it was declared to be *perpetual* and *invariable* at that amount. When a *zemindar* fell into arrear with government, his estate might be either sold or resumed.

That the assessment was at the outset, and still is, too high, cannot well be doubted; and it must ever be matter of regret that the settlement was not made with the *ryots*, or cultivators, rather than with the *zemindars*; but, notwithstanding these and other defects, the measure was, on the whole, a great boon to India. Until the introduction of the perpetual system into Bengal, the revenue was raised in it, as it continues to be in the rest of India down to the present day, by a *variable* as well as a most oppressive land-tax. We all know what a pernicious influence *tithe* has had in this country; but suppose that, instead of amounting to 10, *tithe* had amounted to 50 per cent. of the gross produce of the soil, it would have been an effectual obstacle to all improvement; and the country would now have been in about the same state as in the days of Alfred, or of William the Conqueror.

In France, Italy, and other parts of Europe, where the *métayer* system is introduced, the landlord seldom or never gets half the produce, unless he also furnish the stock and farming capital, and, in most cases, the seed. But in India, neither the government nor the *zemindars* do any thing of the sort: they merely supply the land, which is usually divided into very small portions, mostly about 6, and rarely amounting to 24 acres. A demand on the occupiers of such patches for half the produce is quite extravagant, and hence the excessive poverty of the people, which is such as to stagger belief. Still, however, the perpetual system is vastly preferable in principle, and also in its practical influence, to any other revenue system hitherto established in India. It set

limits to fiscal rapacity, and established, as it were, a rampart beyond which no tax-gatherer dared to intrude. The enormous amount of the assessment, and the rigour with which payment was at first enforced, ruined an immense number of zemindars. But their lands having come into new and more efficient hands, a better system of management was introduced, and the limitation of the government demand gave a stimulus to improvement unknown in any other part of Hindostan. This, in fact, was the grand desideratum. A land-tax, that may be increased should the land be improved, is all but certain to prevent any such improvement being made. This has been its uniform operation in every country in the world that has had the bad fortune to be cursed with such a destructive impost. But a heavy land-tax, provided it be fixed and unsusceptible of increase, is no bar to improvements, unless in so far as it tends to deprive the proprietors and occupiers of land of the means of making them. There is, in such a case, no want of security, and the cultivator is not deterred from attempting improvements, or of bringing superior enterprise and industry to operate on his estate, by the fact that the tax will, in consequence, be increased.

The truth of what is now stated has been fully evinced in Bengal during the last 20 or 30 years; for both the pop., and the land-revenue of that part of our Indian empire has greatly increased. A great deal of waste land has been cultivated, and various works have been undertaken that would not be so much as dreamed of in any other part of our empire in the east. But, with all this, there has been but little, if any, improvement in the condition of the people of Bengal under our government. They, in fact, are practically excluded from, at least, all direct participation in the benefits resulting from the limitation of the assessment. They have merely exchanged one taskmaster for another. It is their landlords who have been the great gainers. The occupiers still, generally speaking, hold under the *métayer* principle, paying half or even more of their produce as rent; so that their poverty is often extreme, and their condition not infrequently inferior even to that of the hired labourer, who receives the miserable pittance of two annas, or about 3d., a day as wages.

It seems, however, as if there were some strange fatality attending the government of India; and that the greatest talents and the best intentions should, when applied to legislate for that country, produce only the most pernicious projects. The perpetual settlement carried into effect by Lord Cornwallis in Bengal was keenly opposed by Lord Teignmouth, Colonel Wilkes, Mr. Thackeray, Sir T. Munro, and others, whose opinions on such subjects are certainly entitled to very great respect; and it would seem that the Board of Control became, at length, favourable to their views. In consequence of this change of opinion it was resolved to introduce a different system, under the superintendence of its zealous advocate, Sir Thomas Munro, into the presidency of Madras, or Fort St. George. This new system has received the name of the *ryotwar* settlement. It proceeds on the assumption that government possesses the entire property of the soil, and may dispose of it at pleasure; no middlemen or zemindars are interposed between the sovereign and the cultivators; the ryots being brought into immediate contact with the collectors appointed by government to receive their rents. It is impossible, however, to enter fully into the details of this system. They are in the last degree complicated, which of itself would be enough to show their inexpediency. The land is taxed, according to its quality, at rates varying from 6d. up to 70s. an acre. Thus, for example, if the land were mere *dry field*, without artificial irrigation, the land-tax would be about 3s. an acre. If it have a supply of water capable of growing rice, the tax rises to 23s., or to nearly 8 times the former rent; and if the irrigated land be a garden, or an orchard, the tax rises to 40s., or above 13 times the tax on dry land! In the first instance, the natural and inherent fertility of the soil only is taxed; in the second, to that tax is added one on the capital and labour which the peasant or his ancestor laid out in reservoirs, canals, trenches, or wells. In the third, not only are all these taxed, but there is imposed besides an excise on fruits, garden-stuffs, and potherbs. But the radical vice of the system is that the lands are not let for a considerable number of years, or for ever. On the contrary, there is a constant tampering and interference with the concerns of the ryots. It is enacted, for example, that "at the end of each year the ryot shall be at liberty either to throw up a part of his land, or to occupy more, according to his circumstances." When, owing to bad crops, or other unforeseen accidents, a ryot becomes unable to pay his rent or assessment, it is declared that "*the village to which he belongs shall be liable for him to the extent of 10 per cent. on the rent of the remaining ryots, but no more.*" And to crown the whole, the tehsildars, or native officers, employed in collecting the land-rents, or revenue, have been vested with

powers to act as officers of police, to impose fines, and even to inflict corporal punishment almost at discretion!

It is really astonishing how acute and able men should have dreamed of establishing a system in an extensive and only half civilised country that every one must see would be destructive of the industry of the tenants, and would lead to the grossest abuses, were an attempt made to introduce it into the management even of a single estate in Great Britain. Mr. Tucker, a gentleman who resided long in India, and now occupies a place in the company's direction, has animadverted on this plan as follows:—"My wish," says he, "is not to exaggerate; but when I find a system requiring a multiplicity of instruments, surveyors and inspectors, assessors, ordinary and extraordinary; potails, curnums, tehsildars, and cutcherry servants; and when I read the description given of these officers by the most zealous advocates of the system, their periodical visitations are pictured in my imagination as the passage of a flight of locusts, devouring in their course the fruits of the earth. For such complicated details, the most select agency would be required; whereas the agency we can command is of the most questionable character. We do not merely require experience and honesty to execute one great undertaking; the work is ever beginning and never ending, and calls for a perennial stream of intelligence and integrity. And can it be doubted that the people are oppressed and plundered by these multiform agents? The principle of the settlement is to take one third of the gross produce on account of government; and, in order to render the assessment moderate, Sir T. Munro proposed to grant a considerable deduction from the rates deducible from the survey reports. But, if it be moderate, how does it happen that the people continue in the same uniform condition of labouring peasants? Why do not the same changes take place here as in other communities? One man is industrious, economical, prudent, or fortunate; another is idle, wasteful, improvident, or unlucky. In the ordinary course of things, one should rise and the other fall: the former should, by degrees, absorb the possessions of the latter; should become rich while his neighbour remained poor: gradations in society should take place; and, in the course of time, we might naturally expect to see the landlord, the yeoman, and the labourer. And what prevents this natural progression? I should answer, the *officers of government*. The fruits of industry are nipt in the bud. If one man produce more than his fellows, there is a public servant at hand ready to snatch the superfluity. And wherefore, then, should the husbandman toil, that a stranger may reap the produce?"

"There are two other circumstances which tend to perpetuate this uniform condition. The ryots have no fixed possession; they are liable to be moved from field to field: this they sometimes do of their own accord, for the purpose of obtaining land, supposed to be more lightly assessed; at other times, the land is assigned by lot, with a view to a more equal and impartial distribution of the good and the bad, among the different cultivators. But these revolutions tend to destroy all local attachments, and are evidently calculated to take away one great incentive to exertion.

"The other levelling principle is to be found in the rule, which requires that the ryot shall make good the deficiencies of his neighbour to the extent of 10 per cent.; that is to the extent, probably, of his whole surplus earnings. Of what avail is it that the husbandman be diligent, skilful, and successful, if he is to be mulcted for his neighbour's negligence or misfortune? A. must pay the debt of B. If a village be prosperous it matters little, for the next village may have been exposed to some calamity; and from the abundance of the one we exact wherewithal to supply the deficiency of the other. Is it possible to fancy a system better calculated to baffle the efforts of the individual, to repress industry, to extinguish hope, and to reduce all to one common state of universal pauperism." (*Review of the Financial Policy of the E. I. Company*, p. 134.)

It will be afterwards seen that, notwithstanding the long period of tranquillity that the Madras territories have enjoyed, the land revenue, instead of increasing, as it should have done under any reasonable system, has been progressively declining. The organisation and maintenance of the existing ryotwar system is, in truth, the most discreditable fact connected with the history of British India. The assessment of the land revenue in Madras is, in every respect, quite as objectionable as the assessment established by Mehemet Ali, in Egypt (*See Vol. I. p. 747.*); and it would seem, indeed, that the pacha had had the land revenue code of the Madras Presidency before him when he framed his code: if there be any substantial difference between the two, that of the pacha, arbitrary and oppressive though it be, is entitled to the preference.

We have already stated enough to show that a variable land-tax is, in all cases, most injurious to a country. It

lands; and it was enacted that those that held under a free tenure prior to 1765 should remain untaxed "for ever." It has been said that the present Indian government has manifested a strong disposition to seize upon the rent-free lands, or to subject them to a system of taxation; but, as a proceeding of this sort would be a flagrant vio-

lation of a solemn engagement, we do not believe that there is any real foundation for the statement.

The other principal sources of the public revenue are the sea and frontier customs, the salt and opium monopolies, &c.

Abstract View of the Revenues and Charges of British India, for the Years 1845-46, 1846-47, 1847-48, and 1848-49, including the Charges disbursed in Great Britain. (*Parl. Paper*, No. 479. Sess. 1850.)

We subjoin the following statement with respect to the revenue of the presidency of Bengal:—

Account of the Revenue of the Bengal Presidency, in 1845-46, 1846-47, 1847-48, and 1848-49.

Revenue.	1845-46.	1846-47.	1847-48.	Estimate, 1848-49.
Mint duties	Co.'s rupees. 6,52,147	Co.'s rupees. 5,54,628	Co.'s rupees. 4,22,349	Co.'s rupees. 5,59,000
Post-office collections	5,59,319	5,33,908	5,11,625	4,89,400
Stamp duties	23,73,154	23,81,565	22,93,196	22,78,500
Excise duties in Calcutta	3,10,472	2,78,804	2,80,668	2,84,100
Judicial fees and fines	7,96,514	7,78,543	8,04,586	8,27,200
Miscellaneous civil receipts, including net gain or deducting net loss by exchange operations between India and England	-	13,27,267	3,93,138	-
Land Revenue	3,50,48,987	3,52,13,893	3,50,77,753	3,51,86,000
Sayer and Abkarry	26,70,599	28,01,323	29,16,032	29,19,900
Miscellaneous receipts in the revenue department	81,448	66,681	44,772	47,100
Receipts from the territory ceded by the Burmese	18,81,473	20,03,310	19,75,250	20,11,400
Receipts from Binde	28,00,817	26,91,870	20,30,220	-
Customs	82,94,778	77,19,709	74,35,457	76,06,100
Sale of salt	1,53,17,711	1,64,40,018	1,58,72,680	1,25,97,100
Sale of opium	2,96,99,875	3,06,73,652	2,35,61,021	2,92,54,006
Marine and pilotage receipts	10,26,841	9,77,042	9,58,533	8,64,000
Revenue of Prince of Wales' Island, Singapore, and Malacca.				
Prince of Wales' Island	Co.'s rs. 1,76,495	Co.'s rs. 1,63,840	Co.'s rs. 1,75,972	Co.'s rs. 1,81,800
Singapore	5,18,415	4,20,811	3,89,684	3,85,900
Malacca	64,120	61,093	73,111	1,10,450
Subsidy received from the Nagpore government	-	7,59,010	6,15,744	6,78,150
Tributes from the Nizam, Rajpoot and other states	-	8,00,000	8,00,000	8,00,000
Interest on arrears of revenue, &c.	-	8,96,132	11,09,508	12,02,720
	-	37,104	1,36,141	48,500
Total gross revenue	-	10,36,15,141	10,70,74,808	9,87,22,476
Deduct allowances and assignments payable out of the revenues in accordance with treaties or other engagements	-	26,98,615	26,30,097	26,70,795
Charges of collecting the Revenues (including cost of Salt and Opium).	-	10,09,16,526	10,44,44,711	9,60,51,681
Charges of collecting the stamp duties	Co.'s rs. 1,02,063	Co.'s rs. 1,06,228	Co.'s rs. 1,20,772	Co.'s rs. 1,06,300
Charges of land, Sayer and Abkarry revenues	37,42,770	37,40,457	36,66,848	37,66,900
Charges of customs	4,73,018	4,79,072	4,68,786	4,84,000
Cost and charges of salt, including payments made to the French and Danish governments under convention	48,45,246	41,58,685	36,08,707	35,78,561
Cost and charges of opium	75,22,613	78,80,265	1,06,45,725	1,08,92,187
Total net revenues of the Bengal presidency, after payment of allowances and assignments, and charges of collection	-	1,66,85,710	1,63,63,707	1,88,29,148
	8,42,30,816	8,90,81,004	7,73,93,036	7,72,25,553

INDIA (BRITISH).

The total debt of India, in India, on the 30th of April, 1848, amounted to 43,085,263*l.*, bearing an interest of 2,045,214*l.* a year.

The army maintained in British India consisted, in 1837, of 295,840 men, being distributed into British, native, and contingent native troops, as follows:—

British.		Native.		Contingent Native.	
Staff	205	Staff (British)	312	Scindia	15,000
Horse artillery	1,927	Co.'s officers of British birth	3,416	Oude	10,000
Foot do.	4,354	Officers of Hindoo birth	3,416	Nizam {cavalry, 10,000 infantry, 12,000}	22,000 -
Engineers	77	Engineer corps	3,498	Baroda {cavalry, 3,000 infantry, 4,000}	7,000
Cavalry	2,565	Horse artillery	1,022	Nagpore	1,000
Infantry	13,879	Foot do.	5,822	Holkar	3,000
Officers	755	Artillery train	1,392	Travancore, 3 battalions	3,000
		Cavalry	14,529	Cochin, 1 do.	1,000
		Infantry	124,281	Mysore	4,000
				Cutch and Jondpoor	6,000
				Rajpoot {cavalry, 7,500 infantry, 27,000}	34,500
				Sattarah	5,000
	26,682		157,758		111,500

The British troops serving in India in 1849-50, consisted of — officers, 1,277; non-commissioned officers, 1,870; rank and file, 25,120; making in all an effective force of 28,267. Horses, 3,500.

The expense of the Anglo-Indian army, according to reports laid before parliament in 1830, was as follows:—

Engineer Corps	83,874	Medical staff	132,490
Artillery	606,463	Pioneers	74,511
Cavalry	1,070,634	Commissariat	614,327
Infantry	4,124,079	Sundries	2,178,887
Staff	481,490		
		Total	9,373,955

It may be observed, by the way, that this sum of 9,374,000*l.* is more than double the sum annually expended on the Prussian army! Considerable additions have been made within the last half dozen years to the military force in India.

Each presidency has its separate army, commander-in-chief, staff, &c.; but the commander-in-chief of the supreme government has a general authority over the armies of all the presidencies. Among the native troops, called *Sepoys* (esquires), there is a complete intermixture of tribes, castes, and creeds; but the infantry consists chiefly of Hindoos and the cavalry of Mohammedans. The Hindoo soldiers of the Bengal army are mostly of high caste, more than 20,000 being Brahmins. The soldiers of the Madras army are principally Rajpoots, and are reckoned the most persevering, hardy warriors; but they observe their religious customs so strictly, that the least deviation from them might have a dangerous effect on their discipline. The Bombay soldiers are the most easily disciplined, being generally of the lower castes. The troops are not raised by any forced levy or conscription; military service in India is quite voluntary, and is so popular that each regiment has a number of supernumeraries ready to take the place of such soldiers as die or leave. The men are well paid, clothed, and fed. The corporal punishment of Hindoos is not allowed; imprisonment being, in the Indian, as in the French, army, the principal engine by which discipline is kept up. In the former, however, the disgrace attending dismissal from the service, which is acutely felt by the native soldiers, tends powerfully to preserve discipline and obedience. Each company has an English captain, lieutenant, and ensign, as well as a native captain, lieutenant, and ensign. The latter, however, are under the command of the British officers; so that, with the title and uniform of officers, they are, properly speaking, only subalterns or non-commissioned officers. The Indian army, when not in the field, is in camp the whole year through, a system which has contributed, in no small degree, to bring it to its present state of efficiency.

A good deal of conflicting evidence was given before the parliamentary committees in 1832 and 1833, as to the real state of the Indian army, and the degree of dependence to be placed on it. On the whole, it would seem to be superior, in respect of discipline and organisation, to any native army ever previously embodied in India; and so long as its discipline and efficiency are maintained unimpaired, it is no doubt fully adequate to provide for the tranquillity of India, and its defence against Asiatic invaders. But the *Sepoys* are decidedly inferior both in physical strength and mental energy to Europeans: and such being the case, we cannot help, how reluctantly soever, agreeing in opinion with those who think that the Indian army could not make any effectual opposition to any thing like a corresponding force of French, Russian, or other European troops.

The Indian navy consists only of one frigate, 4 or 5 16-gun brigs, 6 or 8 10-gun corvettes and brigs, 3 or 4 armed steamers, and some other vessels: it is manned by about 500 European seamen, and from 500 to 700 natives, under about 140 British officers: it is attached to the Bombay presidency, which see.

Commerce.—Internal Trade.—Throughout the whole of the immense basin of the Ganges there is an extensive inland navigation; and this, also, is the case in the valleys of the larger rivers in the S.; but elsewhere the inland trade is greatly impeded by the want of roads, and the imperfect means of conveyance. With the ex-

ception of a few military roads, made by the English, none fit for carriages have been constructed in any part of the country; what are called high roads being, in fact, little better than broad and bad pathways, on which goods to a small extent are conveyed in carts, or, rather, very rude cars, drawn by a pair or more of oxen. Many kinds of goods are carried by pack-bullocks; on the N.W. frontiers of Hindostan, camels and horses are used; in the N., small horses, and even goats and sheep are employed; but in most of the mountainous parts of Hindostan porters are the chief bearers of merchandise. The charge for conveying goods by land is estimated at an average of 100 m. at 56*s.* per ton, being about 28 times as much as the conveyance of the same weight of goods for 100 m. on the Ganges; and equal to more than half their freight by sea from Calcutta to London! In consequence the internal trade of the country has hitherto been confined principally to the necessities of life. Under these circumstances we must not be surprised that various projects for the construction of railways have latterly been brought forward; but it is to be hoped that these may be well considered before any attempt be made to carry them into execution.

Corn, cotton, oleaginous plants, and sugar are the most important objects of inland commerce. The chief trade in rice takes place within the tract of the inundation of the Ganges: N. of lat. 25°, it is superseded by that of wheat and barley. Cotton is grown in every latitude in India; and is not, therefore, an article of very extensive internal commerce. Indian cotton is, speaking generally, coarse, dirty, and short in the staple; and is very inferior to most other kinds brought to the markets of Europe. But it is believed that this is not owing so much to any natural incapacity on the part of India to produce good cotton, as to the want of care in selecting the seed, and in the culture of the plant. In these respects, too, some very material improvements have been effected of late years; and a good deal of the cotton brought from India is now greatly superior to what it was a few years ago. But it is still susceptible of much improvement. It has been estimated that cotton fabrics, of the value of about 20,000,000*l.* a year, used to be made by the pop. of British India, or of the value of 34,000,000*l.* Including the tributary states. Cotton goods from Great Britain are now imported to the value, inc. twist, of nearly 4,000,000*l.* a year; but the real falling off in the amount of the Indian manufacture, in consequence of the import of British cottons, does not, probably, exceed two millions sterling a year; for we consume more than 400,000*l.* worth of their cotton wool, and dispose of more than a million's worth of their fabrics in China. These statements sufficiently evince the fallacy of the often-repeated complaints of the destruction of the cotton manufacture of India by the importation of English goods; and it is needless to add that, though the latter were imported to a much greater extent, the circumstance would be an advantage, not an injury, to India; for they would not be imported were they not cheaper, and, consequently, more easily attainable than their own by the great bulk of the population. (For an account of the circumstances that led to the ruin of the manufacture of fine muslins in Dacca, see Vol. I. 669.)

Sugar is a principal article of internal culture and trade. It is principally raised in the great plain of the Ganges. The average annual consumption of sugar in Hindostan has been estimated at between 11 lbs. and 12 lbs. a head, which, for the British and tributary states, would amount to upwards of 650,000 tons; but we believe that this is a most exaggerated estimate, and that half the quantity would be much nearer the mark, though probably still in excess. The average consumption of salt is estimated at 15 lbs. per head, or upwards of 877,000 tons annually, which, at 8*l.* a ton, including the tax, gives a total amount of between 7 and 8 millions sterling. This article is every where paid for chiefly in corn. The other staples of the inland trade are indigo, opium,

silk, tobacco, nitre, oil-olius, drugs, hides, rice, timber &c. The Malabar coast has some products peculiar to itself, as teak and sandal woods, black pepper, and cardamoms, and now, also, furnishes considerable quantities of coffee. With these, and different metals, areca nuts and spices obtained from other countries, woollen and cotton goods, and various manufactures and products of Europe and China, the corn, cotton, sugar, and other articles of the inland trade are paid for on that coast. But there is no extensive or well-organised system of inland trade in India. The different parts of the country are, in this respect, separate and unconnected. "The merchants of the upper provs.," says Sir C. Trevelyan, "know nothing of the trade of the lower provs.; the merchants of the lower provs. know nothing of what is passing above Mirzapoor; and the maritime trade is a branch separate from both." This is a consequence, partly of the want of good roads and other easy modes of communication, but more, perhaps, of the internal duties that were laid on the transit of goods from one part of the country to another. These, however, have been abolished; and there can be no doubt that this measure will be of signal advantage to the country, and is, in fact one of the greatest boons conferred upon it by the English.

"In India, as under most uncivilised governments, the transit of goods within the country was made subject to duties; and upon all the roads and navigable rivers toll-houses or custom-houses (*chokrys*) were erected, which had power of stopping the goods till the duties were levied. By the rule and oppressive nature of the government, these custom-houses were exceedingly multiplied; and, in long carriage, the inconvenience of numerous stoppages and payments was very severe. As in all other departments of the government, so in this, there was nothing regular and fixed. The duties varied at different times and different places; and a wide avenue was always open to the extortion of the collectors. The internal trade of the country was, by these causes, subject to ruinous obstructions." (*Mill*, book iv. chap. 8.)

The pernicious consequences resulting from this state of things early engaged the company's attention; though, at first, their efforts were directed rather to obtain an exemption from the transit duties in favour of their own trade than to effect their abolition. In 1788, however, Lord Cornwallis, who was fully aware of their pernicious influence, adopted the judicious and decisive measure of abolishing the duties. But, unaccountable as it may seem, they were again restored in 1801; and were "frightfully increased" in 1810! Through the artificial impediments thus thrown in the way of internal commerce, the country was split, as it were, into a vast number of petty states, each surrounded by a line of custom-houses, and each jealous of the other. Metals, for example, passing from one town or district to another, were charged 10 per cent. *ad valorem*, and most other articles were charged from 5 to 10 per cent. "Hence, the power of carrying on business on a large scale, of using expensive machinery, and engaging numerous labourers, is contracted in an infinite degree; employments cannot be subdivided and improved; industry languishes; and a general tendency exists towards that barbarous state of things in which every body is obliged to produce and manufacture every thing he requires for his own consumption." (*Trevelyan's Report*, p. 8.)

Had the inland transit duties been productive of a large amount of revenue, that would have been some set-off against the enormous evils of which they were productive. But such was not the case. The expense of their collection, and the obstructions they threw in the way of communication, were such as to render their produce quite insignificant. At length, however, the pernicious influence of these duties in a commercial, and their inefficiency in a fiscal, point of view were clearly demonstrated by Sir C. Trevelyan, then one of the secretaries to the Bengal government*, in the able report referred to above. In the course of the year (1836) following the publication of this report, the internal transit duties and town duties in Bengal were abolished, but their abolition in other parts of India, which it was expected would immediately follow, has not yet taken place.

External Trade.—Sir George Larpent furnished the following estimate of the trade of India and China with Great Britain in 1837-38 to a committee of the H. of Commons; and taking it for a basis, and making the necessary alterations, the following estimate of its present (1880) amount may not, perhaps, be very wide of the mark. (See next column.)

Indigo grows luxuriantly from the equator to the 30th degree of lat.; but in India the best is produced in Bengal and Bahar, between lat. 23° and 27° N., and long. 84° and 90° E.; everywhere else the product is inferior. The annual produce of all the Bengal provs. may be esti-

* Now Assistant-Secretary to the Treasury.

into England; but it does not appear that there are any real grounds for such an opinion. Indian wheat is, speaking generally, very inferior to British wheat; and it could not be imported, in ordinary years, at less than from 40s. to 44s. a quarter. Its price, free on board at Calcutta, may be taken at 15s. or 16s. a quarter; to which, if we add 16s. or 18s. for freight to England, and 8s. or 10s. for profits and landing charges here, it is abundantly plain that, except in high priced years, it would not answer to import Indian corn.

Previously to the discovery of nitrate of soda in S. America, Bengal and Bahar had a monopoly of the trade in saltpetre. And, contrary to what might have been anticipated, the exports from the latter do not appear to have been at all affected by that discovery. In proof of this statement it is enough to mention, that the exports of saltpetre from Calcutta amounted, in 1848-49, to 615,000 maunds. Dyes, shell-lac, linseed, safflower, sal-ammoniac, castor-oil, coffee from Malabar, tea from Assam, &c., tin, antimony, catechu, and pearl sago are other exports worthy of mention; and which owe their importance as such principally to the commercial enterprise and talent of Europeans.

N. of them, are densely wooded. The central and N. parts consist chiefly of level prairies, interspersed with small lakes and swamps. Next to the Ohio, the principal river is the Wabash. It rises in the N.E., and, flowing first W. and afterwards S., in the lower part of its course divides this state from Illinois, and falls into the Ohio after a course of 400 m., the greater part of which is navigable. It has several tributaries, including the White, the E. Fork, &c., which also are navigable for a considerable distance. The other principal rivers are the St. Joseph, which falls into Lake Michigan, and the Kanawha, an affluent of the Illinois. The climate differs little from that of Ohio and Illinois; but Indiana is somewhat less subject to the extremes of heat and cold than the latter state. The winters seldom last longer than six weeks; the Wabash, however, is at that season frozen over so as to be crossed with safety. In the valleys of the Ohio and Wabash, miliary fevers, agues, &c. are very prevalent during summer.

Soil in most parts very fertile. The agricultural products are the same as in the adjoining states on the E. and W. Little is known of the metallic resources of the state, no mines being wrought. Large quantities of sulphate of magnesia are met with in the S. along the banks of the Ohio. An extensive system of internal navigation has been undertaken, and in 1836 a loan of 10,000,000 doll. was negotiated by the state for promoting the construction of canals and railways. The most important public work yet commenced is the Wabash and Erie Canal, to extend from the W. end of Lake Erie to La Fayette, on the Wabash, a distance of 187 m., 100 of which are within Indiana: 80 m. of this canal had been navigated during the year ending Aug. 1838. It is proposed to extend the line down the Wabash to a projected central canal leading to Evansville, making its total length 480 m. A railway from Indianapolis to Madison has been finished, and various other extensive public routes are either completed or in active progress.

These undertakings have involved the state in a rather large debt, that portion of it due to foreigners having amounted, in 1847, inc. arrears of interest, to 14,374,640 doll. Since then it has been distributed into various stocks, above 6,000,000 doll. having been thrown upon the canal, the payment of its principal and interest being made to depend on the receipts from the canal.

In 1840, the state had one bank of its own, and 12 branch banks, with a united capital of 2,965,378 dollars. By a clause of the constitution, the legislature is bound to provide, as far as the circumstances of the state will permit, for a system of general education, and the establishment of a university, in which tuition shall be gratis. The thirty-sixth part of every township of land is reserved for the purposes of education; but no general system of public instruction has yet been devised and carried into effect. There are at present 2 colleges: Indiana College, at Bloomington, founded 1835; that of S. Hanover, established 1837, and Wabash College, at Crawfordsville, established in 1833. The Methodists have a university, founded in 1839.

Indiana is divided into 84 cos. Indianapolis, on White River, near the centre of the state, is the cap. and seat of government: the other chief towns are New Albany, Madison, and Vincennes. The legislature consists of a senate, with, at present, 30 mem., and a house of representatives of 63 mem.*. the former are elected for three years, and the latter annually, by all the free white male citizens above 21 years of age, who have resided in the state for one year preceding the election. The general assembly meets annually at Indianapolis.

* The number of members of the legislature is regulated by that of the electors.

Statement of the Quantities and Declared Value of the Principal Articles of British and Irish Produce and Manufactures exported to the E. India Company's Territories, exclusive of Ceylon, in 1849.

For further particulars as to British India the reader is referred to the article HINDOSTAN.

We subjoin a chronological statement of the principal territorial acquisitions made by the British in India. — [See top of next column.]

INDIA-BEYOND-THE GANGES, sometimes called INDO-CHINA, an extensive region of Asia, forming the eastern of its three great peninsulas, extending between the 7th and 36th degs. of N. lat., and the 92d and 109th of E. long., comprising the empires of Birman, Siam, and Annam, the Malay peninsula, Laos, the Tenasserim provs., Aracan, Cathay, Cachar, Assam, and the Bengal districts of Sylhet, Tipperah, and Chittagong, which see.

INDIANA, one of the United States of America, in the N.W. part of the Union, between lat. 37° 45' and 41° 45' N. and long. 84° 40' and 89° W., having N the lake and state of Michigan, E Ohio, W. Illinois, and S. Kentucky, from which it is separated by the Ohio. Length, N. to S., 370 m.; average breadth, 130 m. Area, 35,100 m. Pop. (1840) 634,966; but its inhabs. have since rapidly increased, and may now, perhaps, be estimated at 850,000. Surface generally level or undulating; there are, however, some extensive hilly tracts in different parts. The chief elevations in the state are the bluffs which skirt the Ohio; and these, and the country immediately

Judges are elected for a term of seven years; the governor is chosen for three years, and is only twice eligible.

The earliest permanent occupation of Indiana was made by the French, about 1701, when Vincennes, and several other small settlements were established by them along the Wabash. Previously to 1800, it was included in the N. W. territory, and from that year until 1800 was governed with Illinois, under the title of the Indiana territory. In 1816, it was constituted an independent state. It sends 7 representatives to congress.

INDORE, a city of Hindostan, prov. Malwah, cap. of Holkar's dom., and the residence of that chief, a little N of the Vindhyan mountains, and 30 m. S by E. Oojain: lat. $23^{\circ} 45' N$, long. $75^{\circ} 30' E$. Pop. very uncertain, it having fluctuated greatly at different periods. According to Malcolm (*Central India*, 1. 498.), it is now inconsiderable both in size and pop., and, being but weakly fortified, is a place of small importance. It stands at nearly 2,000 ft. above the level of the sea, in a well wooded, pleasant, and healthy tract, and has been wholly built within the present century. Some of its streets are tolerably spacious, paved with granite slabs, and its houses often of two stories, and constructed partly of brick; but, speaking generally, it is mean and ill built, and contains no public edifice worthy of remark, except the palace, a massive quadrangular granite building, with decorations of carved wood.

The territories of Holkar comprise an area of 4,200 sq. m., having N and S Scindia's dom., and W. and E. territ. of the Bombay presid. By the treaty of 1816, Indore was placed on the footing of other subsidiary states, the British agreeing to maintain a force for its external and internal security; and Holkar to keep

whole surface, and a more extensive tract towards the E. end, called the *Page de Champagne*, is quite bare of wood, and infertile, but the remainder is mostly either under culture or covered with forests. In 1834, the arable land comprised 401,251 hectares, meadows 66,208 h., and forests and heaths 122,333 h. Agriculture is very backward, but more corn is grown than is required for home consumption, a result probably owing to the thinness of the pop., as only about 1,000,000 hectoliteres of all kinds are produced annually. The produce of wine amounts to about 600,000 hectol. a year, which also is more than is consumed by the inhabitants. Fruits are good, and excellent hemp is raised. In 1830, there were 755,000 sheep in the dep., large flocks being fed on the *Page de Champagne*. A good many oxen are fattened for the supply of Paris; and hogs for the markets of Avignon and Limoux. Geese and other poultry are reared in large numbers, particularly in the *Page*

de Breven. Fish are abundant; and larches form an article of trade. Iron of good quality is found, and forges are numerous. Good gun-shots are obtained at Châteauneuf. Next to iron goods and woollen cloths, the principal manufactures are those of cottons, woollen yarn, leather, tiles, earthenware, hats, paper, and parchment. The dep. exports corn, wine, cattle, wool, woollen cloths, iron and iron goods, &c., to double the value of its imports. In 1835, of 63,375 properties subject to the contribution *foncière*, 47,481 were assessed below 5 fr., and 15,003 between 5 and 10 fr., the number of considerable properties is somewhat below the average of the dep. The peasantry are strongly attached to routine practices, and therefore little likely to better their condition. Education is little diffused. In 1836, 120 communes were without primary schools, and only 3,250 persons, or 1-40th part of the pop., were receiving public instruction. Indre is divided into 4 arrond. : chief towns (*hôtels-maires*), the cap., La Basse, Issoudun, and La Châtre. It sends 4 mem. to the ch. of dep. Number of electors (1836-37), 1,000. Total public revenue (1831), 2,312,308 fr.; expenditure in the same year, 2,773,404 fr.

INDRE ET-LOIRE, a dep. of France, reg. of the W., formerly included in the prov. Touraine, comprising a tract on both sides the Loire, between lat. $46^{\circ} 40' N$ and $47^{\circ} 40' N$, and long. $0^{\circ} 2' E$ and $1^{\circ} 31' E$, having N. Sarthe and Loir-et-Cher, E. the latter dep. and Indre, S. Indre and Vienne, and W. Maine-et-Loire. Area, 511,673 hectares. Pop. (1845), 312,100. Surface almost an entire plain with a slope from both the N and S. to the Loire, which runs through it, near its centre, from E to W. The part of the dep. watered by the Loire is so productive and beautiful that it has been termed the garden of France, but the soil elsewhere is generally dry, thin, and poor, and in the N. W. there are some extensive pools and marshes. Heaths and wastes occupy nearly 1/4th part of the surface, and forests more than 1-10th. In 1834, 234,310 hectares were arable, 10,465 pasture land, 84,004 vineyard, and 25,573 otherwise cultivated. Agriculture is tolerably well conducted, having been much improved of late years. The corn now produced is more than adequate to the supply of the dep.; in 1835, 2,730,780 hectoliteres were harvested, 1,108,760 of which were wheat, and 545,420 oats. Beans, peas, &c. are of excellent quality. Wine is annually made of the value of 9 or 10 millions of francs, or about double what is required for home consumption; but it is generally inferior. About 160,000 quintals of hemp, worth 5,300,000 fr., are raised yearly; and liquorice, aniseed, coriander, saffron, truffles, &c. are cultivated. The culture of the mulberry-tree is increasing rapidly: in 1836, 42,000 kilog. cocoons were gathered. The chief exports of this dep. are its agricultural products: cattle are not reared in any great number, and most kinds of live stock are inferior. Manufacturing industry is in a rather active state. The woolen, leather, and silk manufactures of Tours have materially increased within the last few years. The silk and rasp factory at Amboise employs 140 workmen, and consumes above 200,000 kilog. a year of fine steel. The manufactures of red lead and iron goods are important; and near Monthaçon is the royal gunpowder factory and saltpetre refinery of Ripeau, at which 200,000 kilog. of gunpowder are made annually. Indre-et-Loire is divided into three arrond., the chief towns of which are Tours, the cap., Chinon, and Loches. It sends 4 mem. to the ch. of dep. No. of electors (1836-37), 2,112. Total public rev. (1831), 7,762,120 fr. This is the native country of Descartes, who was born at La Haye on the 31st March, 1596. Indre-et-Loire has also produced Rabalais and Balzac, Agnes Borel, Gabrielle d'E. trees, and the Duchesse de la Vallière. (*Anglo, art. Indre, and Indre-et-Loire; Official Tables.*)

INDUS (*Sindhu*, Sansc.; *Ind* and *Sind*, Pers.), a large river of S. Asia, forming during great part of its course the proper N. W. boundary of Hindostan, and lying between the 25th and 35th parallels of N. lat., and between the 67th and 81st degrees of E. long. The geography of this river, especially as regards its upper portion, is very imperfectly understood, but we shall endeavour to collect into a consistent account the information gained from the investigations of Major Kennell, Moorcroft, Burnes, Ripington, and other travellers. As the course of the river has not been visited by Europeans, its situation is at present only a matter of conjecture; but general consent seems to place it on the N. declivity of the Cañon branch of the Himalaya range, near the Chinese frontier town of Govoa, and not far from the Lake Mansourous and the sources of the Sutledge. The stream, called by the Chinese *Sung-ho-tschu*, takes a general W. N. W. course past Ladak, and receives the larger river Shyook, N. W. of Ladak, whence the united streams run through the country of Little Tibet, and after cutting a passage through the great Himalaya range, in lat. $30^{\circ} 30' N$, and long. $76^{\circ} 30' E$, are joined, about 150 m. E. of the mountains, by the Abou-Sera, and lower down at Attock, where it is 200 yards wide, and both deep and rapid,

by the river of Caubul. The river is crossed here by a bridge of boats, constructed like that used by Alexander, and described by Arrian (lib. v. cap. 7.). The bridge is only allowed to remain between November and April, when the river is low; and the construction of it is completed in the course of six days. S. of Attock, the Indus enters a plain, but soon afterwards winds amongst a group of mountains as far as Harrabah, whence it pursues a southward course to the sea, uninterrupted by hills, and expanding over the plain into various channels, which meet and separate again, but are rarely united into one body. The breadth of the river at Kaharee Ghât, in lat. $31^{\circ} 28'$ N., was found to be about 1,000 yards, the deep part of the channel being only 100 yards across, and 12 ft. deep. The banks in this vicinity are very low, and in summer are so much overflowed, that the stream expands in many places to a breadth of 15 m. (*Elphinstone*, vol. ii. p. 416.) In lat. $28^{\circ} 55'$, the Indus receives the Punjab rivers, and rolls past Mittum with a width of 2,000 yards, and a depth near the left bank of 4 fathoms. "From this point to Bukkur the main stream takes a S.W. course, with a direct channel, but frequently divided by sandbanks. Various narrow crooked branches also diverge from the parent stream, retaining a depth from 8 to 15 ft. of water; and these are navigated by boats ascending the Indus in preference to the great river itself. The country on both sides is of the richest nature, but particularly on the E. bank, where it is flooded from innumerable channels, cut for the purpose of throwing the water S.E. into the interior." (*Burnes' Bokhara*, vol. i. p. 260, 261.) About 17 m. S. of Bukkur, in lat. $27^{\circ} 19'$, the Indus sends off a branch to the W. called the Larkhaun river, which, after making a circuit, and expanding in one place into a large lake 12 m. broad, rejoins the main stream 50 m. below the point of separation. The insulated territory, called Chandokee, is one of the most fertile in the Sinde dominions. About 160 m. below Bukkur is Sehurun, in lat. $26^{\circ} 22'$; and between these points the river flows in a zig-zag course nearly S.W., the intervening country being richly watered and divided by its ramifications into numerous islets of the finest pasture. The distance between Sehurun and Hyderabad is 105 m.; the banks seldom exceed 8 ft. in height, and the neighbouring grounds are usually covered with tamarisks. The river throws off no branches in this part of its course, except the Fullalee (generally an unimportant stream), which leaves the Indus 12 m. above Hyderabad, and crossing the W. extremity of the Runn of Cutch, enters the Indian Ocean by the Khorree mouth. The main river opposite Hyderabad is 830 yards broad, and 5 fathoms deep; but the channel becomes narrower and deeper as it approaches Tatta, 65 m. below the capital. Shifting sandbanks also occur in many parts between these towns, to such an extent as to perplex the navigator. The course of the stream from Hyderabad is S.W. by S., with one decided turn below Jurruk, where it throws off the Pinyaree leading to Mughribee, and entering the sea by the Seer mouth. The country N. of Tatta, which might be rendered one of the richest and most productive in the world, is devoted to sterility, presenting to the eye only dense thickets of tamarisk, saline shrubs, and other underwood. About 5 m. S. below Tatta is the commencement of the Delta of the Indus. The river here divides into two branches, that to the right being called Buggaur, while that to the left is known as the Sata. The latter is by far the larger of the two, and a little below the point of division has a breadth of 1,000 yards: "it divides and subdivides itself into many channels, and precipitates its water into the sea by 7 mouths, within the space of 35 m.; yet such is the violence of the stream, that it throws up sandbanks or bars; and only one mouth of this many-mouthed arm is ever entered by vessels of 50 tons." (*Burnes' Bokhara*, vol. i. p. 207.) The Buggaur, on the other hand, flows in one stream as far as Darajee, within 6 m. of the sea, at which point it bifurcates, forming two arms, which fall into the ocean about 25 m. apart. A sandbank, however, which crosses its upper part, close to the apex of the Delta, renders it unfit for navigation. The land embraced by the Buggaur and Sata extends at the junction of these rivers with the sea to about 70 m.; and so much, correctly speaking, is the existing Delta; but the river covers with its waters a much wider space, and has two other mouths still farther E., viz. the Seer and Khorree, from which, however, the waters have been diverted by the rulers of Sinde into canals for the purposes of irrigation. If, therefore, these forsaken branches be included, the base of the Delta, measured in a straight line from the W. to the E. embouchure, extends 110 m. in a S.S.E. direction. Arrian estimates its extent at the time of Alexander's expedition at 1,800 stadia, or nearly double that now assigned to it; but it seems doubtful whether we are to attribute this difference to any great changes in the bed of the river, or to the miscalculation of the Macedonian admiral, Nearchus. The inconstancy of the stream through the Delta makes the navigation both difficult and dan-

gerous. The water is cast with such impetuosity from one bank to the other, that the soil is constantly falling in upon the river, and huge masses of clay hourly tumble into the stream, often with a tremendous crash. In some places the water, when resisted by a firm bank, forms eddies and gulphs of great depth, in which the current is really terrific; and, in a high wind, the waves dash as in the ocean. It appears, indeed, from the *Report of the State and Navigation of the Indus*, by Lieuts. Carless, Wood, and Pottinger, notwithstanding the statement of Sir A. Burnes, of there being "an uninterrupted navigation from the sea to Lahore," that banks, bars, &c. offer such great obstructions, as effectually to prevent the river from ever becoming extensively available for the purposes of commerce. Vessels drawing 8 feet water find themselves aground at the very entrance of the Seeta mouth: the employment of ships is out of the question, and the navigation of the *doondees*, or small native boats, is so tedious, that no communication of any importance could be kept up between Hyderabad and the sea, except by steamers, the use of which, in a country like Sinde, would be attended with extreme difficulty. There are also political obstacles to using the Indus as a channel of commerce. The people and princes are ignorant and barbarous: the former plunder the trader, and the latter overtax the merchant, so that goods are sent by land and by circuitous routes rather than by the Indus, their natural channel. The tides rise in the mouths of the Indus about 9 ft. at full moon, and both flow and ebb with great violence, particularly near the sea, where they flood and abandon the banks with equal and incredible velocity. This phenomenon was an object of great surprise to Alexander's fleet, and Arrian remarks (lib. vi. cap. 19.) that "the ebbing and flowing of the waters was as in the great ocean, inasmuch that the ships were left upon the dry ground; but what still more astonished Alexander and his friends was, that the tide, soon after returning, began to leave the ships, so that some were swept away by the fury of the tide and dashed to pieces, while others were driven on the banks and totally wrecked."

It is most probable, allowing for the exaggerations current on the subject, that the countries traversed by the Indus were less barbarous and uncivilised in the days of Alexander than at present; but admitting this, still we are disposed to reject the statement of Dr. Vincent, that there was then an extensive intercourse by means of the Indus between the Punjab and the coast of Malabar. He has even supposed that the vessels employed in that trade proceeded as far S. as Cape Comorin, and having doubled it, sailed N. along the coast of Coromandel! (*Voyage of Nearchus*, p. 11.) But there is no direct evidence of any such intercourse, and the presumption is all the other way. That there was a good deal of traffic on the river between its upper parts and Pattala (near the modern Tatta) is pretty certain; but the navigation of the mouths of the river must have been very different in antiquity from what it is at present, to admit of much intercourse taking place between Pattala and the ocean.

The tides are not perceptible more than 75 m. from the sea, or about 25 m. below Tatta. The quantity of water discharged by the Indus is stated by Sir A. Burnes to amount to 80,000 cubic ft. per second, nearly as much as is discharged by the Mississippi, and *four times* as much as is discharged by the Ganges, the other great river of Hindostan. This discharge, provided the statement be accurate, must be attributed chiefly to the greater length of its course in high and snowy regions, to its numerous and large tributaries, and to the barren arid nature of the soil through which it passes; while the Ganges, on the other hand, expends its waters in irrigation, and blesses the inhabitants of its banks with rich and exuberant crops.

The Indus has numerous affluents, none of which, however, deserve any particular mention except the Sutledje, and the other rivers of the Punjab. Of these rivers, the Sutledje (the *Zaradrus* of Ptolemy), which is the most easterly of all, takes its rise near Garoo, on the great plain N. of the Himalaya mountains, enters the chain at Shipkee (where it is 10,484 ft. above the sea), runs in a narrow mountain valley for upwards of 100 m., and enters the S. plain at Ropur, whence its course is south-westward to its junction with the Indus. The other rivers of the Punjab, besides the Beas (the *Hyphasis* of Arrian), which is an affluent of the Sutledje, are, proceeding westward, the Ravee (the *Hydraotes* of Arrian), the Chenâb (*Acesines*), and the Jylum or *Hydaspes*. The last three, all of which rise on the S. slope of the great mountain range of N. India, join their waters with those of the Sutledje in lat. $29^{\circ} 10'$ N., and long. $71^{\circ} 12'$ E. The rivers of the Punjab are in general navigable up to the place where they issue from the mountains. (*Rennell's Hindostan*, p. 177. &c.; *Elphinstone's Caubul*, vol. ii., App.; *Burnes' Bokhara*, vol. i. passim; *Hamilton's Gazetteer*; *Ritter*, vols. v. and vi. passim.)

INGOLSTADT.

INGOLSTADT, a town of Bavaria, circ. Ratisbon, on the Danube, 23½ m. S.W. that city. "The pop. of this ancient and melancholy town is reduced to 9,000 (1839), a number very disproportionate to its extent. It has recently been restored to the condition of a fortress, by the construction of very strong works on an improved plan. Its old fortifications had withstood sieges from the troops of the League of Schmalkald, from Gustavus Adolphus, and Duke Bernard of Saxe Weimar, and resisted Moreau for three months; but he, succeeding at length, caused them to be demolished. Ingolstadt lost its university, at which the celebrated Dr. Faustus studied, in 1800: it is now transferred to Munich." (*Murray's Handbook*.) It still possesses, however, a royal residence, nine churches, in one of which the Bavarian general, Tilly, was buried, and several hospitals and charitable institutions. It had formerly a considerable manufacture of woollen cloths; but this and its other branches of industry and trade has fallen into complete decay. (*Dict. Géog.; Strin, &c.*)

INNSBRUCK (Fr. *Innsbruck*), a city of the Tyrol, of which it is the cap., on the Inn, 80 m. N. by E. Trent, and 240 m. W. by S. Vienna. Lat. 47° 16' 8" N., long. 11° 23' 43" E. Pop. (1846) 12,800. Its situation is highly picturesque. It stands in the middle of a valley, the sides of which are formed by mountains from 6,000 to 8,000 ft. high, and the Inn is crossed by a wooden bridge (whence the name of the city) from which a magnificent prospect is obtained. On and round this bridge one of the severest actions took place during the war of the Tyrolese, under Hofer, against the French. Innsbruck is divided into the old and new towns, and has 5 suburbs. The latter are larger and better built than the city itself, though badly paved. The houses of Innsbruck are mostly 4 or 5 stories high, built in the Italian style, with flat roofs, and are frequently ornamented with frescoes. Many have arcades below, occupied with shops. The object most attractive to strangers is the Franciscan, or Court church, an edifice containing numerous fine works of art. Among others, is the tomb dedicated to the emperor Maximilian*, a splendid monument: it is ornamented with 24 bas-reliefs, representing the principal actions of his life, and is surrounded by 24 colossal bronze statues of persons celebrated in history, including Clovis, Theodoric, Arthur, Charles the Bold, Duke of Burgundy, Godfrey of Bouillon, Rodolph of Habsburg, and many of the emperors of Austria, his descendants, &c. Here, also, is the mausoleum of the archduke Ferdinand of the Tyrol, and his wife, also adorned with bas-reliefs; the grave of Hofer; his statue in white marble, &c. There are numerous other churches, several of which are worth notice. The palace, an extensive building, has gardens extending along the Inn, which form a public promenade. In front of the Old Palace, the former residence of the archdukes of the Tyrol, and of some of the German emperors, is the "Golden Roof," a kind of oriel window, covered with a roof of gilt copper, and one of the curiosities of the place: this edifice is now used for the chancery-chamber (*Kanzleigebäude*). Innsbruck has a university of the 2d order, in which instruction is entirely gratuitous. It occupies an extensive and fine edifice, and has 25 professors, and exhibitions to the amount of 12,000 fls. yearly. It is attended by above 400 students, and has attached to it a valuable library, botanic garden, normal school, &c. The *Ferdinandeum*, founded in 1823 upon the model of the *Johanneum* of Grätz, is a museum devoted to the productions of the Tyrol in both art and natural history, and contains some interesting collections, particularly in the dep. of mineralogy. The seminary for noble ladies, founded by Maria Theresa in 1771, the gymnasium, ancient Jesuits' college, and various convents, provincial house of correction, council chamber, town-hall, theatre, and a handsome ball-room, are the other chief public buildings; a statue of Joseph II., and a triumphal arch raised by Maria Theresa, are among the most conspicuous ornaments of the city. Innsbruck is the seat of the state assembly, high judicial court, and other superior departments of the public service for the Tyrol and Vorarlberg; it has manufactures of silk, woollen, and cotton fabrics, leather, glass, and steel goods, and sealing-wax; and is the seat of a considerable trade between Italy and the other countries N. of the Alps. (*Oesterr. Nat. Encycl.; Berghaus; Turnbull's Austria, &c.*)

INVERARY, a royal and parl. bor. and sea-port of Scotland, co. Argyle, of which it is the cap., on a bay on the W. shore, and near the bottom of the arm of the sea called Loch Fyne, 40 m. N. W. Glasgow. Pop. in 1841, 1,233. Inverary consists principally of two rows of houses, one of them fronting the bay, the other at right angles with it, running inward, and having a northern exposure. The houses, built on a uniform plan, are large and commodious; and the town is one of the neatest and cleanest, and its situation the most pic-

INVERLEITHEN.

31

turesque, in Scotland. The public buildings are the par. church (in which public worship is alternately performed in Gaelic and English), and a handsome edifice by the water side, containing the court-house and other offices. In the immediate vicinity of the town, on the N., is Inverary castle, the chief residence of the ducal family of Argyle. It was built after a design by Adams, in 1749; but it is hardly worthy of the situation or of the family. It is an embattled structure, of two stories, and a sunk floor, flanked with round overtopping towers, and surmounted with a square-winged pavilion. There is in the saloon a curious collection of old Highland arms, including some of those used by the Campbells in the battle of Culloden.

The family of Argyle was, for a lengthened period, one of the most illustrious in the annals of Scotland. Its chiefs were especially distinguished by their devotion to and support of the great principles of civil and religious freedom. Among other members of the family may be specified the Marquis of Argyle, beheaded in 1661; and his son and successor, who also fell a victim to arbitrary and unconstitutional power in 1685; Wodrow, and after him Mr. Fox in his *Historical Fragment*, have given singularly interesting accounts of the circumstances attending the trial and execution of the last-mentioned nobleman. The grandson of the first and the son of the last of these noble martyrs, created duke of Argyle and Greenwich, and commonly called the great Duke of Argyle, was celebrated both as a statesman and general. He was commander-in-chief in Scotland, in 1715, and by his conduct on that and other occasions, was of signal service to the revolutionary establishment. Pope said of his Grace,—

"Argyle, the state's whole thunder born to wield,
And shake alike the senate and the field."

The staple commodity of Inverary is herrings, those of Loch Fyne being celebrated for their superior excellence; but the fishing in the Loch has latterly declined: in 1847 the quantity cured and packed in Inverary amounted to 7,857 barrels.

Inverary was erected into a bor. of barony in 1648. In a garden beside the church is a small obelisk, commemorative of the execution in this place, in 1685, of several gentlemen of the name of Campbell, on account of their adherence to presbyterianism. This bor. unites with Campbellton, Oban, and Irvine, in sending a mem. to the H. of C.; and in 1849-50 had 39 reg. voters. Edmund Stone, a self-taught mathematician, editor of *Euclid's Elements*, and author of a *Treatise on Fluxions*, and other works, was a native of Inverary. (*Bound. Rep.; Wodrow's Hist. of Church of Scotland, passim.*)

INVERKEITHING, a royal and parl. bor., par., and sea-port of Scotland, co. Fife, beautifully situated on rising ground on a bay on the N. bank of the Frith of Forth, 10 m. W. N. W. Edinburgh. Pop. of town (1841) 1,827. The town consists of a main street, and a smaller one branching off it, besides several wynds or lanes. Many of the houses are extremely old, and an air of antiquity generally marks the place. The only public buildings are the par. church, a dissenting chapel, the bor. school, and the town-house. About 10 in every 100 of the inhab. are, at an average, at school; a larger proportion than generally obtains elsewhere. There are 3 libraries in the bor. The par. abounds with coal, most of which is exported from St. David's, on Inverkeithing bay. There belonged to the bor. in 1843, 28 registered vessels of the aggregate burden of 1,356 tons, employed chiefly in the coasting trade. A considerable number of English and foreign vessels resort to Inverkeithing for coal, bringing in exchange bark, timber, and bones for manure. There are in the immediate vicinity of the town, a distillery, tan-work, ship-building yard, a magnesia manufactory, and a brick work.

Inverkeithing was created a royal bor. by William the Lion in the 12th century. Its privileges included right of customs over a considerable district of country lying on the Frith of Forth; but these have fallen into disuse, with the exception of the duties at the markets held at Kinross and Tulliebole, and the customs at North Queensferry. Even Edinburgh, at one time, paid an acknowledgment of superiority for some parts of the Calton Hill, but it was bought up, or relinquished. In the ridings of the Scottish parliament, the provost of Inverkeithing was entitled to precedence next to the provost of Edinburgh. Before the convention of royal burghs was appointed to be held at Edinburgh, Inverkeithing was the place of its meeting. This bor. unites with S. Queensferry, Dunfermline, Culross, and Stirling, in sending a mem. to the H. of C., and in 1848-9, had 45 registered voters. (*Bound. Rep.; New Stat. Acc. of Scot., § Fife, p. 230.; Beauties of Scotland, iv. 119.*)

INVERLEITHEN, a par. and village of Scotland famous for its mineral well, co. Peebles, 22 m. S. by E. Edinburgh, and 5 m. E. by S. Peebles. It is situated

* Maximilian, who himself commenced this mausoleum, was after all not buried in it, but at Wienerische Newstadt, in Austria.

in a romantic pastoral country, within $\frac{1}{2}$ m. of the N. bank of the Tweed, and on both sides the Leithen, a tributary of that river. Pop. of the village, 463; not including summer visitors, the aggregate number of whom, in the season, may be about 1400. (*New Stat. Acc. of Scot.*, § *Peeble-shire*, p. 31.) The mineral water has been analysed, and found to contain, per quart bottle, carbonate of magnesia, 10·2 grains; muriate of lime, 19·4; and muriate of soda, 31. (*Id.*, 26.) The popularity of Inverleithen, as a watering-place, was greatly enhanced by the publication (in 1824) of Scott's novel, entitled "St. Ronan's Well," of which it was supposed to be the prototype. A yearly festival has been since instituted at Inverleithen, for the celebration of "the St. Ronan's Border Games;" and the name of almost every street, or separate edifice, in the village, such as "Abbotsford Place," "Waverley Row," "Mar-mion Hotel," &c., refers to the illustrious novelist. Traquair-house, the seat of the noble family of that name, is in the immediate vicinity of Inverleithen. The first Earl of Traquair, Lord Treasurer of Scotland in the time of Charles I., was one of the most eminent statesmen of his day. Dr. Russell, author of the *History of Modern and Ancient Europe*, was born near the village, and was educated in it. The woollen manufacture has been introduced into Inverleithen. (*Crawford's Officers of State*, p. 406.; *Factory Returns*, 1839.)

INVERNESS, a marit. co. of Scotland, and the most extensive in that part of the U. Kingdom: it stretches quite across the island from the E. to the W. sea, having N. the Moray Frith and Ross-shire, W. the Atlantic Ocean, S. Argyre and Perth, and E. Aberdeen, Banff, Moray, and Nairne. But it includes, exclusive of the mainland, the large island of Skye, with the smaller islands of Harris, N. and S. Uist, Benbecula, &c. Area, 2716,800 acres, of which 1,943,920 belong to the mainland, and 772,760 to the islands; the former having 84,480, and the latter 37,760 acres of water. Inverness-shire is, speaking generally, wild, mountainous, and rugged. It is supposed that there is not more than $\frac{2}{3}$ per cent. of its surface not naturally covered with heath. Ben Nevis, which, next to Ben Macdu, is the highest mountain in Great Britain, being 4,370 ft. above the level of the sea, is situated near Fort William, in this co. Mealfourvony, on the N. side of Loch Ness, is 2,730 ft. above the sea. The arable land, which is of very limited extent, is principally comprised in the low districts contiguous to the town of Inverness, in Strathspey (the low country on both sides the Spey), and in narrow gleus along the other rivers and lakes. Climate very various; but generally it may be said to be wet and stormy on the W. coast, severe in the interior, and comparatively mild and dry on the shore of the Moray Frith. Principal rivers, Spey, Ness, and Beaul; all which, but especially the first, have valuable salmon fisheries. The arable land of this co. was formerly divided into small patches, having usually a greater or less extent of hill pasture attached to them, and occupied by tenants at will. The latter lived in miserable huts; and were at once excessively poor, idle, and disorderly. But the abolition of hereditary jurisdictions and clanship in 1748, and the carrying of good military and other roads into districts that were formerly quite impervious, by enabling the law to be every where brought into full operation, have completely repressed the feuds and disorders that formerly disgraced this and other Highland cos. The small holdings have also been very generally consolidated into sheep-farms, some of which are very extensive, and which are mostly stocked with chevlots. Arable farming has, also, been very much improved; and, in consequence, there has been a very great increase in the quantity of disposable produce, and in the rent and value of the land. Good wheat is raised round the Moray Frith; but oats is the principal crop. The stock of black cattle is very large; and cattle, sheep, and wool constitute the principal articles of export. In some districts there are extensive forests. There are no manufactures of any importance, nor any considerable town, except Inverness. Illicit distillation, that was once very prevalent, is now all but suppressed. Limestone, slate, and marble abound in most places; but the want of coal renders the limestone of little value. Average rent of land, including islands, in 1843, 1s. 2½d. per acre. Gaelic is the common language; and in the W. parts of the co., and some of the islands, it is the only one that is generally understood. Owing to the thinness of the pop., the co. is but ill supplied with schools, though in this respect, as in others, it is very much improved.

This co. is divided into two nearly equal portions, by a remarkable glen or valley, stretching N.E. and S.W. from the town of Inverness to Loch Linnhe, opposite the island of Mull, on the W. coast. This glen, which is very narrow, consists principally of a chain of lakes, comprising Loch Ness, Loch Olch, and Loch Lochy. Its surface being nowhere more than 94 ft. above the level of the sea, advantage was taken of this circumstance, and of the continuous chain of lakes, to open a navigable

communication between the E. and W. seas, avoiding, consequently, the lengthened and dangerous navigation by the Pentland Frith. The entire length of this navigation, or of the Caledonian Canal, inclusive of the lakes, is rather more than 60 m.; but the excavated part is little more than 23 m. It cost about 1,000,000*l.*, and is on a larger scale than any work of a similar class in any other part of the empire. It promises, however, to be a very unproductive undertaking; and but for the invention of steam-boats, which were unknown when it was commenced, it would have been nearly useless.

Inverness co. has 35 parishes: it sends 1 mem. to the H. of C. for the co.; and the bor. of Inverness joins with Fortrose, Nairne, and Forres in sending a mem. Registered electors for the co. in 1849-50, 853. In 1841, Inverness-shire had 19,194 inhab. houses, and 97,799 inhab., of whom 45,538 were males, and 52,261 females. Valued rents 73,188*l.* Scotch. Annual value of real property in 1843, 182,064*l.*

INVERNESS, the cap. of the above co., and of the Northern Highlands, a royal and parl. bor. and sea-port of Scotland, on both sides the Ness, within a mile of its influx into the Moray Frith, and at the N.E. extremity of the Great Glen of Scotland, forming the line of the Caledonian Canal, 112 m. N.W. by N. Edinburgh, and 81 m. N. by W. Aberdeen. The situation of Inverness is peculiarly striking and picturesque, standing, as it does, in the middle of a beautiful plain, of unequal extent in different directions, with the Moray Frith on one side, and the back ground, consisting of variously shaped hills, some of which are richly wooded, while others are bleak and rugged. "It is the boast of Inverness to unite two opposed qualities, and each in the greatest perfection; the characters of a rich open lowland country with those of the wildest alpine scenery, both also being close at hand, and in many places intermixed; while to all this is added a series of maritime landscape not often equalled." (*McCulloch's Letters on the Highlands*, vol. i. p. 56.) The Ness, on whose banks the borough stands, is perhaps the shortest river in Scotland, flowing between Loch Ness and the Moray Frith, a distance of only 8 m. Pop., in 1841, 11,568; of the town and par., in 1801, 8,782; in 1841, 15,418: inhab. houses, 3,084.

The most important portion of the town is on the right bank of the Ness. A handsome stone bridge of 7 arches was erected across the river in 1685; there is also a wooden bridge, built in 1808, at an expense of 4,000*l.* The principal streets lie E. or N., and consist generally of more elegant and substantial buildings than are to be found in any other town of the same size in Scotland. The streets, which are lighted with gas, are causewayed and flagged. The inhab. are supplied with water by pipes from the river. The shops, which supply the demand of an extensive district of country, are, in many instances, large and well stocked with goods. The villas in the suburbs are numerous and elegant, and the walks varied and commodious. The public buildings are the Exchange and Town-house, near the centre of the town; the Gaol, surmounted by a tower 130 ft. high; the Assembly Rooms of the Northern Meeting; Infirmary, Academy, the United Charity Institutions; which last edifice occupies an elevated situation in the vicinity of the town. With regard to ecclesiastical buildings, the High Church is the most conspicuous; the square tower attached to it was built by Oliver Cromwell, and the bell brought from the cathedral of Fortrose, on the N. banks of the Moray Frith. There are other two parish churches, in one of which Gaelic alone is used; and two chapels of ease. There are, also, free churches, dissenting chapels, belonging respectively to the Episcopalians, the United Associate Synod, the Independents, Baptists, Methodists, and Rom. Catholics.

Gaelic was formerly the only language spoken in Inverness and its neighbourhood; and it is at this moment the ordinary speech of the lower orders, all of whom, however, understand and can speak English. It is admitted that the English language is spoken in greater purity by the middle and upper ranks in Inverness than in any other place in Scotland; a distinction which is said, whether correctly or not, to have originated in the circumstance of Cromwell having stationed and long maintained an English garrison in the town. "The soldiers seem to have incorporated afterwards with the inhab., and to have peopled the place with an English race; for the language of the town has been long considered as peculiarly elegant." (*Johnson's Tour to the Hebrides*.) The Highland character, however, still predominates very considerably in the borough. In addition to the Gaelic language, the speech of the common people, their dress is more or less of Celtic fashion, and of home manufacture, such as the short coat, blue bonnet, plaid rig and fur stockings, all of the coarsest materials. The married women usually walk the streets and go to church without a bonnet; the maidens without either cap or bonnet; while the other parts of their dress are of the most simple and homely description.

Inverness enjoys eminent advantages as to education.

Inverness is now, however, superior perhaps to any town of its size in Scotland as to all the necessaries, comforts, and luxuries of life. Corp. revenue, 1848-49, 1,707*l*. 12*s*. 7*d*. This bor. unites with Forres, Fortrose, and Nairne in sending a mem. to the H. of C. Registered voters, in 1849-50, 477. (*Anderson's Highlands and Islands; Caledonia*, vol. i.; and the works already referred to.)

INVERURRY, a royal and parl. bor. and par. of Scotland, co. Aberdeen, in the angle formed by the confluence of the Don and Ury, 14 m. N.W. Aberdeen. Pop. of town (1841) 1679; of town and par. 3020. The inhab. are chiefly agriculturists, there being only about 36 weavers in the par. The Aberdeenshire Canal, begun in 1798, and completed in 1807, commences in the tide-way of the harbour of Aberdeen, and terminates at Port Elphinstone, near Inverury. The entire length is 18*½* m.; the surface width is 33 ft.; the depth 24 ft.: it has 17 locks; and its highest level is 168 ft. above low water-mark. Keith Hall, the seat of the Earl of Kintore, who also holds the title of Lord Inverury, is in the immediate vicinity of the bor. Arthur Johnston, editor of the *Dedictio Postarum Scotorum*, and who holds the next place to Buchanan among the Latin poets of Scotland, was born in the neighbourhood of Inverury in 1687. This bor. unites with Elgin, Banff, Cullen, Kintore, and Peterhead, in sending a mem. to the H. of C. Registered voters in 1849-50, 115. (*Boundary Reports; Statistics of Scotland*, iv 490.)

IONA. (*See HARRIS.*)

IONIAN ISLANDS, a collection of 7 principal and many smaller islands on the W. and S. coasts of Greece, lying between the 36th and 40th parallels of N. lat., and between the 19th and 23 deg. of E. long., forming a republic under the protection of Great Britain. The principal islands, with their area, population, &c., are as follows:—

Islands.	Area in sq. m.	Total Pop. in 1836.		Alms, &c.	Pop. to sq. m.
		Males.	Females.		
Corfu . . .	227	25,221	22,236	9,806	167
Cephalonia . .	845	24,884	22,133	936	162
Zante . . .	186	19,673	15,473	1,127	146
Santa Maura . .	100	9,087	8,194	180	85
Ithaca . . .	44	4,312	4,712	108	219
Cerigo . . .	116	6,156	4,561	37	75
Paxos . . .	28	2,561	2,503	223	193
Total . . .	1,507	110,318	93,746	12,487	166
		204,064			

These islands, a more minute description of which will be found under their several heads, have, generally speaking, rugged irregular coasts, and a very uneven surface; barren rocks and heath-covered hills forming nearly half their whole contents. Their geological formation is chiefly limestone, disposed in highly inclined strata, intermixed with grey foliated gypsum, and masses of sandstone: and there are few organic remains. The climate is mild, but subject to sudden changes. The *sirocco*, however, makes the heat occasionally oppressive, and the thermometer in summer frequently rises to 8*½* Réaumur. Hurricanes called here (*borasces*) and earthquakes are frequent, especially in Zante. There fell, in 1838, 49.04 inches rain. Fine springs of fresh water are abundant on most of the islands. The soil is more favourable to grape cultivation than to the raising of corn; and hence more than $\frac{2}{3}$ of the surface available for tillage is laid out in currant-grounds, vineyards, and olive plantations, which are all managed with considerable skill. The land is chiefly in the hands of small proprietors, who let it out to tenants on the *enfiteuser* system, receiving half the produce as rent.

The following table has been said to exhibit the employment of the surface, the nature and quantity of the produce, and the average market prices of the different articles in 1836. (*Q. T. Tables.*)

Kind of Produce.	Acres.	Amount of Produce.	Average Price.
Wheat . . .	16,127	76,326 bush.*	<i>s. d.</i> 2 11 per bush.
Indian corn, barley, &c. . .	37,437	145,600 —	1 4 —
Oats . . .	5,492	22,915 —	1 3 —
Pulses . . .	4,320	23,578 —	3 8 <i>½</i> —
Olive oil † . .	219,339	112,219 barr.	6 <i>s</i> 3 per barr.
Wine . . .	119,152	210,147 —	—
Currants . . .	15,740	17,980,100 lbs.	11 4 —
Cotton . . .	1,014	37,567 —	0 8 <i>½</i> —
Flax . . .	1,310	74,933 —	0 8 <i>½</i> —
Total of land in crop . .	498,151	† Olives are sown extensively cultivated in Corfu, grapes in Cephalonia, and currants in Zante. Olives are gathered in Dec., and currants in the middle of Sept.	
Pasture land . .	64,980		
Total of available land . .	563,131		

* This should certainly be quarters; if not, the crop was worth little more than the seed.

The live stock on the islands, in 1898, consisted of 14,349 horses, 10,205 horned cattle, 20,000 sheep, and 60,400 goats, a number far too small to meet the demands of the pop. and hence, large quantities are annually imported from Alaska and Greece. The mouflon-sheep are not important. Sheep to wool at Corfu and Lania and the value of the quantity exported, in 1898, is officially estimated at 12,000. earthenware with glazes just like carpets covers windows, floors, roofs, and marking are also made to some extent. The islands, however, enjoy a considerable share of the commerce of the Mediterranean, owing to their out-going dis- tinguish for the supply of the neighbouring continent. They import wheat and other grain, chiefly from Greece, olive, cotton, and woolen fabrics, cured fat British hardware and animal products, the total value of which amounted, in 1898, to 26,748,100, and in the same year they exported island produce and manufactures (olive-oil, currants, wine, vasolina, cotton, silk, soap, and woven fabrics) to the amount of 600,000. The com- merce of the islands is cramped by the high duties laid on imported articles. Their commercial relations will be best understood by the following account of the exports and imports of Alexandria in 1898.

Commodity	Imports	Exports
Grain and grain products	1,200,000	1,200,000
Meat and meat products	1,100,000	1,100,000
Mineral products	1,000,000	1,000,000
Textiles	900,000	900,000
Chemicals	800,000	800,000
Metals	700,000	700,000
Transportation equipment	600,000	600,000
Other manufactured goods	500,000	500,000
Services	400,000	400,000
Gifts and other	300,000	300,000
Total	8,000,000	8,000,000

These islands possess few manufactures properly so termed. The work of the village or peasant spin and weave a coarse kind of woollen cloth, sufficient in great part for the use of their families. A little more is made at Corfu and Zante. The latter manufactures a considerable quantity of silk gown-de-Wayne and handkerchiefs, the art of dyeing, however, is too little studied, and the establishments are on too small a scale. The pottery, in general, are ugly, with nothing in shaping and very superfluous. Those of Zante and Cephalonia are more industrious than the Corfuans, in the first particularly their superior condition is probably to be ascribed, in part at least, to the fact that the women reside on their estates, and contribute by their example to stimulate industry. In Corfu, the taste for the dirty life which prevailed in the time of the Venetian government, still operates to a great degree. The Corfuan proprietor regards too little in his class, his land is neglected, while he continues in the practice of his forefathers, who pursued watching opportunities of the end of a corrupt career, intent to improving their fortunes by the more legitimate means of honorable exertion and attention to their patrimony. In this respect, however, a material change for the better has taken place within the last three years.

The government of these islands, since 1817 has been vested in the high commissioner (who represents the government of Great Britain), the senate, and the legislative assembly which have jointly the title of the *parliament of the Ionian Islands*. The legislative assembly consists of 40 members 10 of whom are chosen by the senators, or voters of the different islands, Corfu, Cephalonia, and Lango returning 7 each, Santa Maura 4, and the three smaller islands sending 4 among them. The other 31 are styled *deputies*, being officers appointed by the high commissioner. This assembly elects its own officers, fixes the amount of the supplies, and has the power of originating new laws. The senate consisting of 6 members is chosen by the legislative assembly out of their own number, but the president is nominated by the commissioner who likewise confirms the election of the rest. This body is legislative, so far that it has a vote on the proceedings of the assembly, but its chief business is to regulate affairs during the recess of the legislative body to decide on matters submitted to it by the commissioner and to nominate the officers under the general government subject to the approbation of the commissioner. The assembly and senate are elected for five years, but may be dissolved at an earlier period, either by the sovereign or his representative, with whom ultimately rests the confirmation, or veto, of every law, decree, appointment, or proceeding of the general or local government. The separate islands likewise have each a council of 6 members selected out of a list of 10, furnished by the senators besides whom 3 other active functionaries are nominated by the senate to act as an executive body. The judicial power is lodged in a supreme court at Corfu, comprising 4 ordinary and 3 extraordinary members, the latter being the commissioners and the president of the senate; of the former, two are

native language, motivated by the courts, and two are appointed by the commissioners, who may be either English or British subjects. The ordinary courts consist of seven judges and, in case of difference of opinion, appeal to the extraordinary judges. Subordinate to this court are four tribunals on each island, making 11 in the whole, and under these again are justice of peace courts for minor offences and small civil suits, but the courts and high commissioners may reverse every decision whatsoever if they think proper. The armed or militia establishment, the police, and the army are under the sole direction of the high commissioners. The public press is likewise under the immediate control of the commissioners and courts. The religious establishments consisting of an archbishop and bishops with the vicars or curates of the Greek church, which is the dominant sect. Full liberty however is given to the adherents of the Rom. Catholic, Protestant and other sects.

The revenues of the London islands are potentially derived from sugar duties on all and customs of 10 per cent. on wine of 8 per cent. and on soap of 6 per cent. and octrois. The duties on imported merchandise are regulated by a tariff and all articles not specifically included in it pay an ad valorem duty of 7 and 8 per cent. There are no direct taxes. The following is an official statement of the revenues and expenditure in these islands during 1887:—

Revenues		Expenditures	
General	\$1,200	General government	\$1,200
Special duty	000	Local int. on the cap-	
Gifts and	0,010	ital lands	
to customs	\$4,000	Compensation of police	
to wine and spirits	0,000	and courts of justice	
to tobacco	0,000	Education	
to other	0,000	Service of public officers	
Public works	\$2,000	Public works, roads, etc.	
For loan	0,000	Public buildings and	
University of arts and		schools	
grammar	0,000	Police	
Service of public property	\$1,000	Military and other ser-	
Service for roads, etc.	0,000	vice	
Public and population		Compensation	
service	0,000	Compensation of public	
Attachment	0,000	works service	
		Military protection	

Owing to the want of an efficient police, and to the gross corruption of the Venetian government, under which impunity might be secured for the basest crimes, the state of society in the Ionian Islands, when they were placed under the eye of England, was as bad as can be imagined. The inhabitants were in every way ignorant, superstitious, cowardly, vindictive and blood-thirsty. Perjury was so common, as hardly to excite attention, and assassination was more frequent than in any other country. Corvée was exacted. But under the rigorous and equal government of Great Britain a great change for the better has been effected; assassination is now comparatively rare, and the inhabitants are beginning to appreciate the advantages of honesty, law, decency, and industry.

Education in these islands has been progressively improving since the efforts of the Earl of Cathillford first gave the impetus to the government and island. At Cairo there is a university supported by the government, in which instruction is furnished by distinguished professors in classical and scientific subjects, and the same town contains an ecclesiastical seminary for young men intending to enter the priesthood of the Greek church. Each of the islands has a "secondary" school for instruction in the Greek, Italian, and English languages, writing, arithmetic, &c. and in the chief town of each island there is a central school for teaching reading, writing, and arithmetic. District schools are established in every part of all the islands. The whole educational establishment is under the direction of a commission of public instruction and the Italian government makes large annual grants for building school-houses, providing books, &c.

The only coins properly belonging to the Ionian islands, are a silver six pence and a copper cent but these mostly in circulation are Spanish doubloons and dollars, and Venetian dollars, received in payment for the produce exported to Spain and Italy. British silver coins are also occasionally met with. The chief standard of weight is the Imperial Troy pound of 5,760 grains: 30 of these grains make a tola, 30 tola make an agram, and 12 agram compose a silver sikkie. The sikkie is equivalent to the pound avoirdupois, and 100 of these grains make a cabot. The English yard is the standard linear measure, 4 yards make a cossia, 10 yards a masta and 1,740 yards a mile. The gallon (equivalent to the English gallon) contains 8 choia.

The Iowian Islands are frequently mentioned in the earliest history of Greece, but only as detached governments, and not under their collective form. After having repeatedly changed masters during the middle ages they at length became the possession of the Ven-

settled early in the 12th century. They were then-
forward governed by an Italian prince; the Italian
language was generally introduced into public acts
and among the nobles, and Corbi was made the chief
citadel and part of the Venetian navy. In this state the
Island continued till 1797 when they were ceded by
the French, who were expelled in their possession
by the treaty of Campo Formio. Two years afterwards
they were again under the French, and finally
restored to the British in 1804.

part, and parts of 6 others, 7,000 acres. Pop. in 1801,
15,100. The town occupies the foot of a range of hills
gradually sloping to the river which is navigable up to
this point by vessels of 200 tons, and is crossed by a hand-
some iron bridge. The streets are irregularly built, and
for the most part narrow, but some of them, which are
new or have been recently widened, consist of neat and
substantial buildings. On the whole, although containing
a great many old-fashioned houses, the town presents
a pleasing appearance, and is not only improving, but
rapidly extending. It is lighted entirely with gas, and the
streets are either paved or macadamized. (*Mem. Bristol
Ship*). There are 13 par. churches, some very remark-
able for architectural beauty and several places of wor-
ship for dissenters. The other public buildings are, the
town-hall, the shire-hall, the county-house, a respect-
able brick structure on the quay, a commodious market
house, erected in 1801, the corn exchange, the ex-
change, and a very well regulated, the bar and the
free library kept, as well as the grammar school, in an
old building upon a monastery of Black Friars. The
grammar school, which was founded by its founder
Cardinal Wolsey to form part of a college preparatory to
Christ Church, Oxford, was chartered by Queen Elizabeth
in 1585. The master receives, for the instruction of 50
boys (sons of freemen), a salary of 1000 a year and
a dwelling house, and he is allowed to take boarders. A
charity school, for maintaining, clothing, and educating
16 poor children, two national schools, and a Lamenstrum
school, furnish instruction to a great many children, and
Sunday schools are attached to most of the churches and
all the chapels. An institution for the support of widows
and orphans of poor clergymen was established in 1795
and there are several almshouses. Two weekly papers
are published in the town.

Ipswich formerly enjoyed a considerable share in the
woollen and linen trade, but manufacturing is
now all but extinct, the trade in this district having been
greatly diminished by the cheaper goods made in the
North. The town has no spinning factories, but small
quantities of yarn are spun for the Norwich weavers.
The present industrial establishments comprise two ex-
tensive iron foundries, a small mill, a soap and candle
factory, in 1801, 4000 lbs. hard soap, 100,000 lbs.
and two ship-building yards, with accommodations for con-
ducting merchants of the largest size. The prin-
cipal business of the town consists in the corn and coal
trade, large quantities of wool, beef and mutton, being
exported to London; while coals are extensively im-
ported, being shipped by the Swinburn Canal to the
W. parts of the co. A general foreign trade of some
importance, especially to Norway (timber is carried on
by 1000 tons belonging to the port 100 vessels, of 14,700
tons burden, and the gross customs duties, in 1801,
amounted to 17,000. A communication with London is
carried on by means of steam packets, but the principal
intercourse with the metropolis, and all parts of the
kingdom, is now carried on by means of the Eastern
Railway. (*Manufactures of Ipswich and Municipal
Account Report*, *Tables of the Pop. &c.*)

The corporation the first charter of which was granted
by King John, and confirmed by subsequent monarchs
appears to have been previously to the passing of the
Municipal Reform Act, one of the worst regulated and
most corrupt in the kingdom. Every power was vested in
it its property, its privileges and its authority, having
been used for election purposes. (*Mem. Report*). The
present municipal officers are 16 aldermen, one of whom
is mayor, and 20 councillors, the two being divided into
3 wards, and having a contribution of the poor, under a
statute. Corporation revenue in 1801-02, 6,500. A
sanitary board is established here, before which 1,200 petitions

were signed in 1841. Ipswich has sent 9 members to the
H. of C. since the reign of Edward I., the franchise, till
the passing of the Reform Act, being vested in freemen
(by birth, servitude, gift, or purchase) not receiving charters.
The boundaries of the old bur. have not been changed.
Registered electors, in 1801-02, 1701.

The earliest name of the town was *Oppidum*, derived
from its proximity to the confluence of the Upping (now
converted into a canal), with the Orwell. Its antiquity
is proved by its destruction, in 901, by the Danes. In
the reign of Edward the Confessor it comprised 800 in-
habitants. William the Conqueror created a battle for its
protection. Its ancient corporate privileges included
jurisdiction over the river and part of Man-
wich, which was long subordinate to Ipswich and an
exception from serving on an jury or holding an
office. During the 13th and 14th centuries, this town
seems to have been a favourite resort of monks and
clergymen, there being at that period no fewer than
31 churches and 6 religious houses. (*Early English
Promoter*, *Ann. of Ipswich*, *Mem. Bristol Ship*, *Man.
Corp. Rep.*)

IRELAND, a large and important island of
Europe, in the N. Atlantic Ocean. It is situated
to the W. of Great Britain, being separated from
the latter by St. George's Channel on the S., the
Irish Sea in the middle, and the N. Channel on
the N.; the distance from St. David's Head, in
S. Wales, across St. George's Channel, to Car-
mare Porth, in Ireland, is about 47 m., the distance
from Holyhead, in N. Wales, across the S. border
of the Irish Sea to Dublin, about 55 m.; and
the distance from the Mull of Cantara, across
the N. channel to the opposite coast of Ire-
land, about 134 m. And besides its proximity
to England, Ireland has been long politically
connected with that part of the empire, and
since 1800, when its separate legislature was
merged in the imperial parliament, it has formed
a principal portion of the United Kingdom of
Great Britain and Ireland.

Ireland was called by Aristotle and Strabo
Ierne (Iona), by Cæsar, Tacitus, and Ptolemy, *Hibernia*,
and by Moles and others, *Juverna*, three
names being obviously derived from its native
or aboriginal name of *Ir*, *Ere*, or *Eris*, whence
also the modern name has been deduced. (*Col-
lara* *deus Antiqua*, l. 406.)

Ireland is situated between the parallels of
51° 35' and 55° 35' N. lat., and of 6° and 11° W.
long. It is of a rhomboidal figure, and though
more compact than Great Britain, is deeply in-
dented, particularly on its S. W. and N. coasts,
with bays and arms of the sea. Its greatest
length between Mason Head, in Cork, and Fair
Head, in Antrim, is about 201 m.; and its greatest
breadth from the W. coast of Mayo to the E.
coast of Down, is about 108 m., but in other
places the breadth is much less, and there is no
part of Ireland above 20 or 25 m. from the sea.
Its area is estimated at 28,518 sq. m., of which
262 sq. m. are water.

Face of the Country.—As contrasted with
Scotland, or even the greater part of England,
Ireland may be said to be a flat country. Still,
however, the surface is in most parts much
diversified; and even where it is quite flat, the
prospect is generally bounded by hills or moun-
tains in the distance. With the exception of
the Devil's-bit and Slieve Donard mountains, which
run N. E. and S. W. for about 20 m., inter-
secting Tipperary and dividing King's and Queen's
Counties, most of the other mountains in Ireland
are pointed out into groups, or form only short
ridges. The principal group is situated in the S. W.
corner of the island, in the co. Kerry and Cork, ad-
joining the celebrated lakes of Killarney. Curlew
Faul is the highest of these. In this group the highest
mountain in Ireland, has an elevation of 1,000 ft. above
the sea. The Wicklow mountains, in the co. Wicklow,
on the E. coast of the island, cover a considerable area;
Lugnaquilla, the highest, is about 2,800 ft. above the sea.
Some of the glens in this mountain group are celebrated
for their beauty. The Mourne mountains in the S. part

of the co. Down, are also of considerable extent; and some of their peaks attain to an elevation of above 2,700 ft. The mountains of Donegal, and those in the N. parts of Leitrim and Sligo, and in the W. parts of Mayo and Galway, constitute a formidable barrier along the N.W. and the greater part of the W. coast, and serve at once to attract the moisture brought from the Atlantic, and to break the fury of the storms from that quarter. Some of the Irish mountains are rugged and precipitous; but the greater number are smooth and rounded, admitting of cultivation a considerable way up their sides, and sometimes to their very summits.

The central portion of Ireland consists of a vast tract of level land, broken in some places by a few undulating hill ranges; but for a great part of its extent nearly an uninterrupted flat, extending in some parts, as between Dublin and the Bay of Galway, quite from sea to sea. This great level consists partly of rich cultivated land; but it also comprises a vast extent of bog, partly in Kildare, King's County, and Roscommon, and partly in Meath, Westmeath, and Queen's County. Though not continuous, these bogs differ but little in elevation; and being in many parts separated only by narrow ridges of dry land, they have received the common appellation of the Bog of Allen. Several rivers have their sources in this bog, the highest part of which may be elevated about 280 ft. above the level of the sea. There are several very extensive levels in other parts of the country; and some of them, particularly in Tipperary and Limerick, are not inferior in fertility to any land in the empire.

Ireland is very well watered, having to boast of an unusual number of rivers and lakes. At the head of the former is the Shannon, which, as a channel of internal communication, is not inferior, if it be not superior, to any other river in the United Kingdom. Excepting the Shannon and, perhaps, the Erne, there is no river of any consequence flowing westward. The Blackwater, Suir, Nore, and Barrow, all considerable streams; and the Lee and Bandon, which, though much smaller, have a good deal of commercial importance, pour their waters into the Atlantic on the S. coast; the Slaney, Liffey, Boyne, &c. discharge themselves into St. George's Channel and the Irish Sea; and the Bann and Foyle have their mouths on the N. coast. The Shannon, after rising at the base of the Cuikagh mountain, in Ulster, runs through the centre of the island, traversing, or, rather, expanding into the lakes Allen, Ree, Derg, &c.; and, after nearly insulating the prov. Connaught and co. Clare, falls into the Atlantic, by an estuary of great length and width. This fine river is navigable for 214 m., or throughout its entire course, except about 6 or 7 m. above Lough Allen. (See SHANNON.) The Blackwater or Broadwater is the chief river of Munster: it rises on the confines of Limerick and Kerry, and soon assumes an E. direction, which it generally preserves till about a dozen m. from its mouth, when it turns suddenly S., and falls into the ocean at Youghal harbour. Its course may be estimated at about 100 m. The tide rises as high as Cappoquin, to which point it is navigable. Mallow, Fermoy, Lismore, and Youghal, are on its banks. The Suir rises in the Sliebhloom mountains, and has generally a S. course till it approaches the Knock-me-le-down range of hills, which separates its basin from that of the Blackwater. It then turns E., and ultimately falls, together with the Barrow, into the estuary termed Waterford harbour. In a commercial point of view, this is one of the most valuable rivers of Ireland. Vessels of 500 tons come up it to Waterford; besides which city, Carrick, Clonmel, Cahir, &c. are situated on it. The Barrow is decidedly the most important of the Irish rivers, after the Shannon: it has been elsewhere described (Vol. I. p. 301.). The Nore, its chief tributary, holds its course between the Barrow and the Suir: it has a general direction S.S.E., running past Kilkenny, Thomastown, and Innistoge. It is navigable for considerable vessels to the latter place, and for barges to Thomastown. The Slaney, like the two foregoing rivers, has in general a S.E. course; it rises at the foot of Mount Lugnaquilla, co. Wicklow, and falls into the arm of the sea termed Wexford Haven. Wexford, Enniscorthy, Newtown Barry, Tullogh, &c. are built on it: it is navigable for barges as far as Enniscorthy. The Lee and the Bandon have both an E. course; the former, on which Cork is situated, is navigable to that city for vessels of from 150 to 200 tons; the Bandon has its mouth in Kinsale harbour. The Boyne, celebrated in Irish history, has been elsewhere noticed (Vol. I. p. 425.). The Liffey is remarkable only as the river on which the metropolis is situated. The Upper Bann rises near the Mourne mountains, and runs into Lough Neagh, which receives several other large streams. The outlet of this lake is the Lower Bann, which has a N. course to its mouth, 5 m. below Coleraine, to which point only it is navigable for boats, and that with difficulty, from the rapidity of its current. Its salmon and eel fisheries are highly important and valuable. The Foyle, formed by the confluence of several streams near Strabane, runs generally N.N.E., and discharges itself into Lough Foyle. Stra-

bane, Lifford, St. Johnstone, and Londonderry are on the Foyle, which is navigable to the latter city for the largest class of merchantmen, and to St. Johnstone for barges. The Erne, Arrow, Moy, Kenmare, &c. require no particular notice.

Ireland is more remarkable for the number and extent of her lakes, or, as they are there called, *loughs*, than either Scotland or England, though they must, perhaps, in general, yield to those of the sister island in point of picturesque beauty. Lough Neagh, in Ulster (which see), ranks pretty high among the secondary European lakes, inasmuch as it extends over about 100,000 acres. Lough Erne, co. Fermanagh, consists of two considerable lakes, connected by a winding strait, on an island in which the town of Enniskillen is built. Both these lakes are full of islands, some large and thickly inhabited, many well wooded, and the whole so disposed, and accompanied by such a diversity of coast, as to form a vast number of rich and interesting prospects. Loughs Corrib, Mask, and the lakes of Killarney, so celebrated for their surrounding scenery, are the other principal lakes. (See KILLARNEY.) The total extent of the Irish lakes has been estimated, as already seen, at 455,399 acres; of which, 32,474 acres are included in Leinster, 44,652 in Munster, 183,796 in Ulster, and 194,477 in Connaught.

The term *lough* is also often applied in Ireland to arms of the sea nearly enclosed on all sides by the land, and frequently forming commodious harbours. Of these, the most celebrated are Loughs Foyle and Swilly on the N., and Belfast and Strangford on the E. coast.

The Irish coast, particularly on the W. and S.W., is deeply indented with numerous bays, gulphs, and arms of the ocean, forming some noble havens. Ireland has been vaguely said to possess, in all, 14 harbours for the largest ships, 17 for frigates, and from 30 to 40 for coasting vessels, independent of at least 24 good summer roadsteads. The principal inlets of the sea on the W. coast are Donegal, Sligo, Killala, Clew, Galway, Tralee, Brandon, Dingle, Bantry (a matchless bay) and Dunmanus bays, and the estuaries of the Shannon and Kenmare; and on the S. the harbours of Cork (one of the finest in Europe), Waterford, Dungarvan, Youghal, and the bays of Courtmacksberry, Cloghnakilty, &c. The E. coast has no good harbour; the principal inlets on that side being, exclusive of Loughs Strangford and Belfast, the bays of Dublin, Dundalk, and Dundrum, and Wexford Haven. The chief Irish headlands are, Dunmore Head (which, exclusive of a few insignificant islands, is the most W. point of Europe) and Achil Head, on the W. coast; Cape Clear, on the S., Carnsore Point, on the S.E., and Fair and Malin Heads, on the N. A great number of small islands and islets belong to Ireland, which lie chiefly along its W. coast. They are of little importance: the largest are Achil, Clare, N. and S. Arran, Valentia, and Rachlin (the *Ricina* of Ptolemy), on the N.E. coast.

The climate is more temperate and equable than that of other parts of Europe in the same lat. The heat of summer is less oppressive, and the cold of winter less severe; and, when any thing like immoderately hot or cold weather takes place, it lasts for a much shorter time. The great defect of the climate of Ireland is excess of humidity: not only is rain more frequent than in England, but the atmosphere, when there is no rain, is largely impregnated with moisture. This circumstance, the result of the insular position of Ireland, and of the prevalence of W. winds for three fourths of the year, accounts for the greater verdure of the country, and for the trees continuing in leaf much longer than in England. In the driest seasons, Ireland rarely suffers from drought, but the crops are often injured by too much wet. "It is a common saying in Ireland, that the very driest summers never hurt the land; for, although the corn and grass upon the high and dry grounds may get harm, nevertheless the country in general gets more good than hurt by it: and when any dearths fall out to be in Ireland, they are not caused through immoderate heat and drought, as in most other countries, but through too much wet, and excessive rains." (*Boate's Nat. Hist. of Ireland*, 167., ed. 1652.) Hence, Ireland is naturally much better adapted for a grazing than for an agricultural country; a peculiarity noticed by Giraldus Cambrensis, in his *Topog. Hiberniæ*, who says that it is more fruitful of pasture than of fruit, and of straw than of grain. *Pascuis tamquam frugibus, gramine quam grano fecundior est insula.* It may also be worth mentioning, that the superiority of Ireland as a pastoral country was well known to the ancients. *Calli*, says Pomponius Mela, *ad maturanda semina iniqui; verum adeo luxuriosas herbas, non letis modo, sed etiam dulcibus, ut se exigua parte dici pecora impleant.* (*De Situ Orbis*, lib. iii. § 6.) It is alleged that the atmosphere is less humid now than formerly; and this is only what we should be inclined, *a priori*, to infer, from the cutting down of the woods, and the great extension of cultivation. Were drainage as extensively practised in Ireland as in England, there can be little doubt that the climate would be still farther improved; though, from the po-

sition of Ireland in respect of the Atlantic, it must necessarily be always distinguished for humidity. The average quantity of rain in a series of years was found to be 35 inches annually in Cork, and 31 in Derry. The changes of the seasons, and of the weather generally, are a good deal more uncertain even than in England; and the business of agriculture is proportionally hazardous. Thunderstorms are less frequent and destructive in Ireland than in Britain. The mean temp. of the N. of Ireland is about 48°, of the middle 50°, and of the S. 52° Fahr. Its range at Dublin has been found to be between 14° 50' and 81° 50', the mean being about 49°. Peaches, grapes, and most other southern fruits do not ripen without much care and attention; but the broad-leaved myrtle grows luxuriantly in the S. counties, and the arbutus is not native to any other country so remote from the equator.

The geology of Ireland differs greatly from that of England, and in a general point of view rather resembles that of France; Ireland being, like the latter, a basin surrounded by mountains of a primary or transition character. The Mourne mountains, and others in the N.E., are composed chiefly of granite, mica-slate, grauwacké, porphyry, &c., similar to the mountain ranges on the opposite Scottish coast. Granite prevails in the Wicklow mountains, and it is found, together with gneiss, mica-slate, hornblende, quartz, old red sandstone, &c., in Mayo, and other parts of the W. Clay-slate, felspar, primitive greenstone, and limestone, are the other chief primary and transition rocks. Limestone is a very prevalent formation, it being found over the whole country, except in a few of the N. and W. counties; in many places sandstone protrudes through it in the form of knolls. In the N., the trap-field of Antrim, the largest basaltic formation in Europe, extends over an area of 800 sq. m., and presents, in the Giant's Causeway, &c., the finest specimens of columnar basalt. No tertiary beds, containing shells, &c., like those of the London and Paris basins, have been discovered; but the limestone in most parts abounds with fossil remains. Coal, that most valuable of fossils, is found in the S. and E. The principal coal-field is that of Kilkenny, which rests, like the great coal formations of England, upon mountain limestone; the other coal-fields are those of the cos. Tipperary, Cork, Kerry, Limerick, Lough Allen in Leitrim, Monaghan, and another in Ulster, N. of a line drawn between Dublin and Galway. Little coal is, however, raised; the produce of the Kilkenny coal-field, according to the return in the Railway Report, not exceeding 55,000 tons coal, and 52,350 tons culm. The coal that is raised is also very inferior. In fact, Dublin, Belfast, Cork, and all the principal Irish towns, are supplied with coal from Great Britain. Iron is found in many parts of the country; and the great increase of iron-works in the earlier part of the 17th century is said by Boate to have been a principal cause of the destruction of forests in Ireland (p. 120.) But these having been exhausted, and coal not having been found of such quality and in such quantity as to supply the deficiency, the Irish iron-works have been almost wholly abandoned. In Donegal and Galway, statuary marble, nearly equal to that of Italy, is found; and the black and grey marbles of Kilkenny are much prized, and exported to a considerable extent. There are copper and lead mines in Cork, Kerry, Wicklow, and other places. The copper mine of Allihies, in Cork, is said to employ from 1,300 to 1,500 men. Small quantities of gold and silver have been found in Wicklow. Indeed, some stream-works were wrought in the latter co., on account of government, previously to the rebellion in 1798; and it is said that as much gold was obtained as paid the expense. But some mining operations in Wicklow, commenced by government early in the present century, having failed, all attempts to obtain the precious metals have been since entirely abandoned. Copper is the only metal which at present appears to repay the labour and expense of raising it: the ore is mostly sent to Wales to be smelted. Antimony, manganese, serpentine of excellent quality, fullers' earth, gypsum, limestone, slate, with beryls, garnets, &c., are the other chief mineral products. (*Railway Report*, App. B., p. 66, &c.)

The deficiency of good coal in Ireland is less felt as regards domestic than manufacturing purposes. About 2,800,000 acres, or nearly 1-7th part of the entire surface, consists of bogs, which are capable of furnishing an almost inexhaustible supply of peat at very little more expense than that of the labour required in digging it. About 1,576,000 acres of this peat soil are estimated to consist of flat red bog; the remaining 1,255,000, called mountain bogs, lie on the surface of the uplands. The red peat bogs, which form a remarkable feature of this country, are chiefly comprised in the great central plain of Ireland; and the space bounded N. by a line drawn from Howth Head to Sligo, and S., by another from Wicklow Head to Galway, would include the greater portion of the Irish bogs. Unlike the English mosses, they are rarely level, but undulating; and in Donegal

there is a bog completely diversified with hill and dale. These bogs consist of moist vegetable matter, containing a great deal of stagnant water: and after heavy rains, fogs, &c., sometimes burst, and inundate or overwhelm the surrounding country. But they vary infinitely in wetness, as also in depth, composition, &c. The extensive bogs in the central part of the island, though separated from each other, have, as already stated, received the common name of the Bog of Allen. The bogs in general rest upon a stratum of blue clay, based on limestone, and are invariably above the level of the sea; their greatest elevation, however, not exceeding 488 ft. Many conflicting opinions have been entertained with respect to the origin of these bogs. It has been contended by some that they are of no great antiquity, and originated in the cutting down of the forests, after the invasion of Ireland by Henry II., or at a somewhat earlier period. It is alleged that the recumbent trees having intercepted and dammed up streams of water with the rubbish carried along with them, the whole became gradually covered with a vegetation of moss, sedgy grass, rushes, and various aquatic plants. We believe, however, that there is but little foundation for this theory; and that the bogs owe their origin to natural causes, and not to a supposititious cutting down of the forests. The English did not, till long after the reign of Henry II., spread themselves over any considerable portion of the country, and could not, therefore, be the agents in any very remote and extensive destruction of its woods, which, in fact, were both numerous and extensive long after the bogs had attained to about their present extent. (*See Boate's Nat. Hist. of Ireland*, pp. 118—122., ed. 1652.) The drainage and cultivation of these extensive portions of the surface of Ireland have long been regarded as objects of great national importance, and frequent attempts have been made to show that they might be effected at no very great expense. But there are but few examples in any part of the island, and those under very peculiar circumstances, of successful bog cultivation. The attempts to drain the bogs hitherto made in Ireland have not been very successful; and even had they succeeded, it is doubtful whether the bogs would have produced any considerable return. It is, indeed, by no means clear, supposing them to be quite dried, that they would not, in most instances, be rendered still more worthless than at present. (*Walsfield*, i. 106.)

The bogs are not, however, without their value; they supply the inhabitants with fuel. In those parts, indeed, where bogs are scarce, they are the most valuable properties in the country. In not a few localities, they have been wholly cut out; and where this is the case, and other bogs are not easily accessible, the inhabs. have sustained great privations from the want of fuel.

The diversity of soils is not nearly so great in Ireland as in England. It has no stiff clay soils, such as those of Essex, Hants, Oxfordshire, &c., nor any chalk soils, as those of Hertford, Wilts, Sussex, &c. Sandy soils are also rare. Loam, resting on a substratum of limestone, predominates in Ireland; and, though often shallow, it is almost everywhere very fertile. A large part of Limerick, Tipperary, Roscommon, Meath, Longford, &c. consists of deep fine friable loam, and is, perhaps, not surpassed by any land in Europe; it is not permanently injured by the bad system of culture to which it is subjected, and if kept clean, will yield an almost interminable series of corn crops; and how bad soever the order in which it is laid down to grass, it is in no long time covered with the finest pasture. The deep rich grazing lands on the banks of the Shannon and Fergus are not surpassed by the best in Lincolnshire. A good judge of such matters, Arthur Young, contends that, acre for acre, the soil of Ireland is superior to that of England, though, as the proportion of waste land in the former is much greater than in the latter country, we incline to think that this is an exaggerated statement; but had Mr. Young confined his remark to the cultivable land in both countries, it would have been quite correct. In fact, if we deduct the bogs and mountains, we believe that Ireland is about the richest country, in respect of soil, in Europe. As a grazing country, she is probably superior to any other, and certainly is surpassed by none.

The botanist Schults not long ago complained that there were two great islands in Europe, Ireland and Sardinia, of which the *floras* were unknown; and he might, perhaps, have said the same of the *fauna* of the former. The arbutus and myrtle have been already mentioned, and besides these plants, most of those common to Britain are met with. The wild animals do not materially differ from those of England. Wolves formerly infested the country, but they were extirpated under Cromwell. The Irish greyhound, which was of use in clearing the country of these animals, is about 3 ft. in height, of a light colour, and of such strength and courage, that it is said to be more than a match for the mastiff or bull-dog;

It is now, however, nearly extinct. The numbers of deer have greatly declined with the clearance of the forests, and the progress of cultivation. The native Irish horse is seldom more than 15 hands high, very hardy, and sure-footed: it is used for all kinds of labour. A large blood-horse is reared extensively in Meath, and is to be found in most of the rich grazing counties. The native Irish cattle, a breed with short legs, large bellies, and white faces, have been, to a considerable extent, superseded by the introduction of the Holderness, Staffordshire, and Devonshire breeds, either pure or crossed. As compared with England, but few sheep are raised in Ireland. The native Irish sheep is small, and covered with nearly as much hair as wool; but it is now uncommon in a pure state, having been crossed with various English breeds. Most of the Irish sheep are at present long-woolled, and are usually of large size. A breed of fine short-woolled sheep is peculiar to the mountains of Wicklow. Goats are very generally kept, and hogs are universal. The native Irish hogs are of the worst possible breed, being tall, lengthy, and narrow in the loins; but improved breeds are now common: they are fattened principally with potatoes, and one or more is to be found in every house. Every body is acquainted with the story of St. Patrick having extirpated reptiles from Ireland. And there is this much of foundation for the legend—that neither of the three species of snakes found in England is met with in the country, a circumstance which is most probably

to be ascribed to the great humidity of the soil and climate. The toad is, however, said to be met with at the S.W. extremity of the kingdom; and frogs, having been introduced in the last century, are general denizens of the pools. Moles are unknown; and Irish oak timber is said not to harbour spiders, &c.

There is now, whatever may have been the case formerly, a great want of wood in most parts of Ireland. And, however rich the soil, the appearance of the country is, in most parts, indicative of the poverty and depressed condition of the bulk of the pop. Generally speaking, what are called farm-houses and offices in England, do not exist in Ireland; and the aspect of the cottages, which, in the vast majority of instances, are of the most wretched description; the smallness of the fields, which, instead of hedges and ditches, or stone fences, are usually divided by turf dykes; and the badness of the horse furniture, and of the agricultural implements, all impress the traveller with the most unfavourable convictions. But, how mortifying soever the contrast between the excellence of the soil and the state of the people, it is some satisfaction to know that it is less striking now than formerly. In many districts, a considerable advance has been made towards a better order of things; and the spirit of improvement has begun to scatter its seeds and spread its roots in most parts of the country. We subjoin—

A Table of the Provinces and Counties of Ireland, specifying the Number of Baronies and Parishes, the Extent of the cultivated and uncultivated (Bogs and Mountains) Land, Plantations, Towns, and Water in each Co. and Prov.; with the Population of each in 1841, and the Number of Acres of Land corresponding to each Person.

Population.—The first authentic account of the pop. of Ireland is given by Sir William Petty, in his tract entitled the *Political Anatomy of Ireland*. Sir William was employed by government to superintend the survey and valuation of the forfeited estates, instituted during the protectorate; and so well did he execute his task, that his survey continues, after the lapse of near two centuries, to be the standard of reference in the courts of law as to all points of property. He had, therefore, the best means of obtaining accurate information with respect to the numbers and condition of the people; and, as the results of his researches on these points are exceedingly curious, it is best to give them in his own words.

"The number of people now in Ireland (1762) is about 1,100,000; viz. 300,000 English, Scotch, and Welsh Protestants and 800,000 Papists; whereof 1-4th are children unfit for labour, and 75,000 of the remainder are, by

reason of their quality and estates, above the necessity of corporal labour; so as there remains 750,000 labouring men and women, 500,000 whereof do perform the present work of the nation.

"The said 1,100,000 people do live in about 200,000 families or houses, whereof there are about 16,000 which have more than one chimney in each, and about 24,000 which have but one; all the other houses, being 160,000, are wretched nasty cabins, without chimney, window, or door-shut, even worse than those of the savage Americans, and wholly unfit for the making merchantable butter, cheese, or the manufactures of woollen, linen, or leather.

"By comparing the extent of the territory with the number of people, it appears that Ireland is much under-peopled; forasmuch as there are above 10 acres of good land to every head in Ireland, whereas in England and France there are but four, and in Holland scarce

quart." (*Polit. Anst. of Ireland*, pp. 114, 115, ed. 1774.)

In 1781 an inquiry was instituted by order of the House of Lords of Ireland, for ascertaining the pop. through the medium of the magistrates and established clergy, the result of which gives a pop. of 2,010,321. At this period, and for long after, Ireland was essentially a grazing country. To such an extent, indeed, was the pasturage system carried, that in 1787, during the administration of prime Minister, a law was made to compel every occupier of 100 acres of land to cultivate at least 5 acres, under a penalty of 40s. 1

According to the returns of the hearth-money collectors, which are believed to have been pretty accurate, the number of houses in Ireland is

Year.	House.	Pop.
1734 —	295,130	2,371,234
1763 —	494,966	2,544,378
1777 —	644,994	2,890,346
1785 —	674,393	2,845,352
1790 —	650,000	2,800,000
1794 —	701,181	4,406,511

In 1805, Mr. Nevenham estimated the pop. at 3,265,464. An incomplete census was taken in 1812, from which the pop. was computed at 3,327,556. At length a complete census was taken in 1813, when Ireland was found to contain a pop. of 3,801,337. According to the last census, taken in 1841, the pop. amounted to 6,173,124, viz. Limerick, 1,973,731; Meath, 2,286,161; Ulster, 2,866,378; Connaught, 1,412,356.

The extraordinary increase of pop. since 1785 has arisen from a variety of causes. The bounty acts of the 13th Geo. III (1765) on the exportation of corn from Ireland appear to have given the first great stimulus to corn cultivation in that country; and consequently to the breaking up of the large grazing farms, and this stimulus was continued and increased by the high prices of corn during the late war. The impetus thus given to the subdivision of farms was vastly increased by the enfranchisement of the Catholics. In 1792, for the great majority of the landlords being eager to increase their political influence, by increasing the number of voters on their estates, did not hesitate to subdivide them into small patches.

Consequently, the whole country was parcelled out into small patches, and filled it with a redundant and beggarly population. Latterly, however, they have become fully aware of the pernicious consequences of the practice, and have, in many instances, exerted themselves to check it, and to consolidate the small patches into considerable farms. Their efforts to bring about these desirable changes have been facilitated by the operation of the Poor Law Amendment Act, passed in 1837; and the law for the support of the poor has been anxious to hinder the tenants, and their occupancy by the introduction even not be effected without injury upon a great many cottiers and other small occupiers of land, has, in some parts, and distress; and has been about with an unnecessary though liable to abuse and to this, this is the line of conduct in the end of advantage to the poor, that we might go further, that we might be of any material service.

No real improvement need be looked for in Ireland till the hordes of paupers that are huddled upon the land have been removed from it; and, speaking generally, no clamour can be more completely unfounded than that which has been raised against those landlords who have acted upon this conviction. They are the best friends to their country. It is no doubt the duty of a landlord who is endeavouring to clear his estate of its surplus inhabitants, to carry out his plans in the way least likely to be oppressive upon the parties to be removed, and to assist them, in as far as he may be able, in emigrating, or in establishing themselves in some other locality. It is not, however, always in the power of a landlord to do this; and we do not know that government could expend some portion of the public money more advantageously than in facilitating the settlement of the ejected parties in the colonies. As it is they very frequently either find their way into the towns where there is no demand for their services, or come to Britain, into which their immigration is a very serious evil. It is, indeed, surprising that no public aid should hitherto have been given to emigration from Ireland. At present it is extensively carried on; but the parties who emigrate are not generally those who could best be spared. The small occupiers are by far the most redundant class; and they are precisely those who have the least ability to carry themselves to

much to say that there are at present (1840) more than double the number of persons in Ireland than it is, with its existing means of production, able either fully to employ, or to maintain in a moderate state of comfort.

Barren Economy.—Ireland, generally speaking, may be said to be a country of small farms and cottier cultivation. Few of the tillage farms extend to 60 acres, the great majority being about 5 acres, and varying from 3 to 10 and 15 acres. It is obvious that farms of this size cannot, except under peculiar circumstances, be well cultivated. They are too small to admit of a proper division of labour, or rotation of crops; at the same time that, owing to the poverty of the occupiers, the stock and implements are of the most inferior kind. Drainage, though the most essential of all improvements, is all but unknown to the greater number of Irish farms; and, in the smaller class of occupancies, the potato, owing to its supplying the greatest quantity of nutriment from a given space, is always a principal crop. Owing to the difficulty, and sometimes impossibility, of the occupiers of a small patch of land finding employment in the neighbourhood when they are not fully occupied at home, they acquire lazy, careless habits. In consequence, many of the most ordinary operations of husbandry, such as the cutting down weeds, and even the harvesting of corn and potatoes at the proper time, are neglected; and, on the better class of farms, about twice the number of

labourers are said to be required for their cultivation than would be necessary in England or Scotland.

There being few, and these only inconsiderable, manufactures in Ireland, not less, perhaps, than 4-5ths of the pop. directly depend for employment and subsistence on the soil. The competition for small patches of land is consequently very keen, and the rents greater than the occupiers can afford, though not greater than might be paid for them, were they consolidated into proper sized farms, and cultivated on an improved system. In Ireland, in fact, the possession of a piece of ground has long been a condition all but indispensable to existence; and we need not, therefore, wonder that the occupiers should cling with desperate tenacity to their small patches. This has led in most parts to a sort of tacit but well-understood agreement among the cottiers, or small farmers, to support each other against intruders; and, in the greater part of Ireland, it is as necessary to the quiet possession of the land to secure what is called the tenant's right, or the good-will of the occupier, as it is to make a bargain with the landlord. Any tenant who should neglect this indispensable precaution would run a great risk of being disturbed in, or violently ousted from, his possession. Indeed, most of the disturbances by which Ireland has been so long agitated and disgraced have been of an agrarian character, or have been directly or indirectly connected with the occupancy of the land.

sanctioned or connived at the practice, till it had well nigh parcelled out the whole country into miserable patches, and filled it with a redundant and beggarly population. Latterly, however, they have become fully aware of the pernicious consequences of the practice, and have, in many instances, exerted themselves to check it, and to consolidate the small patches into considerable farms. Their efforts to bring about these desirable changes have been facilitated by the operation of the Poor Law Amendment Act, passed in 1837; and the law for the support of the poor has been anxious to hinder the tenants, and their occupancy by the introduction even not be effected without injury upon a great many cottiers and other small occupiers of land, has, in some parts, and distress; and has been about with an unnecessary though liable to abuse and to this, this is the line of conduct in the end of advantage to the poor, that we might go further, that we might be of any material service.

No real improvement need be looked for in Ireland till the hordes of paupers that are huddled upon the land have been removed from it; and, speaking generally, no clamour can be more completely unfounded than that which has been raised against those landlords who have acted upon this conviction. They are the best friends to their country. It is no doubt the duty of a landlord who is endeavouring to clear his estate of its surplus inhabitants, to carry out his plans in the way least likely to be oppressive upon the parties to be removed, and to assist them, in as far as he may be able, in emigrating, or in establishing themselves in some other locality. It is not, however, always in the power of a landlord to do this; and we do not know that government could expend some portion of the public money more advantageously than in facilitating the settlement of the ejected parties in the colonies. As it is they very frequently either find their way into the towns where there is no demand for their services, or come to Britain, into which their immigration is a very serious evil. It is, indeed, surprising that no public aid should hitherto have been given to emigration from Ireland. At present it is extensively carried on; but the parties who emigrate are not generally those who could best be spared. The small occupiers are by far the most redundant class; and they are precisely those who have the least ability to carry themselves to

much to say that there are at present (1840) more than double the number of persons in Ireland than it is, with its existing means of production, able either fully to employ, or to maintain in a moderate state of comfort.

Barren Economy.—Ireland, generally speaking, may be said to be a country of small farms and cottier cultivation. Few of the tillage farms extend to 60 acres, the great majority being about 5 acres, and varying from 3 to 10 and 15 acres. It is obvious that farms of this size cannot, except under peculiar circumstances, be well cultivated. They are too small to admit of a proper division of labour, or rotation of crops; at the same time that, owing to the poverty of the occupiers, the stock and implements are of the most inferior kind. Drainage, though the most essential of all improvements, is all but unknown to the greater number of Irish farms; and, in the smaller class of occupancies, the potato, owing to its supplying the greatest quantity of nutriment from a given space, is always a principal crop. Owing to the difficulty, and sometimes impossibility, of the occupiers of a small patch of land finding employment in the neighbourhood when they are not fully occupied at home, they acquire lazy, careless habits. In consequence, many of the most ordinary operations of husbandry, such as the cutting down weeds, and even the harvesting of corn and potatoes at the proper time, are neglected; and, on the better class of farms, about twice the number of

the columns, or three paths where they might be able to ensnare themselves.

A good deal of what is peculiar to the mode of carrying trade in Ireland has grown out of the circumstances under which it was originally acquired by the proprietors of the present estates. About 1690, of the land was forfeited under Cromwell and William III. and this was almost all property was mostly sitting ground, formerly bestowed upon or was acquired as a very small portion by soldiers and gentlemen of fortune and influence in England. Such persons could not be supposed to have England to call in Ireland and, in point of fact, they very rarely visited their estates in the latter two centuries immediately with nothing else than they could get for them. There was no sympathy between them and their tenants, the religious and political principles of one party were opposed to those of the other. The landlords looked upon their tenants as a sort of quarrelling slaves, who, if any in-ordinate objects they should present them, would immediately shake off their dependence on them, and the tenants regarded the landlords as tyrants unjustly intrusted with the tenure of theirs and in common to the religion and rights of the Irish people. Very few had, or could be expected to have, any sympathy to the stability of such a state of things, and it could not be expected that landlords should care much about the permanent interests of such tenants, or that they should by any any considerable sums in their improvements. To build a farm house or others was an ending which, for a long period, an Irish landlord ever hesitated, and even so that they the old built maintain an secondary and the great majority of landlords by no means or nothing in buildings. In consequence of this position, and of the general condition of the buildings and the poverty of the occupiers the farm buildings & so they call them at Ireland are as ready to decay, quite unworthy of the name and in most instances are omitted in the operations. Such a thing as a farm is hardly known among the smaller occupiers and the fact is not sufficiently cherished on the public mind, which seems to have fixed

The circumstances then shortly stated, as to the disposition of landed property in Ireland, caused the introduction of a modification, and the provisions of the Statute, and of particularly various. Nothing could be more natural than that an English gentleman possessed of an Irish estate should prefer letting it to a tenant with a stipendium, allowing the latter to continue with the occupiers. This released him from the employment duty for which, most probably, he was wholly unfit, and gave him a certain income with little comparative trouble. It is true, however, that a landlord, when having no permanent tenant in the soil, or in the welfare of the estate or its occupiers, will look only to temporary advantages, and will be more likely than a landlord to barter the cultivation, and to expulse out of them at that they are possibly afford. Hence it is that, speaking generally, it is bad policy for proprietors to direct to the agency of middlemen, and they are rarely employed, except in the case of landed property to suppose to be insured or it is very difficult or impossible for the landlord to deal direct with the occupiers. In Ireland, too, the injurious consequences naturally resulting from the employment of middlemen were manifestly appreciated by the mass of the people, who gathered the landlord to the point of the bankruptcy of a middleman to whom the occupiers had paid their rents, to compel upon the latter, and to force them to pay their own arrears to him. The sub-letting we observed this injustice, and we landed with him in an estate to a middleman, and not rather upon a sub-tenant with a demand for rent. Some few paid to his immediate superior.

It should be remembered that these remarks apply only to the employment of conditions who have been of a legitimate birth. On many perhaps we should say the majority of Irish conditions, hold under very long leases and when such is the case they are to be regarded as the real landlords, and have all their interests and duties.

Mark has been told about the injustice done to Ireland by the actions of many of her great proprietors. But, in spite of that, several of the strongest signs, as those of the Marquis of Epsford, the Duke of Devonshire Earl Fitzwilliam &c are the best managed the best conducted and most progressive of any in the country. Besides, whatever might have been the cause formerly, circumstances in fact as present more progressive in Ireland than in Scotland or the N. of England, a growing conviction prevails of the better state of the condition with regard to it. The truth is that it is not that many of the Irish landlords have been generous, but that, whether sincere or reluctant, they have not generally acted as if the improvement of their estates and the progressive condition of the country, were matters with which they had little or no concern, that the depressed and backward condition of the country is to be excused.

The same circumstances that diminished the employment of children were also to have led to the still more harmful practice of taking them to government or a number of common schools, located in a remote village, quite impractically and severely taxing the child. It is needless to repeat what we have elsewhere stated. Yet I like so to the prevailing influence of this mode of compulsory schooling as to imagine more and more. Whenever it proves a failure an investigation should be at once instituted. But change is being provided, and will prove in many very extensive districts, especially in the whole and more desolate parts of the country, we are glad to have to state that it is generally on the decline.

[illegible]

from which it is left to be recovered by the agricultural engineer. Whenever this position exists, there is a constant, of course by the large improvement, and nothing but the extraordinary quality of the material enables it to produce any thing under so destructive a system of drainage (compare of 1881, 1882, & 1883, p. 228 &c.). In many parts the entire dependence of the country being on these one or two crops, when the crop fails they are reduced to the extreme of distress, and have rarely any choice between starvation and begging, unless it be to call under the name of a Catholic Monk. Can we wonder that our farmers and crop keep the ground without cultivation, which is seldom granted on the east of Scotland. In most cases they are allowed to abandon the crop for the year, but this is an alternative they make every effort to avoid as it involves the loss not merely of their labour, but of their only means of supporting themselves during the coming season.

It must, however, be borne in mind that though the problem remarks apply to the agriculture of Ireland taken as a whole they do not apply in every case, or even to every considerable district. Especially it is most advanced in the eastern and southern counties and is most improved in the S and W especially the latter. But in all the provinces some parts are much better off than others; a few large estates still consist of pretty considerable farms, and the buildings upon and cultivation of some of them, occupied by landlords and principal tenants, would do us discredit in any part of the empire. Some however are but exceptions which it is to be hoped will every day become more numerous, to the ordinary state of things. The leading features of Irish agriculture are such as have been already delineated. We desire however a spirit of improvement has distinguished itself into great estates, which notwithstanding the inevitable deterioration in the way are hardly fit to gather strength. The landlords in whose hands so much depends are so generally slow in coming more alive to their real interests. And their attachment to the system of tillage is vigorous to think is increased by the fact that to have for promoting the use of improved culture, a considerable number of them have already been brought into the market and more will follow. And the new landlords being comparatively free from such restrictions and probably also from the protection by which these proprietors were influenced, the presumption is that they will act on different and more enlarged views. It is to be hoped that, despite the misrepresentation to which they are so exposed they will on their own farms against the influence cultivation of the land and that they will embrace every opportunity of accomplishing the most practical improvements that their properties may have been subjected

Imports and exports of handicrafts have been affected in the small sphere of the industry. When the country opens up with England by means of steam and the transoceanic markets that have thus been opened the small articles of hand produce, which the larger class of producers the owners of engineering, ship-building and iron, and of improving their stock and culture. The owners of villages and towns the owner to all the commercial industry and business the demand from England has had indirectly more to the extension of handicraft than to the extermination. But it is difficult

suppose that it should not, also, have a material influence over the latter; and, so soon as an effectual check is given to the practice of subdivision, this, no doubt, will be the case. It must, however, be kept in mind, that the introduction of a better system of agriculture is, by dispensing with useless hands, for a while injurious, rather than otherwise, to the bulk of the labouring pop. "From north to south," say the railway commissioners, "indications of progressive improvement are every where visible; and most so in places accessible to the immediate influence of steam navigation. But all these signs of growing prosperity are, unhappily, not so discernible in the condition of the labouring people as in the amount of the produce of their labour. The proportion of the latter reserved for their use is too small to be consistent with a healthy state of society. The pressure of a superabundant and excessive pop. is perpetually and powerfully acting to depress them." (*Report 9.*)

Potato Cultivation. — For a lengthened period the great bulk of the people of Ireland have principally subsisted on potatoes, and have but seldom tasted bread or butcher's meat. This general dependence on the potato has been in part a cause and in part a consequence of the subdivision of the land; and may, therefore, be considered as a main source of the over-population of the country, and the degraded state of the poor. Being the cheapest species of food raised in Europe, and the rate of wages being principally determined by its cost, the poor can resort to nothing else when the potato happens to be deficient, and are then, in fact, reduced to the extreme of distress. Such deficiencies are also very apt to occur, partly from the potato crop being peculiarly liable to failure, and partly from the impossibility as to all practical purposes of storing up the surplus of abundant years as a reserve against future scarcities, or of mitigating the pressure of the latter by importing so bulky an article from abroad. The circumstances now glanced at sufficiently account for the extreme severity of the distress which Ireland has sustained through the failure of the potato at different epochs, such as 1740-41, 1817 and 1820, and 1846 and 1847. Everybody knows that in the last-mentioned years, when the failure was very general, the Irish were wholly unable to meet the difficulties of their situation; their wages, proportioned to the cost of potatoes, were altogether inadequate to purchase supplies of wheat, oats, or other grain; and there being no cheaper food on which they could fall back, they must, but for the bountiful assistance afforded to them by the government and people of England, have been subjected to all the horrors of famine. And notwithstanding all that ample means, and the most active benevolence could effect, the deficiency and bad quality of the food on which they were occasionally obliged to depend, proved fatal to a considerable number of persons. Hence it is that the extension of the potato culture in Ireland, and the reliance placed on the root by the population, have been and continue to be evils of the first magnitude, being fatal alike to agriculture, and to the comfort and security of all classes of the people.

Such being the result of the potato culture, the reader will not be surprised to learn that we are not of the number of those who regret the checks given to it by the late failures of the crop. On the contrary, we incline to think that their influence should have been extended by legislative measures; and that it would be sound policy to discourage the growth of a root which is otherwise almost sure to become a staple article of food, and which never fails to exercise a most pernicious influence over those dependent on it. Were it used, along with bread, as a subsidiary variety of food, it would be different. But it can hardly continue for any very con-

siderable length of time to be so used, its greater cheapness and the facility with which it is made ready for use, tempting the poor to resort to it in preference to any other article. And after they have been accustomed to subsist on it, they become its slaves; for their wages being governed by its price, they have no means, even were they desirous, of leaving it for a better or more costly article. It is not easy to exaggerate the evils incident to such a state of things. We are persuaded, indeed, that the growing dependence on the potato has not in Ireland only, but in Britain and elsewhere, had the most fatal tendency; and that but for it the labouring classes would have profited to a much greater extent than they have done by the wonderful progress of industry and invention since the peace of 1815. The accounts of the great extent of land under the potato in Ireland in the course of the present year (1850), and of the apparently unabated confidence placed by the peasants on this hazardous and debasing resource, are, perhaps, the most unfavourable that have been received from that country for many years past.

Next to potatoes, oats, barley, and wheat, but especially oats, are the crops most commonly cultivated. Owing to the humidity of the climate, the country is not well fitted for wheat and barley, which are at once more precarious and not of so good quality as in England; but it is admirably suited for the growth of oats, the culture of which has rapidly increased. Turnips are cultivated only in some of the best farmed districts, and, though extending, are not to be looked upon in the light of a general crop.

Ireland, however, is much better adapted for a grazing than for an agricultural country: and such, in this respect, is the excellence of the soil, that in most parts it never fails, however foul and exhausted when laid down to grass, speedily to clothe itself with a rich and luxuriant cover of herbage. We have noticed the improvements made in the stock in most parts of Ireland, by the introduction of improved breeds: and both the dairy and grazing systems of husbandry have been materially amended.

The rapid increase of the exports of corn and other raw produce from Ireland is very generally referred to as demonstrating the great improvement of agriculture; and, in so far as respects the increased exports of cattle, beef, and butter, the inference seems to be well founded. The breed of live stock has, as already stated, been very greatly improved; the system of stall-feeding has also been introduced; and the increased exports of animal produce have been obtained, not only without any increase, but with a positive diminution, of the land in pasture. But it is quite otherwise with the extraordinary increase of the exports of corn and meal. The subjoined table shows that they increased from less than a million of quarters previously to 1817 to nearly three and a half millions in 1838! But no one will venture to affirm that agriculture improved in any thing like a corresponding proportion; and as the condition of the bulk of the people did not probably vary very materially during this interval, there cannot be a doubt that the increased exports of corn are principally to be ascribed to the extension of tillage. The late Lord Clements says, in his tract on the Poverty of Ireland, that "the export of grain has increased most rapidly from those parts where no agricultural amendment whatever is visible." (*P. 27.*) It has been occasioned partly and principally by the breaking up of grass land,

and partly by the occupiers being tempted, by the facility and certainty of the market, to sell every bushel they can spare, subsisting themselves principally on potatoes, and retaining the worst corn for seed and their own use. This,

also, has been the case with pigs, which, speaking generally, have been raised by the cottiers as a means of paying rent, and not of providing subsistence for their families.

Account of the Quantities of Grains, including Flour and Meal, of the Growth of Ireland, Imported into Great Britain from Ireland, in different Years, from 1802 to 1849 inclusive.

Years.	Wheat and Wheat Flour.	Barley, including Beau or Bigg.	Oats and Oatmeal.	Rye.	Pear.	Broom.	Maiz.	Total.
	Quarters.		Quarters.	Quarters.			Quarters.

1844	304,273		1,676,639	15				
1845	249,429		1,077,564					

The exports of cattle, sheep, &c., from Ireland to Britain, in 1846, 1847, and 1848, were, according to the best attainable information, as follows:—

	1846.	1847.	1848.
Oxen, bulls, and cows	No. 134,425	No. 129,900	No. 126,062
Calves	6,343	8,992	7,083
Sheep and lambs	220,337	384,179	253,823
Pigs	420,877	108,407	110,787
Total	932,930	620,636	569,797

The great decline in the exportation of swine is owing to the havoc made in that description of stock by the scarcities of 1846 and 1847.

Rent of Land.—There are no means of forming any accurate estimates as to the amount of rent in Ireland. The property-tax does not extend to it; and all that we have to trust to in determining its rental are estimates deduced from the rentals of particular estates, or from valuations made for the assessment of the local burdens and for the adjustment of the composition on account of tithe and the poor's rate. The first, unless made with unusual care, are rarely much to be depended on, and lead almost always to exaggerated conclusions. In 1727, Mr. Brown computed the gross rental of Ireland, inclusive of quit-rents, tithes, &c., at 2,824,000*l.*; and, in 1778, Mr. Young estimated it at 6,000,000*l.* (*Newenham's View of Ireland*, p. 232.) Mr. Wakefield, from minutes collected in his tour, estimated the average rental of Ireland at 27*s.* the Irish acre, or at 16*s.* 6*d.* the imperial acre (vol. i. p. 305.); and, notwithstanding the imperfect data on which it was founded, this estimate, though in excess, came

pretty near the mark. No doubt, however, the elaborate estimate framed by Mr. Griffith, and contained in his evidence given in the Second Report of the Lords' Committee on Tithe (1832), is much more deserving of attention: it is principally bottomed on official valuations, and is probably, therefore, a little under the mark. According to Mr. Griffith, the total rent of Ireland in 1832 amounted to 12,715,478*l.*, which would give an average rent of 12*s.* 2*d.* per acre for the whole kingdom. But to get a correct notion of the rent, the area occupied by water, amounting to 630,825 acres, should certainly be deducted, and this being done, the average rent is 12*s.* 7*d.* an acre. According to the more recent estimate of the value of the land obtained under the valuation of the poor's rate, the average rent per acre, deducting water, is 12*s.* 7*d.*

The annual value of the unimproved mountains and bogs has been variously estimated at from 1,000,000*l.* to 2,000,000*l.* If we suppose 1,500,000*l.* to be the more correct sum, it will leave, on Mr. Griffith's hypothesis, a sum of about 12,000,000*l.* for the gross rental of the cultivated land of Ireland, amounting to 13,464,300 acres, equivalent, at an average, to about 16*s.* 8*d.* an acre; which, allowing for deficiencies in the valuation, may, perhaps, be increased to 17*s.* or 17*s.* 6*d.* an acre—a very high rent for a country occupied and farmed in the manner of Ireland. And to this has to be added the sum, frequently a large one, paid in most parts by new tenants to the previous tenants or their heirs, on account of tenants' right.*

* The measurements of the different Irish counties given by Mr. Griffith, do not quite agree with those deduced from the Ordnance Survey. The latter have been used in this article, but the discrepancies are not material.

The object of this payment is to secure the "good will" of the previous occupiers, or, in other words, to get leave peaceably to occupy the holding. Different opinions have been entertained in regard to the origin of this custom. Probably it had its source in payments made by entering tenants for certain improvements made, or articles left, on the holding by those leaving it; but now it is really a bonus to secure peaceable possession, and is exacted in cases where no improvement whatever has been effected, where nothing is left upon the land, and even where the outgoing tenant has been evicted for non-payment of rent. It is at once a source and an evidence of the depressed state of agriculture, and of the barbarism of the country; and, instead of being extended, as the Irish demagogues demand, should be everywhere suppressed.

Fisheries.—The seas round Ireland swarm with fish. Cod, ling, and hake are found in great abundance on the Nymph Bank to the S. of Waterford. Flat fish also abound in many parts. Large shoals of herrings visit the coast annually; and the bays and creeks furnish great quantities of the smaller and more delicate species, as pilchards, sprats, smelts, and sand-eels. The basking whale and sunfish are often seen off the W. coast. But the fishery has never been either largely or successfully carried on by the Irish; and, at this moment, the principal supply of salt fish is derived from Scotland. In 1764 a system of bounties was established to encourage the trade, but without any material success. It was revised in 1819 by a commission, which also gave loans for the purchase of boats and tackle. With such encouragement the number of fishermen and boats increased considerably during the ten years the system was in operation. But though the fishing declined on the bounties being withdrawn, this decline was temporary only, and it has since considerably increased. In 1848 it employed in all 15,932 boats, and 70,011 men and boys.

There are salmon and eel fisheries in most of the great rivers. The salmon fisheries in the Bann, near Coleraine; the Foyle; the Blicke, near Ballyshannon; the Boyne, above Drogheda; and in various other parts, are very productive. At an average of the nine years ending with 1834, the produce of the Foyle salmon fishery amounted to 2,814 cwt. a year. Irish salmon, packed in ice, is principally exported to Liverpool, Bristol, and London.

Manufactures.—Ireland is not, and never has been, a manufacturing country. Its unsettled turbulent state, and the general dependence of the population on land, have hitherto formed insuperable obstacles to the formation of great manufacturing establishments in most parts of the country; whilst the want of coal, capital, and skilled workmen, and the great ascendancy of England and Scotland in all departments of manufacture, will, there is reason to think, hinder Ireland from ever attaining to eminence in this department. And it is needless to add, that while manufactured goods can be produced cheaper in Britain than in Ireland, so long will the interests of the latter be best promoted by their importation. It is, whatever the Irish demagogues may say to the contrary, a contradiction and an absurdity to suppose that either individuals or states can be enriched by producing at home what it would cost less to bring from abroad.

The woollen manufacture was carried on to some extent in Ireland previously to the revolution of 1688, soon after which, in compliance with the interested solicita-

tions of the English manufacturers, the export of Irish woollens to foreign parts was prohibited, and oppressive duties laid on their importation into England. But, though it be impossible too severely to condemn this selfish insulting policy, there is no solid ground for supposing that it was productive of any real injury to Ireland. Though the acts complained of had never existed, the result would have been the same. It is quite nugatory to suppose that, under any circumstances, the woollens of Ireland should ever have been able to come into competition with those of England, either in the home market, or any where else.

The existing woollen manufacture of Ireland is carried on upon a small scale. At Dublin, and other parts in the vicinity, some cloth of a better description is made; and other branches are carried on to some extent in Killybeggy and other places, more especially at Mountmelick and Abbeyfeix, in Queen's Co., and a few other places. It appears, from the returns of Mr. Stuart, inspector of factories, that there were in Ireland, in 1838, 31 woollen mills; but they were upon so small a scale as to employ, in all, only 1231 persons, and this number would appear, from the subjoined account, to have decreased in the intervening period. The railway commissioners estimated the value of the wool produced in Ireland at about 300,000*l.* a year. It is not suitable for the manufacture of any but very low priced cloths; but it is well adapted for the manufacture of woollen stuffs, and hence the recent extension of that department at Mountmelick and Abbeyfeix.

To compensate for the bad treatment of the woollen, the linen manufacture of Ireland was long the object of especial patronage. It was fostered and promoted by a number of statutes, and placed under the superintendence of a board, with an annual grant of public money for distribution in premiums and bounties. The board, however, has been discontinued for some years, and the grants withdrawn. The manufacture is chiefly confined to Ulster. In 1834, the last year for which there is an official return, the total value of unbleached linen sold in Ireland amounted to 2,580,637*l.*, of which that sold in Ulster produced 2,109,305*l.* The exports in 1835 amounted to 70,309,873 yards, of the estimated value of 3,726,654*l.*; and their value at present (1850) can hardly fail to exceed 4,000,000*l.* The manufacture was at one time, and still is, very generally diffused over the country; the yarn being spun by the cottier's family, and woven by the cottier himself. But since the introduction of machinery for the spinning of yarn, and of power-looms, the old system has been to a considerable extent abandoned, and the yarn is now principally spun by machinery. A good deal of cloth is also made by power-looms; but the greater part continues to be woven in the houses of the cottiers, who are supplied with yarn by the agents of the manufacturers. In fact, but for this change of system, the manufacture would have been wholly annihilated; as the manufacturers under the old domestic system could not have withstood the competition of Dundee, Leeds, &c. It is also of importance to observe that under the new plan the weavers, being regularly supplied with yarn, are kept constantly at work, and do not combine, at least to nearly the same extent as formerly, the incongruous occupations of weavers and farmers. This, as was to be expected, has tended to improve both businesses. In 1835 no fewer than 2,652,000 lbs. linen yarn were imported from Great Britain into Ireland; but we understand that, in consequence of the increased quantities of yarn produced by the mills in Belfast and the vicinity, the imports of yarn from Britain have since declined. The growth of flax has latterly been considerably extended, especially in the N. of Ireland. We subjoin

An Account of the Numbers of Work-people employed in the Cotton, Woollen, Worsted, and Flax Factories of Ireland in 1846, distinguishing the Sexes and Ages of the Work-people:—

	Ages.						Total.		
	Under 15 Years of Age.		Between 15 and 16 Years of Age.		Above 16 Years of Age.				
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.	Males and Females.
Cotton	4	11	502	773	954	1,249	1,550	2,633	4,183
Woollen	2	1	79	144	452	404	833	549	1,082
Worsted	-	-	21	46	80	91	101	157	258
Flax	9	27	2,456	4,235	3,128	7,231	5,505	11,493	17,088
Total	15	39	3,150	5,198	4,614	9,575	7,779	14,812	22,591

Distillation has been, for a lengthened period, an important business in Ireland. Previously to 1823, when the duty on spirits was 5*s.* 6*d.* a gallon, illicit distillation was extremely prevalent in Ireland; so much so, that the commissioners of revenue inquiry estimated the total annual consumption of spirits in Ireland at that period at 8,200,000 imp. galls., though, in 1822, no more than 2,328,267 paid duty! In 1823, the duty having been re-

duced to 2*s.* 10*d.* per imp. gall., 6,890,315 galls. paid duty in 1824, and 9,362,744 in 1825. In 1835 the duty was reduced to 2*s.* 4*d.* per gall.; and in 1838 duty was paid on 12,296,342 galls. But it would seem that the consumption had then attained to a maximum; for, in the course of 1839, and the immediately subsequent years, great numbers of people in all parts of the kingdom were induced, principally by the exertions of a Roman Catholic priest,

of the name of Matthew, to pledge themselves to abstain from spirituous liquors. And the extent to which the temperance system was afterwards carried was most extraordinary; the consumption of spirituous liquors having declined in 1839 to 10,815,709, and in 1849 to only 5,290,660 galls. This appears, however, to have been the lowest point in the descending scale, the consumption having increased in 1843, 1844, and 1845, when it amounted to 7,605,196 galls. In 1849 the consumption amounted to 6,978,333 galls, native spirits, and 366,276 galls foreign do. The habit of drinking spirits, formerly so prevalent among the Irish, particularly when assembled at fairs and other public meetings, was the source of innumerable outrages; and there can be no doubt that the decline of this vicious practice has been of material advantage to the lower classes.

The silk trade was introduced by French emigrants shortly after the Revolution: its chief seat was in Dublin; but since the repeal of the protecting duties it has declined, so as to be now nearly extinct, with the exception of tabinet or Irish poplin, a mixed fabric of silk and worsted, for which there is a considerable demand. The first importation of cotton wool into Ireland, of which there is any authentic notice, took place in 1771. The manufacture was carried on with some little success in several parts during the continuance of the protecting duties. On their withdrawal it declined for a while; but it has since revived, and is now prosecuted in the neighbourhood of Belfast, where there are several large mills, and at Portlaw, co. Waterford, where there is a mill that employs many hands.

Commerce.—The exportation of the raw produce of the soil has always formed the principal commercial

business carried on in Ireland. During the late war, she supplied a large share of the provisions required for the army and navy serving abroad; and she still sends large supplies to the colonial markets. Great Britain, however, is by far the best and most extensive market for all sorts of Irish produce; and her exports to this country, es-

* It is supposed that many of the articles which appear blank in the columns for 1835, and are detailed in those for 1836, are returned in the Aggregate Value of "other Articles."

pecially of corn and flour, and of butter, pigs, eggs, &c., have prodigiously increased. The conversion of grain into flour and meal has lately become an extensive business in Ireland; and many mills, erected for this purpose, are on an extensive scale, and are furnished with the best machinery. By far the greater part of the trade of Ireland is carried on as a cross-channel trade with Great Britain, and especially with Liverpool, Bristol, and Glasgow. Its trade with foreign countries, and with British colonies, is comparatively inconsiderable.

The extraordinary increase in the value of the imports in 1847, 1848, and 1849, is entirely to be ascribed to the immense importations of corn in these years. The values of the latter were, in 1847, 6,306,488*l.*; 1848, 2,898,624*l.*; and 1849, 4,356,199*l.*
The shipping of Ireland is but inconsiderable, compared with that of Great Britain; but it has increased considerably within the last ten years. We subjoin an account of

Number and Tonnage of Sailing Vessels and Steam Vessels registered in the Ports of Ireland in 1847 and 1848.

Galway	51,435	Westport	14,182
Limerick	146,044	Wexford	19,561

The great preponderance of the customs revenue of Dublin results from its being the principal port for the importation of wine, sugar, timber, and other taxed articles. Its trade is really inferior to that of Belfast, and but little superior to that of Cork.

Banks.—Banking business in Ireland was long in a very unsatisfactory state. Till 1783, when the Bank of

Ireland was incorporated, the business was wholly in the hands of individuals. The privileges given to the Bank of Ireland were similar to those of the Bank of England, as to the restriction of private banking establishments to six partners. Its capital, at its commencement, was 600,000*l.*, increased in 1791, to 1,000,000*l.*; in 1797, to 1,500,000*l.*; in 1808, to 2,500,000*l.*; in 1821, to 3,000,000*l.* In 1804, there were 50 registered private banks; and since then several others were opened, but they have all closed or failed, except four in Dublin. The system of joint-stock banks came into operation, in Ireland, in 1825, excepting within a circle extending 65 m. round Dublin, of which the Bank of Ireland had a monopoly.

The system of savings' banks, though in a very unsafe and unsatisfactory state, has been considerably extended. The total number of depositors and deposits was, in

Roads are generally well laid out, and kept in good order. They are made and maintained partly by turnpike trusts, but chiefly by co. presentments, or assessments on the cos. The latter amounted, in 1848, to the sum of 4,069*l.* The system of macadamising was practised in Ireland for some years before it attracted public attention in Great Britain.

Canals.—The Grand Canal, commenced in 1765, is carried from Dublin to Robertstown, 25 m. W., whence proceed two branches, that to the right to the Shannon harbour, on the Shannon, near Banagher, and thence on the W. of the river to Ballinasloe, 94 m. from Dublin, with a branch of 84 m. to Kilbeggan; that to the left to Athy, 55 m. from Dublin, with a branch of 11 m. from Monastereven to Portarlinton and Mountmellick. The summit level is 200 ft. above the sea. The Barrow is navigable from Athy, for small craft, to the Scars, 43 m., thence for larger vessels, by Ross to Waterford, 30 m.

The Royal Canal, commenced in 1789, extends from Dublin to Tarmonbarry on the Shannon, 92 m., with a branch of 5 m. from Killashee to Longford. Its greatest height above sea level is 307 ft. The Shannon has been rendered navigable from Limerick almost to its source, and is traversed by steam-boats both for passengers and goods. The Boyne navigation from Drogheda to Navan, and the Lagan from Belfast to Lough Neagh, are partly river and partly still water. The Ulster Canal connects Loughs Neagh and Erne. The Suir Navigation Company was incorporated in 1837, for making a ship canal to Carrick-on-Suir.

Railways.—Numerous railways, some of which promise to be of great advantage, have been opened in Ireland; others are in the course of being constructed, while many more have been projected. Among the leading lines may be specified the Great South Western, extending from Dublin to Cork and Limerick, with a branch to

Carlow, where it unites with lines that are to run to Waterford and Wexford; the Great Western to connect Dublin with Mullingar, Athlone, and Galway; the line from Dublin to Belfast; from the latter to Armagh, Banishillen, and Sligo, with a number of others. Of these the first mentioned line connecting Dublin with Cork and Limerick has been nearly completed; its branch to Carlow has also been completed, and it is thence extended to Bagnalstown on the way to Waterford. The Great Western has been opened as far as Mullingar; and government have agreed to advance £100,000 as a loan towards the completion of the portion of the railway between Athlone and Galway, upon the security of the line, and under the stipulation that it is to be finished on or before the 31st December, 1851. The communication between Dublin and Belfast, which one might have supposed would have been the first to be perfected, is still incomplete, though this will not, probably, be the case much longer. A number of other lines, including several which originate in Belfast, have either been completed, or are more or less advanced, but the probability is, that a far greater number of the lines that have been projected will not be undertaken. On the 30th of June 1849, 361 m. of railway had been opened, and 183 additional m. were then in progress. The total receipts from passengers and goods, during the year ended at the above date, amounted to £80,942.

Revenue.—The Revenue of Ireland is raised from the same sources as in England, except the property and assessed taxes, which do not extend to Ireland. But, owing

to the depressed situation of the great bulk of the Irish people, and their inability to consume taxed articles, the revenue of Ireland falls far short of what it might be expected to amount to from the magnitude of the pop. In fact, the revenue of Ireland, with a pop. (in 1841) of 6½ millions, hardly equals that of Scotland, with a pop. of 2 millions.

We subjoin an account of the gross and nett receipts of the public revenue of Ireland in 1846, showing the ratio per cent. which it cost to collect the gross revenue.

	Gross Receipts.			Nett Receipt, deducting Expayments.			Ratio per cent. in which Gross Revenue was reduced.

This is but a small sum, compared with what is assessed for similar purposes in England. But the weight of local taxation on the land is now considerably increased, through the operation of the compulsory provision for the support of the poor; though that will be far more than counterbalanced by the good effects of which it cannot fail to be productive.

The constitution of Ireland is modelled on that of England, but, for a lengthened period, the native Irish, comprising the great bulk of the population, were essentially excluded from all participation in its benefits, and were in fact reduced to a state of helotism. This conduct, it is needless to add, was little less injurious to the conquerors than to the conquered. "As the English would neither in peace govern the Irish by the law, nor could in war root them out by the sword, they needs became prick in their eyes and thorns in their sides." But nations are slow and reluctant learners; and that selfish short-sighted policy, whose effects were thus forcibly exposed by Sir John Davies (*Discoverer*, &c., p. 126. ed. 1747) in the reign of James I., flourished to its full vigour down almost to our own times! The granting of the elective franchise to the Catholics, so late as 1792, was, in truth, the first great step in the progress to a better system, which was happily consummated by the repeal of the last remnant of the penal code in 1829. The odious distinctions by which society was formerly divided have no longer any legal or statutory foundations. Adherence to the religion of their ancestors has ceased to entail upon the Catholics a denial of their political franchises; and all classes now participate equally in the rights and privileges granted by the constitution. The legislature consisted, previously to the Union, of a chief governor, under the name of lord lieutenant, with power to appoint a deputy during absence, a house of lords and a house of commons. Under Henry VII., the prostration of the Irish parliament was effected, by transferring the right to hold parliaments, which had been vested in the lord lieutenant, and to originate bills, to the king and the English privy council. The first parliament, in which members were returned from all parts of Ireland, sat in the beginning of the reign of James I. The number of members varied at different times, but was ultimately fixed at 300, two for each co., two for Trinity College, and the remainder for cities and boroughs, the representatives for the latter being, in most instances, nominated by their proprietor or

patron. Previously to 1793, the members held their seats for life, so that they could hardly be considered as representatives even of the Protestant part of the nation, and had but little sympathy with popular feelings. At this epoch, however, parliaments were made occasional. Since the Union, Ireland has been represented in the imperial parliament by 20 temporal peers, elected for life by the whole body of Irish peers; four by

the crown. Previously to 1793, the members held their seats for life, so that they could hardly be considered as representatives even of the Protestant part of the nation, and had but little sympathy with popular feelings. At this epoch, however, parliaments were made occasional. Since the Union, Ireland has been represented in the imperial parliament by 20 temporal peers, elected for life by the whole body of Irish peers; four by the crown. At this epoch, however, parliaments were made occasional. Since the Union, Ireland has been represented in the imperial parliament by 20 temporal peers, elected for life by the whole body of Irish peers; four by the crown.

The judicial establishment is vested, as in Great Britain, in the lord chancellor, removable at pleasure, as

The following Table shows the Commitments for the Years 1847 and 1848, arranged according to Classes :—

Class.	1847.	1848.	Increase per Cent.	Rate per Cent. in 1848.	
				Convicted.	Acquitted.
1. Offences against the person with violence -	4,548	5,984	3,417	31.12	51.48
2. Offences against property with violence -	2,828	9,561	338	14.98	37.91
3. Offences against property without violence -	17,484	19,547	2,063	21.8	50.08
4. Malicious offences against property -	221	986	805	188.47	44.27
5. Forgery and offences against the currency -	125	307	19	10.30	51.48
6. Miscellaneous offences -	6,443	9,320	2,577	44.65	38.48

Gross increase on the year 1848, as compared with 1847, 7,812, or 22.43 per cent.

The regular troops stationed in Ireland since 1800 have been as follows :—

Years.	Troops.	Years.	Troops.	Years.	Troops.
1830	20,408	1837	18,480	1844	25,115
1831	16,701	1838	18,480	1845	25,778
1832	19,301	1839	26,884	1846	26,116
1833	22,998	1840	24,888	1847	26,108
1834	22,085	1841	16,887	1848	32,417
1835	16,843	1842	16,181	1849	25,267
1836	17,906	1843	14,475		

The military department is under the control of the commander of the forces, whose head quarters is at Kilmaham. He has under him 6 general officers, who respectively command one of the 5 military districts into which the island is divided. The ordnance, which is a branch of that of Great Britain, has its chief station at the Pigeon House Fort: attached to it is the staff of the trigonometrical survey of Ireland. There is at Kilmaham an hospital for decayed and disabled soldiers, similar to that of Chelsea.

Religious Establishments.—The ecclesiastical arrangements that prevail in Ireland are at once anomalous and irrational. The Reformation never made any considerable progress in the country, the new doctrines being only espoused by the English settlers within the pale. But after protestantism had been adopted by the bulk of the English people, and had been made the established religion on this side the water, it was determined to establish it as the state religion in Ireland. In pursuance of this resolution, the Catholic clergy were ejected from their livings, which were bestowed upon divines attached to the doctrines of the church of England. This change did not, however, produce any corresponding change in the religious feelings of the people, who seemed, indeed, to become the more attached to their ancient faith, according as their clergy were treated with harshness and injustice. In every other country, the established religion, if there be one, is that of the great majority of the people; but in Ireland the established religion is and long has been that of a small minority—and that minority, be it observed, consists principally of the wealthy and best educated classes, who could, without difficulty, supply themselves with religious instruction! Such an arrangement is inconsistent with and subversive of every principle of sound policy and common sense. The grand object of an establishment should be the provision of religious instruction and consolation for the great bulk of the community, and

especially for those who are too poor to be able to provide it for themselves. But, in Ireland, the reverse of all this obtains. The established religion is alien to and repudiated by nine tenths of the pop., who regard it as erroneous in principle, and as a usurpation upon the rights and property of their clergymen. These feelings are natural; and it is nugatory to suppose that they should be got rid of, so long as the existing arrangements are maintained. A Catholic establishment in England would not, in fact, be more irrational and absurd than a Protestant establishment in Ireland; and, so long as the latter is permitted exclusively to enjoy the revenues appropriated by the state for the support of religion, so long will it be an object of disgust and hostility to the Catholic people and clergy, that is, to the great majority of the nation, and be productive of the most implacable animosities.

Previously to 1834, when the Church Temporalities Act, the 3 & 4 Will. 4. c. 37. was passed, the country was divided into 4 archbishoprics, corresponding nearly with its four civil provinces, and these were farther subdivided into 20 bishoprics, held by 18 bishops. But this hierarchy, obviously disproportioned to the wants of the country, was restricted within more moderate dimensions by the act referred to above. It reduced the archbishoprics of Cashel and Tuam to bishoprics; and divided the island into the Northern and Southern provinces, the archbishop of Armagh being the head of the one, and the archbishop of Dublin of the other. It also reduced the number of bishops to 10; and effected various changes in the revenues of the different sees, to take effect on the demise of the different incumbents by whom they were then occupied. The revenues arising from the cancelled bishoprics and other sources were vested in commissioners, to be applied to the building and repair of churches and other ecclesiastical purposes.

Under the old arrangement, the archbishoprics and bishoprics, with their revenues, were as follows :—

NORTHERN.			
Armagh	-	-	£17,570
Meath and Clogher	-	-	5,730
Clogher	-	-	10,571
Down and Connor	-	-	8,866
Derry	-	-	14,180
Raphoe	-	-	5,787
Kilmac	-	-	7,175
Down	-	-	4,515
SOUTHERN.			
Dublin and Glendagh	-	-	40,381
Kildare	-	-	4,258
Wexford	-	-	2,820
Ferret and Leighlin	-	-	6,000

NORTHERN PROVINCE.			
Cashel and Emly	-	-	£7,354
Limerick, Ardfer, and Aghadoe	-	-	5,369
Waterford and Lismore	-	-	4,928
Cork and Ross	-	-	4,346
Cloyne	-	-	5,009
Killaloe and Kilmara	-	-	4,041
SOUTHERN PROVINCE.			
Tuam and Ardragh	-	-	£5,908
Elphin	-	-	7,034
Clonfert and Kilmacduagh	-	-	5,621
Killala and Achery	-	-	4,087

Total Income £130,533

Under the existing arrangement, the dioceses and their incomes will be thus regulated:—

NORTHERN PROVINCE.			
Armagh with Clogher	-	-	£119,087
Meath and Clonsilla	-	-	4,068
Derry and Raphoe	-	-	8,000
Down and Connor, and Dromore	-	-	4,204
Kilmora, Ardragh, and Elphin	-	-	6,253
Tuam, Killala, and Achery	-	-	4,840
SOUTHERN PROVINCE.			
Dublin, Glendalagh, and Kildare	-	-	7,736
Omory, Leighlin, and Ferns	-	-	4,800
Cashel, Emly, Waterford, and Lismore	-	-	5,000
Cork, Cloyne, and Ross	-	-	5,498
Killaloe, Kilmara, Clonfert, and Kilmacduagh	-	-	5,270
Limerick, Ardfer, and Aghadoe	-	-	4,973

£130,537

The total income of the two archbishops, and of their ten suffragan bishops, will thus be £7,528, being an average of £752.80 to each.

The revenues of the suppressed bishoprics were, in the years ending 1st August, 1845, 1846, 1847—

	1845.			1846.			1847.		
	£	s	d.	£	s	d.	£	s	d.
Ardagh	2,588	5	9	2,571	7	10½	2,595	14	0

Total	40,160	11	1	42,770	13	11½	37,638	5	6

FROM 21. OF U. IN 1739, grass lands obtained an exemption from tithe; so that while a tenth part of the produce of a potato garden or slip of land, on which, perhaps, a numerous family was dependent, went to the establishment, the herds of the opulent grazier contributed nothing to its support. Under such circumstances, we need not wonder that, for a lengthened period, the payment of tithes in Ireland was made with extreme reluctance, and that their collection has, in innumerable instances, been productive of outrage and bloodshed. At last, it became next to impossible, in many parts of the kingdom, to derive any revenue from this source; and in consequence it was attempted to substitute compositions or fixed payments for tithes in the room of tithes themselves. But, though productive of some advantage, this measure was comparatively useless, from its leaving the composition to be paid by the occupier and not by the

landlord. To obviate this defect, an act was passed in 1838 (1 & 2 Victoria, cap. 100.) abolishing compositions for tithes, and substituting in their stead a fixed payment of three fourths of their amount (401,114.) to be made by the landlords or others having a perpetual interest in the land. This act, by relieving the tithe-collector from the necessity of coming into contact with the great bulk of the occupiers, has obviated a prolific source of predial disturbance, and been, in so far, advantageous. Still, however, it must not be supposed that either this or any other device should ever reconcile the Irish people to the appropriation of a large revenue to the exclusive use of the church of a small minority of their number. The effect of this preposterous arrangement is to insult and alienate the bulk of the population, who would be more or less than men if it ceased to encounter their rooted hostility.

The R. Catholic church is arranged nearly in the same manner as the established church previously to the late changes. There are four archbishops, the same in name and provincial rank as those of the Protestant church, and 23 bishops. Eight of the bishops—Ardagh, Clogher, Derry, Down and Connor, Dromore, Kilmora, Meath, and Raphoe—are suffragan to Armagh. Dublin has but three suffragans—Kildare and Leighlin united, Ferns, and Ossory. Six are suffragan to Cashel, namely Ardfer and Aghadoe (usually called the Bishop of Kerry, Cloyne, and Ross), Cork, Killaloe, Limerick, Waterford, and Lismore. Tuam has four suffragans—Achery, Clonfert, Killala, and Galway. The bishop of the united dioceses of Kilmacduagh and Kilmara is alternately suffragan to the archbishops of Tuam and Cashel. The wardenship of Galway, formerly an exempt jurisdiction, subject only to the triennial visitation of the archbishop of Tuam, has been lately erected into a bishopric, under its former archiepiscopal jurisdiction. On the death of a bishop, the clergy of the diocese elect a vicar-capitular, who exercises spiritual jurisdiction during the vacancy. They also nominate one of their own body, or sometimes a stranger, as successor to the vacancy, in whose favour they postulate or petition the pope. The bishops of the province also present the names of two or three eligible persons to the pope. The new bishop is generally chosen from among this latter number; but the appointment virtually rests with the cardinals, who constitute the congregation *de propaganda fide*. Their nomination is submitted to the pope, by whom it is usually confirmed. In cases of old age or infirmity, the bishop nominates a coadjutor, to discharge the episcopal duties in his stead; and his recommendation is almost invariably attended to. The emoluments of a bishop arise from his parish, which is generally the best in the diocese, from licences of marriage, &c., and from the cathedralism. The last is an annual sum, varying from 2½. to 10½., according to the value of the parish, paid by the incumbent in aid of the maintenance of the episcopal dignity. The parochial clergy are nominated exclusively by the bishop. The incomes of all descriptions of the R. Catholic clergy of Ireland arise partly from fees on the celebration of births, marriages, and masses; and partly, and principally, perhaps, from Christmas and Easter dues, and other voluntary offerings. All places of worship are built by subscription. There are numerous monasteries and convents.

Exclusive of the injustice inflicted on the R. Catholics of Ireland, by the seizure of the funds belonging to their church, and their appropriation to the support of the clergy of the church of England, they laboured for a lengthened period under the most degrading disabilities. The treaty of Limerick, in 1691, between the generals of William III. and those of James II., guaranteed to the Irish R. Catholics the same religious privileges they had enjoyed during the reign of Charles II. But this treaty was most shamefully broken; and during the reigns of Anne, George I., and George II., a series of acts were passed, constituting what has been called the Catholic penal code, which had for its object the extermination of the R. Catholic religion in Ireland. It is unnecessary to recapitulate the provisions of these statutes. Their spirit was succinctly and truly described by Mr. Burke:—"The laws made in this kingdom (Ireland) against papists were as bloody as any of those that had been enacted by the popish princes and states; and when those laws were not bloody they were worse: they were slow, cruel, outrageous in their nature, and kept men alive only to insult in their persons every one of the rights and feelings of humanity." (*Letter to Sir H. Langrish*.)

Every body knows that this atrocious code entirely failed of its object, and that, instead of being exterminated, the R. Catholic religion gained new strength and vigour from the persecution to which it was exposed.

Per domus, per omnes, ab ipso
Duch opus animarum foveo.

In the earlier part of the reign of George III., the leading statesmen of England became alive to the impolicy and mischievous operation of parts, at least, of the penal code; and its more offensive provisions were gradually

repealed. In 1798, the elective franchise was conceded to the R. Catholics; but they continued, down to a comparatively late period, to be excluded from the privilege of having seats in the legislature, of being members of corporations, and of holding numerous public offices of trust and emolument. At length, in 1829, the R. Catholics were fully emancipated from all civil disabilities on account of religion, and were placed, as respects their political rights and franchises, nearly on the same footing as Protestants.

That this measure was a great boon to Ireland is most true; but, though it allayed, it was not enough to extinguish, religious feuds and animosities. Justice, and the most obvious dictates of policy, require, as already stated, either that the R. Cath. should be made the established religion of Ireland, or, at all events, that the R. Cath. clergy should participate, proportionally to the number of their flocks, in the emoluments now exclusively engrossed by the clergy of the church of England. It is a contradiction and an absurdity to suppose that a great and decisive majority should ever quietly submit to be deprived of privileges possessed by a minority. This, however, is the state of things in Ireland; and, till it be radically and completely changed, the country will, no doubt, continue, as heretofore, to be disgraced and distracted by religious dissensions.

The Protestant dissenters are found chiefly in Ulster. They are classed in congregations, an indefinite number of which forms a presbytery, and delegates, partly ministers and partly lay elders, form the general synod, which regulates the ecclesiastical concerns of the body, and is presided over by a moderator chosen annually. The synod of Ulster is coexistent with the establishment of the Presbyterian doctrine and discipline in Ireland. The Southern Association, or Presbyterian Synod of Munster, was formed about 1660: the Presbytery of Antrim separated from the Synod of Ulster in 1727, and the Remonstrant Synod in 1829. The number of presbyteries and congregations in each body, and in the Seceding and Covenanters' synods are as follows:—

	Presbyteries.	Congregations.
General Synod of Ulster	24	275
Presbyterian Synod of Munster	2	15
Presbytery of Antrim	1	13
Remonstrant Synod	4	27
Seceders	10	152
Covenanters	4	28

The Methodists are divided into two societies—the Wesleyan and the Primitive Wesleyan; the number in both societies is 27,546. The Independents, or Congregational Union, a separate body from Presbyterians or Methodists, have 26 congregations.

The Society of Friends, or Quakers, are most numerous in Dublin, the Queen's Co., and Armagh. The United Brethren, or Moravians, have establishments in Dublin and Antrim. The Jews have a synagogue in Dublin.

The numbers attached to each religious persuasion in Ireland, in 1834, were, according to the returns of the Commissioners of Public Instruction, as follow:—

Denominations.	Number.	Centesimal Prop.
Established Church	852,064	10.726
Roman Catholics	6,427,713	80.913
Presbyterians	642,356	8.086
Other Dissenters	21,804	0.275

Or, in round numbers, out of every hundred souls, 11 are of the establishment, 81 R. Catholics, and 8 Protestant dissenters.

Education.—The principle of educating the great body of the people was fully recognised at the Reformation. An act of 28 Henry VIII. bound every beneficed clergyman by oath, on his incumbency, to keep or cause to be kept a school in his parish. A subsequent act of Elizabeth required the bishop and beneficed clergy of every diocese to maintain a grammar-school. But in nine cases out of ten, the oath and the act were alike disregarded; and the few schools that were organised were founded on sectarian principles, being intended for the exclusive use of the dominant sect. In 1733, a society was established by charter, for founding schools at the public expense, in which the children of the poor should

be taught the elements of literature, and instructed in useful works. But though the avowed, this was not the real object of this society, which exerted itself to undermine the Catholic religion by educating Catholic children in the principles of the Protestant faith! But this attempt at proselytism was soon discovered; and the schools were, of course, deserted by all but Protestants, and have, in fact, served as so many foci for the dissemination of bigotry rather than of really useful instruction. But though thus thrown upon their own resources, the Catholic peasantry of Ireland were by no means uneducated, at least, if we understand by education, instruction in reading, writing, and the common rules of arithmetic. But we regret to have to add, that the moral character of their education was too generally of the most objectionable description; and that, instead of improving, it not unfrequently tended to debase and pervert the mind, and to familiarise the young with immorality and disorder. In these respects, however, great improvements have been effected within these few years, and the character both of the country schoolmasters and of the school books (formerly of the worst possible description), has been greatly ameliorated.

In 1815, a society in Dublin, for the suppression of vice, received a large parliamentary grant for the instruction of the poor on the principles of the established church; and, in 1819, a society for the instruction of the poor, but professing to avoid any interference with the religious opinions of the pupils, received a much larger annual grant. The latter of these associations was called the *Kildare Street Society*, from the place of its meetings.

These societies failed, however, in producing a general effect. The grants of public money, by which the chartered schools were chiefly maintained, were withdrawn, from a conviction of their inefficacy, and of the abuses which had crept into their management. The grants to the society for the suppression of vice, and the Kildare Street Society, were also withdrawn, in consequence of their want of success, and of their real or supposed interference with the religious tenets of the pupils. In 1833, the public money hitherto parcelled out among these associations was vested in the lord lieutenant, to be expended in promoting the education of the children of every religious denomination under the superintendence of commissioners forming a board of National Education. Education in the national schools is strictly confined to the common and most useful branches of secular knowledge, the religious instruction of the pupils being, in every case, left to the care of their parents and the priests of the denominations to which they belong.

The commissioners comprise some of the highest dignitaries, both of the Protestant and R. Catholic churches; and some distinguished Protestant and Catholic laymen. They seem to have discharged their important functions with great diligence and impartiality. The schools they assist in establishing, though opposed by the bigots of both factions, appear to be making the most satisfactory progress; and will, no doubt, be productive of great public benefit. We subjoin an account of the progress of the national schools since their commencement in 1833:—

Years.	Schools.	Pupils.	Parl. Grants.
1833	789	107,042	25,000
1834	1,106	145,521	35,000
1835	1,181	153,707	35,000
1836	1,300	166,929	35,000
1837	1,384	169,548	60,000
1838			
1839	1,561	192,971	60,000
1840	1,978	232,560	60,000
1841	2,337	281,849	67,000
1842	2,721	319,792	65,000
1843	2,912	355,320	65,000
1844	3,153	395,550	75,000
1845	3,428	432,844	85,000
1846	3,637	456,410	100,000
1847	3,825	492,632	120,000
1848	4,109	507,469	125,000

The comparative progress of the system through the several provinces appears from the following table, showing the number of the schools and teachers in 1847, and the number of pupils, both male and female, as returned by the managers half-yearly:—

Provinces.	No. of Schools in operation on the 31st Dec., 1847.	No. of Children on the Rolls, as returned by the Managers, for the half-years ending						Number of Teachers.	
		31st March, 1847.			30th September, 1847.				
		Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Ulster - -	1,598	79,124	57,441	136,565	73,752	58,772	132,524	1,339	382
Munster - -	827	51,000	46,912	97,912	57,162	51,014	108,176	615	388
Leinster - -	940	55,183	50,510	105,693	58,775	55,558	114,333	645	452
Connaught -	460	25,833	19,159	44,992	23,880	18,346	42,226	343	176
Total -	3,825	209,140	174,022	383,162	213,569	133,690	397,259	2,942	1,598

Of the children educated, fully one-seventh are Protestants, which is not less than a fair proportion, as the Protestants never certainly do not exceed one-seventh part of the mass of Ireland.

The Sunday School Society, formed in 1802, for the general and religious instruction of children capable of attending schools on week days, had in connection with it, in 1840, 2,318 scholars, attended by above 50,000 members and 324,171 pupils. It is maintained wholly by voluntary contributions.

There are several collegiate institutions for instruction in the higher departments of science and literature. Among them are Trinity College, Dublin, the only university entitled to confer degrees in all the sciences, the N. Catholic College at Maynooth, the Agricultural Institution in Delfon &c. Some details relating to each of these are given in the narratives of their respective localities. (See Division II., page 100, Belfast.)

[illegible]

Four. — Notwithstanding the great natural advantages of the country it has, as already seen, been overgrown with a redundant population, in such depressed circumstances as to be involved in the extreme of destitution on any failure of the potato crop, and there is also, at all times, much suffering arising from the pressure of want. During a recent period there was no efficient provision for the relief of the poor, who, in consequence, had to depend wholly on private benevolence. Mendicity was prohibited as an extraordinary custom, and strangers in Ireland were shocked by the scenes and disgusted by the importunity of beggars of all ages and sexes, and in the most abject state of poverty that infected the roads and public places. Such a state of things was a disgrace to a country pretending to be civilized. But inevitable as it was, it could not be permanently improved without instituting a compulsory provision for the support of the poor which was long successfully resisted, through the prevalence of mistaken theories with respect to its operation in this country. At length, however, sound opinions gained an ascendancy, and parliament became impressed with the conviction that it was indispensable in order to preserve the tranquillity of the country in case of scarcity to make certain more efficient provision for the support of the poor. This was done by an act passed in 1838, which introduced the principle of compulsory assessment for the poor into Ireland, and which, while it serves to protect the population from falling a sacrifice to the extremity of want, is a new and powerful motive to the landlords to oppose the spreading of farms, and to take a greater interest than they previously did in the condition of the cultivators and others inhabiting their estates. In both these respects, the compulsory assessment has been extremely useful. This system is placed under the control of the Poor Law Commissioners for England, and is now extended over the whole country.

The Poor Law came into operation in 1839, but none of the workhouses were opened for the admission of paupers till 1840. Since 25th March, 1845, all the workhouses in Ireland have been open, and a rate has been made in every union. The following (see next column) is a series of the returns of expenditures of every kind, and of the amounts of paupers relieved in the workhouses, from the commencement of proceedings under the Relief Act, on 25th September 1845. —

Race, Character, and Condition of the People — It seems to be admitted on all hands that the first inhabitants of Ireland, of whom history has preserved any account, belonged to the great Celtic family. Much ingenious conjecture has

Year.	No. of Volumes.	Expenditure.	Receipts.

The number of papers referred to the FBI within the year ended 29th September, 1953, was as follows:—

For workman 1946 September 1947	25,000
Additional work paid for in workhouse during	
the year ended 30th September 1947	250,000
Workhouse food and clothing the year	200,000
Workhouse to share of the year	100,000
Expenses in the workhouse during the year	
Estimated cost of workhouse	1,000,000
Total	1,575,000

been expended on the question whence Ireland derived her earliest colonists, and the claims of Britain, France, Spain, Scythia, and even Troy, to the honour of being the mother country of the Irish, have all been supported with some learning and much confidence. We shall not enter on this slippery arena, but shall content ourselves with observing that, owing to the greater proximity of Britain to the Continent, it is most probable that she was peopled before Ireland, and the latter being nearer to Britain than to the Continent, it is for the same reason most probable that she was either wholly peopled from Britain, or principally from her, but partly also from Gaul.

Though there be no direct evidence of the fact, it may, perhaps, be inferred that Iceland was visited at an early period by Phœnician, or rather Carthaginian ships, but, in those days, the most have been a long and perilous voyage; and there are no grounds whatever for thinking that it was of common occurrence, or that the Phœnicians ever made any settlement in the country.

The Irish belong to what is called the Gaelic division of the Celtic family; having, as is supposed, emigrated from Britain when the latter was invaded and settled by the Cimbri or Northern Celts. About the period when the Romans withdrew from Britain, a tribe called the Scoti began to acquire a preponderating influence in Ireland, which, from the 5th to about the 11th century, was thence called Scotia. But about the latter period this tribe, having effected a settlement on the W coast of N. Britain, its name was transferred to that country, which still retains it, and Ireland again recovered its old name of Hibernia, Ierna, or Ireland. The greatest diversity of opinion exists, and an almost impenetrable obscurity hangs over every circumstance connected with the establishment of the Scoti in Ireland. Colonists from Belgium are known to have settled in it, and Pinkerton supposes that they were the progenitors of the Scoti; but this is disputed by Moore and others, who contend that the settlement of the Scoti in Ireland is comparatively recent; and that they were of Scandinavian origin.

But though these Helgian or Scandinavian immigrants succeeded in obtaining an ascendancy in parts of Ireland, they were not sufficiently numerous to make any considerable change in the language, character, or institutions of its Celtic inhabitants. "The conquering tribes themselves, one after another, became mingled with the general mass, leaving only in these few Teutonic words, which are found mixed up with the native Celtic, any vestige of their once separate existence." (*Meade's Ireland*, I. 98.)

The number of English settlers in Ireland was long inconsiderable. Till the plantation of Ulster, in the reign of James I., they were mostly, indeed, confined to the E. and S. E. counties; where, though they had partially changed the language, they had effected comparatively little change in the habits and manners of the people. The pop. of Connaught, and generally of all the western and of a large portion of the other parts of the island, may, even at this day, be considered as of nearly pure Celtic origin; and in several of the remoter districts Celtic is now the ordinary language of the common people. And, notwithstanding the differences that may easily be traced in different parts, from the intermixture of English and Scotch blood, the entire pop. has a peculiar and distinctive character, that is not to be mistaken. It may, in general, be said of the Irish, that they are ardent in their affections, credulous, vain, fond to excess of flattery, irascible, easily influenced by sudden impulses, uncertain, and usually in extremes. Hence the facility with which they have been duped by the merest impostors; and their proneness to believe every falsehood, how gross soever, that flatters their prejudices. They are wholly destitute not merely of the foresight and prudence, but also of the resolution and steady perseverance of the English and Scotch: and though their bravery be unquestionable, and they will undertake any thing, they are very apt, if they do not succeed at the first onset, to become dispirited, and to despond. They are eminently witty, hospitable and social; though often parsimonious, prodigality is one of their distinguishing traits; as is their light-hearted, contented disposition: but this frequently degenerates into thoughtlessness; and, how advantageous soever in some respects, by disposing them to be satisfied with existing circumstances, it tends to hinder their making any persevering and well-concerted efforts for their improvement.

Dr. Crumpe*, in his valuable essay on the employment of the people, has the following statements with respect to the character of the lower Irish:—"Two leading and naturally allied features in the character of the lower Irish are idleness and inquisitiveness, especially when hired and employed to perform the work of others. The moment an overseer quits them, they inevitably drop their work, take snuff, and fall into chat as to the news of the day; no traveller can pass them without diverting their attention from the business in hand, and giving rise to numerous surmises as to his person, errand, and destination. The most trivial occurrence, especially in the sporting line, will hurry them, unless restrained, from their occupations. Even the sedentary manufacturer will, on such occasions, quit his employment. Nothing is more common than to see a weaver in the N. start from his loom on hearing a pack of hounds, and pursue them through a long and fatiguing chase. A tendency to pilfering and theft is very predominant among them, and connected with this vice is the prevalence of low cunning and lying; and, as their accompaniment, may be mentioned a fawning flattery. The blunt honesty, the bold independence of the English yeoman, are wanting; and in their stead too generally substituted the petty dishonesty of the vassal, the servility and artifice of the slave. Drunkenness is an evil of considerable magnitude in the catalogue of national vices. It is

one to which the lower Irish are peculiarly addicted, and that from which the most serious obstructions arise to their industry and employment. That vile beverage, whisky, so cheaply purchased, and so generally diffused, affords them an easy opportunity of gratifying this destructive passion. As one consequence of the general prevalence of ebriety, the lower Irish are remarkably riotous. I do not here so much allude to Whiteboyism, and other public disturbances, which owe their origin chiefly to other causes, as to their quarrels among themselves. Their fairs are frequently the scenes of confusion, riot, disturbance, and bloodshed. Combinations, too, risings, and outrage among tradesmen, are far from unusual, and on pretexts that are truly ridiculous. The Irish are, also, to a remarkable degree, lawlessly inclined. It is well known that instead of being anxious to apprehend offenders, or to assist the execution of the law, they are, in general, ready to give the former every assistance to escape; and to resist the latter, unless awed by a superior force." (*Essay*, pp. 170—175.)

We believe that this, though not a very flattering, is a perfectly fair statement. But some, at least, of the defects of national character, specified by Dr. Crumpe, originate in circumstances that either have been, or admit of being obviated. Drunkenness, happily, is now, one should think, in a fair way of being expunged from the list of Irish vices; and with it will disappear the riots and disturbances to which it gave birth. The idleness of the Irish, though in part constitutional, is in part, also, a consequence of the minute division of the land, and of the impossibility of its occupiers finding any regular or continuous employment. Their proneness to combination and outrage, their readiness to obstruct the course of law, and to assist the escape of malefactors, were formerly promoted, if not occasioned, by oppression and misgovernment, and now they are the results of their desperate efforts to keep possession of their patches of land. Down to a comparatively recent period the native Irish had not, and could not be expected to have, any confidence in the law. They were, in fact, a proscribed and enslaved race, among whom it would have been preposterous to look for "blunt honesty," and "bold independence." And notwithstanding the "oppression and extortion" to which the Irish were formerly subject have disappeared, their effects will, it is to be feared, be long visible, and with the defects inherent in their character will make their regeneration a work of extreme difficulty. Agitation is still rife in the land. The peasantry are taught to ascribe all the ills with which they may be visited to misgovernment, or to their connection with England. Nothing is ever set down to account of their own improvidence, or want of industry. On great emergencies, such as a scarcity of food, or of employment, they become quite paralysed; and instead of exerting their energies, sink into despair, or, at best, abuse the government which feeds them. These evils can only be modified by slow degrees; by government pursuing a consistent and impartial course; placing the Catholics on a level with the Protestants, in respect of religious endowments as well as of civil rights; diffusing sound instruction; discouraging agitation; enforcing, at all hazards, the empire of the law; and adopting every practicable method for preventing the further splitting of the land, and for promoting its consolidation into larger farms.

Wages in Ireland vary from about 1s. to about

* An intelligent physician at Limerick, whose work received a prize awarded by the Royal Irish Academy for the best essay on the subject of which it treats.

6d. a day; but at neither rate is employment constant, and in parts of the country half the labourers are all but unoccupied for nearly half the year. Under such circumstances, it is needless to add that their food, clothes, &c. must, speaking generally, be of the most inferior description. In these respects, however, there are some material differences; and in the N.E. and eastern counties, but especially the first, the condition of the peasantry is much superior to what it is in the S.W. and W.

We subjoin, from the Report on Railways*, the following statements with respect to the condition of the pop. in the N.E., S.E., E., and W. divisions of the country.

"In the first (N.E. division) they are better lodged, clothed, and fed than in the others: the wages of labour are higher, being, at an average, about 1s. per day; and their food consists chiefly of meal, potatoes, and milk. They are a frugal, industrious, and intelligent race; inhabiting a district for the most part inferior, in natural fertility, to the S. portion of Ireland, but cultivating it better, and paying higher rents in proportion to the quality of the land, notwithstanding the higher rate of wages.

"In the southern districts we find a population whose condition is, in every respect, inferior to that of the northern. Their habitations are worse; their food inferior, consisting at best of potatoes and milk, without meal: the wages of labour are found reduced from 1s. to 8d. per day; yet the peasantry are a robust, active, and athletic race, capable of great exertion, often exposed to great privations, ignorant, but eager for instruction; and readily trained, under judicious management, to habits of order and steady industry.

"The population of the midland (eastern) districts does not differ materially in condition from those of the south; but the inhabitants of the western district are decidedly inferior to both, in condition and appearance: their food consists of the potato alone, without meal, and in most cases without milk: their cabins are wretched hovels; their beds straw; the wages of labour are reduced to the lowest point, upon an average not more than 6d. per day. Poverty and misery have deprived them of all energy; labour brings no adequate return, and every motive to exertion is destroyed. Agriculture is in the rudest and lowest state. The substantial farmer, employing labourers, and cultivating his land according to the improved modes of modern husbandry, is rarely to be found amongst them. The country is covered with small occupiers, and swarms with an indigent and wretched population. It is true, that some landed proprietors have made great exertions to introduce a better system of agriculture, and to improve the condition of their immediate tenants; and a few of the lesser proprietors have made humble attempts to imitate them; but the great mass of the population exhibits a state of poverty bordering on destitution.

"The distinctions we have drawn as to the usual diet of agricultural labourers in the different parts of Ireland, are strictly applicable to those only who have regular employment. When they are out of work, which is the case in many places during three or four months of the year, the line is not so easily perceived. Then a reduction in the quantity as well as in the quality of their food takes place; but still, though on

a diminished scale, their relative local degrees of comfort or of penury are maintained nearly according to the above classification. In no extremity of privation or distress, have the peasantry of the northern counties approached to a level with those of the W.; while Leinster and the greater part of the S., though sometimes reduced to the lowest condition, retain, generally, even in the most calamitous periods, a shade of superiority. There are districts, indeed, in every quarter of the land, where through peculiarities of situation, or other causes, distress falls with an equal pressure upon all; but such exceptions are rare, and so limited in extent, as scarcely to qualify the foregoing observations." (*Report*, p. 5.)

In another part of the same Report, the commissioners give the following information with respect to the deterioration in the condition of the lower orders:—"Among the effects of the rapid increase of pop., without a corresponding increase of employment, the most alarming, though, perhaps, the most obviously to be expected, is a deterioration of the food of the peasantry. It could scarcely be thought, indeed, that their customary diet would admit of any reduction, save in quantity alone; yet it has been reduced as to quality also, in such a way as sensibly to diminish their comfort, if not to impair their health. Bread was never an article of common use amongst the labouring poor; but it is now less known by them than formerly. Milk is become almost a luxury to many of them; and the quality of their potatoe diet is generally much inferior to what it was at the commencement of the present century. A species of potato called the 'lumper,' has been brought into general cultivation, on account of its great productiveness, and the facility with which it can be raised from an inferior soil, and with a comparatively small portion of manure. This root, at its first introduction, was scarcely considered food good enough for swine; it neither possesses the farinaceous qualities of the better varieties of the plant, nor is it as palatable as any other, being wet and tasteless, and, in point of substantial nutriment, little better, as an article of human food, than a Swedish turnip. In many counties of Leinster, and throughout the provinces of Munster and Connaught, the 'lumper' now constitutes the principal food of the labouring peasantry; a fact which is the more striking, when we consider the great increase of produce, together with its manifest improvement in quality, which is annually raised in Ireland, for exportation and for consumption, by the superior classes." (p. 81.)

This certainly is a very unfavourable statement; but it is not possible that wealth should increase in the hands of the upper and middle classes, without the lower ultimately participating in its advantages.

History.—The early accounts of Ireland are singularly disfigured by fable. It was not invaded by the Romans, whose knowledge of it could, therefore, be derived only from the reports of the Britons, or of natives of Ireland in Britain. The fair presumption, however, is, that its inhabitants were then more barbarous than even those of this island.† In the 5th century Christianity was introduced into Ireland by St. Patrick, a native of N. Britain, who, in his youth, had been carried a captive into Ireland. Along with the

* The statements in this report, which was drawn up by the late Mr. Drummond, Under Secretary for Ireland, are of the highest authority. It was compiled in 1838.

† Pomponius Mela, who has given so accurate an account of the soil of Ireland, and of the richness of its pastures, says, *Cultores que inconditi sunt, et omnium virtutum igneri, pictatis admodum asperies.* (Lib. iii. sec. 6.) Strabo (lib. iv.) gives some extraordinary details respecting the Irish, which, however, he does not state on his own authority, but merely as having been reported to him.

passed the British missionaries introduced the letters and learning of Rome, and a school founded at Armagh, not long after Thomas Becket's death in most parts of Europe, but it could be of no consequence to infer from the fact of this and a few other schools existing in the country that it was then distinguished by literature and civilization, as it could be to allege that such was the case with the Western Islands, and the adjacent parts of the mainland of Scotland, in the fifth century, because there was then a celebrated monastery and school in Iona!

The condition of the political state of Ireland, previously to the English invasion, was obscure and contradictory. This much, however, may be gleaned from them, that the island was partitioned out into a number of semi-independent states, which sometimes did, and sometimes did not, acknowledge their dependence on a chief prince or king of all Ireland. Immense hostilities were waged by the petty sovereigns against each other, which were not even interrupted by the invasion of the Danes in the 10th century. The latter, in no very long space, became masters of the greater part of the coast of the island, and occupied the parts of Dublin, Wexford, Waterford, and Cork, where they were taken by the English.

The successors to the petty sovereigns, or to the chiefs of clans or septa, were called *chiefs*, and were generally elected from the family or kindred of the reigning prince or chieftain during his lifetime. Females were excluded from the succession, and minors were never chosen as chiefs, the object being to have a prince of mature years always at the head of the military or clan, who might be able to direct their operations, and to defend them from hostile attacks. The laws of the Irish were such as might be expected to prevail among a rude and barbarous people, and were administered in the open air by hereditary judges, designated *brúides*. The most atrocious crimes might be compensated for by the payment of an *eric* or fine, and, as in all cases a considerable portion, and in some cases the whole, of the fine went to the lord, or chief of the sept, his interest obviously led him to encourage rather than to repress crime. The laws with respect to the destruction of fixed property were such as would have alone served to extinguish all industry. "Through the whole country," says Leinster, "the tenure of lands determined with the life of the possessor, and, as the crimes or misfortunes of men frequently forced them from one tribe to another, property was eternally fluctuating, and new portions of lands made almost daily. Hence the cultivation of lands was only in proportion to the immediate demands of nature, and the tribute to be paid to superiors." (*Hist. of Ireland*, Introduction, p. 34.)

A people with such institutions could not be other than barbarous, and such, in fact, they were. They had made little or no progress even in the most necessary arts, and were, with few exceptions, entire strangers to civilization and refinement. Neither was

Richard III., and the accession of Henry VII. had terminated this compulsory struggle, Ireland was chosen by the defeated party of the Yorkists as a theatre on which to commence a system of operations for the dethronement of the new monarch. In consequence, Lambert Simnel was sent thither by the Dukes of Burgundy, as the descendant and representative of Edward IV. His title was acknowledged by the Anglo-Irish, and he was crowned in Dublin with all the ceremonies attendant on the inauguration of the ancient Irish sovereigns. A similar though less vigorous effort was afterwards made by George of Ffynnon Werburgh, whose title was also acknowledged in the S of Ireland.

In 1494, a parliament assembled at Drogheda, under the presidency of Sir Edward Poyning, then lord-deputy passed some very important statutes. By one of these, afterwards well known in Irish history by the name of "Poyning's Law," effectual provision was made for maintaining the supremacy of the government of England over the legislature of Ireland. With this view it was enacted, that no parliament should in future be held in Ireland without license from the king, and that no bill or draft of a law should be submitted to its consideration without having been previously sent over to England by the Irish government for the approval, alteration, or rejection of the king, so that the power of the Irish parliament was then, in fact, limited to the mere acceptance or rejection of bills approved or modified by the English government.

This act was much and justly complained of at a later period, but, when passed, it was a decidedly popular measure. Parliaments had previously been, for the most part, the mere instruments of the barons that happened to be ascendant at the time, so that their enactments were often conflicting, and the administration wanted consistency. Poyning's law obviated in some measure, these defects, and parliament henceforth became dependent rather on the government of England than on any particular faction or party in Ireland.

Early in the reign of Henry VIII. the spirit of innovation broke out in a formidable shape. The chief authority had previously been exercised for a long period by the rival families of the Fitzgeralds and Butlers, whose heads were the Earls of Kildare and Ormonde. The former of these noblemen was at this period lord-lieutenant. On being summoned to England, to answer charges brought against his government, he appointed his son, Lord Thomas Fitzgerald, his deputy. The latter, on a false rumour of his father's execution in London, not only threw up the reins of government, but declared himself an open enemy to the English monarch, ravaged the pale, and laid siege to Dublin, where he was repulsed by the gallantry of the citizens. Having again surrendered to Lord Grey, the new lord-lieutenant, he was sent prisoner to England, where he attempted his escape on the scaffold, along with several of his near relations, who, though unconnected with his acts, were unjustly implicated in their consequences. The introduction of the Reformed doctrine, which was effected with equal violence and contempt for the prejudices of those within and without the pale, brought a new element of discord into Ireland. The native Irish were devoted adherents of the church of Rome. Their hostility to the new doctrine did not, however, display itself openly during the reign of Henry, who, about this time, changed his title of lord to that of king of Ireland, and in the reign of his protestant successor Edward VI., but it broke out with unrestrained fury to that of Elizabeth. O'Neill, who possessed nearly the whole of Ulster, hastened by the court of Spain, hoisted the standard of rebellion. He was supported by a Spanish armament, which took possession of Kinsale, without, however, being able to maintain itself in that position. After a long and constant O'Neill was forced, by the energetic and prudent measures of Lord Mountjoy, to an unconditional submission, and his subsequent flight from Ireland, on the imputed charge of another insurrection, terminated the war. Ireland was now again divided into counties, and planted with numerous bodies of English and Scotch settlers, which laid the foundations of the improvement of that province, and gave it a distinctive character. The reign of James I., and the earlier part of that of Charles I., formed a period of undisturbed tranquillity. But the disputes between the house and the English parliament afforded the Irish a flattering though fallacious prospect of regaining their independence and re-establishing their religion. To effect this object, an insurrection was secretly organized, on a very extensive scale, embracing not only the native Irish, but many Roman Catholic families of English descent. This formidable conspiracy broke out in 1641. The treachery of one of the conspirators prevented Dublin from falling into their hands, but the insurrection broke out simultaneously in Ulster and soon after spread into most other parts of the country. The most heinous crimes were committed by the conspirators, which were sometimes fearfully retaliated; and the country

became the theatre of the most dangerous enemies of their mother country. At one time there were 9 separate parties, with independent jurisdiction, in the part of the island subject to England, and distinguished by the name of the pale. The mischief resulting from the interminable disorders inseparable from such a state of things, were increased in 1642 by an invasion of the Scotch, under Edward, brother of Robert Bruce. He overran the greater part of the country, but was finally defeated and killed near Dundalk. The resources of the country were also wasted in civilisation, and its youth hurried away to fight the battles of their masters on the continent, or in England, during the wars between the houses of York and Lancaster. After the death of

continued to be a prey to all the horrors of civil war till 1649, when Cromwell appeared in the field, at the head of a well-disciplined and powerful army. Having taken Drogheda by storm, he delivered it up to military execution; and such was the terror inspired by the fate of this city, that almost all the strongholds belonging to the party of the Catholics soon after fell into his hands, and the English supremacy was, for the first time, established in every part of Ireland.

The confiscations that followed Cromwell's success were upon so vast a scale that about *four fifths* of the soil was transferred to new proprietors, either parliamentary soldiers, or speculators, called adventurers, who had advanced money to carry on the war.

After this tremendous visitation Ireland continued tranquil, and began to advance considerably in prosperity, till the events connected with the Revolution of 1688 again made it the theatre of fresh and sanguinary contests. After the flight of James II. from England, he landed, with a view to retrieve his fortunes, in Ireland, where he was received with open arms by the Catholics; and having brought with him from France a number of experienced troops and officers, partly Irish and partly French, he soon found himself at the head of a powerful army. Luckily, however, he was wholly without the talents necessary to ensure success in such an enterprise. The battle of the Boyne, on the 1st of July, 1690, gained by William III., turned the scale completely in favour of the latter; and the battle of Aughrim, on the 12th of July, 1691, when the British under Ginkell, afterwards earl of Athlone, obtained a decisive victory over the troops of James II., commanded by St. Ruth, who fell in the action, was the last great effort made by the Irish to achieve their independence. The remains of the Irish forces, having retreated to Limerick, capitulated under conditions embodied in the famous convention called the treaty of Limerick. We have already noticed the violation of this treaty. It is due, however, to the memory of our great deliverer, William III., to state that he was no willing party to its violation. This is entirely to be ascribed to the intolerance of the English and Irish protestants, who, flushed with victory, did not hesitate, despite the stipulations to the contrary in the treaty, to trample the Catholics under foot, and as far as possible to exterminate their religion. "By the total reduction," says Mr. Burke, "of the kingdom of Ireland, in 1691, the ruin of the native Irish, and in a great measure, too, of the first races of the English, was completely accomplished. The new interest was settled with as solid a stability as any thing in human affairs can look for. All the penal laws of that unparalleled code of oppression, which were made after the last event, were manifestly the effects of national hatred and scorn towards a conquered people, whom the victors delighted to trample upon, and were not at all afraid to provoke. They were not the effects of their fears, but of their security. They who carried on this system looked to the irresistible force of Great Britain for their support in their acts of power." (*Letter to Sir H. Langrish*, p. 44.)

The violation of the treaty of Limerick being accompanied by the most extensive confiscations, and followed up by the enactment of the penal code, completed the prostration of Ireland. There being no longer any means of rising, nor even security at home, the aspiring Catholic youth sought employment and distinction in the service of France, which, for a lengthened period, drew large supplies of recruits from Ireland. Hence, by a singular contradiction, the same revolution that established freedom of conscience and a liberal system of government in England and Scotland, established an odious despotism and persecution in Ireland. In the words of Mr. Burke, "it established, in defiance of the principles of our revolution, the power of the smaller number, at the expense of the religious liberties of the far greater, and at the expense of the civil liberties of the whole."

But, as already stated, the penal code failed to effect its object; and, instead of being exterminated, the Catholics gradually acquired a still greater numerical superiority. At length, in the earlier part of the reign of George III., the rigour of the code began to be abated, and the Catholics ceased to be regarded as mere *ferre nature*.

One of the most curious chapters in Irish history is that connected with the embodying of the volunteers in 1782, and the revolution that was soon after effected in the constitution of Ireland. The difficulties in which Great Britain was then involved having occasioned the withdrawal of the greater number of the troops from Ireland, rumours were propagated of an expected invasion of the island by the French; and, to meet this contingency, the Protestants of Ulster and other parts took up arms, and formed themselves into volunteer corps. These bodies soon became sensible of their strength; and having appointed delegates and concerted measures, they proceeded to set about reforming the constitution.

In this view they published declarations to the effect that Ireland was a free and independent kingdom, and that no power on earth, except that of the king, lords, and commons of Ireland, could legally enact laws to bind Irishmen. These declarations, which struck a direct blow at the superiority hitherto claimed and asserted by the British parliament, might, and most probably would, at another time, have been successfully resisted. But Great Britain, being then engaged in a desperate contest with her revolted colonies, and with almost all the Great European powers, prudently made the concession demanded by the Irish volunteers; and the *Independence of Ireland* was proclaimed amid the most enthusiastic demonstrations of popular rejoicing.

In truth, however, this independence was apparent only. The wretched state of the elective franchise in Ireland was totally inconsistent with any thing like real independence; and so venal was the Irish parliament, that any minister, how unpopular soever, had no difficulty in securing a majority in that assembly. Hence the anticipations in which the more sanguine Irish patriots had indulged were destined soon to experience a most mortifying disappointment; and this, and the hopes inspired by the French revolution, terminated in the rebellion of 1798, which was not suppressed without a repetition of the former scenes of devastation and bloodshed.

The British government at length wisely determined to effect a legislative union between Great Britain and Ireland, and to suppress the separate legislature of the latter. This measure, notwithstanding a strenuous opposition, was happily carried, and took effect from the 1st of January, 1800. And, unless it were resolved or wished to put an end to all political connection between the two countries, nothing could be more inexpedient and absurd than the existence of a separate independent legislature for Ireland. Perpetual jealousies could not have failed to arise between it and the legislature of Great Britain, which must necessarily in the end have led to estrangement, and probably separation. A legislative union was the only means of obviating these and other sources of mischief: its repeal would make Ireland a theatre for all sorts of projects and intrigues, and it would be sure to be followed, at no distant period, by the dismemberment of the empire. Its maintenance should, therefore, be regarded as a fundamental principle of policy: and, to give it permanence and stability, every effort should be made to remove all just grounds of complaint on the part of the Irish people, and to make the union one of national interest and affection, as well as of constitutional law.

IRKUTSK, GOVERNMENT OF. See SIBERIA.

IRKUTSK, a city of Asiatic Russia, cap. of Eastern Siberia, on the Angara, at its confluence with the Irkut, about 30 m. from the N.W. shore of Lake Baikal, 500 m. S.E. Krasnojarsk, and 1450 m. in nearly the same direction from Tobolsk; lat. 53° 16' 20" N., long. 104° 19' 45" E. (*Erman, Reise um die Erde*, ii. 412, &c.) Pop., with its garrison, about 15,000. It is situated in a wide plain, 1,240 ft. above the level of the sea; the mean temperature of the year being — 0·3 R., or rather below the freezing point. The Angara, which is about 1,000 ft. broad at Irkutsk, divides the city into two nearly equal parts. It is fortified and defended by a citadel, and has 4 suburbs. Of about 1,900 private houses, only 50 are built of stone; the rest are chiefly of wood, or faced with painted planks. The streets are broad, but altogether unpaved; from the solidity of the ground, however, they are not dirty; and Erman says, that, in many respects, Irkutsk is much more agreeable than Tobolsk. It has 33 churches, 12 of which are constructed of stone; an exchange, also a stone edifice, and a good bazaar with numerous shops. The Baikal admiralty house and building docks on the Angara, medical college, gymnasium, and *comptoir* of the Russo-American Company, are said to be worthy of a European city; the government-house, theatre, several convents and hospitals, and a prison, are among its other public edifices. It is the seat of an archbishop, and of a Russian governor, whose authority extends over the immense provs. of Irkutsk, Yakutsk, Okhotsk, Kamtschatka, and Russian America, including Bodega and the other settlements on the coast of California, distant nearly 120° long. It has numerous educational establishments, including, besides the gymnasium, with a library of 5,000 vols., an episcopal seminary, high school of navigation, with classes for instruction in the Tartar, Chinese, and Japanese languages; normal, secondary, Lancastrian, and other schools, and a cabinet of mineralogy. It has an imperial factory of woollen cloth for the supply of the troops in Siberia, manufactures of linen and other piece goods, glass, hats, soap, leather, &c.; and is the residence of numerous artisans in the different trades common in Europe. It is the great entrepôt for the commerce of N.E. Asia, importing tea, rhubarb, fruit, paper, silks, porcelain, and other manufactured goods from China by way of Kiachta and furs, &c. from Kamtschatka, the Aleutian

factor for an estate in the neighbourhood. John Galt, author of *Annals of the Parish*, and other works, was a native of the bor.; and Burns was for a short time engaged in business in it as a flax-dresser.

ISCHIA (an *Ægeria*, *Juvénis*, and *Prithenus*), an isl. of the Mediterranean, belonging to the k. of Naples, 3 m. S. W. from the promontory of Misenum, and 18 m. W. S. W. Naples. It is about 7 m. in length, and 30 in circ., having an area of 31 sq. m., and a pop. of about 34,000. Nearly in its centre is M. San Nicola or Epomeo (an. *Epaprus*). This, though now an extinct, was formerly an active volcano, the eruptions of which are noticed by Strabo (lib. v.) and Pliny (lib. ii. § 86.); and which burst forth with great fury in 1301, since which it has been quiescent. It is 2,613 ft. above the level of the sea, and the whole isl. falls in a gentle slope from it to the sea, except on the N., where its sides are more abrupt. Ischia obviously, indeed, owes its origin to volcanic agency, and consists wholly of volcanic matters. Its bold and rocky shores present an imposing appearance from the sea; and the favourable impression it makes at a distance is not dissipated on landing, it being remarkable both for fertility of soil, and beauty of situation. Besides a great quantity of wine, it produces olives and a variety of fruits, with wheat, maize, pulses, and excellent herbage. It is well supplied with game, especially partridges. Sulphur and other useful mineral products are abundant, and there are numerous hot springs and natural vapour baths, especially at its N. W. extremity. The inhab. are partly husbandmen, and partly sailors and fishermen. The manufacture of straw hats, baskets, and earthenware, are carried on to some extent.

Ischia is divided into two cantons: chief towns, Ischia and Foria, the former on the E. and the latter on the W. coast. Ischia, the cap. with 3,000 inhab., is "a pretty town of white buildings, and the residence of a bishop. A round rock, as black as if just launched out of the bowels of a volcano, forms a kind of haven by means of a causeway communicating with the town; its summit and sides are covered with houses, old towers, and ruinous fortifications, buddled together, and accessible only on one side by a steep winding road." (Switzerland, ii. 12.) On this rock stands an old fortress, in which the last princes of the house of Aragon took refuge when Naples was conquered by the French. This building is now used as a state prison. Foria is ill built, and without a harbour.

The poets account for the volcanic phenomena of Ischia, as for those of Vesuvius and Etna, by ascribing them to the violent efforts of Typhoeus and the other giants buried below them to escape from their prison:—

† *greatest general eruption, upon further signs*
† *volcanic power, Ischia, Vesuvius, Etna*
† *One eruption.* *Switzerland, vol. ii. p. 167.*

See also *Strabo*, ix. lib. 716.

of Savoy, runs with a tortuous course, generally S. W., and falls into the Rhone about 5 m. N. N. E. Valence, after a course of 122 m., 108 of which are navigable. Its chief affluents are the Romanche and Drac; Grenoble stands on its banks. W. winds predominate in this dep., and the annual fall of rain is estimated at nearly 26 inches. In 1836, the arable lands were estimated at 518,367 hectares, meadows 66,718, vineyards 27,000, forests 198,420, and heaths, wastes, &c. 171,960 do. Agriculture is backward, but improving. In 1836, 2,720,120 hectolitres of corn, chiefly wheat and rye, were said to have been harvested, being a larger supply than

was produced in any of the surrounding depts., besides 10,771,300 hectolitres of potatoes, or more than double the quantity grown in any other dept. of France. But it should be borne in mind that these returns, though given in the official tables, are but little to be depended on; and are, in fact, nothing but rough approximations. The vine is pretty generally cultivated, and the produce of wine amounts to about 450,000 hectols. a year. Chestnuts, almonds, and other fruits abound, and large quantities of ratafia, and other liqueurs, are made. The number of mulberry trees had increased nearly a third between 1830 and 1834. In 1835, 430,366 kilog. cocoons were collected. Good cavalry horses and mules are bred. In 1832, the stock of black cattle amounted to about 127,000 head, the breed is generally small, but the cows are good milkers, and some superior cheeses are made. The sheep yield excellent wool, and many flocks from the surrounding depts. are sent to pasture in summer in the mountains. Poultry are reared in great numbers. In 1835, of 196,450 properties subject to the contribution *foncière*, 89,649 were assessed at less than 5 fr., and 31,668 at from 5 to 10 fr.; the number of large properties is a good deal below the average of the depts.

Isère is one of the richest depts. of France in respect of minerals, and mining is one of the chief occupations of its inhab. Gold and silver mines were wrought till the commencement of the present century. At present, iron, copper, zinc, and lead are the chief metalliferous products, but mercury, blanch, antimony, and cobalt are likewise obtained; so are also coal, sulphur, alum, marble, granite, gypsum, &c. There are 10 large smelting furnaces, and numerous forges and steel factories. Paper, silk stuffs and yarn, coarse woollens, table linen, sail and packing cloth, gloves, especially at Grenoble, cotton and woollen yarn, crapes, straw hats, mineral acids, &c. are the other chief manufactures. Lyons is the great entrepôt for the produce of Isère. The dept. is divided into 4 arrond., 48 com., and 868 com. Chief towns, Grenoble, the cap., with 22,387 inhab., St. Marcellin, La Tour du Pin, and Vienne. Total public revenue (1844), 14,847,040 fr. This dept. abounds with remarkable natural curiosities, and Roman and other antiquities. One of its most remarkable establishments is the GRANDE CHARTREUSE, which see. (*Hugo, art. Isère; French Official Tables; Guide du Voyageur, &c.*)

(S. B. See THAMES.)

ISKARDO, a commercial town of Little Tibet, on the Upper Indus, about 120 m. N. W. Leh, but at present little known. It is reported to be a large fortress of irregular construction, and the cap. of a distr. of same name. (*Burns's Trav.*)

ISLAMABAD, a town of India beyond the Brahmaputra, belonging to the prov. Bengal, district Chittagong, of which it is the cap., on the river Chittagong, 8 m. from the Bay of Bengal, and 134 m. S. E. Dacca. Pop. 12,000 (*Malabar*), about 2,000 of whom are of Portuguese descent. "The streets are in good order, and the bazaar abundantly supplied with every sort of domestic and foreign produce. The mode of building, and the general aspect of every thing, is decidedly Bengalee. About 200 vessels, chiefly brigs of from 40 to 100 tons, are owned in the place, and many vessels from other places resort thither. The chief exports are rice and salt. Large Maldivé boats come annually, during the fine season, with coconuts, tortoise-shell, camels, cocoa nuts, and colts for rope, and carry away rice and small manufactures. (*Malabar*, i. 134.) This town is theemporium of a great extent of country, and the resort of numerous merchants. A kind of cotton canvas is made in its neighbourhood, and vessels of considerable burden are built. Islamabad has two Portuguese churches, and a large English school established in 1812. (*Malabar's Travels in S. E. Asia*.)

m. *See* WATTSBURN.

Isolated town and harbour of anarabia, on the N. side of the sea, about 43 m. from the Black s. 20° 10' 15" N. Pop. 12,000. The Russians, under Suvarrow, given up to an indiscriminating but laterly it has recovered, at urbanous devastation. It has a srtling corn, hides, tallow, &c. The custom-house and quarantine are of the first class. Owing to the shallowness of the water over the bar of the Kilia mouth, vessels bound for Ismail generally enter the Danube by the Southern or middle mouth. (*See* DAWSON, in this Dictionary; and *Hagermeister on the Black Sea*, p. 24. Eng. trans.)

ISPAHAN (*Aspadana*), a celebrated city, formerly the cap. of Persia, and once so extensive and populous that the Persians said of it, in their induced phraseology, "*Schoon nâpe gihan*"—"Isfahan is half the world." (*Charlevoix*, iii. 2.) It is situated in the

prov. Irak Adjmi, of which it is the cap., as well as of a begler-beglik, of the same name, 211 m. S. Teheran, and 263 m. S.S.W. Bushire. Lat. $33^{\circ} 28' N.$, long. $51^{\circ} 50' E.$ Pop. variously estimated at from 250,000 to 50,000, the latest estimate of Morier fixing it at 60,000. This, however, is unquestionably too low; and the pop., most probably, exceeds 100,000. (*Ritter*, ix. 48.) This city, which was at the height of its glory during the reign of Shah Abbas, in the 17th century, now presents to the traveller, in its buildings at least, little beyond the magnificent ruins of its former greatness. It stands in the midst of an extensive plain, abundantly watered by the Zenderood, a river about 600 ft. broad; and is surrounded by groves, avenues, and spreading orchards. "Among the first objects that struck our eyes," says Sir R. K. Porter, "were the numerous noble bridges, each carrying its long level line of thickly ranged arches to porch-like structures, some fallen into stately ruin, others nearly entire, but all exhibiting splendid memorials of the Sefi race. The S. avenue, through which we entered the town, terminated at the great bazaar of Shah Abbas, the whole of which enormous pile is vaulted above to exclude heat, yet admit air and light. Hundreds of shops, without inhabitants, filled the sides of this once great emporium, the labyrinths of which we traversed for an extent of nearly 2 m., till we entered the *Maidan Shah*, another spacious theatre of departed grandeur." (*Travels*, ii. 37.) This vast oblong, formerly enriched with shops, in which every commodity of luxury and splendid manufacture was exposed, is of very large dimensions, being (according to Porter) 2,600 feet long, and 700 feet broad, and in the centre of each of its sides stands some edifice remarkable for grandeur or character, while the remaining parts composing the square are occupied by uniform ranges of building, once used as apartments for the nobility and officers of the Persian court, the lower part being open, and forming a noble arched walk. On the N.W. side is the great painted gate of the bazaar, on which, in former times, stood the celebrated clock of Ispahan, and on the opposite side is the Meshed-Shah, a superb mosque built by Shah-Abbas, and dedicated to Mehdi, one of the twelve Imams. The centre of the N.E. side is occupied by another mosque, called Looft Ullah, which faces the Ali-Kapi, a noble gate, surmounted by a dome, the marble ornaments of which still remain. Above the gate is a pavilion, pointed out as the place where Shah-Abbas was wont to sit and witness the games and exercises of his troops in the Maidan; but only a few wooden columns, pieces of glass, and decayed paintings remain to attest its former beauty, as described by Chardin. The summit of the tower commands a view of the city in its whole extent, presenting a succession of narrow unpaved streets, ruinous houses, mosques, and shapeless structures, broken by groups of various tall trees, which once made part of the gardens attached to the houses now fallen to decay. In the S. part of the city is a large tract of pleasure-ground, called the *Chahar-Bagh*, which consists of a series of eight gardens, or *paradises*, watered by canals, basins, and fountains, adorned with numerous palaces or pavilions, and enclosed within four majestic walls. In the centre of the enclosure is the palace of the *Chahai Sâtoom*, or forty pillars, the favourite residence of the later kings of the Sefi dynasty. Its front, which is entirely open to the garden, is sustained by a double range of columns, each shooting up from the united backs of four lions of white marble; and within are several large apartments, on which all the caprice and cost of eastern magnificence have been lavished. The walls of the saloon, in particular, are embellished with large paintings, which, without exhibiting much taste or correctness of design, are still useful as illustrations of the manners and habits of the Persians. The suburb of Julfa, which is situated S. of the Zenderood, and connected with the Chahar-Bagh by a bridge 1,000 ft. long, having 34 arches, was originally founded for a body of Armenians, whom Shah-Abbas transplanted from their own country (Julfa on the Araxes), and stationed here, with full toleration of their religion, and many valuable mercantile privileges. They were known all over the E. for their manufacturing industry; and their quarter, which was inhabited exclusively by Christians, formerly comprised 13 churches, and some of the handsomest private residences and gardens in the city, the pop. of this industrious quarter alone having exceeded 30,000 at the close of the 17th century. At present, however, it is little more than a mass of ruins, the few remaining houses being tenanted by a population, whose moral condition, according to Sir R. K. Porter, has suffered a deterioration corresponding to the decline of their fortunes. The suburb of Abbas-abad, which lay W. of the city, and that of the Guebers, or fire-worshippers, on the S. side, near Julfa, are entirely destroyed.

Ispahan has, within the last 30 years, begun to revive

from its desolation; and the spontaneous efforts of the inhabs., in trying to better their condition, were ably seconded by the exertions of Hadji Mahommed Hussein Khan, the *Ameen-a-doolah*, or second minister of the shah, who employed his immense wealth and influence in the improvement of his native city. A new palace, near the *Sâket Sâtoom*, has been completed, and extensive repairs have been made in the bazaars, streets, and fountains; besides which, a large track of land, close to the river, has been enclosed to form rice plantations, the produce of which now forms an important article of commerce. The manufacture of all kinds of woven fabrics, from the most costly gold brocade or figured velvet to the most ordinary calico or coarse cotton, is pursued on an extended scale; partly on raw materials raised in the surrounding district, and partly also on silk and cotton wool introduced from Ghilan and other provinces of Persia: many hands are also employed in making gold and silver trinkets, paper and paper boxes, peucases, ornamented book covers, firearms, sword-blades (of steel, from India), glass, and earthenware. These goods are sent to all parts of the E., Ispahan being the chief emporium in Persia, and on the great line of communication between India, Caubul, and China, on the E., and Turkey, Egypt, and the Mediterranean, on the W. Its trading prosperity, however, like that of Bushire, is much obstructed by the monopolies and injudicious taxes of the government. The inhabs. of Ispahan are considered the best manufacturers in Persia, and education seems to be very general. Every one above the lowest order can read and write; and artisans and shopkeepers are familiar with the works of their favourite poets. The merchants form a distinct class: frugal, and even penurious in their habits, they seldom make any display of wealth, and are extremely wary and circumspect in their commercial speculations, owing, no doubt, to the severity of their sufferings during national disturbances, when they have been usually selected as the first victims of plunder and oppression. Their houses are mean on the outside, with low, narrow entrances, but are often fitted up internally with great luxury. These merchants, with all their affectation of poverty, have capitals embarked in trade which vary from 80,000 to 150,000 tomans, and not only control in a great degree the whole trade of Persia, but are able also, it is said, to influence prices in the markets of W. Hindostan. Owing to insecurity and bad government, the interest of money in Ispahan varies from 12 to 36 per cent. a year; and the farming pop. are often compelled to pay 60 per cent. for the loans required to enable them to meet the exactions of the government. If trade exist at all under this wretched system, how great would it become under a government that should establish security, and give full scope to the enterprise and ingenuity of a people who are amongst the most industrious in W. Asia! (*See Hagemester; Essai sur l'Asie Occidentale*, p. 266—275.)

The origin of Ispahan is uncertain; but its position seems to identify it with the *Aspadana* of Ptolemy. Under the caliphs of Bagdad, it became the cap. of Irak, and rapidly increased in wealth, pop., and trade. This rising prosperity, however, received a severe check during the invasion of Timour, who took the city, in 1387, and gave it up to military execution. The troops massacred 70,000 of the inhabs., whose heads, piled on the walls of Ispahan, long attested the merciless severity of the conqueror. From this desolation the city gradually revived under the Sefs; but it did not become the residence of royalty till Shah-Abbas the Great made it the metropolis of Persia, embellished it with stately mansions, and rendered it not only a luxurious capital, but filled it with merchants, artificers, and agriculturists from Europe as well as Asia, whose united industry soon made it the great emporium of the Asiatic world. The city was at this time 24 m. in circuit, and comprised, according to Chardin, 160 mosques, 48 colleges, 1,800 caravanserais, 273 public baths, and 12 cemeteries; while the pop. amounted, according to the same author, to 600,000 persons; but other authors raise it to 1,100,000; and the inhabitants of 1,400 villages are said to have derived their subsistence from its prosperity. There can, however, be no doubt that these statements are grossly exaggerated; and, in fact, merely show that Ispahan was then a rich, flourishing, and populous city. "Its bazaars," says Sir R. K. Porter, "were filled with merchandise from every quarter of the globe, mingled with rich bales of its own celebrated manufactures;" and the shah's court was the resort of ambassadors from the proudest kingdoms of the east, as well as of Europe. This prosperity, however, was but of short duration; for, in 1722, Persia was invaded by the Affghans, and Ispahan, after sustaining a siege of eight months, during which the adjacent country was laid waste by the barbarous policy of the enemy, was reduced to its present ruinous state: the walls were so completely destroyed that all traces of them are obliterated, the palaces dismantled and robbed of all their ornaments, and the

people massacred without mercy. Nadir-Shah recaptured the city in 1737, but he took no steps to restore its ancient glory. The sovereigns have resided at Teheran during the last 70 years; and Isfahan has gradually fallen to a state of decay, from which even its commercial importance has not been able to preserve it." (Chardin, vol. iii. passim; Porter's Travels, ii. 37-44; Quatrecy's Travels, iii. 63-64; Ritter, ix. 40-44.)

ISSOIRE, a town of France, d^{pt}. Puy-de-Dôme, cap. arrond. on the Creuse, 19 m. S.E. Clermont. Pop. (1836), 6,741. It is well built and clean; in its centre is a spacious market-place. It has manufactures of copper basins and other copper wares, with some trade in walnut oil, hemp, and wine.

ISSOUDUN, a town of France, d^{pt}. Indre, of which it is the most important, though not nominally the chief town, cap. arrond., on the Theola, which is here crossed by three bridges, 16 m. N.E. Châteauroux, and on the high road between that city and Bourges. Pop. (1836) 9,608. It stands partly on the declivity of a hill, and partly in the plain at its foot; is said to be better laid out and built than any other town in the centre of France, and is remarkably clean. It owes its regularity and beauty principally to the numerous devastating fires it has undergone at different times; during one of which, in 1681, the citizens repulsed and put to flight the troops of Louis XIV., then investing the place. Issoudun was formerly a fortress of some strength, and possessed a large castle, a portion of which, now remaining, serves as a prison. The town has 4 churches, 2 hospitals, a new town-hall, barracks, a small theatre, and several public walks. It is the seat of a sub-prefecture, of a tribunal of original jurisdiction and commerce, and of a chamber of manufactures. It has linen and woollen cloth and parchment factories, and was formerly a place of considerable commercial activity, but it has not yet recovered the injury done to its industry by the revocation of the edict of Nantes. It is of great antiquity, having been one of the towns laid waste by the Bituriges to arrest the progress of Julius Cæsar. (Hugo, &c.)

ISTRIA. See ILLYRIA.

ITALY (Lat. *Italia*, Fr. *Italie*), one of the most celebrated and fertile countries of Europe, the seat of the greatest empire of antiquity, and of art, science, and civilization, when the surrounding countries were immersed in barbarism. It is finely situated, comprising the whole of the central peninsula of S. Europe, with the extensive and rich country to the N. of the peninsula, and included between the Alps and the Mediterranean. It extends between lat. 37° 45' and 49° 30' N., and long. 6° 30' and 18° 30' E., having N.W. France and Savoy, N. Switzerland and the Tyrol, N.E. Carinthia, Carniola, and the Hungarian Littoral, E. the Adriatic, and on all other sides the Mediterranean. In antiquity, it was known by the names of *Hesperia*, *Ætæna*, *Saravna*, *Æthiopia*, &c.; but these names, though loosely applied to the whole country, were strictly applicable only to particular portions of its surface. Various derivations have been assigned to the term Italy. (See *Facciolati, Lexicon, voc. Italia*.) In the first instance, it is said to have designated only its more S. portion, or what is now the peninsula of Calabria Ultra; but in the course of time it superseded every other name, and was gradually extended to the whole country from the Alps southward. In shape, Italy has been familiarly likened to a boot, the heel formed by the Terra d'Otranto, and the foot by Calabria, both in the Neapolitan dom. The general direction of the Italian peninsula is S.E. and N.W.; its length, from Mount St. Gothard to Cape Spartivento, in Calabria, is nearly 760 English m.; its breadth varies from about 280 m. in N. Italy, to less than 80 m. near its centre; and in one part of Calabria it is no more than 18 m. from sea to sea. The area of the mainland may be estimated at about 100,000 sq. m.; but three large islands, Sicily, Sardinia, and Corsica, and many smaller, as Elba, Ischia, the Lipari group, &c., belong to Italy. It has long been divided into a number of independent states; the names, area, population, &c. of these at present existing in it may be seen in the following table:—

States.	Area in Sq. m.	Pop. by latest Census.	Pop. to sq. m.	Capital.
Kingdom of Naples and Sicily:—				
Naples	31,281	(1848) 4,200,706	134.0	Naples.
Sicily	10,610	2,040,510	191.7	Palermo.
	41,891	6,241,216	150.0	
Kingdom of Sardinia, &c.:—				
(continued, &c. (including Savoy)	15,373	(1858) 2,041,000	132.7	Turin.
Islands	8,547	204,223	24.0	Cagliari.
	23,920	2,245,223	93.8	
Emilia-Venetian Kingdom	17,342	(1861) 4,400,300	253.6	Bologna and Venice.
Italian Government of Tuscany (belonging to Austria)	8,000	351,910	44.0	Firenze.
Papal States	—	2,306,216	307.0	Rome.
Grand Duchy of Tuscany	—	2,000,115	300.0	Firenze.
Duchy of Parma	—	1,043,097	160.0	Parma.
Modena	—	494,737	110.0	Modena.
Republic of San Marino	—	2,317	24.0	San Marino.
Total	—	22,671,000	197.7	

(Barbier, *Statistique d'Italie*; *Revue des Deux Mondes*, &c.)

Physical Geography.—The frontier of Italy is extremely well defined. She is defended on the N., the N.E., and N.W. by the vast bulwark of the Alps, the passes of which might be easily guarded and made impervious to hostile attack. She has every where else a sea frontier; so that, while she is protected by a natural rampart against attacks by land, she has every facility, by means of her extensive sea frontier and numerous ports, for internal and foreign commerce.

Though bounded by the Alps, only a comparatively small portion of the surface of Italy is covered with alpine ramifications. The mountain system exclusively belonging to the peninsula is that of the Apennines. (See Vol. i. 126, 128.) These mountains, which may be regarded as a continuation of the maritime Alps, at first run E. along the Mediterranean shores in the Sardinian territory; and then, turning gradually S., divide Tuscany from the Papal States, passing through the peninsula nearly to its centre, and sending off numerous branches on either side. At length, near lat. 40° 45', the main ridge divides into two separate chains, the principal of which continues S. to the extremity of Calabria, while the other runs E. S.E. through the Terra d'Otranto. The mean elevation of the Apennines is about 4,000 ft.; Monte Corvo, the summit of the Gran' Sasso d'Italia, in Abruzzo Ultra, is, however, 9,831 ft. in height, and is capped with snow during the whole year. Monte Velino is 8,103 ft., and Monte Sibilla, in the Papal States, 7,313 ft. high; and many other summits in central and extreme S. Italy approach the latter in elevation. The Apennines are much less rugged than the Alps, and abound with rich forests, and pasture land, on which numerous flocks of sheep are fed. They are of great service to the country, by the numerous rivers which have their sources in them and by their influence in moderating the summer

too famous for its volcanoes; those of and Stromboli, in the Lipari Islands, prominent, by far the most celebrated [any on the globe.

The most part mountains, Italy has vast extent and extraordinary fertility. Its extensive and richest is that of Lombardy. This noble plain extends from the near Suva, to the mouth of the Po, in space of about 360 m., with a breadth of 120 m., including nearly the whole of northern kingdom, the central portion of N., most part of the duchies of Parma the N. legations of the Papal States. a extremely well watered, the numerous streams that rise in the Alps, and pour in, afford a vast and inexhaustible supply from these an infinite number of canals not diffuse the fertilizing element over, and give to its corn and rice fields, and olives, extraordinary productiveness, different in different parts, is for the, and very fertile. The surface is into small farms of from 10 to 20 scientifically, is at least carefully and tivated. The fields are enclosed by these shrubby-trees, poplars, and oaks; and a luxuriant, that in many parts the appearance of a vast forest. This plain a immense number of cities, many of antiquity and considerable size, and all the noble buildings and valuable works on the whole, the plain of Lombardy may be called the garden of Europe; and, at all events, it is certainly the garden of Italy.

The next great plain stretches along the W. shore of Central Italy for about 200 m., from Pisa, in Tuscany, to Terracina, between the Papal States and Naples. Within these limits are included the Tuscan *maremma*, great part of the *campagna* of Rome, and the Pontine *marais* (anc. *Fompinus paludis*). This plain is, in all respects, very different from the former. Though, in antiquity, and to a certain extent, also, in the middle ages, it was celebrated for its fertility, and was highly cultivated and populous, it is now comparatively a desert. This is a consequence of the prevalence of *malaria*, which infects these districts to such an extent as to render them at certain periods of the year all but uninhabitable. They are necessarily, therefore, for the most part in pasture; and are occupied by a vagrant population, who reside in the country only in the healthy season. In the *campagna* of Rome the shepherds who have charge of the flocks are obliged, during the summer season, to repair every night to the city, or to some other town, as sleeping in the country would be fatal: it is then, also, extremely dangerous to travel by night through the Pontine marshes. The vagrant population of this extensive tract, and those who live on its borders, have all an emaciated, unhealthy, cadaverous aspect; and where the plain is cultivated, the labourers who come from other parts of the country to assist in the harvest frequently fall victims to the pernicious influence of the atmosphere, or have their constitutions injured for life. In the Tuscan *maremma*, the soil has in many places become, from neglect, sterile and unproductive; but in the *campagna* of Rome, and the Pontine marshes, the soil is, in most parts, extraordinarily fertile, is covered with a luxuriant vegetation, and, were it properly cultivated, would yield immense crops.

There are no hills in the *Campagna*. Its undulations do not arise from elevations of the surface, but from depressions; it may be described as a *plateau* from 1 to 200 ft. above the level of the sea, traversed by wide and shallow valleys, which occupy 1-4th or 1-5th part of its surface. Some of these valleys are dry, others have small sluggish streams, and they are from 50 to 150 ft. deep. There is a strip of swamp along the sea-coast, probably 2 or 3 m. broad; but with this exception, the *Campagna di Roma* seems to be generally dry; for the wet lands seen in some of its small valleys are such as we find in every country, and are not worth mentioning as an exception. Its present appearance is bleak and deserted in a remarkable degree. There are scattered clumps of brushwood, but the eye ranges over it for miles often without discovering a single timber tree, and I have seen nothing deserving the name of woodland or forest within its vast bounds. Fences are rare, except near Rome, a gentleman's country house, or villa, is not to be seen in it, nor a decent farm-house; and even the cottages are so few and far between, that in the 40 m. from Rome to the hills near Civita Vecchia, I am satisfied that I did not see 50 houses, of all descriptions. It is divided into immense estates, usually let in small lots, on the *coltivo* system, and is kept mostly in pasture, not more than 1-8th or 1-10th part being under the plough, or rather *her*, for it is laboured with the latter.

The Pontine marshes are 24 m. long, and probably 12 broad. The work of draining was commenced under the Roman republic, was continued by the emperors and popes, and is not yet entirely finished. The journey through them is monotonous beyond any thing I have met with. A canal 50 ft. broad, the grand trunk of the drainage, extends along their whole length, in a line mathematically straight. The soil thrown out of this canal forms a raised bank, 5 or 6 ft. above the water, and 80 or 100 ft. broad. An excellent road passes along this bank, with a double row of lofty trees on each side. You travel mile after mile on this road, on the same unvarying straight line, with the same endless vista before you, longing for some hill, or valley, or turn of the road, to break the fatiguing uniformity of the scene. It was upon this canal that Horace travelled in a track-boat, on his journey to Brundisium. The marshes are not altogether uninhabited. A few houses are met with on the road, and others are seen in the distance. The surface is chiefly in pasture; but part is planted with tall reeds used for vine props, part covered with brushwood, probably raised for fuel, and some small patches are ploughed. Very little wet marsh is now visible till you come to the north or higher end, where there is a considerable tract still undrained. The general surface of the plain inclines eastward and southward, so that the inland part is actually lower than that towards the coast on the north; and, like the Neapolitan *Campagna*, the level ground abuts sharply against the mountains. (*Maciaren's Notes on Italy*, p. 62.)

Various and very conflicting causes have been assigned for the increase of *malaria*, and the consequent depopulation of these extensive and once fertile territories. They were always, indeed, rather unhealthy; but their unhealthiness has been prodigiously aggra-

vated in modern times. It is believed by many that its deterioration has been, in a considerable degree, owing to the wanton destruction of the woods and forests, by which the land was shaded in antiquity, and screened from the fiery beams of the summer sun. No doubt it is in part also a consequence of the abatements that have been allowed to occur in the

the country, and the want of industry: neither do we think that the inferior longevity of the Italians is to be ascribed to their climate, but to the depressed situation and poverty of the bulk of the people, the bad quality and scanty supply of food and clothes, the low state of medical science, and the want of cleanliness. The general climate may, indeed, be said to contribute indirectly to bring about these results, by encouraging slothful habits, and making the people less industrious than they would be were it more severe; and, no doubt, this is to some extent true. But it is to the want of enlightened institutions, a tolerant system of religion, and a free press, that the distressed state and heavy mortality of the people of Italy are mainly to be ascribed.

It has been supposed that the climate of Italy has undergone a considerable change, and that it is now less cold in winter than formerly. There seems to be good grounds for concurring in this opinion, and the changes may be accounted for by the cutting down of the forests already alluded to, and by the changes that have taken place in the countries to the N of Italy. (See *Mum's Essay on the Populace of Ancient Nations*, and the authorities referred to in it.) We doubt, however, whether there be any foundation for the notion, that either the productiveness of Italy or its pop. has diminished. We do see some extensive tracts, as the Tuscan mountains, the Campagna, and some parts of the Neapolitan territory, which in antiquity were occupied by a dense pop., are now all but uninhabited; but, on the other hand, Lombardy has been signally improved, and in this moment infinitely better cultivated and more populous than at any former period. On the whole, we incline to think, that whatever Italy may have lost in respect of pop. in certain districts, has been fully counterbalanced by a corresponding gain elsewhere; and that her decline from her ancient time and influence has not

then rich, and even the half-desert tracts along the W. shore interest by their solitude and their ventures. The extent of the sea coast, and the number and magnitude of the lakes, add also greatly to the beauty and variety of the landscape; while the clearness of the atmosphere gives to every object a brightness of colouring, and distinctness of outline, that can with difficulty be conceived by those accustomed to our cloudy and less brilliant skies. No wonder, then, that the beauty and richness, as well as the glory of their country, should have been a favourite theme of the ancient writers.—

22. *Qui reges Mithras alio, distinctus terra,*
Non pariter (Imago, septu ante vestibus) Mithram,

Indis, septu ante vestibus Mithram, hunc.

In respect of its vegetable products, Italy may be divided into six regions, according to its elevation. These are as follows : —

woods. On the Alpine summits are seen the dwarf birch, juniper, and other plants of Lapland and Siberia, while at their feet flourish the *Ag. Agave americana*, and *Cereus giganteus*. Mount Vesuvius has a Flora peculiar to itself. (Magnusson, *Europe und Seine Bewohner*, 10 64-65.)

Italy is even more an agricultural than a manufacturing country; but the incidence of a great part of the pop., the remaining operation of the feudal system, and the backward state of agriculture, render the actual return far inferior to what the country is calculated to yield. Silk has become a most important product. Its culture has increased very rapidly since the peace of 1815, and the total produce is now estimated at about 12,500,000 lbs. a year. wine and olives, particularly the latter, are also very important products, and there is a great abundance of the finest fruits. Corn is not so generally cultivated in Italy as in the more N countries of Europe; but pulse and other vegetables are extensively raised. Particular parts of the country are appropriated to particular products. Lombardy is the chief corn country; in the Genoese and Tuscan territories, the culture of fruit, particularly of olives, predominates; while the unbroken district of the Maremma and Campagna remains, as before stated, chiefly in a state of natural pasture. Shiftful agriculture is principally confined to the N; in the centre, with the exception of portions of Tuscany, and B., it is at a very low ebb; and throughout the kingdom of Naples the abundance of vegetable productions is owing more to the climate and soil than to the industry of the husbandman. The products of the N parts of the peninsula are found there in abundance, and whole groves of olives are seen growing in the open country, interspersed with apples and other tropical products.

The pastures of Italy are stocked with large herds of black cattle, sheep, and goats: few horses are reared; and the breed is in little estimation, except in certain parts of the Neapolitan territory. Mules are more common, being found better adapted for the bad and mountainous roads. The operations of agriculture are performed by oxen. The buffalo is found in Italy, though hardly any where else in Europe. Hags are fed in large herds in the forests, particularly in Calabria. The mountains and forests contain a number of wild animals; among others, the bear, stag, marmot, and badger. The lynx or tiger cat is not uncommon in the mountains of Abruzzo, and the crested porcupine is supposed to be peculiar to the S of Italy. Foxes, hares, and winged game, are sufficiently abundant. From the heat of the climate in the S provinces, snakes and reptiles of different kinds are numerous. The rivers, lakes, and coasts abound with fish.

Manufactures and Trade.—Italy is not distinguished for manufactures: the chief are those of silk fabrics, silk thread, &c., which have their principal seat in Lombardy. Woolen and linen stuffs, straw plait, gloves, artificial flowers, straw hats, paper, parchment, leather, gloves, combs, and musical instruments, are among the other goods manufactured in Italy, but, generally speaking, the raw products of the country form its chief exports, and most manufactured articles, whether of necessity or luxury, are imported from foreign nations. Venice and Genoa engrossed a large proportion of the trade of Europe, till the discovery of the passage to the East by the Cape of Good Hope, and the enterprise of the Portuguese and Dutch, and after them the French and English, diverted European commerce into a new channel. From that period, the prosperity of these cities gradually decayed, and the first of them has sunk into comparative insignificance, while Italy at large has but a small portion only of her former

The trade with the Levant is very considerable, and a good deal is carried on with France, Austria, Greece, Switzerland, Germany, Russia, and America. Next to Trieste, Leghorna, and Genoa, the chief commercial ports are Civita Vecchia, Naples, Ancona, Bari, Brindisi, Palermo, and Palermo. The principal inland commercial cities are Milan, Brescia, Verona, Bologna, Turin, Florence, Lucca, Rome, and Strasbourg. Further details respecting the trade of Italy will be found under their respective heads, and the different states into which the country is divided. We submit—

A Statement of the Operations of the editorial Activities

▲ Statement of the Quantities of the principal Articles exported from the U. Kingdom to Italy and the Italian Islands, in 1698, specifying the declared Value of the Articles of British Produce and Manufacture.

[illegible]

The principal roads in Austria, Italy, Turkey, &c. are pretty good, and some of them excellent, but in the Papal States and the Neapolitan dom. they are generally very bad. In Central Italy however several ancient roads exist, in good preservation, as the Eolian Way, and a part of the Appian which constitutes, in fact, the best routes in the territories of Ferma, Madonna, and the Pope. New and excellent roads have been opened from Genoa to Nice Turin and Leghorn, and from Leghorn to Genoa. The road from Rome to Naples is extremely good, and a new road has been made from Naples to Brindisi, and the extremity of Calabria. Within the present century also, magnificent roads have been carried over the Alps by the pinnacles of the Spölgen, Simplon, St Bernard, Mont Cenis, &c. and many modes of communication have thus been opened between Italy and Switzerland, Russia.

Cornals are numerous, especially in the Austrian territories, the H. legations of the papal dom, and the general part of Piedmont, they are chiefly however, for irrigation only. But those of Pisa and Lucca, and those from the Po to Ferrara and Reggio, are valuable.

America, Education, &c. — The pap is entirely Roman Catholic, except a small portion inhabiting a few valleys of Piedmont, who profess the Protestant faith, some converts of the Greek church. In the 13 provinces of Naples and Rome, and strangers of various countries, dwelling principally in the large cities, where they are allowed the free exercise of their different modes of worship. There are 36 Roman Cath archbishops, and an indefinite number of suffragan bishops in Italy. The number of inferior ecclesiastics is surprisingly great, and the secular clergy are the principal teachers in their respective parishes. It has been said, with reference to public education in Italy — "It is quite a mistake to suppose that no advance has been made of late years in the department of education in Italy, so far as it otherwise, that the feeling on which popular instruction has been placed is, on the whole, superior to what exists in France or England. Any one who will give himself the pains to enquire into the fact will find that there are proportionally more Italians than Englishmen or Frenchmen who are able to read and write, and the children of the middling and lower classes in Lombardy and Tuscany have no reason to chafe from a comparison with their contemporaries in Protestant countries, so respects the quality of their acquirements. In every part of Italy the talent is proportionally on the advance more especially in the north." (*Journal of Education for April 1835, p. 399.*)

This, however, is a most important and useful statement. It is true that elementary instruction is pretty generally diffused in N Italy and Tuscany, but such is not the case in the Papal States and in Naples. And whatever may be the fact as to where elementary instruction, part of the higher branches of education are very far behind in all parts of Italy. And what else could be expected in a country subjected to irresponsible governments, and where the freedom of the press is almost unknown? There is not, and it would be folly to expect that there should be, any real instruction, in such

Imported into the U. Kingdom from Italy and the Italian Islands in 1938.

[illegible]

The most celebrated Italian universities are those of Paris, Padua, Bologna, Pisa, Parma, Rome, Naples, &c.; but their ancient reputation has greatly fallen off, and it was originally owing not so much to the superior instruction they afforded, as to the backwardness of the corresponding class of seminaries in other parts of Europe.

Of the academies instituted in the country with a view to the improvement of the language, the most celebrated is the *Accademia della Crusca*, at Florence (see *FLORANCE*); others are established in Rome, Milan, Bologna, and other large towns. No part of modern Europe has surpassed Italy in the number of her associations in literature, science and the fine arts. This has been, in some degree, owing to her being the refuge of men of letters, when driven out of France by the invasion of the Turks; but far more to the early independence and wealth of the principal cities. Under the fostering influence of the latter Dante, Petrarca, Boccaccio, Machiavelli, and a host of other great poets and prose writers, history painters, sculptors, and musicians, flourished at a period when the literature and the arts of the rest of Europe were comparatively barbarous. The Italians still excel in works of imagination, and of pure science and mathematics; but the contemporary nature of their governments, the want of free institutions, and of a free press, drive them from the higher and more interesting walks of literature.

Italy is richer than any other country in monuments of antiquity and of the middle ages. Among the splendid ruins of ancient grandeur are the Coliseum and Palatine, the triumphal arches of Vespasian, Severus, and Constantine, the pillars of Trajan and Antonine, the above St. at Rome; the amphitheatres of Verona and Pola, the aqueducts of Naples; the ruins of the temples of Paestum or Pesto, (dispa, eastern, western, and of unknown antiquity, and, above all, the colossal remains of Herculaneum and Pompeii. Almost every town possesses some memorial of antiquity; and there is scarcely a place or a stream of any size that is not imperceptibly associated with some circumstance of importance in ancient or modern history. Tivoli (Tibur), where Horace and Cæcilius had villas; the Alban Mount (Mons Albanus), surmounted by the temple of Jupiter Latiaris; Praeneste (Pozzuoli) the seat of Cæsar's villa, whence the *Augustæan* *Paradise*, the most beautiful of eternal disquisitions, derive their name; the Lake Nemi (Lacus Nemorensis), sacred to Diana; the Camp Phlegreæ near Naples; the Bay of Baia; the Field of Cannæ; the lakes of Trasimene and Avernus, and a thousand other places, have all acquired an immortality of renown.

State of the People.—It is difficult to form any fair estimate of the real condition of the people of Italy. Having been long parcelled out into numerous small states, and subjected to different laws and customs, they are not a homogeneous nation; and it would be unfair to well

inaccurate, to suppose them all alike. Nevertheless, they have many things in common; and the state of the peasantry in most parts of the country contrasts very disadvantageously with the fertility of the soil and the beauty of the climate.

How has kind Heav'n adorn'd the happy land,
And scatter'd blessings with a wasterful hand?
But what avail her unexhausted stores,
Her blooming mountains and her sunny shores,
With all the gifts that heav'n and earth impart,
The smiles of nature and the charms of art,
While proud Oppression in her valleys reigns,
And Tyranny usurps her happy plains?
The poor inhabitant beholds in vain
The redd'ning orange and the swelling grain:
Joyless he sees the growing oils and wines,
And in the myrtle's fragrant shade repines:
Starves in the midst of nature's bounty curst,
And in the laden vineyard dies for thirst.

Perhaps, however, this is rather too unfavourable a picture. We agree with Dr. Moore in thinking that extreme indigence is accompanied with less wretchedness here than in most other European countries; a consequence partly and principally of the mildness of the climate, and partly of the temperance and contented disposition of the people. (*Moore's Italy*, ii. 340.) But, with all this, it is still true that there is in Italy a great deal, not merely of poverty, but of wretchedness and misery. With the exception of the Neapolitan dominions, in which agriculture is at the lowest ebb, Italy may be said to be a country of small farms held on the *metayer* principle, or on condition of the occupier giving up half the produce to the proprietor; and where such a system of occupancy exists, there can be little or no improvement, nor any accumulation of wealth. In such a state of things, the occupiers live uniformly almost from hand to mouth, and are necessarily exposed to the most tremendous vicissitudes. Neither is there in Italy any regular state provision for the poor; and wherever this is the case, and especially in so densely peopled a country, there cannot fail to be innumerable instances of extreme suffering. The mortality that took place in Italy after the deficient harvest of 1817 was quite frightful, and mendicancy and misery prevail at all times to an extent unknown in better governed countries, though with fewer natural advantages. A superficial observer might suppose that the small farmers in the *Val d'Arno*, and other rich and beautiful districts of Tuscany and other parts of Italy, were in the enjoyment of most of the comforts of the Golden Age; but, in point of fact, they have to maintain a constant struggle with poverty. M. Lullin de Châteauneuf says of the occupiers in the Tuscan Arcadia, that, "on entering their houses, we find a total want of all the conveniences of life; a table more than frugal, and a general appearance of privation: they are unable to lay by any thing as a reserve against unfavourable years." (*Letters on Italy*, &c., Eng. trans., p. 79.) And such is the case with the far greater portion of the country. Mr. Maclaren says, that the proportion of poor, tattered, and wretched persons at Naples is quite excessive. "On our way to Caserta, Benevento, and other places, children 8 or 9 years old, absolutely naked, often kept running alongside our carriage for a quarter of a mile or more. In all the towns and villages near Naples, strangers are besieged with crowds of mendicants, whose importunities know no bounds." (*Letters*, p. 65.) Mr. Matthews says, that in "the Papal States all is slovenly and squalid; there seems to be no middle link in the chain of society between the cardinal and the beggar." (*Diary of an Invalid*, p. 282.) It is not so bad in the N. of Italy; but even there, the destitution and misery of the people are often such as almost to stagger belief. (See *Rose's Letters*, i. 128, &c.)

It were idle to expect that cleanliness should be a distinguishing characteristic of such a people. And, in fact, the towns, houses, and persons of the people, would, in most instances, be greatly improved by scrubbing, washing, and combing.

The reader may find in Moore, Matthews, and other writers, full details of the *cicisbeo* or *cavalier serviente* system, peculiar to Italy. It is confined to the higher classes, and appears to be the natural result of a state of society in which marriages are adjusted on mere mercenary principles, the parties frequently meeting for the first time at the altar, and where there is little save affairs of gallantry to engage the attention of the men. The introduction of free institutions and of a free press into Italy would soon make an end of the race of *cicisbeos*. But till then, it is probable that this public display of apparent, if not real, disregard to the most important engagement of life, will maintain its ground.

Foundling hospitals abound in most parts of Italy; and are at once a powerful cause as well as an effect of the corruption of manners. They receive all classes of children, legitimate and illegitimate, rich and poor; and great numbers are annually sent to them. The mischievous consequences of such a state of things, and the disregard which it evinces for the most sacred obligations, are too obvious to require being pointed out. One of the greatest, and, perhaps, most indispensable reform

that could be effected in Italy would be the abolition of foundling hospitals. What is to be expected of those who do not scruple to send their children to die, or, if they escape death, to be brought up, independently of any care of theirs, in foundling hospitals? Such persons may have the cant of patriotism on their lips; but we may be quite sure that they will never incur any sacrifice to effect any object that they do not believe will directly conduce to the promotion of their own selfish ends and projects. We borrow from Mr. Matthews the following striking description of the ladies of Rome and of the Papal States.

"The women are in the grandest style of beauty. The general character of their figure is the majestic; they move about with the inceding tread of a Juno. The physiognomy of the Italian woman bears the stamp of the most lively sensibility, and explains her character at a glance. Voluptuousness is written in every feature; but it is that serious and enthusiastic expression of passion, the farthest removed from frivolity, — which promises as much constancy as ardour, and to which love is not the capricious trifling gallantry of an hour of idleness, but the serious and sole occupation of life. There is an expression of energy and sublimity which bespeaks a firmness of soul and elevation of purpose equal to all trials; but this expression is too often mingled with a look of ferocity that is very repulsive. Black hair, and black sparkling eyes, with dark olive complexions, are the common characteristics of Italian physiognomy. A *blonde* is a rarity: the black eye, however, is not always bright and sparkling; it is sometimes set off with the soft melting languishment proper to its rival blue; and this, by removing all expression of fierceness, takes away every thing that interferes with the bewitching fascination of an Italian beauty." (*Diary*, p. 115.)

Governments.—There is nothing more than the shadow of popular representation in Italy. The little duchy of Lucca has, indeed, its senate of 36 representatives, of the classes of merchants, scholars, artisans, and cultivators, and some bodies in the city of Genoa and the island of Sardinia slightly trench on the power of the king of those domes. The Lombardo-Venetian kingdom has also its 2 provincial assemblies; and in the kingdom of Naples there are nominally 2 legislative chambers, one of peers and the other of deputies. But the functions of the Sicilian chambers have, since 1815, been obsolete; and the provincial assemblies of the Lombardo-Venetian kingdom are divested of all legislative powers. Elsewhere the governments of Italy are absolute (San Marino being little more than a dependency of the pope), especially the papedom and the duchy of Modena; though in the former it is generally exercised with extreme mildness.

That a country so fertile and extensive as Italy, rich in the various products of a fruitful soil, enjoying an excellent climate, well situated for commerce, having a frontier covered by a range of almost impassable mountains, whose inhabitants are remarkably shrewd and intelligent, and which was civilised and powerful, possessed of great wealth, and studded over with innumerable free states, at a time when the rest of Europe was sunk in comparative barbarism, should have been thrown back in the career of improvement, and for centuries subjected to the sway of foreigners, and treated with all the ignominy of a conquered province, can hardly fail to excite the astonishment even of the most careless observer. To trace the various causes which have conspired to produce so striking an anomaly in the moral and political world, would require a lengthened essay, or rather a large volume. But if we mistake not, the same circumstance to which Italy principally owed her superiority in the 13th, 14th, and 15th centuries, has also been the principal cause of her subsequent degradation. The number of separate and independent communities into which Italy was then divided, by directly associating her inhabitants with the government of their respective cities, and making them feel that their own interests were identified with those of the community to which they belonged, powerfully excited their passions, and called forth all their energies. Those powers which had been dormant for centuries were again revived; Milan, Florence, Venice, Genoa, Pisa, &c., became the capitals or so many free states, distinguished by their wealth, and their progress in the arts: eloquence, poetry, history, architecture, painting, and every other pursuit that could either add to the comfort or the embellishment of society, were prosecuted with vigour and success. But this state of society, though it gave a powerful impulse to civilisation, was also productive of the most implacable animosities. The disputes among the rival republics, from their limited territory, and their deeply affecting every individual, were prosecuted with all the eagerness of a personal and the rancour of a political quarrel. Sismondi's great work (*Républiques Italiennes du Moyen Age*) is chiefly filled with accounts of these conflicts. And such a state of society, how incompatible soever with the enjoyment of peace and tranquillity, unquestionably affords a fine field for the development of superior talent and mental energy.

Unfortunately, the contacts between the different parties in Italy ended, as such contacts almost always do by leading to an arena for the struggle and enervating it to the point of exhaustion. German, French and English troops after being engaged in supporting the pretensions of one or other of the rival claims, turned their arms against those they had supported or who had turned them into their country and struggling in their direction, engaged in their own and despotic matters.

And Italy when the republican governments were destroyed, had the good fortune to have been consolidated into one single and unified monarchy, the people would have been fully compensated for the loss of political independence. According to some historians and party and factional interests the nation would have become satisfied with the same spirit, and would have been able to defend itself against foreign aggression, and the probability is, that in the course of time the people would have acquired power sufficient to effect the destruction of a government depending on conquest, and to recover possession of a portion at least of their former rights and privileges. But the recovery of the Italian republics was attended by no such result. Instead of being reduced under one, the country was divided among a hundred petty despots and despotic governments. There was there no possibility of uniting these petty despots, the Austrians, having obtained possession of the Milanese and Venetian, was enabled to prevent any single state from acquiring a decided ascendancy and to perpetuate and cultivate these disunited feuds and divisions which led to the ruin of the republics.

It would be an endless task to endeavour to describe the various effects of which this state of affairs has been productive. How often the successors of the French have repented to find the Italians have seemed to exercise one pernicious influence over the governments of their constitutional rulers. Perverted and moving foreign governments, or governments dominated from foreign sources, which cannot avoid they had to the interests of the Emperors of Parma and Naples; the Austrians of Milan and Austria; and the *Lombards of Venice*. They were not only deprived of their ancient liberties, but the strongest means of resistance to which their petty monarchies were then open, held by the great transalpine powers, prevented their acting in conformity either with the wishes or the requirements of their subjects. The result was that the Italian people gradually destroyed the habits of having or to express an opinion on public measures, to begin the liberty themselves had been engaged, by plunging into the country, and from being the most active, industrious people in Europe, were now a listless and quiescent. The result by the despotic systems of petty tyrants, and, as they have been like a dog from the play has now her hereditary freedom given by it strange, and the mind of her children warped by quiescence and their own, comparing or comparing, in the Italian language of her past, *Filippi*, and after a short time, a long contribution to the tyranny of Rome. (*London Standard* April 1, 1861.)

In the latter part of the 18th century Germany, Germany, France, Prussia, and other countries, were engaged in seeking their constitution to a series of their petty tyrants, but their efforts were not attended by any corresponding success. At the epoch of the French revolution, the government of almost every state in Italy, with the exception of Tuscany, was a state of the French republic. The use of torture was universal, civil and criminal processes were conducted secretly, and left to the decision of a single judge, a direct tax of 10 per cent. on income was levied on all land and other tangible property, heavy French duties were imposed on all commodities passing from one petty state to another, as well as particular ones, the exportation of the raw produce of the soil was forbidden, the high roads were infested by robbers, morals were at the lowest ebb, and civilization was reduced to an almost unknown state where it was.

Whatever Italy has been the influence of French domination to other parts of the Continent, there cannot, we apprehend, be a doubt, that, to Italy at least, it was ever advantageous. Under Napoleon, who has a just title to be called its greatest benefactor, the republics were consolidated in the Lombards, Venetian Kingdom, and the Kingdom of Italy. Piedmont, Parma, Pavia, Tuscany, and Rome were united to France, and received her laws and institutions, and Naples was constituted into a constitutional kingdom with improved and more liberal institutions. A rigorous and efficient justice was everywhere organized, the oppressive situation which the papacy and other despotic rulers of the different petty states had imposed on the internal commerce of the country, were entirely removed, and full power was granted to export the various products of the soil, tithes were abolished, a uniform code of laws was introduced, instead of the dark and mysterious proceedings of courts

of criminals, justice was equally and impartially administered, science was promoted and encouraged, the Italian soldiers acquired the discipline and bravery of their French allies, local prejudices and long cherished animosities were on the wane, a national spirit was beginning to revive, and that energy which had for centuries been dissipated in dissensions and unimportant pursuits was again started by the public mind.

It is difficult to overstate the influence of the French in Italy on education in every respect, and in every department and activity. But notwithstanding these drawbacks, it was certainly for preferable either to that by which it was preceded, or to that by which it has been followed. During Napoleon's reign, carried by the French to an unprecedented extent, and history the republicanism was left to be a severe hardship, but as the horizon was accompanied by the entire freedom of industry, and as the laws passed indiscriminately on all classes they were submitted to with little or no resistance. The Italian says in his second part of all the privileges of the monarchy, they brought with them unrestricted to the dominion of the law, to freedom of thought, and to military virtue, aware that, at no very distant period, when their political situation should be changed, they would again be transported to that Italy to the future liberty and glory of which they were devoted their every thought. (*Progress and Fall of Italian Freedom*, p. 10.)

Under the French says Mr. *Greenham*, Italy enjoyed all the immediate advantages of a code which allowed the free constitution of commerce, and gave publicity to all the proceedings of justice. This, indeed, was under the ancient governments of Venice, but a criminal code was given her by France, infinitely superior to what she possessed in the time of her republic. But the system of open proceedings and examinations, has given way to one which has distributed the most valuable part of evidence, and for these principles perhaps still more precious to Italy than structure has been substituted that of secret proceedings and secret examinations to the judges. Under the governments of France, the courts were regulating the trade in corn and other commodities, laws, steps, and justice, civil as well as criminal was well and expeditiously administered. At present, there is no one unacquainted by justice, who would not rather receive a date than sentence to arrest it by law. And in these respects, justice equities of private equity in the same footing as when Mr. *Greenham's* work was published.

It is greatly to be regretted that, on the downfall of Napoleon, by 1814, provisions were not made for the consolidation of Italy into an independent state, but only other states. The confusion, however, of the great confusion of Italy by France, (*London Standard*) The old order of things was, in a considerable extent, restored, the republics of Venice and Genoa, indeed, disappeared, but the Kingdom of Sardinia, the Papal States, and the duchies of Tuscany, Parma, Lucca, &c. were reintegrated nearly on the footing on which they stood before the revolution. Austria, however, had the lion's share in the new arrangements, having acquired the whole Milanese and a great Venetian province, at the same time, that the despotic throne of Tuscany, Modena, and Parma were filled by members of the house of Hapsburg, in which they took up the protection and support. Hence the influence of Austria is now all but omnipotent in it, and Central Italy and a great portion of the S. where the throne of Naples is again occupied by a Bourbon.

On the restoration of the old governments, a good many abuses which the French had rooted out were restored, and the system was mutilated and humiliated. With the division of the country into different states, up and was put to the equality of laws and the freedom of internal commerce, and these national prejudices and hatreds that had begun to be obliterated again exhibited their odious characteristics. The open Imperial justice and the rigorous justice, introduced by the French, were either suppressed, or entirely modified, and in the Papal States and Naples, especially the former the priests again acquired a preponderating influence, and there are, once more, Turkey and Spain excepted, the worst government of the European states.

The government of Austria in Italy cannot be justly said to be oppressive. But it is oppressive, partial, and arbitrary. This is evident by the restrictions laid on the press, and on the transportation of books, and by the preventing the opening even of a school for elementary instruction without its express permission. The freedom of taxation and the constitution are too severely felt now than under the French, but this is more than counterbalanced by the defects in the administration of justice.

Under the French governments the private administration of justice and the efficient justice, almost wholly suppressed private examination and public robbery, but they have again revived in the Papal States and Naples,

though even there they are a good deal less frequent than formerly.

It is impossible to say how long the present order of things is destined to last, but at present, unless relief should come from without, the prospects of Italy are far from encouraging. The want of all sympathy with each other, and the jealousy that subsist amongst the different states, will, it is much to be feared, long oppose an insuperable obstacle to any united or persevering effort to throw off the yoke of their foreign masters, and even though such were not the case, there is a "want of character, approaching to incapacity" (Montrose), that unmans the Italians, and unfit them for sustaining the difficulties and perils that would have to be encountered in such a struggle.

ITALY (AUSTRIAN). Under this term are included all the Austrian territories within the limits of Italy, comprising the Lombardo-Venetian kingdom, and the gov. of Trieste, extending over a space of about 28,118 sq. m., and having, in 1855, a pop. of 5,178,100. The gov. of Trieste is, however, included in the kingdom of Illyria; and the following statements will, therefore, apply only to the rest of the territory, being that, indeed, to which the name of Austrian Italy especially belongs.

The Lombardo-Venetian kingdom, one of the most valuable possessions under the Austrian empire, extends between lat. $44^{\circ} 45'$ and $46^{\circ} 41' N$, and long $8^{\circ} 30'$ and $13^{\circ} 30' E$, having N. Carinthia, the Tyrol, and the Grisons, from which it is separated by the Alps, W. the Swiss cant. Ticino and Piedmont, S. the duchies of Parma and Modena, and the N. legations of the Papal States, from which it is chiefly divided by the Po; and E. the gov. of Trieste and the Adriatic. Area, pop., subdivisions, &c. as follows:—

year at Sondrio is 41 Feb., at Milan 43-4, and at Padua 46-6. More rain falls in this than in any other portion of the Austrian dominions; in the government of Venice the mean annual amount is estimated at 34 inches, and in Lombardy at 43 inches. The greatest fall is in autumn and winter.

The tops of the Alps are naked, covered with snow, and interspersed with glaciers; but their sides are for the most part covered with fir, larch, oak, pine, chestnut, and other trees, or natural pastures. The plain country is continuously cultivated, and is one of the most productive portions of Europe. About 4-5ths of the pop. of Lombardy depend directly or indirectly on agriculture; and nearly 7-10ths of the culture, the proportions in 1850 parts in 100, pasture 12, and wood 31. But, for cultivation on an extended scale, already stated, generally a country of wheat on the *metayer* principle, and its so., though industries are mostly poor, marks that over most of the country for and from 70 to 75 English acres, while as then 10 or 12. The subdivision of, much greater in the upland regions; in the *Almondo* there are many farms set of the productive land in the mountain consists of pastures. Only the lower border of the mountain belt is arable; the land is there frequently cut into terraces, one above another the divisions being occasionally supported by stone walls. The earth that fills these terrace-branches is continually carried down to the lower levels by the action of rain, and other causes, and has to be brought up again every two or three years, often on peasants' backs, the routes being impracticable for vehicles. The vine, mulberry walnut, and various other fruit trees, barley, rye, a little wheat, buckwheat, potato, millet, kitchen vegetation, hemp, and flax, are the chief agricultural products of this region. The land is here divided into the most minute portions; and being, as it were, the one thing needful to existence, the greatest value is attached to its possession. The inheritance of an individual is often only a few sq. yards of land; and on the lake of Garda a similar extent of surface, cultivated with lemons or oranges, or the laurel (for its oil), serves to maintain a family. In the central region, or hill country, properties are less divided, though they are there split into small stewardships, worth from 10,000 to 20,000 francs. These farms are mostly the property of the higher classes, and of the inhabs. of cities. There is scarcely a single peasant proprietor, the peasantry being more tenants, paying, in general, a rent of half the produce. A lease at a fixed rent, or a money rent, is extremely rare. Silk, wine, oranges, lemons, olives, and other fruits, corn, cheese, and cattle, are the chief products of this region; the culture of the silk-worm is an important occupation of the peasants' families, and, with the money gained from this source, they provide themselves decently with the necessaries of life.

The aspect of this part of Lombardy is very pleasing. Flourishing villages, hamlets, and isolated houses are spread over it, connected by carriage roads made at the expense of the proprietors and cotinners, which latter possess a considerable portion of the soil in this and the next region. In the high hill country, or that part of the plain near the hills, small stewardships are not common. The system is that of *pignone*, or sharing-tenants; that is, tenants who pay a rent in money for their houses, and a fixed rent in kind for the ground. In the low hill country, some of the property is communal, the farms let at from 10,000 to 20,000 fr. a year and some as high as 30,000 fr., and the farmers have considerable capital in stock, as cattle, implements, seed, and timber. In this region great numbers of cattle are fed. It has, like the high hill country, a siliceous bottom, with the difference, that here in every part water may be procured at a very little distance below the surface. In the *delio* of Leodi, and its neighbourhood, the soil is so fertile and well watered, that the inhabs. have relinquished the growth of corn for that of the indigenous plants spontaneously produced. The meadows, constantly irrigated, are mowed, and spring again four times in the same year; and the value of the produce in grass is superior to that of the richest corn. (*Chilsewicz*, 275.)

The mode of irrigation deserves some notice. It is effected in the first place by *fontanelli*, or excavations in the earth, in which are placed long tubes, from the bottom of which bubble up copious streams of water, analogous to Artesian wells. From the *fontanelli* the water is conducted into a ditch, by which it is carried to irrigate the fields placed on a lower level. To these natural waters, derived from the subterranean springs, replenished by a constant supply from the mountain region, are added a great mass of water drawn from the rivers by means of canals, some of which are navigable. The grounds thus irrigated are let as high as 80 Milan livres (14. 9s.) the *pratica* (about 3 1/2 lbs. of an acre). The

But it would appear from the statements in the *Almanacco de' Duchi* for 1861, that the pop. in 1855 had increased to 4,977,482.

The N. part of this territory is mountainous; the S. flat forming a portion of the plains of Lombardy. The Alpine chain on the N. frontier rises to an elevation of more than 12,000 ft. above the sea. By far the greater part of the surface, however, is flat, the flat lands, comprising the *delio* of Pavia, Leodi, Crema, Cremona, Piacenza, Rovigo, Venice, and parts of Verona, Vicenza, Brescia, Milan, &c. The whole country abounds with rivers, all of which, except the Po, have more or less a S. course, and all contribute their waters to the Adriatic. The chief, after the Po, are the Ticino, between Lombardy and Piedmont, the Adige, Oglio, Chiana, Mincio, Adda, Brenza, Piave, Tagliamento, &c. At the foot of the Alpine chain, in the N. of Lombardy, are the lakes of Garda, Como, Maggiore, Lugano, Iseo, &c. The shores of the Adriatic are lined with extensive lagoons, in the midst of which is Venice. A succession of marshes extends along the banks of the Po, in the lower part of its course, and round its outflow is a dreary tract of swampy ground scarcely cultivated by a single farm.

The central parts of the high mountain chain consist of granite and other primary formations; the lower hill ranges consist chiefly of secondary limestones. The country on the Po is a vast alluvial plain, containing numerous fossil remains. Traces of former volcanic action exist in the Euganean hills, an isolated group to the S.W. of Padua. Lava, basalt, iron, coal, turf, potter's clay, some copper, arsenic, marble, and glauconite, are the most important mineral products. The climate is generally healthy, except in the rice grounds along the Po, in the vicinity of Mantua, and near the Adriatic. The thermometer, though it keeps much higher in summer, generally sinks lower in winter in Lombardy than in England. The mean temp. of the

waters are diligently measured by rules, derived from hydrostatic laws, which have passed into an habitual practice. The canals are provided with graduated doors, which are raised or lowered according as the case may be: they are termed *facastri*. The measure is called *oncia*, and corresponds to the quantity of water which passes through a square hole, 3 Milanese inches high (an oncia of Milan equals 2 in. Eng.), and 4 in. wide, open 1 in. below the surface of the water, which, with its pressure, determines a given velocity. Sometimes the same number of inches of water is given out by the day and the hour on different farms. The value of a property depends on the command and goodness of the water; if deprived of the fertilising fluid, it would diminish rapidly in price. Hence the state of the waters is the object of local statutes, and of diligent care and attention. The absolute property of an inch of water is usually valued at from 10,000 to 15,000 fr.; but some waters are valued as high as 30,000 fr. All proprietors are entitled to carry a new canal for the purpose of irrigation across the grounds of their neighbours, on paying the fair value of the ground occupied by the canal, and adding to it one quarter more. (*Bowring's Rep.*, p. 99.)

W. of the deleg. of Lodi, between Milan and Pavia, a good deal of rice is grown. The distr. appropriated to its culture is divided by a great number of canals, lined with banks of turf, into squares of 2 or 3 acres each, within which the rice grows, in water, admitted by sluices, to the height of a few inches. The rice is sown after a single ploughing, and without any other preparation of the land. The sluices are opened to admit water when the plant is some inches in height, and it is drained off again near the period at which the grain is ripe, to allow the land to dry before reaping. After having been reaped, the rice is tied into small sheaves, which lie heaped together some time before being thrashed. The soil remains dry till again ploughed. Rice is grown for three years successively on the same land, after which the ground is left fallow for two years, manured once, and produces in those two years a most abundant crop of hay. The produce of a crop of rice is estimated at double that of a crop of wheat. The rice grounds are let at fixed rents, of about 160 fr. an acre; and even at this enormous rent, the farmers (who do not divide their profits with landlords) have often made large fortunes. The labour required is little, and not expensive; but it is very unhealthy. "Sickly labourers are seen passing along the banks, to superintend the distribution of the water. They are dressed like miners, in coarse cloth, and they wander about, pale as ghosts, in the reeds and near the sluices, which they have scarcely strength enough to open and shut. In crossing a canal, they are often obliged to plunge into the water, and they come out wet and covered with mud, carrying with them the germs of fever, which never fails to attack them. They are not the only victims, as the harvest men seldom get in the crop without being seized with rigors, the air in all the neighbouring places being deteriorated by the stagnant water. The avidity of the rice planters is, therefore, restrained by law, and they are prohibited extending this culture beyond certain limits." (*Châteaueux*, p. 285.) The meadow lands in the irrigated country are, like the rice grounds, parcelled out into fields of two or three acres. After remaining about fifteen years in natural pasture (refreshed by a thick coat of manure every three years), they are ploughed and cleaned in autumn, and undergo *five* successive crops—hemp followed by vegetables, oats, wheat followed by vegetables, maize, and wheat. The land is then left to itself, and a crop of grass immediately springs up without any seed being sown. As soon as the sward becomes thick, the sluices are opened upon it as formerly. In the course of 20 years, 67 crops are obtained from the land: 61 for the food of cattle, 5 for that of man, and 1 for clothing. There are few countries in which cattle of every kind are more abundant. In 1836, there were in Lombardy 257,800 cows, 168,000 sheep, and 52,000 horses employed in agriculture, besides draught cattle, &c.

The famous Parmesan cheese is no longer made in Parma, but in a district 40 m. long by 20 wide, stretching from Abbiategrosso on the Tessino, to near the confluence of the Po and Adda. About 80,000 cows are set apart for its production. These come chiefly from Switzerland, the Tyrol, Bavaria, &c., being bought at from 3 to 4 years old; the supply of milk increases till they are 6 or 7 years old, when it begins to fall off. About 11,500 are annually imported, at an average cost of from 14l. to 15l. each, but varying up to 20l. (*Bowring*); the sale of old cows, calves, and whey, on which last many hogs are fed, are estimated to cover the cost of the young cows, and interest thereon; the profits of the butter and cheese remaining to the farmer. The cheese is made entirely of skimmed milk: the cows are only fed at stated times, and are stalled during a great part of the 24 hours to empty racks, a process which Arthur Young says he was assured was necessary to give the requisite richness to the milk! (li. 188.) In the course

of a year a cow produces at an average 200 *libbre grosse*, or 165 kilogrammes of cheese. It is sold twice a year by the farmers, at about 1 franc per pound. The total quantity made is about 16 millions of *libbre grosse*, worth from 15 to 16 millions fr. There are about 12 lbs. butter for every 40 lbs. cheese. The value of the cheese and butter consumed and exported from Lombardy, is estimated at 23,360,000 fr. In the Milanese district, a fat cheese, called *strackino*, is made, especially at Gorgonzola, to which coagulated milk is carried from other parts. Its production is considered more profitable than that of Parmesan: it is sold at about 1 fr. 28 c. the kilogr. Much of it is made from the wandering herds of cattle which descend in the autumn into the plains. The proprietors of these herds, called *bergamini*, belong to the mountain region: in summer they migrate in search of pasture to the N. side of the Alps, sometimes as far as the Grisons. The pasture lands of Lombardy are mostly in the mountains and low flat country; in its other regions, cattle, sheep, beasts of burden, and even goats, are scarce.

The large farm-houses and offices throughout Lombardy are built on a uniform plan. They are of brick, and surround a square court-yard, on one side of which is the residence of the farmer, granary, and stables, all well arranged, while the other sides consist of covered porticoes, under which the fodder, carts, &c. are kept. Half the court is paved; the other half is an area on which to thrash the corn. A garden is attached to the building, the outer walls of which are covered with vines, producing a growth for ordinary use. Each of these farms has a *métayer* and his family, who usually hold it for generations. They consider it as a patrimony, and never think of renewing the lease, but go on from father to son, on the same terms, without writings. The stock of cattle, &c. belongs to the proprietor. In a farm near Marignano, Châteaueux states that 100 cows and some animals for draught were kept on 85 acres of meadow land. The *métayer* estimated the average return of each cow at 200 fr., or of the whole at 20,000 fr. There were 35 acres of arable land, the produce reckoned at half that of the acres in grass, or 6,000 fr. The gross produce of this farm of 120 acres was therefore 26,000 fr.; which sum was equally divided between the proprietor and *métayer*; the former out of his moiety paying the taxes and charges of irrigation, and the latter deducting from his share the whole expenses of cultivation.

The peasantry in the low flat country receive a part of their earnings in wages, and a part is produced from the share each has in the cultivation of the land. The ground is, as has been said, divided into portions of from 10 and 15 to 50 and 70 acres. Two acres are assigned to every man and his family, or three to families where there are two men. The farmer furnishes the oxen and horses to plough the ground, and advances the seed; the cultivator performs all the farm work till the crop be carried to the granary. 1-3d part of the buckwheat and beans, and 1-4th part of the rice, are then the share of the cultivator; out of which, however, he returns the farmer the seed formerly advanced, amounting to about 1-5th part of the rice, and 1-20th part of the buckwheat. In addition to their wages, the master allows most of his farm servants a small house and kitchen-garden rent free; and pays their capitation and other taxes, amounting to about 6 or 7 fr. each. The hire of a dairyman, besides a certain quantity of provisions, varies from 115 to 200 fr. a year; that of a carrier from 150 to 180 fr. Ordinary labourers get bread, rice soup, milk, &c., and from 62 to 69 fr. a year; drovers get only their food. Rice-reapers, wood-cutters, and mowers come mostly from the mountain districts of Parma and the Tyrol, and vine-dressers from Piedmont and the lake Maggiore: the wages of all vary from about 1 to 1½ fr. a day, with food.

In 1836, it was estimated that 770,000 Winch. bush. rye, 3,795,000 wheat, 6,392,700 maize, 838,000 rice, 10,110,000 cwt. hay, &c., 530,000 do. straw, 696,000 do. cheese, butter, and honey, 170,000 do. silk, and 1,916,000 *cimer* wine, were produced in Lombardy.

We have fewer details respecting the agriculture of the Venetian provs. Their surface is estimated by Quadrio at 2,367,070 *tornature*, 1,102,128 of which are in the plain country, 747,260 being arable, or corn lands, 17,800 rice-grounds, and 189,000 meadows and pastures.

Maize is grown in considerable quantities near Verona, and the mulberry very extensively between that city and Mantua, and towards Vicenza. The mulberry-trees are frequently planted all round the corn-fields, and vines festooned from one tree to another, so that on the same ground three crops—silk, wine, and grain—are annually produced. From Verona to Vicenza the meadows are irrigated with great care as well as facility, by means of the numberless streams that flow into the Adige, the beds of which, being continually raised by the gravel they bring down, and artificially embanked, are, for the most part, above the general level of the plain. Notwithstanding the fertility of the soil, the inhab. are generally poor. Several large farming establishments may be seen,

but no comfortable cottages, or signs of wealth, among the peasantry, who bear a very indifferent character. The fields about Vicenza, however, are kept with great neatness, and cultivated with much industry, presenting a favourable contrast to those about Padua. On the road between these two cities all beauty of scenery disappears. "Willows in all their pollard ugliness, and long lank poplars trimmed to the top, afford a yearly crop of faggots, the only fuel of the country. The tops of the pollarded trees near Vicenza, may be seen cut almost in the shape of goblets, for the sake of holding the leaves of the maize placed there for drying. Potatoes are often cultivated amidst the corn. On the road may be seen immense butts full of grapes, mounted upon clumsy waggons, to which they are secured by such iron rings and chains as would hold a frigate at her moorings, dragged along by 4, 6, or 8 oxen, when a proper vehicle would not require more than a pair." (*Conder's Italy*, ii. 111.) The grain produced in the Venetian provs. leaves a surplus over what is required to meet the home demand. Good husbandry diminishes as we proceed eastward, and Istria is a country which would scarcely repay it. That peninsula is a collection of barren limestone hills, interspersed with a few fertile valleys; it yields very little corn, and the expenses of cultivation nearly absorb the profits. Wood is scarce, and fuel has mostly to be brought from Carniola or elsewhere. The oils of Istria, however, are frequently as good as those of Tuscany, and form its chief export. Some of its wines, also, are good, but the inhab. are more a commercial and sea-faring, than an agricultural or manufacturing people. (*See ILLYRIA*.)

The culture of silk, the most important staple of Northern Italy, is rapidly extending; and even in the delegs. of Pavia and Lodi, where the climate is unfavourable to the worm, the mulberry is gradually superseding the vine and olive. In the deleg. of Brescia alone, the oil crop has diminished within the last 25 years from 400,000 lbs. to half that quantity; while the produce of silk has risen within the same period from 1,900,000 to 3,800,000 lbs. The annual produce of silk in Lombardy, Venice, Tyrol, and Tessino, is estimated at about 7,000,000 lbs., or nearly 7-11ths of the total produce of Italy. The produce of the Lombardo-Venetian kingdom, in 1825, was 2,469,475 Milanese lbs., since which time it has consequently about doubled. The best silk in Lombardy is obtained in the district of Branga, between the lakes Maggiore and Como; and in the Venetian provs., from the delegs. of Treviso and Friuli. Milan and Bergamo are the great centres of the trade in silk; the former city and its neighbourhood being the chief seat of its manufacture. Next to the silk fabrics of Milan rank those of Como, Brescia, Cremona, and Mantua. Verona and its neighbourhood, with many Mantuan districts, produce the best sewing and twist silk. Vicenza and Bassano produce immense quantities of silk, chiefly double-threaded trains, and much also is obtained from Padua; but in all the latter named provs., quantity is more sought after than quality in the production of the article.

Next to silk, the chief manufactures are those of woollen and cotton fabrics, linen thread, paper, hats, iron goods, &c. In Lombardy there are several iron and copper works, with fabrics of earthenware, marble quarries, &c. (For details respecting the chief foreign trade of Austrian Italy, *see* MILAN, VENICE, TRIESTE, &c.) The mountain districts send wines into Switzerland and the Tyrol; and live stock, game, cheeses, butter, honey, firewood, charcoal, timber, granite, marble, slates, bricks, iron and steel, various implements, cloths, and a little hemp, into the flat country; out of which they receive, in exchange, wheat, rice, maize, and oil.

Taxation.—According to the new government survey, the value of the land in the Lombardo-Venetian kingdom has been estimated at 210,861,000 scudi (28,656,000*l.*). The land-tax paid in Lombardy Proper amounts to from 21,000,000 to 22,000,000 *lire*, and in the Venetian provinces to about 12,000,000 *lire*, or together to about 1,040,000*l.* a year, or nearly 2*½* per cent. on the assumed value of the capital. The valuation by which the land-tax is levied in the Milanese has not been altered since 1760: the tax has indeed been increased, but the increase has not been by any means equal to the increased value of the land. After 1796, the land-tax was as high as 48 centesimi per scudo, but since 1819 it has been reduced to 17.1 centesimi: in the Venetian provs. it has also been reduced, but it is still higher there than in the Milanese. It is supposed that the system, to be bottomed on the new survey, will equalise the taxation of the two portions of the kingdom. In the above survey, the valuation is guided by the amount of every kind of produce in ordinary years, and under an ordinary system of cultivation. The average prices, from 1823 to 1825, are taken as a guide, regard being had to local circumstances, distance from markets, &c. The expenses are deducted from the gross receipts, and calculated according to the system of farming. To allow for casualties, from 1-9th to 1-7th part is deducted from the nett proceeds for corn, 1-7th for flax, chestnuts,

and olives, 1-15th for hay, 1-18th for wood. Churches, fortresses, and open spaces are free; but of all other buildings, the value is ascertained as nearly as possible, for the purpose of taxation. Machinery is free; not so mills or water power. All buildings are assumed to be in an average state, and a reduction of from 20 to 40 per cent. is made for keeping them in repair.

The poll-tax is levied in places not subject to the tax on consumption. All individuals (except paupers), from the ages of 14 to 60, are liable; and it amounts to 3 *lire* 68 centesimi for every inhab., without reference to his circumstances. In addition to this tax levied for the state, a sum not exceeding 3 *lire* may be imposed for the exigencies of the commune. The poll-tax, therefore, may reach, but can never exceed, the sum of 6 *lire* 68 cent. The injustice done to the humbler part of the pop., by imposing the same amount of poll-tax on them as on the higher classes, is in part compensated by the frequent practice of raising extraordinary impositions on the latter, in the shape of augmentations to the land-tax, and by the control of the communal property being almost entirely in the hands of the small proprietors. The collection of the taxes is farmed out on leases of three years; and the same person may be collector of several communes, or of several entire districts. The farmer of the taxes has power to proceed against defaulters, and in extreme cases to sell the land for arrears; but such proceedings are seldom or never heard of, and the collection is simple, and attended with very little expense.

The *octrois*, or taxes on consumption, which exist in walled towns differ in amount in different places. They do not every where comprise the same articles, but generally include wine, spirits, flour, bread, cattle, fish, oil, butter, cheese, hay, straw, wood, coals, and a few other articles. The mill-tax is levied at the mills, the others mostly at the town gates. At Milan, wine and vinegar are charged 1 *lire* 18 cent. the cwt., wheaten flour and bread about 1 *½* *lire*, hay and oats 86 cent., cheese 2 *lire* 30 cent., coals and sawed wood 57 cent., bricks and tiles 29 cent. per 100, oxen 7 *lire* 47 cent., pigs 3 *lire* 45 cent. each, &c. The taxes at Venice (which *see*) are higher. Taxes on trades have generally been abolished; in Milan, however, bakers and butchers are subject to an impost. Certain tradesmen in open towns are subject to taxes, which, like others, are farmed out to the best bidder, who usually compounds with the parties for a stipulated sum. The income and expenditure of the different cities of Lombardy amount annually to from 26,000,000 to 46,000,000 *lire*.

The import duties are heavy on most articles. Cotton, woollen, pewter, and tin manufactures, fine polished hardware, porcelain, and books allowed by the censorship, are admitted on payment of an *ad valorem* duty of 60 per cent. on their declared value. Silk fabrics pay 90*s.* per lb. nett. The importation of salt is prohibited, salt, tobacco, saltpetre, and gunpowder being government monopolies. Here, as in England, the private cultivation of tobacco is disallowed, and the salt springs not made use of by the government, must be filled up. The revenue has risen less in consequence of an increase of duties than of increased production and consumption. The total public revenue of Lombardy amounts to upwards of 60,000,000 *lire* a year. The public debt has been considerably reduced; and the interest, which is 5 per cent., is regularly paid.

Government, Education, &c.—The government of Austria in Italy is so liable to be disturbed, through the rooted dislike entertained by the Italians for the Germans, as to require the most vigilant attention on the part of the Austrian ministry. The policy of the latter has been to restrict the power and privileges of the nobles and large proprietors, who have generally been found at the head of any popular movement; and, at the same time, to conciliate the middle and lower classes. Accordingly, the representation in the provincial councils has been rendered apparently more popular than in the other parts of the empire. Each of the two provinces has its assembly, with attributes and powers similar to those of the German *Stände*; but their composition is wholly different. They have neither ecclesiastical members, nobles sitting in right of birth or property, nor deputies of close corporations; but with all this, the most effectual precautions are taken to hinder those assemblies having any popular bias. The members are appointed through the medium of a double, or rather a triple, stage of election. The two great classes of *Contadini*, the proprietors of land; and *Cittadini*, the inhab. of towns, are the primary electors, the suffrage depending on the payment of a certain amount of taxes. These primary electors return from their general body a council of election, the members of which must possess a higher property qualification than is requisite for the primary electors. The council of election elect from the members of its own body a certain number of candidates, and from these candidates the crown selects those who are to act as members of the provincial assembly; and, as if all

this were not enough to stifle any thing like popular feeling, it reserves to itself, whenever it thinks fit, power to cancel all the proceedings, and to order a new selection! And even when elected, this assembly has no legislative powers; the will of the emperor being law. This is carried into effect by the viceroy, who is at present an Austrian archduke; and under whom there is a governor in each prov., assisted by a government council appointed in Vienna. Each deleg. has a delegate, or political superintendent, and a separate financial officer; each district a chancellor; and each commune a *podestà*. In the chief town of each deleg. is a court of primary jurisdiction; in Milan and Venice are courts of appeal and of commerce; and a high court of revision sits in Verona. Trial by jury, and *vis à voce* pleadings and examinations, are unknown. And if we add to this, that a jealous censorship is established over the press, and that only certain foreign journals or books can be imported, we shall have a pretty good idea of the spirit of the government. Two foreign regiments are maintained for the police service, one in either government. Eight regiments of the line in the Austrian army are levied in these provs., but there is no militia. All males, whether noble or otherwise, are registered for military service at the age of 18, unless exempted from physical or other causes. From those thus registered the number required are taken by ballot; but are allowed to serve by approved substitutes, for whom, however, it is often necessary to pay large sums. The period of service is eight years, after which the soldier is entirely free. Whatever, therefore, may be said by such flimsy eulogists as Von Raumer, the government of Austria in Italy is undoubtedly a cold, repulsive, and jealous despotism. But it is not oppressive; and we agree with Mr. Turnbull, that in point of fiscal and military pressure, it is more lenient than that of the French; and all that may tend to the advancement of agriculture and commerce, and the material comforts of the people, is sedulously promoted.

It is, also, true that large sums are expended by the government in keeping up the roads and other public works, and in public education. A larger proportion of the pop. is educated in the Lombardo-Venetian kingdom than in any other prov. of the Austrian empire, except the Tyrol and Bohemia. By a law of 1822, every commune is obliged to maintain a primary school, either wholly or in part; and, in 1837, only 66 communes were without schools exclusively their own: 45 gymnasiums, 18 ecclesiastical seminaries, and 19 lycæums, exist in the chief towns, and there are 2 universities, those of Pavia and Padua, the former ranking as the first in Italy. But, notwithstanding all this apparatus, a really good education is unknown in Lombardy; and that which exists is better fitted to enslave and debase than to expand the mind. It is wholly under the direction of the clergy; and no school can be opened, or book used in a school, or other seminary, without the express sanction of the government. Even the *Conversations Lexicon* has incurred the displeasure of this paternal government.

History.—The greater part of this portion of Italy, after the fall of the Western Empire, was successively possessed by the Heruli, Ostrogoths, Greeks, and Lombards: the latter held it from 568 till 774, when Charlemagne annexed it to the empire of the Franks, to which it remained attached till 888. From that period, except the territory of the Venetians, it generally belonged to the German emperors, till the establishment of the republic of Milan, in 1150. This republic was erected into a duchy in 1395, and, in 1535, came into the possession of the emperor Charles V. After the war of the Spanish succession, the duchies of Milan and Mantua were assigned to Austria, to which they have since belonged, with the exception of the short time they formed a part of the Cisalpine republic and French empire. Venice and its territory, which had existed as an aristocratic republic from the 7th century to 1797, was confirmed to Austria by the treaty of Vienna, in 1815. (*Bowring's Reports on the Lomb.-Ven. States*; *Turnbull's Austria*, &c., and the *Journal of Education*; *Von Raumer's Italy*, i. 124—203.; *Châteauevieux, Italy and its Agriculture*, Rigby's Transl. p. 14—26, 274—286, &c.)

ITHACA, one of the Ionian Islands, and celebrated in antiquity as the kingdom of Ulysses (*scopulus Ithaca*, *Laërtia regna*, Virg., *Æn.* iii. 275.), 7 m. S. Santa Maura, 8 m. E. Cephalonia, and 17 m. W. the coast of Acarnania; Point Marmaca, at its N. end, being in lat. 38° 30' N., and long. 20° 39' E. Length 14 m., breadth 4 m., area 44 sq. m. Pop., in 1836, 9,644. It presents from the sea the appearance of a barren, rugged rock, deeply indented on its E. side by a gulph, at the bottom of which is Vathy, the port and cap. of the island, accurately described in the *Odyssey*:—

"A spacious port appears,
Sacred to Phœcy's power, whose name it bears;
Two craggy rocks, projecting to the main,
The roaring winds' tempestuous rage restrain:
Within, the waves in softer murmurs glide,
And ships secure without their hawens ride."—*Pope*.

About a third part of the surface is capable of cultivation, the greater part of which is laid out in vineyards. The chief products are wine (esteemed in Greece as extremely delicious), olive oil, currants; barley, and a small quantity of wheat; but the industry of the islanders is greatly impeded by the taxes levied on their exports by the Ionian government. After all, it appears probable that Ithaca has little to interest, beyond the associations connected with its ancient history. Many of the places mentioned by Homer can be traced, with great appearance of probability. The port *Phœcy's* is clearly identical with Molo, and the inner harbour of Vathy seems to correspond with the *ναῖλον* *Naïlon* under Mount Neïson. In the S. part of the island, at no great distance from the shore, is a spring, rising at the foot of a rock still called *Koraka*, and supposed to be the *Arcthusa* of Homer. (See *Odys.*, i. 408.) Some ruins of Cyclopean walls, similar to those of Mycene and Tiryns, are considered by Dodwell to be the remains of the city of Ithaca, the residence of Ulysses. (See *IONIAN ISLANDS*.) (*Dodwell*, i. 66.; *Priv. Reports*, &c.)

IVES (ST.), a parl. bor., seaport, and par. of Cornwall, at the W. extremity of the bay of same name, 18 m. W. Truro, and 250 m. W. by S. London. Area of par., 1,850 acres; pop. of parl. bor. (which includes the three pars. of St. Ives, Lalan, and Towednak), in 1841, 8,645. It consists principally of one long street, branching S. into two smaller; and the houses are generally of moderate size, and built in situations to suit the convenience of persons connected with the trade of the port. The church, a low but spacious building, erected in 1434, stands close to the sea: there are also two places of worship for dissenters, a national school, and two Sunday-schools. A grammar-school, founded by Charles I., has gone to decay. The town-hall and custom-house are the only other public edifices. The port has a pier, built by Smeaton, in 1770, at an expense of 10,000*l.*, within which small vessels lie aground at low water. Large ships may anchor in the bay, in 6 and 7 fathoms; but, being quite exposed to the N. winds, it is not much frequented. Notwithstanding these disadvantages, however, this port had in 1850, 152 ships, of 10,479 tons burden, and the customs revenue in 1846 amounted to 1,592*l.* The pier dues are let for 830*l.* a year, exclusive of the tax of 1*s.* per hhd. on the export of fish, which sometimes exceeds 600*l.* in a single year. The principal employment of the inhabs. is the pilchard fishery, which of late has been carried on with more than ordinary success, and to a greater extent than in any other town of Devon or Cornwall. The season lasts from July to Sept., and in favourable years very large quantities are exported to the Mediterranean, a considerable supply being also furnished for the consumption of the town and neighbourhood. In 1842, the entire quantity exported amounted to 20,714 hhds., of which 17,710 hhds. were furnished by St. Ives alone. Several new mines have likewise been opened in the vicinity, affording additional employment to the people. The corporation, chartered in the reign of James II., was, down to the passing of the Municipal Reform Act, a close self-elected body of 11 members: it now comprises 4 aldermen, one of whom is mayor, and 12 councillors, and has a commission of the peace, under a recorder. Corporation revenue in 1847-48, 192*l.* The bor. sent 2 mems. to the H. of C. from the 5th of Queen Mary down to the passing of the Reform Act, which deprived it of 1 mem. Previously to the last-mentioned act, the franchise was vested in the inhabs. paying *scot and lot*; the boundaries of the parl. bor. were then also enlarged, by the addition of the two adjacent pars. of Lalan and Towednak. Registered electors, in 1849-50, 585. Markets on Wednesday and Friday; cattle-fair, Saturday before Advent. (*Mun. Rep.*; *Parl. Bound. Rep.*; *Com. Dict.*, &c.)

IVIZA or IBIZA (an. *Ebusus*), an isl. in the Mediterranean, forming one of the Balearic group belonging to Spain, 50 m. E. by N. Cape Nao in Valencia, and 42 m. S.W. Majorca; the cap. on its S.W. side being in lat. 38° 53' 16" N., long. 1° 26' 32" E. It is of an irregular 5-sided figure; its length from N.E. to S.W. being 27 m., and its average breadth 15 m. The coast is irregular, indented by a great number of bays, the largest being those of St. Antonio and Iviza: the surface is hilly, and in many parts well wooded; but there are several picturesque and fertile valleys having a soil well adapted for tillage. The climate is, in most respects, similar to that of Valencia and Catalonia: the winters are so mild that the thermometer seldom falls below 13° Réaum., and the heats of summer are tempered by the sea breezes. The chief products of the island are olives, wine, corn, flax, and hemp, different kinds of fruit, especially figs, for which it was celebrated even in the time of the elder Pliny. The salt-pans are so productive that salt is a chief article of exportation: large flocks of sheep are pastured on the hills, and the sea near the coast abounds with fish, the capture of which gives employment to many of the inhab. But, notwithstanding these advantages, the island is in great

poverty, owing to the indolence of the inhab., and their slovenly mode of tillage. The Ivizans are of middle size, shrunk and sallow; they speak a language similar to that spoken in Catalonia and Valencia, being a corrupt dialect of the ancient Roman, once the common language of all S. Europe.

The cap. Iviza (which has a pop. of 5,720 persons) is fortified, and has a good harbour. It is the residence of the governor, and a bishop's see. The chief buildings are a cathedral, 6 churches, 2 convents, 2 hospitals, and a public school.

Iviza, the largest of two islands, called by Strabo *Pity-mas*, or the pine-bearing islands, was early occupied by Phœnicians and Carthaginians, whence it has been called *Eborus Phœnissa* by Silius Italicus (*Pœn.*, lib. iii. l. 362.). It was taken from them by Q. Metellus, and remained subject to the Romans, and their successors the Vandals, till the conquest of Spain by the Moors in the 8th century. The Spaniards took the island in 1294, and attached it to the kingd. of Arragon, since which it has usually followed the fortunes of the larger islands, Majorca and Minorca. In 1706, during the war of the succession, it submitted to Sir John Leake with a British squadron, and was ceded to England, together with Minorca, at the peace of Utrecht. They continued in the possession of the British till the peace of 1814, when they were restored to Spain. (*Milano, Dict. Géog.*)

IVREA (an. *Eporedia*), a town of N. Italy, dom. of Sardinia, div. Turin, cap. prov. of same name, on the Doire, 30 m. N.N.E. Turin. Pop. in 1838, inc. com., 8,475. It is an ill-built town, defended by old fortifications, a citadel, and a small fortress upon an adjacent hill; and has an ancient cathedral, supposed to occupy the site of a temple of Apollo, five other parish churches, several convents, an hospital, a seminary, and a large prison. Here are manufactures of silk fabrics and of organzined silk, and some recently established cotton-works; with markets for cheese, cattle, and other Alpine produce; and for the iron obtained near Cogne, and other places in its vicinity. Eporedia is reported to have been colonised by the Romans in the time of Marius. It would appear from Tacitus (*Hist.*, i. 70.) to have been a *municipium* as well as a colony. Strabo says that 36,000 Sallasi, made prisoners by Terentius Varro, were sold here as slaves by public auction. Ivrea has been repeatedly taken by the French, and under the French empire was the cap. of the dep. Doire. (*Dict. Géog.*; *Cramer's Italy*, &c.)

J.

JACCA, a town of Spain, prov. Aragon, cap. of a partido of its own name, 56 m. N. by R. Saragossa, and 32 m. N.N.W. Huesca; lat. 42° 30' N., long. 0° 24' W. Pop., according to Milano, 3,012. It stands at the foot of one of the highest ridges of the Pyrenees, only 21 m. from the French frontier, in a wide and fertile valley, enclosed by the rivers Aragon and Gallego: it is surrounded by a strong wall, and entered by 7 gates. The chief public buildings are a cathedral church, castle, military hospital, and 5 convents. The inhabs. are chiefly employed in agriculture and woollen weaving; but the difficulty of access to other places confines their industry to the supply of the town and immediate neighbourhood. The crops raised in the district comprise wheat, barley, pulse, &c., and fruits are abundant; but the severity of the climate during winter prevents it from producing many of the fruits of S. Europe.

Jacca was a place of some consideration in the time of the Romans, and was the cap. of the *regio Jaccatania*. It was taken by M. P. Cato, anno 195 A. C., and was made a station for the troops during the war with Spain. (*Milano*.)

JAEN, a prov. and kingdom of Spain, in Andalusia, between lat. 37° 30' and 38° 40' N., and long. 2° 50' and 4° 20' W. Its shape is that of an irregular four-sided figure; and it is bounded N. by the Sierra Morena and La Mancha, W. by Cordova, S. by Granada, and E. by Murcia. Greatest length, 85 m.; greatest breadth, 78 m.: area, 4,430 sq. m. Pop., 277,000. This province, situated in the upper part of the valley of the Guadalquivir, is encircled by lofty mountains, which make access difficult, and give to its borders a rude and mountainous character. The surface is chiefly an alternation of hills and valleys, formed by the Guadalimar, Herrumblar, and other affluents of the Guadalquivir. The climate, though damp in some parts, is, on the whole, healthy and favourable to vegetation. The soil on the hills, consisting of *detritus* from the primitive and transition rocks of the sierras Morena and Granada, is sandy and barren; but the valleys are extremely rich, and with moderate attention to tillage, might be made highly productive. Agriculture, however, is in the most degraded state; only a very small portion of the soil is tilled, and the produce is insufficient for the consumption of the prov. Olives, wine, and other fruits of good quality, gall-nuts, woad, kormes, and shumac are abun-

dant, and honey and silk are produced in small quantities. Cattle and horses, however, are pastured on a large scale, and a breed of the latter, peculiar to the neighbourhood of Ubeda, ranks as nearly equal to the Arabian. The mineral wealth of the province, which was celebrated even under the Romans, consists chiefly of iron, lead, and copper, with smaller quantities of silver; but lead and iron are the only ores now wrought. Veins of marble and jasper occur here as frequently as in Granada, but are not quarried, from want of spirit in the inhabs. Manufacturing industry is quite insignificant: silk and woollen fabrics are made in some of the towns; but the chief branch of employment is in pottery, and particularly in making *alcarraxas*, a species of porous earthen jars, much used in Andalusia for keeping liquors cool in warm weather. (*Bowles; Milano; Dict. Géog.*)

JAEN, a city of Spain, cap. of prov. and partido same name, and a bishop's see, on the Jaen, an affluent of the Guadalquivir, 37 m. N. Granada, and 123 m. E.N.E. Madrid. Pop., according to Milano, 18,700. It is situated on the outskirts of the great Sierra de Susana, and is so surrounded by mountains, crossed by extremely bad roads, that few travellers have visited it. A recently made road, however, joining the high road between Cordova and Madrid, and passing through Baylen and the Puerto de Peflacerrados of the Sierra Morena, has made it more easy of access. The city, above which towers a Moorish castle commanding a fine view of the whole country, has extremely narrow streets, a cathedral, 12 par. churches, and 15 convents. The cathedral is of Corinthian architecture, 300 ft. long by 190 ft. in breadth, and built in a very pure style: the pavement is laid in chequered slabs of black and white marble, and the high altar is enriched with fine specimens of jasper and marbles: it also has some good pictures and sculptures. The city, which was celebrated, under the Moors, for its manufactures, still contains numerous fabrics of silk, linen and woollen cloths, and mats, and has a thriving appearance. (*Scott's Ronda and Gram.* ii. 341.)

The remains of a Roman aqueduct, and various inscriptions, prove the antiquity of Jaen. Under the Moors, it rose to considerable importance, and successfully withstood the attacks of the kings of Castile. It was the theatre of war during the final struggles between the Moors and Spaniards in the 15th century, since which time it has never recovered its former consequence.

JAFFA, or YAFFA (an. *Joppa*), a town and port of Turkey in Asia, on the coast of Syria, pach. Damascus, sandjak Gaza, 32 m. N.W. Jerusalem, and 60 m. S.S.W. Acre; lat. 32° 3' 25" N., long. 34° 46' 10" E. Pop., according to Robinson, about 4,000 one fourth of whom are Christians. It is fortified, and stands on a tongue of land projecting into the Mediterranean, and rising from the shore in the form of an amphitheatre, at the top of which is a ruined castle. The port, defended by two batteries, is merely a long basin, enclosed by a ledge of rocks, extending from the S. side northward, directly in front of the town; but it is so choked up with sand as to be unapproachable by all except small coasting craft. The houses are chiefly of stone, and the streets are uneven, narrow, badly paved, and dirty: the principal public buildings, are 3 mosques, 1 R. Catholic and 2 Greek churches, with 3 convents, and a good bazaar. The quarantine house, recently founded, is clean and well regulated: separate divisions, with a chapel attached to each, being allotted to the pilgrims of the several nations, chiefly Greek, who land here on their way to Jerusalem. A military establishment is kept up, comprising (according to Dr. Bowring) 1 reg. of infantry, with 4 battalions of 800 men, and 3 cavalry regts., each having 700 men. A considerable traffic has recently been created by the disturbances in Syria for the supply of the Pacha's troops; but usually the town is dull, and little frequented by strangers, except at pilgrim time, when the pop. is often nearly doubled. Cotton is raised to some extent within the district; and in the neighbourhood are beautiful gardens of orange and lemon trees, tall waving cypresses, coral, and fragrant mimosas, intersected with enormous prickly pears. The fruit bears a high character, and forms a considerable article of export. Tradition assigns to Joppa an exceedingly ancient date. Joshua defined the possessions of the tribe of Dan as including "the border before Joppa." (*Josh.* xix. 46.) In the time of Solomon it was, no doubt, a port of some consequence; for Hiram, king of Tyre, sent a letter to the former monarch, then engaged in building the temple at Jerusalem, saying, "We will cut wood out of Lebanon as much as thou shalt need; and we will bring it thee in floats by sea to Joppa, and thou shalt carry it up to Jerusalem:" and from this place Jonah took his passage in a ship going to Tarshish, when "he fled from the presence of the Lord." In the New Testament it is mentioned as the place where Peter had the vision which revealed to him the duty of preaching Christianity to the Gentiles as well as the Jews; and where he raised to life Dorcas, a faithful disciple, "full of good works and almsdeeds." Among the Greeks and Romans, also, Joppa had the re-

putation of being very ancient. It is stated by Piny (Hist. Nat., lib. ix. § 5.) to be the place where Andromeda was exposed to the sea monster, from which she was rescued by Perseus. Reland suspects that this fable may have its origin in, or be connected with, the history of Jonah. (Relandi Palestina, p. 864.) In A.D. 66, during the Jewish wars, it was repeatedly taken, and finally all but destroyed; and during the crusades it was so entirely ruined by Saladin, that it had scarcely any buildings left, except its two castles. It was soon afterwards repaired by Louis IX. of France. The subsequent history of the place, till the close of the last century, is little known. In 1799 it was taken by Napoleon, after an obstinate and murderous siege. On this occasion Napoleon put to the sword about 1,200 Turks that had formed part of the garrison of El Arisch, which, having previously capitulated, had been discharged, on their engaging not to serve against the French. But though their execution was, no doubt, justifiable, according to the laws of war, still it seems to have been an act of extreme and useless cruelty, and wholly at variance with the general conduct of Napoleon. (For further particulars, see Bowring's Report on Syria; Wild's Narrative, vol. ii. p. 168—172.; Robinson's Palestine and Syria, vol. i. p. 6—9.)

JAFFNA, a sea-port town of Ceylon, near the N. extremity of the isl., cap. of the distr. Jaffnapatam, 190 m. N. Colombo; lat. $9^{\circ} 36' N.$, long. $79^{\circ} 50' E.$ Pop. 8,000? chiefly Mohammedan. The town stands on an inlet, navigable for boats, which communicates with the Gulph of Manaar. It has near it a pentagonal fortress of some strength, which forms the head quarters of one of the principal garrisons in the island. As a commercial port, Jaffna is the third in Ceylon, ranking after Colombo and Point de Galle. Provisions are cheap; and from its salubrity the town is a favourite resort of the Dutch residents in Ceylon, who have named several small and verdant islands in the opposite roadstead after the principal cities of Holland.

JAGO (ST.), or SANTIAGO DE CUBA, a city of Cuba, cap. of its E. division, the second in pop. and magnitude, and the third in mercantile importance in the island, about 6 m. from the S. coast, on the river Santiago, the mouth of which forms its port, about 470 m. E.S.E. Havannah; lat. $19^{\circ} 37' 29' N.$, long. $76^{\circ} 3' W.$ Pop. (1837) 26,738, of whom 9,302 were whites, 10,032 free coloured, and 7,404 slaves. Santiago is well built, having wide streets and stone houses. It has a cathedral, several other churches, a college, hospital, and numerous convents and schools. The port is from N. to S. about 4 m. long, with an irregular breadth, and in some places rather narrow; but it has water sufficient for ships of the line, and is sheltered from winds on every side. Its entrance is narrow, and defended on the windward side by the Morro and Estrella castles. The city is very unhealthy: being hemmed in by mountains on three sides, the free circulation of air is greatly impeded, and the yellow fever commits great ravages in the rainy season. Santiago is the see of an archbishop, and the residence of a governor, who, in respect of civil and political affairs, is independent of the captain-general. It was the cap. of Cuba till the beginning of the 18th century, when the Havannah was raised to that dignity; since which the importance of Santiago has diminished. Its trade has, however, of late years increased considerably. In 1827, the imports amounted in value to 1,441,048 doll., and the exports to 1,370,586 doll.: ten years afterwards, in 1837, the imports were 2,399,399 doll., and the exports 2,182,001 doll. The gross customs revenue of the port amounted, in 1827, to 470,365 doll., and in 1837, to 604,339 doll. Santiago is the port where the copper ore of the Sierra de Cobre is shipped. It was founded by Diego Velasquez in 1514. (Humboldt; Turnbull's Cuba, p. 223, 224.)

JAGO (ST.), or SANTIAGO, a city of Chili, of which it is the cap. and seat of government, in the prov. of the same name, on the Maypocho, at an elevation of 2,600 ft. above the sea, 64 m. E.S.E. Valparaiso, and 270 m. N.N.E. Concepcion; lat. $33^{\circ} 16' S.$, long. $69^{\circ} 48' W.$ Pop., in 1848, estimated at 65,000. It is situated on the verge of the extensive and fertile plain of the Maypocho, and at a distance has a very imposing appearance, its domes and steeples rising among groves, vineyards, gardens, and maize fields. It is inferior to Lima and Buenos Ayres in its public buildings, but greatly surpasses them in cleanness and regularity, and is, upon the whole, one of the best cities in S. America as to appearance, convenience, and salubrity. Like other cities of Spanish origin, it is divided into *quadrads*, that is, squares or compartments of buildings 408 ft. square, separated by streets about 13 yards across. The city-proper is on the S.W. bank of the Maypocho, and is connected with its suburb of La Chimba by a handsome stone bridge. On its S.E. side the city is separated from its suburb of Casadilla by the Casada, a handsome promenade 50 yards wide, planted with poplars; and at the S.W. extremity of Santiago is the suburb of Chuchunco. Fifteen years ago, the city-proper comprised 110 quadrads, and the suburbs about

the same number. It is built upon ground sloping gently towards the W., of which circumstance advantage has been taken in supplying water for its consumption and under drainage, which latter is more perfect than in any other S. American city. The waters of the Maypocho are also frequently employed for the ornament as well as use of the city, there being numerous public fountains, reservoirs, &c. A solid brick rampart, 6 ft. in breadth, and raised 10 ft. above the ground, extends along the S. bank of the river, and protects the city against inundation from the river during the rains. Between it and the town is the *Alameda*, the favourite promenade of the inhab. planted with willows, and furnished with seats, reservoirs, &c. At the N.E. extremity of the city-proper is the hill of Santa Lucia, the site of the fortress of the same name built to command the town. Santiago has no other defence, and this fortress could be easily silenced by artillery placed on the contiguous hills.

The houses of the city occupy a good deal of ground: most of them take up 1-6th part of a *quadra*. The rooms are ranged round three quadrangles or *patios*, the first being an outer paved court-yard, the second generally laid out as a parterre, and the third used for domestic purposes. The wide archway opening into the front *patio* is closed at night by a pair of large folding gates, but is always open during the day. The windows, looking into the two outer court-yards, are protected by iron gratings; but in Miers's time, 15 years ago, there were generally no windows in any of the other rooms, the door alone admitting light through a small grating. The front and sides of the houses facing the streets, where not blank walls, are divided into small rooms, and let out as shops. In the centre of the city is the *Plaza*, or great square, occupying an entire *quadra*. On its N.W. side are the directorial mansion, the palace of government, the prison, and the chamber of justice; on the S.W. side stand the cathedral, and the old palace of the bishop, now occupied by the *estado mayor*; on the S.E. is a range of shops, &c., with an arcade in front; and the N.E. side is composed of private residences. All these buildings, except the cathedral, are of brick, plastered and whitewashed. The palace is by far the best edifice as to its architecture: it consists of two stories, inclosing a large open quadrangle; the lower story comprises the armoury and treasury, and the upper story the great hall of audience and the ministers' offices. The cathedral is the only stone edifice in Santiago; it is constructed of limestone quarried in the Chimba suburb: its design is of the better order of Moorish architecture; but when seen by Miers, its front was only half finished. The bishop's palace is a heavy decayed building, and the arcade with the shops behind it is much dilapidated. In the centre of the square is an ornamental fountain, furnished with water by a subterranean aqueduct. The city is mostly supplied hence with water for drinking, which is conveyed in barrels of 10 gallons each, two of which are a mule's load, and sold for 5d. a barrel. The largest public building, and that most admired by the natives, is the mint: but, according to Miers, it is an unsightly structure. It occupies an entire *quadra*, and, like the private houses, consists of a variety of offices arranged round three quadrangular courts. Its front, facing the shabby street in which it is situated, presents a series of heavy pilasters, supporting a rude cornice and a ponderous balustrade, and having in its centre a large arched portico. The entire edifice is of plain brick, and was, like the other public buildings, constructed by bricklayers sent out from Spain for the express purpose. The Consulado, a spacious plastered and whitewashed structure, in which the commercial tribunal, senate, and national congress meet; the custom-house and the handsome little theatre are worth notice. The city and suburbs are divided into 5 parishes. All the parish churches are mean; but not so those of the conventual establishments, which are somewhat numerous. One of the Jesuits' convents has been converted into a national college, and another is used for the public library and printing-office. The library contains several thousand printed vols., and some curious MSS. relative to the Indian tribes.

Santiago has 3 markets: the principal is holden in the Bassoral, a large open space at the foot of the bridge, and is tolerably well supplied with meat and vegetables. The other markets consist of mere moveable stands at either end of the Canada; but meat, kitchen vegetables, fruits, and other requisites, are continually hawked about the streets on horses or mules, which precludes the necessity of sending to the markets. Fodder for horses is hawked about in a similar manner; and large quantities of lucerne, &c. are daily brought into the town, horses being kept by nearly every family. The horses of Santiago are generally well broken, and are more docile than those of Buenos Ayres. Most part of the adjacent country is devoted to the rearing of live stock; but, when cultivated, it produces good crops of wheat, the soil being excellent, and irrigated by many subterranean springs. The climate, were it not for the dreadful visitation of earthquakes, would be delightful; and, from its comparative coolness, European vegetables

Engraved by S. Hall, Bury Str. Bloomsb.

may be raised in great perfection. The vine is grown, and wine of good quality might be made if its manufacture were properly understood. In the outskirts of Santiago are numerous handsome *quintas* or villas, and the approaches to the city are mostly through lanes bounded by walls inclosing extensive vineyards and orchards, which yield a large revenue to their proprietors.

Santiago occupies the site of a previous Indian settlement: it was founded by Pedro de Valdivia in 1541. It has frequently suffered from earthquakes; but, with other towns of the interior of Chili, it escaped the catastrophe which destroyed Valparaiso and Concepcion in 1835. (*Mier's Trav. in Chili*, l. 426—438; *Scarlett's S. Amer.*, &c.)

JAMAICA (Nat. *Xaymaca*), one of the Greater Antilles, and the largest and most valuable of the West Indian islands, belonging to Great Britain. It lies in the Caribbean Sea, between lat. $17^{\circ} 44'$ and $18^{\circ} 30' N.$, and long. $76^{\circ} 12'$ and $78^{\circ} 25' W.$, about 100 m. S. Cuba, and 120 m. W. Hayti, from which it is separated by the Windward Channel. Shape nearly oval; greatest length, E. to W., 150 m.; average breadth, about 41 m. Area estimated at 6,200 sq. m. According to a census taken in 1844, the pop. is said to have amounted to 377,432, the blacks being 293,128, the mixed or coloured class 68,529, and the pure whites only 15,776. But Sir Charles Grey, the governor, thinks that the numbers given in this census were underrated; and as the negro and mixed races are certainly increasing, and considerable numbers of Indian and African emigrants have been added to the pop., there can be little doubt that at present (1850) it exceeds 400,000.

The Blue Mountains, a lofty range, run through the island, in its whole length, rising in some places to upwards of 7,200 ft. in height. On the N. and S. sides of this range, the aspect of the country is extremely different. On the former the surface rises gradually from the shore by undulating hills, separated by spacious valleys, watered by numerous rivulets, and clothed with pimento groves. The scenery on the S. side is much bolder. The shore is skirted by abrupt precipices and inaccessible cliffs; and the hill ranges towards the interior are more abrupt and less fertile. Between these ranges, and the foot of the central chain, are extensive savannahs, and wide plains cultivated with sugar-cane, &c., the luxuriant beauty and verdure of which is set off by a boundless amphitheatre of forest—

“Insuperable height of loftiest shade,
Cedar; and branching palm.”

The outline of the forest melts into the distant blue hills, and these again are lost in the clouds. The island is well watered. There are about 100 streams dignified with the name of rivers; but none of them are navigable except for boats. Black River, which debouches on the S. W. coast, the largest, is only available for flat-bottomed boats and canoes for about 30 m. Like all the other streams, its current is very rapid.

From the geographical position of the island, so near the equator, the climate in the low grounds is necessarily very hot, with little variation throughout the year; the days and nights are, for the same reason, nearly of equal duration, there not being more than two hours difference between the longest day and the shortest. There is very little twilight; and we may add, that when it is noon in London, it is about 7 o'clock in the morning in Jamaica. The medium temperature of the year near Kingston ranges between 70° and 80° ; but little differences of elevation have a wonderful effect over the temperature and the salubrity of the climate. “At about 4,200 ft. above the level of the sea, the temperature usually ranges between 55° and 65° ; in the winter it falls even as low as 44° . There the vegetation of the tropics disappears, and

is supplanted by that of temperate regions. Showers are common in the interior almost throughout the whole year, but they do not fall with the same violence as in the plains, and the quantity of rain appears to be less. The air is exceedingly humid, subject to dense fogs, and those rapid alternations of temperature peculiar to all mountain regions. While the pestilence of yellow fever rages in the low grounds, and along the coast of this island, cutting off its thousands annually, these elevated regions enjoy a complete immunity from its effects; for that bane of European life has never been known, in any climate, to extend beyond the height of 2,500 ft. The inhabitants are said to enjoy a degree of longevity rarely attained in other countries, and to exhibit that ruddy glow of health which marks the countenance in northern climes, and forms a striking contrast to the pallid, sickly residents of the less elevated districts.” (*Tulloch's Report on the Health of the Troops in the W. Indies*, p. 43.) The N. side of the island is said to be more healthy than the S.; but all insalubrity is supposed to cease at an elevation of 1,400 ft. The mid-day heat is, during most part of the year, greatly modified by an invigorating sea-breeze, called by Europeans the *doctor*, which sets in from 8 to 10 o'clock in the morning, increases in force till about 2, and declines with the sun, till, on the approach of evening, it is succeeded by the land wind from the mountains. When these winds become less regular, or altogether fail, as is sometimes the case before the rainy season, the atmosphere is exceedingly oppressive. The year is divided into a short wet season, which begins in April or May, and lasts about six weeks; a short dry season, from June to August; a long wet season, comprising Sept., Oct., and Nov.; and a long dry season, which occupies the remaining four months, during which the weather is serene and pleasant, being comparatively cool. The annual fall of rain is nearly 50 in.; the amount has become less in proportion as the forests have been felled. More rain falls on the N. than the S. side of the island, and the average temperature is lower. The principal towns and military stations are on the S. side, and it is estimated that of the European troops employed in Jamaica a 7th part died annually during the 20 years previously to 1837. Fevers, dysenteries, and diseases of the lungs or brain, are the most fatal. Fevers of a remittent character are more prevalent than in any of the other British stations in the W. Indies. Earthquakes are frequent, and sometimes dreadfully violent: in 1692 the town of Port Royal was submerged several fathoms beneath the ocean, by a catastrophe of this kind. Hurricanes mostly occur between July and October; and though, perhaps, not so frequent as in the windward islands, they are sometimes most destructive. One of the most appalling of these visitations took place on the 3d of October, 1780. On this occasion the little sea-port town of Savannah-la-Mar, on the S. W. coast of the island, was completely destroyed. During the tremendous conflict of the elements, the sea burst over it with irresistible fury, and in an instant swept into its abyss its inhab. and their houses, leaving behind no vestige of either! Several hurricanes have occurred since, but happily none of them have had such frightful consequences. Jamaica contains no active volcano; but the traces of former volcanic action are sufficiently obvious. Micaceous schist, quartz, and rock spar, are common; but limestone, containing numerous shells, is the most prevalent geological formation. The island contains argentiferous lead, copper, iron, and antimony ores; and the Spaniards are reported to have wrought both copper and silver mines. Mining industry is now, however, quite extinct.

The turf-clad hills on the N. side of the island are chiefly composed of a chalky marl; elsewhere the soil is frequently of a deep chocolate colour, or a warm yellow or hazel. The latter, called the Jamaica *brick mould*, retains a good deal of moisture, and is among the best adapted for the sugar-cane throughout the W. Indies. But though the soil be in some parts deep and fertile, Jamaica is not generally productive, and requires both skilful labour and manure to make it yield heavy crops. In 1789, only 1,907,589 acres were held under grants from the crown, and of this extent only 1,059,000 acres were under culture, leaving about 800,000 acres unproductive; from which circumstance it was hastily inferred by Edwards that “not more than one fourth part of the island is fit for any profitable cultivation, great part of the interior country being both impracticable and inaccessible.” Of the above 1,059,000 acres, it was estimated that 629,000 (710 estates, averaging about 900 acres each) were occupied with sugar plantations; 280,000 acres taken up by 400 cattle-breeding farms, and 140,000 acres in cotton, indigo, coffee, pimento, ginger, &c. Indigo, cotton, and cocoa were formerly important staples; but these have

mostly given way to other articles. Maize, Guinea corn, and rice, are the principal grains cultivated; the latter, however, is not raised in great quantities. Maize yields two, and sometimes three, crops a year, of from 15 to 40 bushels the acre. Calavances, a species of pea used by the negroes, the kinds of pulse and other garden vegetables common in Europe, thrive well in the mountains; and the markets of Spanish-Town and Kingston are abundantly supplied with these, as well as native pot-herbs, &c. of excellent quality. The plantain, banana, yam, cassava, and sweet potato, are indigenous; the first named is the principal support of the blacks. Few countries offer so fine an assortment of tropical fruits. Among these is the bread-fruit tree, from Otaheite, originally introduced by Sir Joseph Banks. The orange, lemon, lime, vine, melon, fig, and pomegranate, are met with, having probably been introduced by the Spaniards; and many other European fruits succeed in the cool mountain region. The sunflower is an article which has recently begun to be cultivated for its oil. Cinnamon has been naturalised in Jamaica; and the forests abound with dye-woods and gualacum, iron-wood, brasilletto, mahogany, green-heart, and other valuable kinds of timber, and woods fit for cabinet work. Various kinds of grasses are cultivated; the principal is Guinea grass, a product of so much importance, and growing so luxuriantly, that the grazing farms are for the most part covered with it. Horned cattle are excellent, and better or cheaper beef is not met with in any part of Europe. Oxen or mules are used for farm labour. Horses, an active and hardy breed, are reared for saddle and harness. Sheep, goats, and hogs are numerous: the latter are of a small breed, but their flesh is very good. Poultry, pigeons, &c. are kept in great numbers. The Europeans found many indigenous quadrupeds on the island, but none worthy of notice now exist, except the agouti, some monkeys, and rats, which last are in such immense numbers, and so destructive of the sugar-canes, that from 8 to 10 per cent. per annum of the sugar crop, while standing, is supposed to be destroyed by them. Great numbers of wild fowl are met with; and rice birds, esteemed great delicacies, visit the island in large flocks in Oct. Alligators inhabit some of the larger rivers, and many varieties of lizards and snakes are found, some of which are used as food by the natives. The mountain crab of Jamaica is highly prized. These singular animals come down by millions from the mountains to the sea, to deposit their spawn, from Feb. to April, and return to their original habitations by the end of June. Copious accounts respecting them will be found in *Du Tertre*, *Brown*, *Edwards*, &c.

The European pop. consists of English, Irish, Scotch, French, German, and Portuguese settlers: the coloured races are divided, according to their share of negro blood, into *sambos*, *mulattos*, *quadroons*, and *mestizos*. A few maroons, the descendants of Spanish slaves, inhabit parts of the interior. They formerly were a great annoyance to the colony, but being, at length, nearly exterminated, those that survived adopted a more peaceable mode of life. The total surface of Jamaica is generally estimated at about 4,000,000 acres; of which, according to a *Parl. Report* of 1839, 3,403,359 have been granted by the crown, on payment of a quit-rent, fixed by the colonial act, the 8th of Victoria, c. 16., at 1d. per acre. This leaves 596,641 acres unaccounted for, and still vested in the crown. There are no means of ascertaining how much of the land assigned to individuals is actually under culture; but in 1838 only 2,588,056 acres paid quit-rent; leaving 815,303, probably less productive and valuable than the rest, but at any rate liable, if not to be resumed by the crown, to be sequestered by the government for non-payment of quit-rent. The attempt of Lord Sligo to resume such lands on behalf of the crown involved him in disputes with the House of Assembly, which asserted a right to possess itself of them: and it would appear, in the absence of any express enactment on the subject, that the crown has no right to resume land once granted, except for the purpose of re-granting it to those who may pay up such quit-rents as are in arrear. (See *Rep. of the Colon. Land and Emigr. Commissioners in Jamaica, Report*, 1840, p. 11.) A large portion of the 596,641 acres unaccounted for is supposed to be held by individuals, owners of contiguous grants, and to be liable to a quit-rent. Nearly all the surface of Jamaica, therefore, appears to be occupied by private parties, and to be altogether under circumstances very different from what it was in Edwards's time, 60 years ago.

Few estates comprise more than 1,200 acres; and the emancipation of the slaves has tended to split the land into more minute divisions. The large estates, especially those on which sugar is grown, have latterly been reduced to great difficulties for want of labourers. On some estates, on which 70 or 80 negro apprentices were formerly employed, not more than 10 or 12 can now be got to work regularly; and on other estates, previously wrought by about 200 hands, the ordinary number is said

to have dwindled down to 20 or 25. The negroes are most anxious to become proprietors of land. If they succeed in this great object of their ambition they devote the principal share of their attention to the culture of esculents and other necessities on their own patch of ground, or raise arrowroot, ginger, &c., on speculation; and work on the sugar and other estates only when it suits their inclination or convenience. Thus, in some districts, they will only work the first four days of the week; and at critical periods of the crops it is necessary to offer high bribes to get them to leave their homes on Friday and Saturday. In corroboration of what is now stated, we beg to lay before the reader the following extract from a Report by a Committee of the House of Assembly in 1848:—"That from the now independent condition of the mass of the people, the command of labour has become exceedingly precarious, often not to be had at all when most wanted; that hardly in any case will the people work on estates for more than five days in the week; that in several districts they refuse to work more than four days in the week; that the average time of field labour is from five to six hours a day; that the labour given for the wages is not only inadequate in quantity, but generally ill performed; that on the anniversary of freedom, and at Christmas, the entire agricultural population spend from one to two weeks in idleness; that in some districts this is also the case at Easter; that at all these periods, even if the canes are rotting on the ground, and the coffee falling from the trees, no rate of wages will induce the people to work, and that labour continues to become more scarce every year by the people withdrawing from the plantations."

Under such circumstances, coupled with the low price of sugar, the reader will not be surprised to learn that the planters have been involved in the greatest distress. It is stated in the Report now referred to, that since the passing of the Slave Emancipation Act in 1832, no fewer than 653 sugar and 456 coffee plantations had been abandoned, and their works entirely broken up! And of the estates that continue to be cultivated, there are very few, indeed, that yield any thing like a profit to the planters.

Since their emancipation, the blacks who were formerly provided with lodgings, and a piece of ground rent-free, have had to pay rent for them; and a good deal of dissatisfaction has arisen from the manner in which this rent has been charged under the new system. In some cases, it is said to have been estimated, not according to the real worth of the premises, but according to the number of persons deriving subsistence from the land, so that the man with the largest family became liable to the heaviest rent! In order the better to command the services of the occupiers, the planters refused at first to give them leases, and stipulated that they might be ejected even at a week's notice. But this plan would seem to have defeated its own object; both by making the blacks inattentive to the culture of grounds held on so precarious a tenure, and by making them extremely anxious to acquire the property of a small piece of land. "Labour and rent," to use the words of Sir T. Metcalfe, "are the questions which agitate the island from one end to the other." Of late, however, the plan of fixed rents, unconnected with labour, has been gaining ground; and 5s. per week may be stated as about the average sum paid by the negro for a house and patch of land. Wages may, at an average, amount to 1s. 8d. a day for field labourers, 2s. 6d. a day for cane cutters, and 2s. 4d. a day for mill-yard people.

It is due to the blacks to state that, since their emancipation, they have conducted themselves with the greatest propriety. But those who expected that they would thereby be advanced in the scale of civilisation will, we fear, be disappointed. They are incurably indolent and apathetic; and the probability is, were the whites withdrawn from the island, that they would gradually relapse into their original barbarism.

It has been attempted to obviate the deficiency in the supply of labour, by importing free labourers from India and Africa. But the former have been found to be quite unsuited to the demands of the country; whereas the latter, so long at least as they are unable to find the means of supporting themselves otherwise, make serviceable labourers. The managers of the estates in St. Thomas-in-the-East, and other quarters into which the Africans have been introduced, have, for the most part, been able to keep their factories at work on Saturdays, and to get their labour performed with tolerable efficiency.

But these schemes are all liable to the greatest abuse. And though it were otherwise, we confess we have little confidence in their affording any real or permanent relief from the difficulties under which the planters are placed. The falling off in the exports since the emancipation of the slaves is not really greater than might have been anticipated. But it is needless to repeat the statements by which we have already endeavoured to show that it is nugatory to expect that free blacks should voluntarily undertake the hard labour they were compelled to un-

large while in a state of slavery. (See Cuba, Guiana (British), Haiti, &c.) It will readily be understood that great differences may be observed in the condition of different estates, owing, no doubt, to their various management, the degree of interest taken in the welfare of the labourers, &c. It is alleged that the smaller estates are best attended to, and that they have not been so much deteriorated as the others by the change that has taken place.

The products raised for exportation, more especially sugar, have hitherto been the grand objects of the industry of the colonists; and the greatest efforts have been made, by the introduction of machinery and otherwise, to obviate the drawbacks under which they have latterly been placed. The estates on the high grounds, called "pens," have been kept almost entirely in pasture, to supply the sugar and coffee estates with horned cattle, horses, and mules. And the inability of the latter to purchase stock, in consequence of the depreciation of their

were oxen, hides, and indigo. The wretched colonial policy of Spain had immersed Jamaica in sloth, poverty, and decay; and even so late as 1762, the exports of sugar amounted to only 11,000 hhds. In 1774, they had increased to 75,000 hhds. of sugar, 36,000 puncheons of rum, and 720,000 lbs. of coffee. The American war was very injurious to the W. Indian settlements, which may be said to be still suffering from its effects in the restrictions which were laid on the importation of food, lumber, &c. from the U. States. The devastation of St. Domingo by the revolution of 1793, which in a few years annihilated a supply of 115,000 hhds. of sugar, previously exported by that island to Europe, gave a corresponding stimulus to its culture in Jamaica and elsewhere. The latter, which, at an average of six years preceding 1799, had produced only 32,000 hhds., exported in 1801 and 1802 upwards of 275,000 hhds., or 126,000 hhds. a year! In 1806 the exports from Jamaica rose to 150,252 hhds., their maximum limit, and considerably more than three times what they now amount to. The same cause gave a similar stimulus to the growth of coffee, which has been increased by the increasing demand for the article in Europe. In 1782 the export of coffee from Jamaica amounted to only 60,000 lbs.; in 1778 it amounted to 440,000 lbs.; in 1797 it had increased to 7,331,631 lbs.; and in 1814 it rose to 24,045,365 lbs! But the rise of prices, which so rapidly increased production in Jamaica, occasioned a similar though less extensive increase in Cuba, Porto Rico, &c.; and more recently in Brazil, Java, Louisiana, Guiana, the Mauritius, and other colonies. In consequence, prices sustained a very heavy fall, and the keen competition to which they were exposed subjected the Jamaica planters to the most serious difficulties. These, however, might have been overcome had they not been immeasurably increased by our legislation in regard to the blacks; and, latterly, also in regard to foreign sugar. Some of the effects of these measures are exhibited in the following table:—

rum.

Commerce.—The history of the trade of Jamaica is not destitute of interest. For a long time after we obtained possession of the island, in 1664, the chief exports

Account of the Quantities of the principal Articles, the produce of Jamaica, Imported into the U. Kingdom in the undermentioned Years.

	1831.	1835.	1840.	1845.	1847.	1848.	1849.

Coffee - - - - - lbs.	16,844,072	11,154,307	8,807,337	6,090,173	6,970,363	4,915,709	5,109,193

Among the articles shipped from the colony are pine-apples, the exports of which, in 1835, exceeded 2,500,000 lbs., but have since been greatly reduced, with arrow-root, ginger, succades, mahogany, indigo, and sometimes small quantities of cotton. The latter was, at one time, rather extensively grown; and among the projects for the revival of industry with which it is customary to amuse the planters, the renewal and extension of the culture of cotton have not been forgotten.

The imports comprise flour, bread, rice, and meal, with beef, pork, fish, and other articles of provision; cotton and linen manufactures, staves and lumber; slops and haberdashery; iron and steel, soap and candles, machinery, and a great variety of other w.

We regret there are no accounts on can be safely placed, of the value of the The estimated value of the imports dur the 10th of October, 1847, amounted that of the exports of insular produce entire value of the exports from the W. Indian colonies, including Demara 1849, amounted to 2,025,019*l.*, of which made 624,566*l.* A large proportion of island is carried on with the U. Stat American colonies, and the ports on t The principal ports (all of which are f Ports Royal, and Morant, Black River Mar on the S. coast; and Lucea a Falmouth, St. Ann, Ports Maria i Amotto Bay, on the north.

Jamaica is divided into three counties; Middlesex in the centre, Surrey in the E., and Cornwall in the W. These are subdivided into 22 parishes, 10 of which are comprised in the first, 7 in the second, and 5 in the third named co. St. Jago de la Vega, or Spanish Town, is the seat of government; but Kingston is the largest town, and the real cap. of the island. The executive power is vested in a governor, appointed by the crown, aided by a council of 12 members, appointed in like manner, of which the lieut.-gov., chief justice, attorney-general, and the bishop, are members. The legislative power is vested in a H. of Assembly, of 47 mems., 3 being elected by each of the parishes containing the towns of Kingston, Spanish Town, and Port Royal, and 2 by each of the other 19 parishes. All male inhabitants, of full age, and possessed of a freehold of 6*l.* per ann., or a rent-charge or leasehold of 30*l.* per do. or who pay 3*l.* a year of taxes, may vote for representatives. The latter ought to possess an estate, over and above all encumbrances, of 100*l.*

a year, or real property worth 100*l.*, or real and personal do. worth together 2,000*l.* The Assembly has all the privileges of the British H. of C., and, like it, its utmost duration is 7 years. Since 1728, the Assembly and Council have been the originators of all laws for the government of the island, the power of legislation having been then conferred upon the island, and a permanent revenue of 6,000*l.* a year guaranteed by it to the crown. The salary of the governor is 6,000*l.* a year. Justice is administered in a supreme court, composed of the chief justice and 2 puisne judges, which sits 3 times a year at Spanish Town. Courts of Assize are holden 3 times a year in each county. Inferior courts of common pleas to the value of 50*l.* with costs, and are in those not above 40*l.* The Court formerly held by the governor only; cul's time, a vice-chancellor was ap- dary of 2,500*l.* a year, who transacts all lal business of the court. Appeal is art of Chancery to the Privy Council, admiralty, and other special coun- tion of the slaves, courts of concili- those established in Denmark (Vol. I. ther countries, have been instituted in ; the blacks are frequently members , and are thus accustomed to the de- of the most important social duties. ir decisions is, of course, optional; but re, they are usually acquiesced in. A new police force, of upwards of 400 constables, was established in 1840.

The military force usually amounts to about 2,000 regular troops, exclusive of the insular militia, which is at present (1850) in a very reduced state. The public expenditure on account of the religious establishments, amounts to nearly 32,000*l.* a year; ministers of other denominations besides the Church being salaried by the government. Jamaica is under a bishop with a salary of 4,000*l.* a year, whose see extends over the Bahamas and Honduras. Nearly 15,000*l.* are spent yearly on public instruction and charitable institutions. Education is pretty widely diffused, except in some parts towards the E. end of the island. But there and elsewhere numerous schools and churches have recently been established; and it is said that the emancipated blacks have not been slow to avail themselves of the benefits resulting from the institution of savings' banks. The press is free, and several able publications are issued. The public revenue and expenditure amount, at an average, to nearly 200,000*l.*

a year each, exclusive of large assessments for parochial purposes. The compensation money awarded to the proprietors for the liberation of the slaves amounted to 6,161,927l., the average value of a slave from 1822 to 1830 having been 44l. 15s. 2d. The ordinary currency of the United Kingdom has been adopted in Jamaica.

Jamaica was discovered by Columbus in 1495, and was settled in 1503. It remained in the possession of Spain till 1655, when it was taken by the English, to whom it has since belonged. (*Parl. Papers, including the able Report by the Governor, of the 10th March, 1849; Edwards's Hist. of the West Indies, &c.*)

JANEIRO. See RIO DE JANEIRO.

JAPAN (EMPIRE OF), called *Nippon* by the Japanese, and *Yang-hou* by the Chinese; an insular empire off the E. coast of Continental Asia, and opposite to the sea of Japan and the gulph of Tartary and Corea, from which it is separated by *Manchooria*. It comprises five large and a great number of small islands, lying between the 30th and 50th parallels of N. lat., and between the 128th and 151st degrees of E. long.; bounded N. by the sea of Okotak and the independent part of the island or peninsula of Tarakal, or Karafto (formerly known to English geographers as *Saghalien*); E. by the N. Pacific Ocean; S. by the eastern sea of the Chinese; and W. by the sea of Japan, which communicates with the open ocean by the straits of La Perouse, Sangar, &c., running between the different islands. Our knowledge of Japan is very unsatisfactory: Dutch traders annually visit its only open port, Nangasaki; and the Russians have acquired some slight acquaintance with the country; but, though the talents of Kämpfer, Thunberg, Krusenstern, Siebold, Meylan, and Fischer, have been engaged in collecting materials for a good description of this very curious and interesting country, the cautious and jealous policy of the Japanese government with respect to the admission of foreigners, (caused, as in China, by the attempts of Jesuit missionaries to Christianise the country,) has hitherto, in a great measure, baffled the efforts of European inquirers into its internal arrangements and economy. The shores of Japan are, likewise, either so rocky or so extremely flat, and are so often enveloped in heavy and dangerous fogs, that exploring vessels cannot approach near enough to make an accurate survey of the coasts. The total area may perhaps amount to about 250,000 sq. m. the pop., which is quite unknown, has been variously estimated at from 30,000,000 to 60,000,000.

Physical Geography.—The three principal islands of Japan Proper, which alone have been explored by Europeans, have a very uneven surface, few plains being of any great extent, and the hilly country extensive and of a rocky character. *Nippon*, the largest, longest, and best known of these islands, contains a regular mountain chain, running N.N.E., the highest summit of which, called *Fusi*, is, according to Siebold, upwards of 12,000 ft. high, another also (*Siro-jama*) reaching an elevation of 8,000 ft., and being covered with perpetual snow: the average height, however, is alleged to be so moderate, that the high ground generally admits of cultivation almost up to the dividing line of the watershed. The summits above named are active volcanoes, and many other hills emit either flames or smoke. Earthquakes are frequent, one in 1706 having destroyed nearly half of Yedo, and killed more than 100,000 of its inhab.; thermal and mineral springs also are of very frequent occurrence, so that, on the whole, the islands of Japan may be considered the seat of great volcanic movements, connected, most probably, with those of *Kamtschatka*, and the islands of *Formosa* and the *Asiatic Archipelago*, all of which belong to a chain of heights almost as distinctly marked as the volcanic chain of America. The metallic riches of Japan are stated to be very great, comprising copper in sufficiently large quantities for an extensive exportation, a considerable quantity of sulphur, some lead, tin and iron, and a little gold and silver, the mines of the last two being under the exclusive superintendence of the government. The rivers of Japan, though numerous, are not long, on account of the peculiar narrowness of all the islands: few of them are navigable, and most might be characterised rather as torrents than rivers. The largest is the *Yedo-gawa*, in *Nippon*, rising in the large lake *Oitz*, or *Biwa-no-umi*, and emptying itself, after a probable course of 60 or 80 m., into the harbour of *Osaka*. The lake *Fakonee*, S. W. of Yedo, is treated with superstitious reverence by the natives. The climate in a country extending over so many parallels of lat. must, of course, vary extremely, the N. dependencies having a severely cold climate, while the S. parts of the empire are nearly as warm as the S. of France, though with a temperature considerably more variable, owing to their insular condition. In *Kiu-siu* and the S. parts of *Nippon*, as far N. as Yedo, the thermometer ranges between 104° and 29° Fahr., 80° being the average height in the middle of summer, and 35° during the severest months of winter. The winter cold, however, is much increased by the prevalence of N. and N.E. winds; and the summer heats of July and August are moderated by cooling breezes from

the S. and S.E. Rain is very frequent, falling more or less on two-thirds of all the days in the year, but more especially in June and July, which are the *satoaki*, or rainy months: hurricanes, also, and storms frequently occur, and are described as being very violent. (*Thunberg*, vol. iv. 68—90; *Siebold*, vol. i. p. 325.)

Agriculture.—Tillage is followed in Japan, not merely as a pursuit dictated by private interest, but also in obedience to a general and very peremptory law, which obliges all owners of land, under the penalty of confiscation, to keep their property in good productive condition, and therefore able (for this is the secret reason of the regulation) to pay a large land-tax to government or its officers. But, whatever may be the cause, the soil, though not naturally fertile, has been so much improved as to be rendered extremely productive. Few plants, except on the hills, are found in a natural state; and the face of the country, even on the mountain sides (which are formed into terraces, as in some parts of Italy and Persia), is so diligently cultivated, that, as Thunberg observes, "it would be difficult to find in the country a single nook of untilled land, even to the dry summits of the mountains;" and this is confirmed in all material respects by Siebold, one of the latest travellers in Japan. In the S. district rice is raised in very large quantities, as it forms a principal article of food with the inhab.; but wheat is little grown and held in light estimation; barley, also buckwheat, a bean called *daisson*, and another, the *soja dolichos* (from which the well-known "soy" sauce is made), potatoes, melons, pumpkins, and cucumbers, are raised in great abundance; and the fruit trees of S. Europe, the orange, lemon, vine, peach and mulberry (the last of which is carefully reared for silk worms), are both plentiful and highly productive. Ginger and pepper are the chief spice plants. Cotton is cultivated in considerable quantities, and tobacco, introduced by the Jesuits, is very generally raised in the S. islands. The grand object of cultivation, however, next to rice, is the tea-plant, brought here from China in the 9th century. Not only are there large tea-plantations, with dyeing-houses, &c.; but every hedge on every farm consists of the tea-plant, and furnishes the drink of the farmer's family and labourers. The finer sorts demand extreme care in their cultivation: the plants thrive best on well-watered hill-sides, and they are said to be manured with dried anchovies, and a liquor pressed out of mustard-seed. Among trees, the *Broussonetia papyrifera* is cultivated for its bark, which is converted into cloth and paper; and the varnish tree (*Rhus vernis*, and called *ocrosto-ki* by the natives,) for its gum, used in varnishing wooden furniture; the camphor laurel, also, the iron tree, the oak, fir, and cypress are common, and furnish products useful as well for home consumption as exportation. Of timber, however, there is an insufficiency, and supplies are obtained from the N. dependencies of *Jesso* and *Saghalien*. The plants, a great number of which are described by Siebold in his review of the climate and vegetables of Japan (vol. i. pp. 290—292.), are extremely beautiful, and many of them, as the *Clerodendron*, *Camellia*, and *Pyrus*, have been naturalised in England; and there is little doubt, the climate being so similar to ours, that numerous other specimens from the Japanese Flora may be introduced.

Cattle and other Animals.—Pasturage in a country inhabited by a people eating scarcely any animal food except fish, and so well supplied with cotton and silk that they feel no want of wool for the manufacture of clothes, must necessarily be very unimportant. Buffaloes and oxen are not numerous, and are used only for draught labour, and there are but few sheep, the progeny of a breed introduced by the Dutch soon after their settlement in Japan: the horses are of inferior size, and are only used by the nobility; there are neither mules nor asses, and pigs are found only in the neighbourhood of Nangasaki. Dogs are common, and are considered sacred animals, in consequence of the favour which they enjoyed from one of the *Mikados* or supreme emperors; and cats are even more esteemed, if possible, by the Japanese ladies than by the venerable spinsters of Great Britain. Among the wild animals, may be enumerated bears, wild boars, foxes, wild dogs, deer, monkeys, hares, rats, mice, and two small animals of the weasel kind peculiar to the country, and called the *itutsu* and *tin*. Birds are numerous and of many varieties: falcons are highly valued, and pelicans, cranes, and herons are considered useful in destroying vermin and insects that are injurious to the interests of agriculture: the pheasants, ducks, and wild geese have splendid plumage; besides which there is a great variety of teal, storks, pigeons, ravens, larks, and other small birds. The common crow, however, and the parrot, have never yet been found in Japan. Among reptiles, snakes are not unfrequent, especially in the N. part of *Nippon*, and one variety, the *Ouvabami*, is of enormous size: tortoises also and lizards are of common occurrence; and the islands, particularly towards the S., abound with noxious insects, scorpions, centipedes, white

ants, &c. An apterous phosphoric insect (*Lampyrus japonicus*) deserves notice as being similar in its habits to the fire-fly of America, but of an entirely different genus. The seas contain large quantities of fish, affording a main article of food to the inhabitants, and giving employment to "entire villages" of fishermen. The salmon, herring, cuttle-fish (*Sepia octopodia*), eel, perch (*Sciæna japonica* and *Callionymus japonicus*), with many others, are caught in great quantities: oysters, also, of a peculiar and delicious kind, are extremely abundant, and are used almost exclusively as food by many of the poor inhabitants about Yedo, where the fisheries lie. Whales and narwhals frequently visit the coast, and are caught by harpooning; the flesh is eaten, the whalebone serves various purposes, and ambergris is extracted from the entrails. (Thunberg, vol. iii. 357. *ad finem*; Siebold, *passim*.)

Manufactures.—The industry of the Japanese will bear to be compared with that of the Hindoos, or even Chinese. The artificers in copper, iron, and steel, have a high character, and the swords of Japan rank second only to those made in Khorassan. Telescopes, thermometers, watches and clocks, of good quality, are constructed at Nangasaki; and if the description of Meylan, in his excellent work on Japan, of a very curious and complicated clock, may be credited, some of the workmen possess a very high degree of mechanical ingenuity. Glass is made; but the natives are not acquainted with the art of glass-blowing. Printing was introduced in the 13th century, and is conducted, as in China, by means of wooden blocks: engravings also are made, but in a very clumsy manner. Silk and cotton fabrics, of good quality, are manufactured in quantities almost sufficient for the consumption of the population. Porcelain, more highly esteemed even than that of China, is formed from two peculiar kinds of earth, called *kashin* and *pinasse*. The art of lacquering furniture with gold, silver, and various pigments, the secret of which was till lately almost exclusively confined to the Japanese, and hence called "japanning," is practised with great success; and the specimens that have reached Europe, and are now deposited, with many other curiosities, in the Royal Museum at the Hague, exceed in excellence every other sort of japanned wares, though Meylan informs us that in the country they would only be esteemed second-rate. The process is extremely tedious, and the gum requires long preparation for its conversion into varnish. Five coats, at least, are successively applied, and when dry, rubbed down and polished with stone; many of the more costly specimens are inlaid with mother-of-pearl. Good paper is made from the maceration of the mulberry and other barks, the fibres of which are used in the manufacture of cordage. The art of building houses is little understood: they are almost universally constructed of timber, covered on the outside with plaster, and the insides consist usually of two stories, each of which, when divided, is parted off into close rooms by flimsy paper partitions, adorned, or rather disfigured, with garish and bold paintings. Of ship-building and navigation the Japanese have a very slight knowledge; and that is prevented from increasing by a law, which compels the people to build their ships in a particular fashion, somewhat similar to that of the Chinese junks. They are made of cedar, fir, or camphor-wood, and the merchant vessels average about 70 ft. in length, by 20 or 24 ft. in breadth, their burden varying from 100 to 150 tons. Great numbers of ships are employed in trading with the different ports of the empire (the principal of which are Yedo, Soseki, Isinomaki, Saga, or Sakai, and Nangasaki), and many others besides are engaged in fishing; but it is manifest from their construction (as seen in the plates accompanying Siebold's work), that both bulk and rigging are wholly unfit for sea-navigation. (Siebold, i. 218—220.)

Trade and Commerce.—The internal trade of Japan is very extensive, and a variety of regulations are in force, the object of which is to protect and encourage home industry. The prices of goods are not enhanced by imposts of any kind; and communication between the great markets and all parts of the empire is facilitated by numerous coasting vessels and well maintained roads. The shops and markets, especially in Yedo, Miako, and Nangasaki, are well provided with almost every description of agricultural and manufactured produce, and the great fairs are crowded with people from the most distant parts of the country. Accounts also are published, from time to time, of the general state of trade and agriculture, and of the prices current for the chief articles of traffic at the trading towns of Yedo, Miakao, Osaka, and Simonoseki on the island of Nippon, Sanga, Kokoura, and Nangasaki in Khu-siu, Tosa in Sikokf, and Matsmai in Jesso. Foreign commerce, however, so far from being encouraged, is vigorously opposed by the government, in consequence of the attempts of the Jesuit missionaries to Christianise the people. An

edict, published in 1637, and still in force, makes it a capital offence for the natives to travel into other countries; and their seamen even, when accidentally cast on foreign shores, are, on their return, subjected to rigorous examination, and sometimes tedious imprisonment, to purify them from the supposed pollution contracted abroad. The Dutch, who were the first permitted to visit the empire after the expulsion of the Portuguese, had their earliest factory on the island of Firato; but they were removed, in 1641, by the emperor's orders, to Nangasaki, where, in common with the Coreans and Chinese, they are allowed to bring their goods for sale; but the number of vessels allowed to come each year, and the quantity of each description of wares to be sold, are strictly defined: and the residents in the factory are restricted to 11 only. The ships, immediately on their arrival, are minutely searched, and the crews are kept, during their stay in port, completely secluded from the natives, on the small island of Djesima, close to the harbour. All the business transactions are conducted by the Japanese, who also unload and re-load the vessels. Besides these obstructions, the superintendent of the Dutch factory is obliged to send valuable presents, or rather tribute, to the sjogun, and, once in four years, he makes an official visit to Yedo with great pomp, and gifts of more than usual value, costing with the journey about 3000*l*. The imports comprise raw silk, woollen, cotton, and linen cloths of various kinds, sugar, dye-woods, seal-skins, pepper, and other spices, quicksilver, tin and iron, cinnebar, glass-ware, &c. from the Dutch, and silk, tea, sugar, dried fish, and whale oil from the Chinese: the exports consist chiefly of copper ingots (forming about 9-10ths of the whole), camphor, and, to a smaller extent, of silk fabrics, lacquered wares, porcelain, soja-dolichos, &c. (*Hogendorp, Coup d'Œil sur l'Isle de Java et l'Archipel des Indes*, p. 385—400.; Siebold, i. ch. 2. and 3.; Thunberg, iii. 82—98.)

Accounts are kept in *thails*, each of which is equivalent to 3½ Dutch florins, or 5*s*. 10*d*. Eng. money, and the *thail* is composed of 10 *mas*, and the *mas* of 10 *condorins*. The gold coins are the *itzib*, worth 15 *mas* (or 8*s*. 9*d*.), the *ko-bang*, equal to 64 *mas* (1*l*. 7*s*. 4*d*.), and the *oban* valued at 3 *kobangs*. Large payments, however, are most commonly made in silver ingots of a fixed weight and value. The standard of weight is the Japanese *piccul*, equal to 130·9 English lbs. avoirdupois, and divided into 100 *cattys* and 1,600 *talcs*. The measure of length is the *tattamy*, equivalent to 6 ft. 4 in. English; but road distance is reckoned by *ri*, or Japanese leagues, about 30 of which, according to Siebold (vol. i. p. 209.), go to a degree of latitude. (Balbi.)

Government and Laws.—The government of Japan is an hereditary, absolute monarchy. The supreme power was originally vested in an ecclesiastical emperor, called *Daïri-sama*, or *Mikado**; but in 1583 Joritomo, the emperor's *Sjogun*, or military commander, usurped the chief civil power, and from that time to the present, notwithstanding its acknowledged illegality, the mikado, who is the only real emperor, has been a mere puppet-king, in a state of dependence on his *sjogun*, his first officer, and the military chief of the empire. All enactments, however, must have the sanction of the emperor before they have legal force; he alone confers honorary distinctions on the *sjogun* and the nobility, and he has the entire superintendence of religious affairs and education. Any further connexion with sublunary affairs would, it is supposed, degrade the Son of heaven, and profane his holy character. His court is at Miako, where he lives secluded in a large palace, and surrounded by numerous officers, who treat him with almost divine honours. His person is considered too sacred to be exposed to the air, and the rays of the sun, and still less to the view of his subjects; and he is consequently confined within his palace: his hair, nails, and beard are not cleaned or cut by daylight, these operations being always performed when he is asleep; he never eats twice off the same plate, nor uses any vessels a second time; and they are invariably broken to prevent them from falling into unhallowed hands. The mikado's finances, however, are now restricted to the taxes collected from Miako and the surrounding territory, certain revenues from the treasury of the *sjogun*, and the fees paid on the admission to honourable dignities and offices. His income, indeed, is so small, and the number of dependents so great, that he may truly be said to live in splendid poverty. The *sjogun*, who has, as has been seen, usurped all the substantial power, holds his court at Yedo, and exercises entire authority over the lives and property of the natives, controlled only by the laws enacted by former emperors, and which admit of little change. To him, also, directly belongs the local government of the five great towns, Yedo, Miako, Osaka, Sakai, and Nangasaki. The country is divided into 8 districts, which are subdivided into 68 pro-

* The name *Daïri* is by some writers applied to the emperor; but this is incorrect, for the *daïri* is simply the term for the court of the *Mikado*, who is hence called *Daïri-sama* (lord of the *daïri*).

vinces, and these again into 604 counties: the provs. are governed by princes called *daimio* or high-named; and under them are governors of districts, called *sionio*, or well-named. The daimios are appointed by the sjogûn, to whom they are accountable, with hostages for the proper exercise of their authority. They are entitled to the revenues of their respective provs., which enable them, besides maintaining their state and dignity, to keep an armed force for the preservation of order, and to make outlays in repairing roads, and other public works. They reside usually in large towns, either maritime or situated on rivers, and their castles are defended by strong gates and lofty towers. Once a year, in token of subjection, they repair to the sjogûn's court, at Yedo, attended by numerous and splendid retinues, and bearing valuable presents, constituting a main portion of his yearly revenues. The executive department is confided to seven ministers, who undertake severally the departments of internal economy and finance, commerce and navigation, public works, police, civil and criminal legislation, war and religion. The supreme judicial council, called *gorondje*, is composed of 5 daimios, who assist the kubo in his decisions on political offences; and a senate of 15 daimios or nobles forms a subordinate court, that takes cognizance of civil and criminal cases.

The laws of Japan are severe, nay, even vindictive and sanguinary; fines are seldom imposed, and exile to the penal settlement of *Taitse-en-sima* (inflicted on the nobles), banishment, imprisonment, torture, and death by decapitation, or impaling on a cross, are the ordinary penalties of crime, the shades of which are little distinguished. It frequently happens, also, that the courts visit with punishment not only the delinquents themselves, but their relatives and dependents, and even strangers who have accidentally been spectators of their crimes; and hence, the remarks of Montesquieu on the spirit of the Japanese laws are by no means incorrect: — "*Ces lois, qui ne trouvent point d'innocens là où il peut y avoir un coupable, sont faites pour que tous les hommes se méfient les uns des autres, pour que chacun recherche la conduite de chacun, pour qu'il en soit l'inspecteur et le juge. Mais ces gens opiniâtres, capricieux, déterminés, bizarres, qui bravent tous les périls et tous les malheurs, sont-ils corrigés ou arrêtés par la vue continuelle des supplices et ne s'y familiarisent pas? Un législateur sage auroit cherché à ramener les esprits par un juste tempérament de peines et de récompenses, &c. . . Mais le despotisme ne connoît pas ces ressorts, il ne mène pas par ces voies; il peut abuser de lui; mais c'est tout ce qu'il peut faire. Au Japon il a fait un effort, il est devenu plus cruel que lui-même.*" (*Esprit des Loix*, book vi. ch. 13.) The prisons are gloomy and horrid abodes, containing places for torture and private executions, besides numerous cells for solitary confinement. The police is extremely strict, and in the large towns each street has a chief officer, called the *otona*, who is responsible for the maintenance of order, the punishment of delinquents, and the registration of births, marriages, and deaths; besides these, four superintendents regulate the economy of the towns, and rigorously punish, often with death, the most trifling infraction of public order or peace, information of which is obtained by an established system of espionage.

Revenues.—The public revenues are derived from taxes on land and houses. The land is assumed to be the property of the state, and is rated according to the class of soil to which it belongs; the rate being said always to exceed $\frac{1}{4}$ and often $\frac{1}{2}$ of the produce; but it is difficult to believe that so heavy a tax can be collected. Tenants neglecting the proper cultivation of their land are punished by ejectment. Houses are rated according to the extent of street frontage, and the amount in which the holders are mulcted is greatly increased by forced presents to the civil officers, and dues for maintaining the temples and idols. The amount of the kubo's revenues cannot be ascertained; but it may be inferred that the land-tax, and the contributions from the daimios, who farm the taxes of their 68 provs., must form a pretty large privy purse.

Armed Force.—The army in time of peace consists of 100,000 infantry, and 20,000 cavalry; the force during war being increased by levies from the different provs. to 400,000 infantry, and 40,000 cavalry. The arms used by the infantry are the musket, pike, bow, sabre, and dagger; those of the mounted troops being the lance, sabre, and pistol. The artillery is confined to a few brass cannon and light pieces. The generals have no permanent office, but, in case of war or disturbance, are appointed by the sjogûn and princes. Discipline and fortifications are little understood; and their batteries consist usually of a few odd-looking walls, raised without either order or apparent object. Japan, though an insular dominion, has no navy whatever; the ships, such as they are, being wholly used in trade.

Religion.—The form of religious worship in Japan, especially the old form, has no resemblance whatever to any of the contemporary Chinese forms: the early in-

hab. of Japan had a peculiar form, which, being respected as that of their ancestors, has maintained itself to this day, as well in the hut of the peasant as in the palace of the daimio. Being generally liked, it is not only tolerated, but even protected and venerated by government; even at the present time, it might have been the positive religion of the Japanese, if political causes had not obliged the subjects openly to acknowledge one of the sects of Buddh. The doctrines, views, and interpretations of the ancient rites of the Japanese worship are in no essential points similar to those of Buddh; and though by contact of 1,000 years, they appear to have more or less amalgamated, yet they are kept rigorously distinct by Japanese theologians. The old religion is the *Sin-sin* (lit. *faith in Gods*), or, according to Siebold, the *Kami-no-mitsi*, or way to the *kami*, or gods, the other being a modern Chinese term for it. This sect regards the founders of the empire to be sprung from *Ten-syoo-dai-zin**, the supreme deity, and to have descended from heaven upon the Japanese land; and their title *Ten-zî* is a recognition of their divine origin. The race is never extinct; for in case of a failure in the succession, a descendant is supposed to be sent from heaven (though in fact privately selected by the emperor from the families of the nobles) to the childless *ten-zî*. The spirit of their ruler is immortal, and this also confirms the faith of the people in the immortality of the soul, in connection with which they also believe in a future retribution of their good and evil deeds during life on earth. Their paradise is called *Takama-kakava*, and their hell *Ne-no-kuni*. The supreme Deity is too great to be addressed in prayer, save through the mediation of the Mikado, the Son of Heaven, or of inferior spirits called *kami*, of which 492 were born spirits, and 2,640 are canonised mortals. For these *kami*, who seem to be regarded somewhat like the saints of the Romish calendar, as intercessors with God, temples are specially erected; and in every Japanese dwelling is a kind of oratory, in which the natives, morning and evening, offer their prayers to the supreme Deity. Large gates and triumphal arches lead to the temples, which, with the dwellings of the priests and other buildings, frequently form extensive and stately edifices. Various eatables are offered as sacrifices to the *kami*, and anciently even human victims were immolated to reconcile the hostility of evil spirits. The priests of this sect are allowed to marry.

The Buddhist form of worship is supposed to have been introduced from China, through Corea, in the 6th century of the Christian era; and the dogmas of that religion are divided into a higher and lower doctrine of faith. According to the first, man derives his origin from *nothing*, and therefore has no evil in himself; the impressions of the material world bringing out the evil in him, and fostering its growth. This evil is to be counteracted by following the bent of the soul, within which is neither more nor less than the Deity guiding our actions. The human body having sprung from nothing, will, after death, return to nothing: but the soul survives, that of the wicked floating eternally in the void of space, while that of the good will repose in the palace of the Deity, whence, if the denizens of this lower world should ever need the aid of a virtuous man, it will be sent from heaven to occupy another body. From this curious view of the Esoteric doctrine of the priests, let us turn to the more popular and practical tenets of the people. "On the other side (*i. e.* in the other world), before the great judge *Emasoo*, stands a large mirror, in which the actions of all mankind are imaged forth. Near this mirror stand two spirits, who observe and report the deeds of every person, and a third records them in a book, by which the souls of the dead will ultimately be judged, and, according to their sentence, sent to their places of rewards and punishments. *Amida*, the saving deity, is the god of paradise; and the way to ensure a journey on the *Go-kurak*, or road to paradise (one only out of six to which departed spirits may be sent), is an obedience to five commandments—*viz.* not to lie, not to commit adultery, not to kill any living creature, not to get drunk, and not to steal. One of the roads for the dead is *Tsikuso*, the road to the hell of animals; and hence the Buddhists of Japan believe in the transmigration of souls into animals as well as men."

Of the religion of Buddh, as now professed, there are many ramifications, and much superstition prevails. *Jammabos*, or monks of the mountain, live a secluded and ascetic life; and blind monks, who deprive themselves of sight that they may not behold the vice around them, are very common throughout Japan. Occasionally, in pursuance of vows, men are met running about the street entirely naked, on a round of visits to different temples; multitudes of religious beggars also are to be seen with shaven heads; and singing girls, in the assumed

* This Deity, however, though practically considered as supreme, is only the descendant of more ancient gods, the most remote of whom was, according to the Japanese mythology, self-created out of infinite and eternal chaos.

many are sold at the fair of Markarief. Two annual fairs are held in Jaroslavl.

This is a city of considerable antiquity, being founded in 1025 by the famous Jaroslav, son of Vladimir the Great, who annexed it to the principality of Rostov. It fell under the dukes of Moscow, in 1426. Peter the Great was the first to give it commercial importance, by establishing its linen manufactures, since which its prosperity has been progressive. (*Schützler, Dict. Géog.*)

JAROSLAW or JAROSLAU, a town of the Austrian empire, Galicia, circ. Przemisl, on the San, a tributary of the Vistula, 16 m. N. N. W. the town of Przemisl. Pop. (1838), 7,964, among whom are many Jews. It has a castle belonging to Prince Czartorinsky, a cathedral, and several other churches, a high school and girls' school, and manufactures of woollen and linen cloths, rosoglio, and wax candles. It has an extensive trade in those goods, and in wooden wares, honey, bleached wax, flax, and Hungarian wines, considerable quantities of all which are sent to Dantzic, though less than formerly. It has some rather large fairs; the principal is that holden on the 15th of Aug. (*Berghaus; Stein; Oesterr. Nat. Encyc.*)

JASSY (an. *Jassorium Municipium*), a town of Moldavia, of which it is the cap., on the Baglul, a tributary of the Pruth, about 120 m. N. N. W. Galacz, and 160 m. W. N. W. Odessa, lat. $47^{\circ} 8' 30''$ N., long. $27^{\circ} 30' 15''$ E. The pop., which is vaguely said to have once amounted to 80,000, and during the present century to 30,000, has been reduced, by war, pestilence, and fire, to less than 20,000. It is situated in a fertile country, partly on a hill, and partly in the valley beneath, and covers a large surface, the houses being interspersed with gardens and plantations. Its fortifications were demolished in 1788, and its only defence is now a small fortress on an eminence, opposite the residence of the hospodar. About 4,700 houses, including all its handsomest residences, were destroyed by fire in 1822; since which, Jassy has presented a miserable appearance. Of the 6,000 houses it is now stated to contain, about 200 only are of stone or brick, and not more than 50 have a second floor. The principal street is wide, and lined with low shops; the other streets are narrow and crooked: they are paved only with logs, and in wet weather are impassable from the mud, while in dry weather they are enveloped in clouds of dust. There is a total want of cleanliness; and this, with the proximity of marshes, and the exhalations which arise from the imperfectly covered sewers, render the town, especially its lower part, very unhealthy. Jassy is the see of a Greek archbishop, whose residence is perhaps the most remarkable public edifice. It has many Greek churches and chapels, a Rom. Cath., and a Lutheran church, numerous convents, an hospital, 8 public baths, a large building appropriated to a Wallachian printing establishment, the only one in the province, a gymnasium, established in 1644, a Lancasterian school, and a school of handicrafts for females, founded in 1834. It has few manufactures; some canvass is, however, made in the town for export to Constantinople, and the trade in wine, flax, corn, hides, wool, wax, honey, and tallow, is considerable, especially at the fairs. The town has so often suffered from fire, that to be secure, some of the merchants deposit their most valuable wares in chests in the high church of St. Nicholas. The boyars, or principal inhabs., have a great passion for pageantry and gaming, and are filiterate in the extreme. Their costume is a mixture of Oriental and European, and the showy dresses of the upper classes strikingly contrast with the general wretched appearance of the population. Like the rest of Moldavia, Jassy swarms with beggars. (*Dict. Géog.; Macmichael's Journey from Moscow to Constantinople*, p. 83.; *Stein*.)

JASZ-BERENY, a town of Hungary, distr. Jagyzia, of which it is the cap., on both sides the Zagyva, here crossed by a stone bridge, 40 m. E. Pesth. Pop. 15,530. It has a large and handsome Rom. Cath. parish church, several other churches, a Franciscan convent, Rom. Cath. gymnasium, high school, and a town-hall, in which are kept the archives of Jagyzia and Great and Little Cumania. In the centre of the town stands a marble obelisk, erected in 1797 in honour of the archduke John; and within the precincts of the convent, on an island in the Zagyva, the traveller is shown a tomb, reported to be that of Attila! The town has a large trade in corn, horses, and cattle, which latter are reared in great numbers in its vicinity. (*Oesterr. Nat. Encyc.; Berghaus*.)

JAUER, a town of the Prussian dom., prov. Silesia, cap. circ. of same name, on the Neisse, (which, by its inundations, often does much damage), 10 m. S. by E. Leignitz. Pop. (1838), 5,847. It is the seat of the judicial courts for the circle, &c.; has a house of correction, a Lutheran, and five Rom. Cath. churches, a free school, and fabrics of linen and woollen cloths.

JAVA, a large and fine island of the Eastern Archipelago, 1st division, belonging principally to the Dutch, and the centre, as well as the most valuable, of their posses-

sions in the East. It lies between the 6th and 9th degs. S. lat., and the 106th and 115th E. long.; separated from Sumatra on the W. by the straits of Sunda, E. by those of Bali from the isl. of that name; having N. the Sea of Java between it and Borneo, and S. the Indian Ocean. Its general configuration is not unlike that of Cuba, except that it is not curved, and it also resembles Cuba in its extent, fertility, products, and commercial value, while it supports eight times its amount of pop. Its length W. to E., is about 660 m.; breadth varying from 40 to 130 m. Area inclusive of the neighbouring isl. of Madura, estimated at about 52,000 sq. m. Pop. between 9 and 10 millions, of whom above 100,000 are Chinese, with Malays, natives of Bali and other isls. of the Archipelago, a few Arabs, Moors, and Bengalese, and 14,000 Europeans, mostly Dutch, but comprising about 300 English, including those employed in the mercantile navy.

Physical Geography, &c.—Most part of the surface is mountainous. A mountain chain, obviously of volcanic origin, runs W. and E. entirely through the centre of the isl., its peaks varying in elevation from 5,000 to probably 12,000 ft. All these peaks are of a conical form, and, with few exceptions, each appears to have originated in a distinct convulsion of nature. All have been at some period active volcanoes; in most of them, however, volcanic agency is now apparently extinct, though, from some, eruptions occasionally take place, and sulphureous vapours are emitted, especially after rain. The S. coast is usually bold and rocky, and being exposed to all the violence of the ocean, is unsafe for shipping; the N. shore is, on the contrary, low and marshy, and has many tolerable harbours and roadsteads, affording sufficient shelter to trading vessels, the sea being generally smooth. Rivers numerous; but very few of any size. The largest is the Solo, which runs through nearly the centre of the isl., and disembogues on the N. coast, opposite Madura. Its length may be estimated at 400 m., 7-8ths of which are navigable for vessels of 200 tons. Surakarta, the cap. of the chief native prince, is on its banks; five or six other rivers are at all times navigable for a few miles from the coast, and probably 50 more are in the wet season used for the conveyance of rafts and rough produce downwards. There are many extensive swamps, and in the mountains many small lakes occupy the craters of extinct volcanoes.

Basalt, hornblende, and other volcanic formations are abundantly intermixed among the primary rocks of the mountain region. On either side of the mountain chain coarse limestone and argillaceous iron-stone are very prevalent formations, and are covered, especially in the lower parts of the country, with a volcanic soil of great richness, in some places 12 ft. in depth. The N. coast rests entirely upon coral. Metals are few. Mineral springs of various kinds are met with, besides naphtha and petroleum wells, and in one distr. is a cluster of hills which eject a mixture of mud and salt water*, like the mud-volcano of Maccaluba, in Sicily. (*See ARAGONA*, vol. i. p. 145.)

The seasons are divided into the wet and dry. The former accompanies the monsoon from October to March or April; the latter, the E. monsoon, which lasts during the rest of the year. On the N. coast, where the thermometer sometimes rises to 90° Fah., the climate is very unfavourable to Europeans; but in the interior, at an elevation of 4,000 ft., where the temperature ranges between 50° and 60° , no deleterious influence is to be apprehended from the atmosphere. Thunderstorms and earthquakes are frequent, but hurricanes are unknown.

Java has a most luxuriant vegetation. It is distinguished by the number and excellence of its fruits and other vegetable products, which comprise many of the most valuable common to tropical climates. Dense forests of teak and other trees, useful for shipbuilding, cover a great part of the interior, especially towards the E. end of the island. The teak of Java is inferior in hardness and solidity to that of Malabar, but it is superior in those respects to that of Birmah; and is said to excel every other variety in durability. The sago, and many other palms, the very curious pitcher-plant (*Nepenthes distillatoria*), and two virulently poisonous plants, the *anchar* and the *chetik*, are natives of the island. The latter, which is peculiar to Java, is a large creeping shrub, and identical with the celebrated *upas*, formerly supposed, but on no good foundation, to be, like Avernus, destructive of birds flying over it. The aggregate number of mammals has been estimated at 50, including the royal and black tigers, rhinoceros, several kinds of deer, the wild hog, wild Javan ox, buffalo, &c. Crocodiles and other large reptiles infest the mouths of the rivers and the marshes; and upwards of 20 venomous serpents are enumerated, including some of enormous size. Birds are in immense variety; the bird of paradise visits Java, from Gilolo, Papua, and the other islands to the E.; and the edible nests of the sea swallow (*Hirundo esculenta*)

* From the salt water thus ejected 200 tons of salt are said to be made annually. (*Raffles' Hist.* i. 27.)

form an important and valuable article of trade for the Chinese markets. This singular product is obtained in the greatest perfection from deep, damp, and all but inaccessible caves along the rugged parts of the sea coast. These are the property of government; and, when they can be easily guarded, produce a considerable revenue. Mr. Crawford, who for several years superintended the collection of the valuable caverns of Karang-bolang, on the S. coast of the island, estimates the value of the nests obtained from them at about 140,000 doll. a year, collected at an expense of about 11 per cent. The nests are taken twice a year; and if no unnecessary violence be done, the operation seems to be but little injurious: at all events, the quantity is but little increased by the caves being left untouched for a year or two. The nests are assorted in three qualities, the best being the whitest, or those taken away before they have been soiled by the food or *feces* of the young bird. The supply of nests being limited and unsusceptible of increase, and being, at the same time, highly prized by the rich and luxurious Chinese, on account of their real or supposed invigorating powers, they bring enormous prices; the finest sorts selling for 5*l.* or 6*l.* per lib. ! and the inferior for 2*l.* or 2*5s.* per do. ! They are collected, but in smaller quantities, in other parts of the Archipelago: their total export to China is estimated at from 240,000 to 245,000 lbs. (*Crawford*, iii. 4324—37.; *Commerc. Dict.*)

Industry, &c. — "The Javanese are a nation of husbandmen. To the crop the mechanic looks immediately for his wages, the soldier for his pay, the magistrate for his salary, the priest for his stipend, and the government for its tribute. The wealth of a province or village is measured by the extent and fertility of its land, its facilities for rice irrigation, and the number of its buffaloes. The proportion, at an average, of the inhab. engaged in agriculture to the rest of the pop. may be stated at 3*4* or 4 to 1; and it is probable that if the whole island were under cultivation, no area of land of the same extent in any other quarter of the globe could surpass it, either in the quantity, quality, or value of its vegetable productions." (*Raffles*, i. 117—120.) At present, only about 1-3d part of the surface is supposed to be under culture; and yet Java produces not only enough of corn for its own consumption, but is the granary of the E. Archipelago, and even of Singapore. Within the last twenty years, the cultivation of all its great staples has wonderfully increased; and the progress of Java has been probably even more remarkable than that of either Brazil or Cuba.

The husbandry of the Javanese may be said to exhibit, upon the whole, much neatness and order. Two or more crops are never cultivated in the same field, as is the slovenly practice of the Hindoos. Neither are the lands tilled in common, as is a usual but most injurious practice in India. The peasant and his family bestow their labour exclusively on their own possessions, and consider their culture rather as an enjoyment than a task. It is here only that their industry assumes an active and systematic character: the women take a large share of the labour. The work of the plough, the harrow and mattock, with all that concerns the important operations of irrigation, are performed by the men, but the lighter labours of sowing, transplanting, reaping, and hoesing, belong almost exclusively to the women.

The implements of agriculture are few and simple; but as well as the agricultural processes, they are more perfect, and imply a greater degree of intelligence, than those of the Hindoos, and perhaps, indeed, than those of any Asiatic people, the Chinese excepted. The Javanese plough, like the Hindoo, has no share. The sock is tipped with a few ounces of iron, and the earth board is carved out of the body of the plough; the wood is teak, the yoke of bamboo cane. One man conducts the plough, and with a long whip guides the cattle, which never exceed two in number. The Javanese harrow is a large rake, with a single row of teeth. The same yoke and cattle are used for it as for the plough, and over its beam a bamboo cane is placed, on which the person who guides it sits to give a necessary weight to the implement. The hoe is very indifferent; its edge only tipped with a little iron, and its handle about 2*1*/₂ feet long. The Javanese sickle is a very peculiar instrument. Its object is to nip off separately each ear of rice with a few inches of the straw; for which purpose it is grasped in the right hand, and the operation effected with a dexterity acquired by habit. The whole farming stock of a villager may be purchased for little more than one-third part of the yearly produce of his land; or for about 15 or 16 dollars, including a pair of buffaloes. These animals usually serve all agricultural and other purposes in place of horses. Cattle of every description are plentiful throughout Java; but the cows are inferior, and yield little milk. Sheep, goats, and hogs are numerous.

Rice is the principal food of all classes: it is grown not only along the whole of the sea-coast, but in all the low grounds and ravines where water is to be had. Wherever rice is cultivated by numerous, the land is divided

into small chequers of about 200 or 300 sq. yards, surrounded by dykes not exceeding 1*1*/₂ feet high, to retain the water for irrigation. When the culture depends on the periodical rains, the charge of these dykes constitutes, as far as irrigation is concerned, the only care of the husbandmen; but the greater quantity of the grain of Java is raised by the help of artificial irrigation. The principal care of the husbandman is to dam the brooks and mountain streams as they descend from the hills, and before the difficulty has occurred which would be presented by their passing through deep ravines. From this circumstance, the crests of the mountains, and the valleys at their feet, are best supplied with water, and there, consequently, is the finest and richest husbandry. The slopes of the mountains are formed into terraces highly cultivated, and the valleys are rendered almost impassable from the frequency of the water courses. The art of forcing rice by artificial irrigation is found only to prevail in the most improved parts of the eastern Archipelago, and in the best lands. This mode does not depend upon the seasons; and hence we see in the best parts of Java, where it chiefly obtains, rice in every state of progress, at any given season, and in the same district, within, indeed, the compass of a few acres. In one little field, or rather compartment, the husbandman is ploughing or harrowing; in a second, he is sowing; in a third, transplanting; in a fourth, the grain is beginning to flower; in a fifth, it is yellow; and in the sixth, the women, children, and old men are busy reaping. Lands which may be inundated at pleasure almost always yield a white and a green crop within the year; and to take two white crops from them, whether a judicious practice or otherwise, is very common. Mr. Crawford states that he has seen lands which have produced, time immemorial, two yearly crops of rice. Two varieties of rice are raised in Java, one a large, productive, but delicate kind, requiring about seven months to ripen, and the other small, hardy, and less fruitful, which ripens in little more than five months. The first is always cultivated in rich lands, where one annual crop only is taken; but where two crops are raised, the other variety is grown. The rapid growth of the latter has, indeed, enabled the husbandman, in a few happy situations, to reap six crops in two years and a half.

Rice, of whatever description, is reaped and stored in the same way. The whole field is not reaped at once, but each portion of the grain is taken successively as it ripens; so that, in the desultory manner in which the operation is performed, a very small field, with many reapers, may occupy a period of 10 or 12 days in reaping. With the singular sickle before mentioned, the ears are nipped off, and forthwith transported to the village by the manual labour of the reapers, for cattle or carriages are very rarely used. At the village, the corn is sufficiently dried by a day or two's exposure to a powerful sun, when it is tied in sheaves or bundles, and deposited in little granaries of wicker work, one of which is attached to every cottage. Grain is never thrashed by treading it out by means of cattle. It sometimes, chiefly in the case of mountain rice, becomes necessary to separate the seed from the straw, which is done by treading, or rather rubbing, the sheaf between the feet, an operation effected with considerable dexterity. Commonly the grain is stored for use, and transported to market in the straw. The operation of husking is performed by the women in large wooden mortars, with pestles of the same material. (*Crawford's Indian Archipelago*, i. 348—365.) Rice is mostly grown in the E. part of the island, whence it is sent in large quantities to Batavia for exportation, or to Samarang, from which port a good deal is shipped for China, and the islands of the Archipelago.

Coffee, which has now become the great commercial staple of Java, is grown in the uplands, the best situations for it being the valleys from 3,000 to 4,000 ft. above the level of the sea. The coffee plant grows from 12 to 16 ft. in height; it attains to maturity in about 5 years, and continues to bear well for the succeeding 10 or 12 years, each tree yielding, at an average, 1*1*/₂ lb. coffee. The chief peculiarity of the coffee culture in Java is the planting of the *dadap* tree (*Erythrina indica*), in rows alternately with the coffee plants, for the purpose of affording shelter to the latter. Coffee is raised principally in the W. part of the island, where the residency of Preangers furnishes at least 1-4th part of the total produce.

Sugar is, also, a most important staple. That best known in European markets is called Jaccatra sugar; it is grown near Batavia, where numerous sugar-mills have been erected of late years. Formerly the sugar-mills and grounds were almost wholly in the hands of the Chinese, but this is no longer the case: the Europeans share the culture of sugar with the Chinese, and having the advantage of machinery, surpass the latter both in the quantity and quality of their produce. The Chinese, however, by their frugality and business-like habits, are supposed to reap the greatest profit from

an awning of light materials, supported by moveable props of bamboo; and the whole is closed in by a temporary paling, and divided into apartments by light partitions. The chief materials of the houses of the Javanese are the bamboo, rattan, palmetto leaf, and wild grass. The house of a peasant in a populous part of Java, where materials are not the most abundant, will not exceed the value of 60 days' labour. In the dwellings of the chiefs there is generally, in a conspicuous part of the house, a kind of state bed, rather for display than use; but an ordinary bed is usually only the bamboo floor of the cottage, or, at best, a bench of the same flimsy material, on which a mat and small pillow are laid, and the peasant retires to rest without undressing. Food is served up on salvers or trays of wood or brass. A few Chinese porcelain dishes are used occasionally, but neither spoons, knives, nor forks.

The commerce between Java and Holland, which

amounts to 5-7ths of the whole external trade, is chiefly carried on by the *Nederlandsch Handel Maatschappij*, or Dutch Commercial Society, which includes some of the most wealthy persons in the mother country.

The principal articles of import are linen and cotton manufactures, chintsee, muslins, &c.; provisions, wines and spirits, iron and iron goods, and woollen goods, haberdashery, glass, copper wares, &c., from Europe and America; opium from the Levant and Bengal; sacking, linens, wheat, &c., from India; porcelain, tea, tobacco, silk and silk goods, from China; copper and camphor from Japan; gambier, coffee, tin, cotton, gold dust, benzoin, sandal-wood, &c., for exportation, from the rest of the archipelago. The following account of the principal articles of produce exported from Java during each of the undermentioned years ending with 1845, shows better than any thing else can do, the wonderful progress recently made by this noble island.

Years.	Coffee.	Pepper.	Indigo.	Hides.	Cloves.	Nutmegs.	Sugar.	Tin.	Rice.	Rattans.	Mace.	Arrack.
	<i>Piculs.</i>	<i>Piculs.</i>	<i>Lbs.</i>	<i>No.</i>	<i>Piculs.</i>	<i>Piculs.</i>	<i>Piculs.</i>	<i>Piculs.</i>	<i>Coyangs.</i>	<i>Piculs.</i>	<i>Piculs.</i>	<i>Leaguers.</i>
1830	228,740	6,061	22,083	30,249	803	1,304	108,640	21,426	13,321	5,093	177	1,927

The value of the principal articles exported from Java in 1845 was,—

Arrack	-	133,222	Sugar	-	20,350,209
Hides	-	220,649	Tobacco	-	2,324,480
Indigo	-	4,961,608	Tin	-	4,044,518
Coffee	-	20,123,798	All other articles,		
Pepper, round	-	184,435	and treasure	-	10,005,888
Rice	-	2,632,101			
Mace	-	132,834	Total value	-	65,995,168
Cloves	-	201,045			
Nutmegs	-	510,353			

The total amount of import and export duties received, in 1837, was 435,600*fl.* In the same year, 1,648 ships, of the aggregate burden of 102,416 lasts (under the Dutch flag, 1,423 of 79,202 lasts), entered; and 1,891 ships, burden 111,920 lasts (1,636 of 85,571 lasts, under Dutch colours), cleared out of the different ports of Java and Madura.

The internal traffic is comparatively small, though few countries have better means of communication. A carriage road, extending from one extremity of Java to the other, 800 m. in length, was made by General Daendels; but it is alleged that its construction cost the lives of 12,000 natives.

The Chinese weights are invariably used in commercial transactions at Batavia, and throughout Java and the other Dutch possessions in India. These are the picul and the cattie, which is its hundredth part. The picul is commonly estimated at 125 Dutch or 133*½* lbs. avoirdupois, but at Batavia it has been long reckoned equal to 136 lbs. avoird. The bahar is 3, and the timbang 5, piculs. The coyang of rice is equivalent to 3,300 lbs. Dutch. The coins in use are similar to those current in the Netherlands. Spanish dollars are received at the custom-house in Batavia, at the rate of 100 for 260 florins.

Government, &c.—Java, inc. Madura, is divided into 22 provinces, or residencies, each governed by a European resident, assisted by a secretary, and as many sub-residents as may be deemed necessary. The residencies are subdivided into arronds, or regencies, the administration of which, especially in respect to the police, is confided to native chiefs, termed regents. The colonial government at Batavia exerts a full and complete power over all the Dutch colonies in the E. seas. The gov.-general in the cap. is the representative of the king of Holland, and commander-in-chief of the forces by land and sea. He is assisted by a secretary-general, and a colonial council of 4 members, who must be of Dutch extraction, born in Holland, or one of its dependencies, and 30 years of age; and who can exercise no other functions while they remain councillors. Justice is administered in the last resort in a supreme court at Batavia, which has jurisdiction in all cases above the value of 500 florins. Three subordinate civil and criminal tribunals, and 3 courts martial, subordinate to a central court in the cap., are established in Batavia, Samarang, and Sourabaya. A member from each of these courts makes a circuit at least every three months into the residencies under its control, to preside at a court of assize, composed besides of 4 native chiefs chosen annually by the government, on the recommendation of the natives. The permanent tribunals of the residencies are the *land-raaden*, composed of the resident, 4 mems. selected from among the regents, a secretary, &c. In each arrond, and commune

there are justices of the peace, with authority in petty cases. The Chinese are governed by their own laws, under functionaries chosen by them, who are responsible to the Dutch for the behaviour of the rest. There are few slaves belonging to Europeans in Java. The greatest religious toleration exists, and ministers of all Christian sects are equally remunerated by the government. Superior schools are established in the chief towns, and primary schools in most of the residencies. The squadron stationed in Java sometimes comprises several ships of the line, but in time of peace usually consists only of a few frigates and corvettes. There is, besides, a colonial navy of light vessels (schooners, gun-boats, &c.), which forms a separate branch of service, though both are generally placed under the command of the admiral of the royal squadron, who has the title of Director of the Dutch East India Navy. Besides the foregoing force, a flotilla of cruisers, manned by native Javanese, is supported by the different marine residencies. The land forces consist of several battalions of infantry and artillery, a corps of pioneers, a regiment of hussars, and a portion of a squadron of lancers. In all, there are about 8,000 Europeans in the Dutch Javanese army, being about equal to 1-3d part of those serving in British India. But, notwithstanding the heavy expense incurred in the government, Java is one of the few colonial dependencies that in ordinary years remit a considerable revenue to the mother country.

The territories of the native princes comprise about 1-4th part of Java and its inhabs., in the centre, S., and S. E. of the island, the cap. of the Susuhunan, or empire of Java being at Surakarta, on the Solo, and that of the sultan, at Djocjokarta. The religion of both these dynasties is the Mohammedan, which prevails over almost the whole of the country. The *Javanese*, as a nation, are the most advanced of any in the E. Archipelago. They only, of those inhabiting that region, have a native calendar, and have made considerable progress in the arts and sciences of civilised life. They appear to have received these originally from Hindostan, together with the Hindoo religion, which is supposed to have prevailed over Java, till its conquest by the Mohammedans in 1478. Copious details respecting the manners, customs, &c. of this curious and interesting people, the antiquities of the island, &c., which would take up too much space in the present work, may be found in Temminck, Raffles, Crawford, and other writers on the subject.

The history of Java cannot be traced with any degree of confidence, further than the latter portion of the 12th century. From that time down to the establishment of Mohammedanism, at the close of the 15th century, the religion of the people was a modified Hindooism; and a number of independent states existed in Java. The ruins of Mojopahit, one of the principal capitals of these several states, are among the most extensive in the East. This city had between two opposite gates, the remains of which still exist, a breadth of about 3 m., which would give a circuit of 12 m. if the enclosure had been a square. The Hindoo kingdom of Mojopahit was overturned by the Arabs in 1478.

The Portuguese reached Java in 1511, and the Dutch in 1595. The latter founded Batavia in 1619, and gradually consolidated their power on the island, though for a long period engaged in continual wars with the native sovereigns. In 1811, Java was taken by a British force from Hindostan, and held till 1816, when, in pur-

* Equal, at 80*fl.* per florin, to 5,491,264*l.*

suance of the treaty of Paris, it was restored to the Dutch. (*Hogendorp, Coup d'Œil sur l'Île de Java; Raffles's Hist. of Java; Crawford's Indian Archipelago; Parl. Reports; Hamilton, E. I. Gaz., &c.*)

JAXARTES, a celebrated river of antiquity, now very generally acknowledged to be identical with the Sir-Daria, the chief stream of the Kirghis-steppe. It rises in the Kachkar-Davan, a W. branch of the Tiang-khang range, in lat. $42^{\circ} 30'$ N., and long. $73^{\circ} 50'$ E. Its course to Kokan is W.S.W. about 180 m.; but at that point it takes a N.N.W. direction for about 300 m., as far as Ak-metachet, in lat. 45° N., long. $66^{\circ} 5'$ E., where the channel divides, the N. and larger branch retaining the name Sir, while that to the S. is called Kouvan-Daria: their mouths in the Caspian Sea lie about 40 m. apart, but are both in long. 61° . The entire length of the Sir, including its windings, cannot be much less than 900 m.; and it is both broad and deep, which may be attributed to its being the sole recipient of the waters on the N. side of the great chain separating the khanate of Kokan from Chinese Turkestan. It has no affluent of any great size; its banks (which are low and sandy) are usually flooded in summer and at the beginning of winter; and the water is described as being loaded with a whitish brown deposit. The ruins of temples and habitations in the Karakoum sands at the lower part of its course clearly prove that its banks were once peopled by a race far more civilised than the brigand Kirghis, who now wander over the Steppe. (*Lévesque, p. l. ch. v.*)

Herodotus gives the name *Araxes* to a large river full of fish, and studded with islands, situated in a vast immeasurable plain. (*See l. 201—216.*) Some geographers have conjectured that he meant the Amoo (*Orus*), others the Wolga; but D'Anville, Heeren, and Mannert, clearly show, from the position of the Massagete relatively to the Issadones, that no other river but the Sir could have been meant by the Father of history. Ancient geographers agree in stating that the Jaxartes flowed into the Caspian Sea, an assertion, perhaps, not quite so erroneous as modern critics have supposed, if any credit be attached to the investigations of Mouravief and Berg on the level of the country between the Caspian and Arab seas, which lead to the supposition that these great salt-lakes were once united. This conjecture, also, if it be correct, at once accounts for the great breadth (E. and W.) given to the Caspian by all the ancient writers. With respect to the term *Araxes*, which was used by the old authors as applicable to at least five distinct rivers, it is now regarded as generic, meaning simply any rapid stream, like the modern *Aras*. (*See D'Anville's valuable paper, Des Fleuves du Nom d'Araxes, in vol. 36. of the Histoire de l'Acad. des Inscriptions.*) Herodotus, whose geography is in general so very accurate, was probably led into what Rennell calls his "prodigious mistake" respecting the direction of the Araxes, by not knowing that this name was held in common by several eastern rivers. (*Comp. Rennell; Geog. of Herod., l. pp. 270—272. and 284—293., with Heeren's Reflections; Asia, ii. p. 340, &c., and Mannert, Geographie der Alten Griechen und Römer, Th. ii. b. 2.*)

JEAN D'ANGELY (ST.), a town of France, dép. Charente Inférieure, cap. arrond. on the Boutonne, which here begins to be navigable for vessels of from 80 to 40 tons, 33 m. S.E. by E. La Rochelle. Pop. (1836), 5,342. It is ill built, but clean and cheerful. It has an ancient abbey, a handsome public hall, some baths, a theatre, and other places of entertainment, and a brisk trade in wine, brandy, and timber.

JEDBURGH, a royal and parl. bor. and market town of Scotland, co. Roxburgh, of which it is the cap., in a narrow valley on the Jed, about 2 m. above its junction with the Teviot, near the termination of the Cheviots, 40 m. S.E. Edinburgh, and 43 m. N.E. by N. Carlisle. Pop. of bor. and par., in 1811, 4,454; in 1841, 4,466; of which the bor. had 3,277. It consists of four leading streets, which cross each other at right angles, and are wide and well built. Around the town are several beautiful villas. The Town-Head, a street parallel with the river, consists of old houses, which, with their inhab., are said for generations to have undergone little or no change. The public buildings are the Castle (built on the site of the ancient castle of Jedburgh, once a royal residence), containing a bridewell and prison, the co. hall, the town-house, and churches belonging respectively to the Associate Synod and Relief. The par. church consists of the western portion of the abbey, founded by David I., in the 12th century, and will be noticed below. A majority of the people are dissenters. The denomination of dissenters, termed *Relief*, had its origin here in 1754. The grammar-school of Jedburgh, an endowed seminary, has long been eminent. It has the honour to reckon among its pupils Thomson, the illustrious author of the "Seasons," and of the "Castle of Indolence," born in the par. of Ednam, in this co., on the 11th of Sept. 1700. It may also be mentioned, that Dr. Thomas Somerville, author of "The History of Great Britain, during the Life of Queen Anne," was minister

of Jedburgh. The only charitable institution in the town is a dispensary, founded in 1807; and open to the pop. of the adjoining district.

The woollen manufacture has been introduced into Jedburgh. The fabrics made are blankets, carpets, flannels, hosiery, &c.: there are three mills, driven by water, which employ 104 hands, exclusive of the stocking-weavers, who carry on their business in their own houses. (*Factory Returns, Parl. Papers, Jan. 1839.*) There is an establishment for the manufacture of printing presses, under a patent, conducted by the inventor, Mr. Hope, an iron founder in the bor. There are two branch banks and a savings' bank.

The abbey of Jedburgh, belonging to the Canons Regular of St. Augustine, must, when entire, have been one of the most magnificent ecclesiastical structures in Scotland. It exhibits different styles of architecture, according to the taste prevailing at the different periods when it was built. The walls of the nave, central tower, and choir, remain; and though (the two last especially) much dilapidated, they sufficiently attest its ancient grandeur. The N. transept, which has a beautiful traceried window, is entire. There are two magnificent Norman doors in this edifice, one at the W. end, and the other in the S. wall of the nave, close to the transept. Indeed the ruin generally affords fine examples of the Saxon, Norman, and early English styles, the latter being admirably exemplified in the long range of narrow painted windows above the arches of the middle part of the nave, and in the blank arches of the W. end. The altar, or E. end of the choir, the cloisters, and the chapter-house, have disappeared. We regret to have to add, that this noble ruin has been disfigured, and its character, in fact, destroyed, by "fitting up the W. end of the nave in a most barbarous style, as the parish church." (*Morton.*) Luckily, this piece of miserable patchwork is as uncomfortable as it is unseemly; so that it is to be hoped it may be abandoned, and the ruins restored, in as far as possible, to their former state. (For farther information with respect to this fine ruin, see the learned and valuable work, entitled *Monastic Annals of Teviotdale*, by the Rev. James Morton.)

A monastery for gray friars was founded in this town by the citizens, in 1513; but of it all traces have disappeared. Here may still be seen the house in which Queen Mary lodged after her visit to the Earl of Bothwell, at Hermitage. Mary continued in it several days, owing to a sickness she had contracted in her unfortunate journey. The apartment which she occupied was on the third story, and is in tolerable preservation.

Jedburgh was erected into a royal bor. in the 12th century: but the castle, the site of which is now occupied by the gaol and bridewell, is supposed to have been of earlier date. After having been for some time in the possession of the English, the castle was taken by the Scotch, in 1409, and demolished. Like other borderers, the citizens of Jedburgh were anciently more celebrated for their martial than for their peaceful virtues. Their favourite weapon was a partizan or halbert, known by the name of the "Jethart (Jedburgh) staff." Their war-cry, or slogan, was "Jethart's here." The term "Jethart Justice," which implies execution before trial, is supposed to have originated in the many instances of lynch law, executed here on border marauders. (*Scott's Border Minstrelsy, l. 50.*) The eldest son of the Marquis of Lothian, descended from the ancient border family of the Kers of Fernihirst, for centuries the feudal superiors of the bor., has the title of Lord Jedburgh.

Jedburgh unites with N. Berwick, Haddington, Lauder, and Dunbar in sending a mem. to the H. of C. Registered voters, in 1849-50, 223. Corporation revenue, 644*l.* 1*s.* 4*d.* (*Keith's Scot. Bishops, pp. 392—452; Redpath's Border Hist.; Chalmers's Caledonia.*)

JEDDO. *See* YADDO.

JELLALABAD, or JULALABAD, a town of Afghanistan, in a fertile plain, and on the high road between Caubul and Peshawur, 80 m. E. by N. the former, and 60 m. W.N.W. the latter; lat. $34^{\circ} 30'$ N., long. $70^{\circ} 32'$ E. Sir A. Burnes says, "It is one of the filthiest places I have seen in the E. It is a small town, with a bazaar of 50 shops, and a pop. of 2,000 people; but its number increases tenfold in the cold season, as the people flock to it from the surrounding hills. Julalabad is the residence of a chief of the Baruksye family, who has a revenue of about 7 lacs of rupees a year. The Caubul river passes $\frac{1}{2}$ m. N. of the town, and is about 150 yards wide: it is not fordable." (*Bokhara, &c., li. 105.*)

JEMME (EL). *See* TYSDAUS.

JENA, a town of central Germany, grand duchy of Saxe-Weimar, circ. Weimar-Jena, cap. district, on the Saale, 12 m. E. Weimar, and 41 m. N.E. Halle: lat. $50^{\circ} 56'$ 28" N., long. $11^{\circ} 37'$ 15" E. Pop., in 1838, 8,817. (*Berghaus.*) The town, which is walled, and has handsome suburbs outside its four gates, lies in a valley, between two abrupt eminences, on the left bank of the river, which is here crossed by a handsome stone bridge.

The streets are wide, and some of the houses are large and well built, many being highly ornamented with vases and grotesque sculpture. The diocesan palace, containing a library and museum, with a good collection of minerals and conchology, 1 Roman Catholic and 3 Protestant churches, 3 hospitals, a hospital asylum, and the university house, are the chief public buildings. It is a place of considerable importance for literature, and the seat of a university founded in the 17th century by the sovereign prince of the Franconian branch of the house of Jersey. In whom the patronage and appointment of the professors is still vested. The constitution is similar to that of other German universities; it has faculties of divinity, law, medicine, and philosophy with 20 ordinary professors, comprising a scientific establishment, for teaching students and conferring degrees; there are also 17 extraordinary professors, and a few private-doctors, or private tutors. The salaries of the ordinary professors range between \$50 and 1000, those of the "extraordinary" varying from \$50 to \$100, which are bestowed by fees from pupils, each of whom pays at the rate of about 5 rds dollars, or 1 sh. 6d., for the course. The remuneration of the tutors depends wholly on the number of their pupils. The annual expenditure of the university including the expenses of theological and other seminaries, the library (comprising 100,000 vols.), voluntary school, collections, botanical garden, prison, officers, &c., amounts to about \$5,000 dollars, or nearly \$5,000, a year. A fund, also, similar to that in Göttingen, with a capital of \$5,000, is employed in purchasing the volumes of professors, and an academic voluntary fund (Spener-stiftung), supported by endowments and yearly grants from the grand duke of Hesse-Wettmar, Coburg, and Meiningen, furnishes daily meals at several universities for 150 indigent students. The number of students has averaged 300 during the last 10 or 12 years, an attendance far more limited (owing to a great measure to the murder of Kotzebue, perpetrated by a student in June) than in the middle of the last century when 1,500 were in actual residence at the same time. (Journ. of Edinb. Acad. 1 and 10.) Living in Jersey is considered cheaper than at almost any other university of Germany, and a student may live respectably and enjoy for half the money the same education he could command in Göttingen; but, notwithstanding this inducement, very few visit it, either from other German states or foreign countries. The industry of the town, which is entirely agricultural, comprises the manufacture of coarse linen, fabrics, hats, tobacco, &c.; and these several trades are very successfully attended.

Jersey is famous in modern history, from its vicinity having been the scene of the great battle of the 1st of October 1805, between the great French army under Napoleon, and the Prussians, commanded by the king and the duke of Brunswick; the latter of whom was actually wounded in the action. The French gained a complete and decisive victory. The Prussians lost above 50,000 men, killed and taken in the course of the day, with all their cannon, baggage, &c. In fact, their army may be said to have been totally destroyed, as most of the troops who escaped from the field were soon after compelled to surrender.

JERSEY, an island of the Channel Islands, and the p. of the Channel Islands, W. the coast of France, at 50 W. point being to lat. 49. 30. N. and long. 1. 50. W. Shape somewhat oblong; 15 m. in length, 5 to 6 m. in breadth. In 1841, 47,344. The soil portions of the N. E. and S. E. and the sea, and all around it are almost immovable rocky hills, separated from the cliffs by the operation of the tide, which cut with great force and rapidly round the Channel Islands. The surface has a general inclination from N. to S., on which side the coast approaches the level of the sea. There is little table land, but sloping hills range run northward, bounding deep and narrow valleys, traversed by small rivers. Jersey geographically considered, is like the other islands in the same group, composed of secondary rocks, resting on granitic formations. True granite is not observed, but schists, which is largely quarried, and exported as granite, is very prevalent, passing in some parts into porphyry and gneiss. It is covered to the N. and more level tracts by urticaria and clay-slate, intermingled here and there with a clay conglomerate (iron and manganese the only metals that occur) are not wrought. The climate, though damp, owing to frequent rains and intense sea fogs, is remarkably mild. The island says Dr Hooper, enjoys an early spring and a lengthened autumn, vegetation being usually earlier and forward in March and the landings far from cooled at the end of December. Spring is marked by continuance of temperature and harsh variable weather, with a prevalence of E. winds; and this disadvantage is less particularly in May, which often fails to bring with it the expected enjoyment. March is mild, and

October yet milder. (Observe on the Top. Clin. and Climate of Jersey.) The soil in the higher parts is gravelly, being composed of detritum from the rocks and one-sided, mixed with vegetable mould; but in the valleys there is a great depth of alluvial matter, washed down by violent rains from the higher lands; and these tracts, where not swampy, are extremely fertile. The S. W. corner of the island is a more assemblage of sandy and barren hills. Agriculture is backward, owing partly to the minute division of property, maintained by the law of gavelkind, and partly to the insularity of rural business. The value of land ranges between 100 and 1500 per acre, and rents vary from 10s to 40 sh., according to the distance from St. Helier. Farms average about 1 acre, few exceeding 10; the crops are, consequently for the most part poor; and even if they were possessed of adequate capital, the limited size of the farms is an insurmountable obstacle to the introduction of an improved system of farming. Some tendency towards improvement has, however, recently manifested itself. The ponderous Jersey plough, known as the grand plough, though not wholly discarded, is likely soon to be supplanted by the Norfolk plough.

The rotation of crops, as applicable to the soil and climate, is pretty well understood, and absolute failures are rarely, if ever seen. Wheat crops, cut early in Aug., produce, according to the official returns, nearly 5 qrs. per acre, and the gross yearly produce is said to amount to 15,000 qrs. of wheat and 5,000 qrs. of barley. But the culture of neither wheat, barley nor oats, is found to be profitable, and they are therefore chiefly imported. Potatoes are raised in large quantities, the returns sometimes exceeding 50,000 lbs. per acre, but the soil does not so mature gives them an unpleasant flavour. Potatoes and mangels worst are larger, cut water. Lentils is highly in favour with the farmers, as it will grow on soils unfit for other purposes. Four crops in a year are not unusual and the land is afterwards left off. A large portion of the culture is land one quarter surrounding to Guernsey, is occupied by apple trees, and the exports of apples and cider have been steadily increasing for some years, the export of the latter amounting to 2,000 hhds. a year, according to the latest returns. The annual yield of apples averages 10 hhds. per acre. The pear-tree is a good setting apple, but the price of the island is the above-mentioned pear often a pound in weight, and sold occasionally at the rate of 2s. per hundred. The cherry pear is also well esteemed, and peach-apricots, nectarines, and strawberries are abundant and noted for size and flavour. Timber trees grow in the hedge-rows, and unite with the fruit trees in giving to the scenery softness and richness rarely equalled. "In fact," says Mr. Inglis, "Jersey appears like an extensive pleasure-ground, one between park thickly crowded with trees, beautifully cultivated, and dotted with cottages." (1 p. 25.) The manner universally used in dressing the land is sward or even; the gathering of which is restricted by the island legislature to two seasons, the middle of March and the end of July, times of great interest to the natives. On grass lands the cow is used in its natural state, till

heret. Cattle breeding is a profitable pursuit here, and in the end the treasure highest in a to his cow. (Quaker Agric.

By called the Alderney cow is not from that of Guernsey which is the short horned Devonshire red, tapering horns slender nose, with. Its purity is maintained by a order to preserve the breed is a prohibition the importation of any females. Which cows produce daily, at an average, 10 quarts of milk, and 1 lb. of butter (4 quarts of the former producing 1 lb. of the latter), the yearly produce of a cow being estimated at 100. The price of a good cow varies from 100 to 150. The butter is chiefly sent for sale to St. Helier's market, or exported to England; the quantity sent thither in 1838 amounted to 20,000 lbs. Sheep are little reared. The Jersey breed is a cross of the Cotswold preserved through the resistance of some Norman cavalry on the island in 1000. It is a strong hard working animal, but no attention is paid to the improvement of the breed. The oyster fishery employs many of the natives, but lately it has been on the decline, owing to the competition of the French fishermen of Granville. The fishery is most active from Feb. to May, and the exports of oysters in 1838 amounted to 130,000 bushels. In the same year 1,670 ducks (waterfowl) were sent to London from Jersey. The conger-eel and herring fishery formerly highly productive, has been almost superseded by the deep-sea red fishery which employs nearly 50 vessels of 2,000 tons, and gives employment during the summer to 1,200 Jerseyans. The fish are chiefly sent to Brazil, 16,000 barrels, of 120 lbs. each, being sent thither in 1838.

The trade of Jersey has increased rapidly during the

last 50 years, and its commercial relations, formerly confined to England and France, now extend to the chief countries of Europe, the W. Indies, and S. America. This increasing prosperity is proved by the returns of ships belonging to St. Helier's. That port, in 1817, had only 79 vessels of 8,167 tons; whilst in 1837 (after a gradual increase) it had 244 ships of 23,826 tons, exclusive of about 500 fishing smacks, chiefly used in the oyster fisheries. Indeed, so great has been the increase of business of late years, that the erection of a new and larger pier at St. Helier's is in contemplation. The trade with England is subject to certain regulations intended to prevent contraband traffic; but every article of the growth, produce, or manufacture of Jersey is admitted into the mother country on payment of the duties imposed on similar commodities grown, produced, or manufactured here. The island receives from England, its general merchant; cotton and woollen fabrics, and hosiery, hardware and cutlery, earthenware and glass, soap and candles, and about 20,000 tons of coals yearly, in exchange for which it sends apples and cider, cattle, potatoes and potato-spirit, oysters, and granite. The imports from France consist of wine and brandy (70,000 gall. of the former and 50,000 gall. of the latter), skins, fruit, and poultry, for which coals, bricks, and potatoes are sent in exchange. The island is supplied with fir and oak timber (1,400 loads of fir and 500 ditto of oak yearly) from Sweden and Norway, with hemp, linen fabrics, and tallow, from Russia, with wheat and barley (about 22,000 qrs. annually) from Prussia and Denmark, and with cheese, Geneva, and tiles, from Holland; the exports to these countries chiefly consisting of coffee and sugar from Brazil, with which this island has extensive dealings, employing 20 ships of 4,000 tons, and importing thence about 600 tons of sugar, and 4,700 cwt. of coffee. The imports from Spain, Portugal, and Sicily, average yearly 70,000 gall. of wine and 100,000 gall. of brandy. The Jersey merchants also trade with Honduras for mahogany, sent chiefly to England. The manufacturing industry of the island is almost confined to ship-building, shoe-making, and hosiery. Ship-building is carried on to a considerable extent, in consequence of the timber imported into the island being exempted from all duty; though, if it be proper to lay a duty on the timber employed in ship-building in Britain, it is not easy to see why timber employed for the same purpose in Jersey should be exempted from the duty. Shoe-making is pretty extensively carried on, and about 13,000 pairs of boots and shoes, chiefly of French leather, are sent annually to British N. America. The hosiery business has greatly declined, owing to the use of machine-made stockings; and the persons now employed in it depend almost entirely on the demand of the island. The communication with England is kept up by means of steamers to and from Southampton four times a week, and by mail-packets twice a week to and from Weymouth. On the arrival of the steamers from Southampton, packets leave for St. Malo and Granville, returning on the alternate days. Traders are constantly sailing to and from London, Bristol, and other English ports.

The vernacular language of the island is French, which is used in the churches and courts of law: the upper ranks speak it in its purity, but the lower classes speak Jersey-French, a *patois* compounded of old Norman French with Gallicised English. English, however, is becoming daily more prevalent, and most of the country people understand and speak it. "The Jerseymen, especially the lower orders, are characterised by blunt independence, often amounting to *brusquerie*, excessive love of gain, and unceasing industry. The minute division of property prevents them from acquiring an independence, while at the same time the actual ownership of land protected by legal privileges, gives them a freedom of sentiment which no tenant at will can enjoy. Their parsimony, however, is not only prejudicial to themselves, as leading them to begrudge provender to their most valuable cows, but is also injurious to others, whom they overreach in bargaining." (*Anglia*.) Their fare is simple and inexpensive, consisting principally of *soupe-d-choux*, a compound of lard, cabbage, and potatoes: conger-eel soup and pickled pork are rarities reserved for festive occasions. The chaumontelle pear is commonly eaten with tea; cider is the general substitute for beer. The higher classes seldom give entertainments or exchange civilities, and are much divided by party spirit. The old parties of *Magot* and *Chariot* have given way to the liberal *Rose* and the exclusive high church and state *Laurel*. Literature is forgotten amid island politics; and even the press, so powerful an engine in England, has scarcely any influence in Jersey. The English residents must be considered as a class quite distinct from the natives, with whom they have little intercourse; they amount to about 4,000, being chiefly half-pay officers with their families, attracted by the cheapness of living and the mildness of the climate.

The revenues of Jersey have greatly increased of late

years, for at an average of the three years ending with 1812, they only amounted to 4,600*l.* a year, whereas, in 1836, they exceeded 14,600*l.*, arising from licenses to tavern-keepers, market-tolls, harbour-dues, duties on wine and spirits, &c. These revenues, after the current expenses of the government and the interest on the public debt (amounting in 1840 to 61,276*l.*) have been paid, are applied to the public works and general improvement of the island. The expense of the militia and English troops (exceeding 20,000*l.* yearly) is defrayed by the British government, and the salaries of the governor and his officers are provided for from the great tithes of the 12 parishes. French and Spanish coins were until lately current in Jersey; but in 1832 the French government called in its old silver coins, since which time English sovereigns and silver have been commonly circulated. The exchange varies from 8 to 9 per cent. in favour of England, so that an English shilling passes for 13*d.*, and a sovereign for 1*l.* 1*s.* 8*d.* Jersey currency.

Jersey and Guernsey have long enjoyed peculiar privileges granted by John and succeeding monarchs. No process in either of the islands, commenced before an island magistrate, can be carried out of it, and no person convicted of felony out of the said islands is to forfeit his inheritance in them, so as to deprive his heirs of their lawful possessions. They are exempted from the jurisdiction of the British courts, except that of the admiralty, and have an immunity from all taxes except what are voted by the island legislature.

Jersey is governed by a local legislature, and a distinct judicature under the ultimate control of the sovereign in council. The legislative assembly, called the states, consists of 36 members, viz. 12 jurats elected for life by the rate-payers of the island, the 12 rectors of the 12 par. into which Jersey is divided, and the 12 constables of par. chosen triennially by the parishioners. It is convened by the bailiff, who always presides, either in person or by deputy; and its chief business is to raise money for the public service, and to pass laws for the government of the island; which, however, continue in force only 3 years, unless ratified by the sovereign in council. The governor, as the king's representative, has a *veto* on all the proceedings of the states, but never uses it, except in cases which concern "the special interest of the crown." The Jersey court of judicature, called the "royal court," is composed of the bailiff, who here represents the sovereign, and of the same 12 jurats who sit in the states. The officers are, the attorney-general, solicitor-general, high-sheriff or viscount clerk, or *greffier*, and 6 pleaders appointed by the bailiff, and styled *avocats du barreau*. This court has cognisance of all pleas, suits, and actions, whether real, personal, or criminal, arising within the island, except cases of treason and coining, which are referred to the sovereign in council. A code of laws, compiled in 1771, and sanctioned by the king, is the fundamental statute law; but it is extremely defective, and is continually changed by the enactment of new laws. The custom of gavelkind obtains, with respect to the disposal of real property: the eldest son, however, by common usage, takes half the estate, and the rest is equally divided. Personal property may be devised, but when left intestate is divided among the children, 2-3rds going to sons, and 1-3rd to daughters. Debts are recoverable by legal process in the royal court. Insolvents may be compelled to give up (*renoncer*) their property, for the benefit of creditors, and either the *vicomte* may sequester it, to pay demands entered against it, or the court may grant the debtor a respite of a year and a day for payment of his debts. Persons not possessing land or houses may be arrested for debt; but property is attached before the person; and landed proprietors cannot be imprisoned till after a judgment. Debts contracted in England can be sued for in Jersey, if not of more than 6 years' standing: debts contracted in Jersey are recoverable within 10 years.

The military government of the island is conducted by a lieutenant-governor, who has the custody of the fortresses, and the command of both the regular troops and militia. The chief fortresses are Fort Regent, Elizabeth Castle, and Mt. Orgeuil Castle, all on the S. coast. The island is further defended by a chain of martello towers, redoubts, and batteries, which encircle it. The militia, in which all male natives, from the age of 17 to 65, are liable to serve, comprises 6 regiments and 2,500 men, exclusive of an artillery battalion of 600 men. The regular troops in time of peace seldom exceed 300 men; but 7,000 men were quartered in the island during last war. Since the reign of James I., the church of England has been the established religion of Jersey, which is under the ecclesiastical direction of the bishop of Winchester. Every par. has a church, and the service is usually performed in French, except at St. Helier's, where English is the language of the congregation. The Independents, Wesleyans, and Baptists have chapels in which service is conducted both in French and English; and there are two places of wor-

city for Roman Catholics. Two free grammar-schools were established in Jersey in the 15th century, but the universities are small. Two public schools on the national system were established by subscription some years since, and are now in successful operation.

The remains of Roman fortifications and the discovery of coins belonging to the emperors, prove Jersey to have been a military station, and under the Franks it formed a part of the region called Neustria. The Normans invaded the Channel Islands in the 9th century, and when the duchy of Normandy was annexed to the crown of England at the Conquest, they came under the British dominion. The French have repeatedly tried to wrest from us these islands, which, by their proximity to the coast of France, seem to be their natural property, but they have uniformly failed. The last attempt was made in 1781 by a detachment of 700 soldiers, under the Baron de Billecourt, who surprised and captured the garrison, but were finally compelled to ransom to their vessels after a desperate encounter with the active militia under Major Pearson, in the straits of St. Helier's. (*Compte, Jagers's Channel Islands*, vol. 1, page 10; *Compte's Agricultural Survey of Jersey*; *Geol. Trans.* vol. 1.)

JERSEY (NEW), one of the U. S. of America, in the N. E. part of the Union, between lat. 39° 34' and 41° 30' N., and long. 74° and 76° 30' W. (having N. and N. E. New York, W. Pennsylvania, S. W. and S. Delaware Bay, and E. the Atlantic. Length, N. to S., 110 m.; average breadth about 30 m.; area, 4,300 sq. m. Pop. (1840), 172,303, of whom 474 were slaves. A great part of the E. shore is skirted by a chain of low islands,

very small, deeper than the Fries, and the shelter of the bay; but N. of the 40° 10', -ranges, divided by a narrow strait, the N. shore is one the 1 in the distance from the Atlantic is 10 m.,

S. parts

to the main is very narrow. A fine grassy country of the E. is warmer than might have been expected from its lat., the temperature approximating to that of N. Virginia, and admitting of the culture of cotton, while the winter in the N. is similar to severity to that of the N. states. In the upper part of the state, and along the banks of the rivers, there is some good land; but the surface is in general either sandy or stony, and it is chiefly by the manufacturing industry of its inhabitants, who till lately have been principally engaged in agriculture, that New Jersey has been rendered so productive as it is. Wheat, rye, barley, oats, maize, buckwheat, potatoes, &c. are cultivated; and in the higher parts of the state large herds of black cattle and sheep are reared. In 1838, the stock of sheep was 200,000, producing 812,000 lbs. of wool, worth 410,000 dollars. Large quantities of butter and cheese of superior quality are made. The only wild quadrupeds now met with are the racoon and fox; the fisheries are productive, and employ many of the inhabitants. Iron in the mountains, and bog iron ore in the marshes, form the most important mineral products; but there is abundance of marble, limestone, sand, clay, and of fine quality copper, zinc, &c. The principal articles brought to market are cattle, fruit, iron, sea sand, butter, cheese, cider, &c. New York and Philadelphia are the chief outlets for the surplus produce, New Jersey being very advantageously situated between them cities. The exports elsewhere are trifling. Manufactures are already extensive, and increasing; the principal are those of iron. It is estimated, in a work published in 1840, that 1,200 tons of bar-iron, 1,200 tons of pig-iron, and 60 tons of cast-iron, besides large quantities of hollow ware, sheet-iron, and nail rods, are annually made.

Paterson is one of the principal manufacturing towns in the U. States, and is well supplied with water-power by the Passaic. Its principal products are cotton, linen, and woollen goods, paper, buttons, &c. Manufactures of glass, leather, shoes, carriages, gunpowder, &c. are established in different places.

In 1838, there were 81 cotton-mills in the state, producing annually about 2,120,700 yards of cotton cloth. The internal communications are generally good; the Morris Canal 101 m. in length by 20 to 25 ft. wide, and 6 ft. deep, extends across the state, from Jersey city, on the Hudson, to Delaware river. The Delaware and Hudson Canal, 41 m. long, from Bardonia to New Brunswick, is 7 ft. deep, and 75 ft. wide at its mouth, and therefore adapted to vessels of considerable burden. It is connected with the Chesapeake, Delaware, and Diagonal Swamp canals, and affords a continuous water communication between New York city and Albany. Another canal 4 m. long connects Salem Creek with the Delaware river, and several others have been projected. Three railroads were completed in 1837, the principal of which, from Camden to Asbury, a distance of 61 m., in the N. part of the state, was finished in 1835. The second, 104 m. in length, from Paterson to Jersey city, was finished in 1834, and the third, from New Brunswick, through Newark, to the Hudson river, in 1833.

This state is divided into 14 counties. Trenton, on the Delaware, is the capital and seat of government. It probably owes this rank to its central position only, since it has not above half the pop. or wealth of New Brunswick or Newark. Elizabeth, Burlington, Flemington, and Paterson, are the remaining chief towns.

The constitution framed in 1776 has continued, with little variation, to the present day. The government is vested in a legislative council of 16 members, and a general assembly of 30 members, all of whom are annually elected by the free white male citizens, who have resided in the state for the preceding year and who pay taxes. The governor is also chosen annually by the joint vote of the council and assembly. The governor and council form a court of appeal and pardon. The salary of the former is 2,000 dollars, with fees. The rest of the judicial authority is vested in a supreme court, a court of chancery held at Trenton, circuit courts, and courts of oyer and terminer, held in each of the counties three times a year; and inferior courts of common pleas, which, with courts of quarter sessions of the peace, are held in the different counties by judges chosen by the legislature and receiving no salary. The state penitentiary at Lancaster had, in 1838, 100 prisoners. In 1837, the state had 26 banks, with a united capital of 10,575,000 dollars. The school fund, established in 1818, had in 1838 a capital of 200,427 dollars. The college of New Jersey established at Elizabeth Town, in 1766, has been removed to Princeton, where it occupies a spacious edifice. It has a library and philosophical apparatus, 8 libraries, with 11,000 vols., and, in 1838, had 360 students. In 1838, 20 periodical publications were issued in the state. A great part of the pop. are Quakers.

The earliest settlement of New Jersey was made by the Dutch, in 1612. Many Swedes and Danes afterwards settled in it, but the Dutch continued to possess it until finally expelled by the English, in 1664. In 1682, it came under the jurisdiction of Penn and his associates. It took an active part in the revolutionary war, and suffered proportionally. New Jersey sends 9 members to congress. (*Darby's Jew, &c.*; *Miner's U. S.*; *American Encyclopedia*; *American Ann.* 1834 to 1845.)

JERUSALEM (Heb. *Yerushalem*, Gr. *Ἱερουσόλημ*, by Herodotus, and *Ἱερουσαλήμ* by Strabo and later writers; mod. Arab. *El-Kuds*), a famous city of Palestine, interesting from its high antiquity, but far more from its intimate connection with the history of the Jews, and the eventful life of the great Founder of Christianity; 190 m. S. E. W. Damascus, 20 m. E. Jaffa, and 70 m. S. by E. Acro; lat. 31° 46' 30" N., long. 34° 51' 30" E. Pop., according to the official report of Mr. Consul Moore, 10,000, of whom about two thirds are Mohammedans. The pop. has been estimated by some travellers at 20,000; but it has not had so many inhab. for some years, except at Easter, when the Moslem and Christian pilgrims swell the pop. to nearly a half more than its ordinary amount. The city stands on a hill, between two small valleys, in one of which, on the W., the brook Gihon runs with a S. E. course, to join the brook Kedron, in the narrow valley of Jehoshaphat, E. of Jerusalem. The first view of the city from the W. is thus described by Robinson — "As we approach Jerusalem, the road becomes more and more rugged, and all appearance of vegetation ceases. The rocks are scantily covered with soil, the

verdure is burnt up, and there is an entire absence of animal life. A line of embattled walls, above which rose a few cupolas and minarets, suddenly presented itself to my view. I was disappointed in its general appearance; but this feeling originated not so much from the aspect of the town as from the singularity of its position, surrounded by mountains, without any cultivated land to be seen, and not on any high road." (*Pal. and Syr.* i. p. 36.) The opposite view, however, from the Mount of Olives, is much more attractive, for it commands the whole of the city, and nearly every particular building, including the church of the Holy Sepulchre, the Armenian convent, the mosque of Omar, St. Stephen's gate, the round-topped houses, and the barren vacancies within its circ. (*Henniker's Trav.* p. 174.) The modern city, built about 300 years ago, is entirely surrounded by walls, barely 2½ m. in circ., flanked here and there with square towers. The four principal gates are those of Damascus and Jaffa on the W., that of Zion on the S., and St. Stephen's on the E. The interior is divided by 2 valleys, intersecting each other at right angles into 4 hills, on which history, sacred and profane, has stamped the imperishable names of Zion, Acra, Bezetha, and Moriah. Zion is now the Armenian and Jewish quarter; Acra is better known as the lower city and Christian quarter; while the mosque of Omar, with its sacred inclosure (called by the Turks *el Haram Schereef*), occupies the hill of Moriah. The streets are narrow, like those of all Syrian towns; the houses, except those belonging to the Turks, shabby, and the shops poorly supplied. Dr. E. Robinson, of the U. States, however, remarks, "that he was agreeably disappointed, and found the houses better built, and the streets cleaner, than those of Alexandria, Smyrna, or Constantinople." (*Geog. Journ.* ix. p. 299.) The public buildings are not numerous, and excepting those consecrated to religious worship, there are none worthy of notice. The baths also and bazaars are mostly inferior to similar establishments in other parts of the E.

The boundaries of the old city, said by Pliny to be *longe clarissima urbium Orientis non Judæa modo* (*Hist. Nat. lib. v. § 13.*), are so imperfectly marked, that no fact can be deduced respecting them from the elaborate researches of D'Anville, Clarke, Niebuhr, and others, save only that they varied at different periods; and that, when most extensive, at the era of its destruction, its treble row of walls embraced a circuit of 33 stadia, including Mount Moriah, Mount Zion, Acra, Bezetha, &c. (*Relandi Palestina*, p. 835.) But the walls having been wholly destroyed, it is impossible to trace their exact situation.* It is impossible also to describe in detail the many spots within the modern city which blind superstition or minute criticism has fixed on as the scenes of events connected with the history of the patriarchs, and the sufferings of Christ; but some places are ascertained beyond a doubt, which all travellers visit with interest, and which command universal respect. There can, for example, be no question, that the mount (Moriah) on which the mosque of Omar now

* Josephus most distinctly says that the Romans left only the W. wall standing, with the towers Phaselus, Hippicus, and Mariamme, and that the remainder was razed to the ground. Τὸν δ' ἄλλον ἄσπετον τῆς πόλεως περιέβαλον οὐκ ἔχοντες ἰσχυράς αἱ κατεσκευασμέναι, ἃς μὴδὲ πύργον οὐκ ἔστιν ἐν ἑστέρας πόλεσιν. (*Jud. Bel. lib. vii. c. 1.*) This assurance of an eye-witness, and the knowledge that two subsequent and very destructive sieges left scarcely any remains even of a more recent city, suffice to show how little credit is due to any of these antiquarian speculations, however ingenious.

stands was once crowned with the *House of the Lord*, built by Solomon, at a cost and with a magnificence of which we can form no adequate idea (1 Kings, caps. vi. and vii.). This great glory Judea, after standing for above 400 years, was first rifled, and soon after destroyed by Nebuchadnezzar, king of Babylon. A second temple, built on the site of the first, by the Jews, after their return from the Babylonish captivity, was so much enlarged and improved by Herod the Great, as to be little inferior to that of Solomon. Tacitus calls it, *immensa opulentia templum*; and he truly adds, *nulla intus Deum effigie, vacuum sedem, et inania arcana*. (*Hist. lib. v. § 8, 9.*) Notwithstanding the efforts of Titus for its preservation, this structure, the palladium of the Jewish nation, was totally destroyed during the siege of Jerusalem, A. D. 70. The mosque of Omar, which occupies this sacred site, stands on an elevated four-sided plateau, about 1,500 ft. long, and 1,000 ft. broad, supported on all sides by massive walls, built up from the lower ground. The lowest portion of these walls is supposed by Dr. Robinson to belong to the ancient temple, and to be referable to the time of Herod at least, if not of Nehemiah and Solomon. The mosque, *el Sakhara*, the erection of which was begun by the caliph Omar, in 637, is of an octagonal shape, surmounted by a lead-covered dome, above which is a glittering crescent. It has four entrances, one of which, towards the N., is adorned by a fine portico, supported by eight Corinthian pillars of marble. Its 48 windows are of stained glass, and the walls are faced below with blue and white marble, and above with glazed tiles of various colours, forming a beautiful mosaic of texts from the Koran. It is altogether a fine specimen of light and elegant Oriental architecture; and the building contrasts singularly with the severity of the surrounding scenery. The interior is not allowed to be entered except by the followers of the prophet; and Dr. Richardson, an English physician, is one of only four Christians who have been admitted within its walls. (See *Robinson's Pal.*, vol. i. Append. p. 290.) "The arrangements," he remarks, "are so managed as to keep up the external octagonal shape. The inside of the wall is white, and without ornament; and the floor is of grey marble. A little within the W. door, is a flat polished slab of green marble, forming part of the floor, and regarded with peculiar respect by the Mohammedans; a little beyond is a series of 24 blue marble pillars supporting the roof, and inside these are 4 large square columns, forming the support of the dome, which rises about 100 ft. above the floor. The central part is railed round, a single door admitting the devotee to the sacred stone, called the *Hadjr el Sakhara*, on which is shown the print of Mahomet's foot when he was translated to heaven. The whole interior is extremely beautiful, and the effect is much heightened by the blending of colours in the pillars that run round the mosque." (*Richardson's Travels in the Med.*, &c., vol. ii. p. 366.) Within the same enclosure, near its S. wall, is another mosque, of square shape, called *El-Aksa*. The cupola is spherical, and ornamented with arabesque paintings and gildings of great beauty. Between the mosques is a handsome marble fountain for ablutions. On the opposite side of the city, in the Latin quarter, called *Harat el Nassara*, is the church of the Holy Sepulchre, a building in the Byzantine style, erected by Helena, mother of Constantine the Great, in the centre of a court or enclosure, filled at pilgrim-

time with pedlars of every description, especially venders of relics and rosaries. The building resembles Rom. Catholic churches in general, but is greatly inferior, notwithstanding its valuable marbles, to many of the sacred edifices in Rome. Immediately in front of the entrance, which is guarded by Moslem soldiers (who receive a tax from all the pilgrims), is a slightly elevated marble slab, called the "stone of unction," on which, according to the monks, our Lord's body was laid, to be anointed by Joseph of Arimathea; and near it are 17 steps, conducting to the supposed Mount Calvary, now a handsome dome-covered apartment several ft. above the floor of the church, floored and lined with the richest Italian marbles: in the crypt beneath is a circular silver plate with an aperture in the centre, through which the arm reaches the identical hole in which the cross was fixed! The great object of interest, however, is the Holy Sepulchre itself, an oblong structure 15 ft. long by 10 ft. in breadth, roofed in with a handsome ceiling corresponding to the richness of the silver, gold, and marble decorating its interior: it stands directly under the great dome of the church, and is divided into two chambers, the first containing the stone on which the angel sat when he addressed the affrighted women, "Why seek ye the living among the dead? he is not here, but is risen," and the other being the sepulchre to which he pointed, saying, "Behold the place where they laid him." The inner compartment, lined with *verd antique*, is only large enough to allow four persons to stand by the side of a plain white marble sarcophagus of the ordinary dimensions, over which hang 7 large and 44 smaller lamps, always kept burning. Around the large circular hall, which is surrounded by a gallery supported on pillars, and roofed by a vast dome, are oratories for the Syrians, Copts, Maronites, and other sects who have not, like the Greeks, Armenians, and Roman Catholics, chapels in the body of the church. The Greek chapel at the E. end of the hall is parted off by a curtain, and is incomparably the most elegant and highly decorated: the Latin chapel closely resembles those seen in Italy, and has a gallery with a fine organ: that belonging to the Armenians is in the gallery. Various parts of the church are pointed out by monks and pilgrims, as the scenes of certain events connected with the last sufferings of Christ; and to such an extent is superstition carried, that a stone is exhibited and gravely declared to be that on which our Saviour was placed, when put in the stocks! The faith, indeed, of intelligent men is most severely tested during a visit to this church: there cannot, however, be a doubt that it stands on the hill of Calvary, and it probably includes the site of the crucifixion; but there seems to be little ground for the assumption, that the tomb and site of the cross were so near to each other as to be inclosed by the same building. In an antichamber near the entry are several relics, the most authentic probably of which are the sword and spurs of Godfrey of Bouillon. The tombs of Godfrey and his brother Baldwin were destroyed during a fire which took place in 1808, and have not been restored, owing to the ill-will felt by the Greek Christians towards the Romish church, to which these monarchs belonged. Westward of the church just described in the *Harât-el-Nassara*, or Christians' Street, is the Franciscan convent of St. Salvador, called by way of distinction *Il Convento della Terra Santa*, a large stone building, having several courts and

gardens enclosed within a strong wall. The funds are supplied by contributions sent from Rome and other Catholic countries, and the inmates comprise from 60 to 80 monks, chiefly Italian and Spanish, by whom European strangers visiting the Holy City are hospitably entertained. The church attached to the convent is gaudily furnished with candlesticks, images, &c., and has a good organ. E. of the above stands the Greek monastery, a well supported establishment with a small subterranean church. The city castle, close to the gate of Jaffa, is supposed to have been built on the ruins of the *Turris Psephina* of old Jerusalem: it comprises a few towers connected by curtains, and has a few old guns mounted on broken carriages. Close by it, on the ascent to the hill of Zion, is the Armenian convent, in the best-looking district of the city, comprising within its precincts rooms sufficient to accommodate a thousand pilgrims, and a large garden: the conventual church is spacious, and most elaborately ornamented; the floor is paved in the most delicate mosaic. E. of the convent is a small Armenian chapel, marking the site of the house of Annas, the high-priest; and just outside the gate of Zion is another chapel, supposed to occupy the site of the house of Calaphas: these positions seem to be far from improbable. (Compare *Joseph. Antiq.* lib. xviii. c. 3. with St. John xviii. 24.) Not a vestige remains of the ancient buildings on Mount Zion, where David built a palace, his own residence, and that of his successors, whence it was emphatically called the "City of David." Its limits are, however, well defined by the aqueduct which conveyed water from Jerusalem to Bethlehem. The hill-side is now used as a Christian burial-ground. N. of the city, in the district called Acra, are the ruins of Herod's palace, and about 300 yards to the S. E., near the reputed pool of Bethesda, is the residence of the *mutxellim*, or Turkish governor, supposed, though with little show of reason, to occupy the site of the prætorium of Pontius Pilate. It is a large straggling building, having a flat roof, which commands a complete view of the mosque of Omar: it stands in the principal street of the modern city, called by the Turks *Harât-el-Allam*, and by the Christians *Via Dolorosa*, the monks having fixed on it as the line of route along which our Saviour was led from the hall of judgment to Calvary. The Jewish quarter (*Harât-el-Yahoud*) occupies the hollow between the hills of Zion and Moriah: it contains 7 mean and small synagogues; and the numerous private dwellings, how comfortable soever inside, owing, it is said, to the fear of exciting among the Mohammedans any suspicion of the wealth of the despised nation. The poorer Jews are supported by charitable contributions obtained from their fellow-countrymen in Europe, especially in Germany and Spain. (*Turner*, ii. 264.) The Turks reside on the E. side of the city all round the great inclosure of Mount Moriah. The suburbs of Jerusalem abound with interesting remains of less questionable antiquity and authenticity than most of those within the modern walls. Close to the gate of Jaffa is the pool of Gihon, near which, in a village of the same name, "Zadok the priest, and Nathan the prophet, anointed Solomon king over Israel" (1 Kings, i. 34.), and, at a later period, Hezekiah "stopped the upper watercourse of Gihon, and brought it straight down to the W. side of the city of David." (2 Chron. xxxii. 30.) S. of Mount Zion is the valley of Hinnom, in which are numerous tombs hollowed out of the

rock, and a building, once used by the Armenians as a charnel-house. The E. boundary of Jerusalem is formed by the valley of Jehoshaphat, which divides it from the Mount of Olives. Proceeding up this valley, the traveller soon arrives at

"Siloa's brook, that flow'd
Fast by the oracle of God."

The source of these celebrated waters, which now, at least, are brackish and sulphureous, lies close under the walls of *Harat-el-Schereef* on Mount Moriah; but the pool is rather more than $\frac{1}{2}$ m. below it. "The stream," says Mr. Robinson, "issues by an underground passage from a rock, and falls into a small basin of no great depth. It was once covered with a chapel, erected to commemorate the miraculous cure of the man born blind." (St. John, ix. 1—7.) The descent to the lower pool, which is remarkable for its daily ebbing and flowing, is by a flight of 30 steps, whence it has acquired the name of the "fountain of stairs." On the E. side of the brook Kedron, now a mere rivulet, running in a valley so closely pent up as to deserve the name of a mountain-gorge, especially at its N. extremity, are four sepulchres constructed, unlike most in Judea, above ground, and designated the tombs of the patriarchs: one of them is alleged to be the burial-place of Zaccharias, the son of Barachias. (See Matt. xxiii. 29. 35.) S. of these tombs, and under the shadow of the temple of Solomon, is the favourite burial-ground of the Jews, among all of whom the dearest wish is, that they may lay their bones near those of their long-buried ancestors, and be ready for the summons of Jehovah, when He "shall come up to the valley of Jehoshaphat, and there judge all the heathen round about." (Joel, iii. 12.) Further N.E. are the gardens of Gethsemane, enclosed by a wall, and still in a sort of ruined cultivation, and the Mount of Olives, a hillock covered with stunted herbage, and with patches here and there of the tree with which it was once abundantly clothed. Here every spot has its grotto and legend, and on the hill the precise place is pointed out whence the Saviour ascended to heaven. The Empress Helena built on it a monastery, which the Turks have converted into a mosque; somewhat to the N. is the Church of the Ascension, now in the hands of the Greek Christians. N. of the bridge, over the brook Kedron, and about 250 yds. from St. Stephen's Gate, is the reputed tomb of the Virgin Mary, comprising, besides several cenotaphs, a subterraneous chapel, in which lamps are kept constantly burning, and services daily celebrated according to the rites of the Greek church. Passing thence up the bank of the Kedron, and crossing the hill Bezetha, the stranger is conducted to the excavations called "the Tombs of the Kings." The road down to them is cut in the rock, and a stone doorway leads to a kind of anti-chamber, now at least, open at the top, and measuring 50 ft. in length by 40 ft. in breadth. It is ornamented by a beautifully carved cornice, and in the S.W. corner a door, formed of a single stone slab, admirably adapted to its framework, and easily working on its hinges, leads into a series of chambers, round which are niches in the rock for the reception of the dead. It is very probable that these are the "royal caves" described by Josephus, as situated close to the N. boundary of the ancient city (see *Bell. Jud.* lib. v. c. 4.); but whether they contained the bones of the sons of David (2 Chron. xxxii. 33.) or those of Helena, queen of Adiabene (as Drs. Clarke and Pococke have supposed), is a

matter as to which no certain conclusions can be drawn.

Jerusalem, considered as a modern town, is of very slight importance. Superstition and fanaticism constitute the principal bond by which the pop., Christian, Jew, and Moslem, are held together. The Jew despises the Christian, and the follower of the prophet looks down with contempt on both; but pilgrims of each of the three creeds resort thither in such numbers as to increase the pop. nearly a half; and heavy taxes are levied on all for the benefit of the pacha. The convents are supported by wealth sent from foreign countries, and a great influx of property takes place from the thousands of annual visitors, rich and poor, so that Jerusalem draws largely on Jaffa, Damascus, Nablous, and other places; but it has no industry whatever—nothing to give it commercial importance, —unless, indeed, we may mention a trade, now almost wholly engrossed by the monks of the *Terra Santa* convent, in shells, beads, and relics, whole cargoes of which are shipped from Jaffa for Italy, Spain, and Portugal. The shells are of mother-of-pearl sculptured, and the beads are manufactured either from date-stones or a hard kind of wood called *Mecca fruit*. Rosaries and amulets are also made of the black fetid limestone, and are highly valued in the East as charms against the plague. (See *Bowring's Report on Syria*, p. 21.) The retail trade seems to be equally insignificant. "The bazaar, or street of shops," says Mr. Robinson, "is arched over, dark, and gloomy, the shops are paltry, and the merchandise exposed for sale of an inferior description. This is the only part of Jerusalem where any signs of life are shown: and even here the pulsations of the expiring city are faint and almost imperceptible, its extremities being already cold and lifeless. In the other quarters of the town you may walk about a whole day without meeting with a human creature." Well, then, may the Jews, who still indulge the hope of restoring their metropolis to its pristine greatness, lament, with the prophet Jeremiah, "From the daughter of Zion all her beauty is departed. Jerusalem hath grievously sinned; therefore, she is removed. The adversary hath spread out his hand, and the heathen hath entered into her sanctuary. All her people sigh and seek bread: see, O Lord, and consider, for I am become vile." (Lam. i. 6—11.) Nothing, indeed, can well be conceived so vile, so degrading, as the mummeries enacted in the Holy City, especially during the Easter festival. The monks, who are servants of Mammon rather than of Christ, act on these occasions as showmen, and masters of the ceremonies; and even the pilgrims, who crowd to the Sepulchre in such numbers as to make order impossible, too frequently exhibit the greatest levity and unconcern. "What a scene was before me," says Mr. Turner. "The whole church was absolutely crammed with pilgrims, men and women halloing, shouting, singing, and violently struggling to be near the Sepulchre. One man in the contention had his right ear literally torn off." (ii. 198.) A few years ago, during the representation of the blasphemous pantomime, entitled "the Holy Fire" (intended to represent the descent of the Holy Spirit), the pressure was so intense, 6,000 persons being assembled on the ground-floor, that great numbers fainted, a general confusion ensued, and upwards of 300 were either suffocated or crushed to death. (*Wilde's Narr.* vol. ii. p. 212.) In fact, the whole scene is revolting to every rational and really devout Christian. Such, however, is the strength

of superstition, that a pilgrimage to Jerusalem is still regarded, in many parts, as an act of the highest merit, and as bringing with it the assurance of eternal felicity.

The local government of Jerusalem is conducted by the *mutesarrif*, or military governor; the *mukaddim*, or chief of the police, the *mufiti*, or chief judge; the *capo-wards*, or superintendent of the mosque of Omar; and the *shahs*, or town-mayors; all of whom, except the *mufiti*, hold their appointment under the pacha of Damascus.

Jerusalem has been usually supposed to be identical with the Salem of which Melchisedek was king in the time of Abraham, anno 1913 A.C., according to Aps. Usber. When the Israelites entered the Holy Land 300 years afterwards, it was in the possession of the Jebusites, descendants of Canaan. Joshua, soon after his entrance into Canaan, "fought against Jerusalem, and took it, and smote it with the edge of the sword, and set the city on fire" (Judges, i. 8.); but the citadel on Mount Zion was held by the Jebusites till they were dislodged by David, who made Jerusalem the metropolis of his kingdom, and his dwelling in "the strong-hold of Zion." (2 Sam. v. 7.) He enlarged the city and built a beautiful palace. It was further embellished by his son Solomon, who in the years 1012—1006 A.C. erected the temple already referred to. Palestine was afterwards successively invaded by the Egyptians, Assyrians, and Babylonians, the last of whom, under Nebuchadnezzar (A.C. 588,) took and destroyed the city, burnt the temple, and carried the people captive to Babylon. After a bondage of nearly 70 years the Jews were restored to their city, by Cyrus the Persian, and about anno 515 A.C. they rebuilt the temple, under the superintendence of Zerubbabel and Nehemiah. Alexander the Great is said, by Josephus, to have visited Jerusalem in peace, and to have respected the religion of the Jews, but the best critics reject this statement as inconsistent with the ascertained events in the life of Alexander, and unworthy of credit. (*Ancient Universal History*, viii. 534, 535; *Maffei's Greece*, vii. 532.) Ptolemy Soter, one of Alexander's generals, seized upon Syria and Palestine, sacked the Holy City, and carried off a large portion of its inhabitants to Alexandria. Later monarchs of the Macedonian empire, who attempted to introduce the pagan worship, were successfully opposed by the Maccabees, and the liberty of Judaea was at length restored, anno 105 A.C. The all-absorbing power of Rome finally put a period to Jewish independence, the whole of Syria being reduced by Pompey, and made a provincial province. This great general, who took Jerusalem after a stout resistance, entered the temple, and explored its inmost recesses; and it is mentioned to his honour, that he touched none of the precious relics, or of the vast wealth accumulated in the sanctuary. *Victor ex illo feno nihil attigit.* (Cicero pro L. Placco, § 32.) Jerusalem, however, was merely tributary, and had not lost its nominal sovereignty (in other and prophetic words, the sceptre had not departed from Judah, nor a banner from between his feet until Shiloh had come, Gen. xlii. 10.) till after the birth of Christ, when it became the residence of a procurator. The repeated rebellions of the Jews at length roused the vengeance of the Romans; and, A.D. 70, the city was taken by Titus, after one of the most memorable and destructive sieges of which history has preserved any account. The Jews, though rent by intestine factions, defended themselves with invincible obstinacy; they contemptuously rejected every

proposal for a surrender, and braved alike the attacks of the Romans, and the still more dreadful attacks of famine. But their resistance was unavailing, except for their own destruction; and the city, being taken, was completely destroyed, along with the temple — three towers only being left as memorials of its existence and destruction. According to Josephus, no fewer than 1,100,000 persons fell in the siege, exclusive of above 100,000 taken prisoners. But notwithstanding what has been alleged in defence of this statement by Brohier (Note ad lib. v. § 12. *Hist. Turch.*) and others, there can be no reasonable doubt that it is grossly exaggerated. The statement of Tacitus would seem to be infinitely more probable, though we incline to think that even it is, perhaps, beyond the mark. "Pervicacissimus quisque illuc perfluebat; neque seditionis agebant. Tres duces, totidem exercitus: prelia, dolus, incendia inter ipso, et magna vis fragmenti ambusta. Multitudinem obsessorum, omnis astutia, viris ac mulieribus acris, assectuta millia fuisse accipimus. Arma cunctis qui ferre possent; et plura, quam pro numero, sudabant. Obstinatio viris feminisque par; ac si transferre oedes cogerentur, major vite metus quam mortis." (*Hist. lib. v. c. 12. & 13.*) Adrian raised the city to the ground, ploughed up a great part of the surface, and built on its site the Roman town of *Ælia Capitolina*. The condition of Jerusalem at this pe

State of Jerusalem.

When Christianity, in the reign of Constantine, became the established religion of the Roman empire, Jerusalem, in name at least, was restored by the zealous Helena. The idol temples were destroyed, and several churches and other buildings were erected on sites supposed to be connected with the events of Christ's history; in short, no efforts and expense were spared in the attempt to raise the Holy City to its rank as the metropolis of Christendom. The period of prosperity thus commenced terminated in 638, by the conquest of Omar, who made the city tributary, heavily taxed the pilgrims, and desecrated the site of the temple, by erecting on it a mosque in honour of Mahomet.

After being more than 600 years subject to the Arabian caliphs, Jerusalem fell into the hands of the Turks, who proved still more oppressive masters than any of their predecessors. The resentment and sympathy of the princes and people of Christendom were awakened by Peter the hermit, and the crusades were undertaken to rescue the natives and pilgrims of Palestine, and above all the holy sepulchre, from the dominion of infidels. The Christian army reached Jerusalem in the summer of 1099. "Godfrey of Bouillon erected his standard on Mount Calvary: the time of the siege was fulfilled in forty days of calamity and anguish, during which the soldiers suffered intensely from hunger and thirst. At length, on a Friday, the day and hour of the Passion, Godfrey stood victorious on the walls of Jerusalem:

* It should be acknowledged, however, that the events of Josephus, like those of Herodotus, Thucydides, Arrian, and others, in more important, may, perhaps, be ascribed less to the author's immortality than to the old-fashioned writing in 1811, in which the narrative is affected by single names, and mistakes, though easily corrected, are detected with extreme difficulty. In general points of history and geography, Josephus's works should be considered the only source of the history of Palestine.

his example was followed on every side by the emulation of valour; and about 460 years after the conquest of Omar, the Holy City was rescued from the Mohammedan yoke. A bloody sacrifice was offered to the God of the Christians: resistance might provoke, but neither age nor sex could mollify their implacable rage: they indulged themselves three days in a promiscuous massacre, and the infection of the dead bodies produced an epidemic disease." (*Gibbon* xi. 84.) Saladin, 88 years afterwards, appeared in arms before Jerusalem: some feeble and hasty efforts were made for its defence, but within 14 days the banners of the prophet were erected on its walls. Saphadin, the brother of Saladin, destroyed, in 1218, all that remained of the fortifications of this devoted city, and reduced the population to a servile subjection to the Mohammedans. A series of changes subsequently occurred; but Jerusalem came finally into the hands of Selim in 1519, since which the Turkish flag has always floated over its sacred places. For more than three centuries its fortunes have been stationary: crowds of pilgrims fill its streets at one season of the year, creating a temporary activity, and increasing the revenues of the Turkish officers; but at all other times its condition recalls forcibly the complaint of Jeremiah:—"The city sits solitary that was full of people: she is become as a widow: she that was great among the provinces is become tributary. Her gates are desolate. . . . All her beauty is departed. . . . Filthiness is in her skirts."

Among the principal authorities for this article are *Richardson's Travels along the Med.*, ii. 221, &c.; *Henniker's Travels*, p. 173—198.; *Clarke*, iv. 288—394.; *Elliot's Travels in Turkey*, ii. 416—449.; *Robinson's Trav. in Pal. and Syr.*, ch. 5—9.; *Châteaubriand, Voyage, &c.*, ii. 116—180.; *Wilde's Narrative*, ii. 180—259.; *Taciti Hist.*, lib. v. and vi.; *Josephus*, passim, but particularly *Jud. Bell.*, l. vi. and vii.; and the *Bible*.

JESI (an. *Æsium*), a town of Central Italy, papal states, deleg. Ancona, on the Fiumesino (an. *Æsis*), 16 m. W.S.W. Ancona. Pop. about 6,000. It is walled, and has a handsome main street, three large squares, a cathedral, and six other churches, many convents, a theatre, &c. It is a bishop's see. It has manufactures of silk and worsted stockings. *Æsium* anciently bore the rank of a Roman colony. Numerous antiquities exist on the banks of the river in its neighbourhood. (*Rampoldi, Corografia, &c.*)

JESSELMERE, or JAYSULMERE, a state of N.W. Hindostan, prov. Rajpootana, subsidiary to the British, and one of the five principal Rajpoot principalities, between the 25th and 26th parallels of N. lat., and the 69th and 72d of E. long. Area estimated at 10,000 sq. m. Pop., perhaps, near 300,000. (*Burnes in Geog. Journ.* iv. 3.) Surface uneven, and intersected with rocky hills: it is not watered by any considerable stream, has little arable land, and is hardly, in truth, more productive than the sandy desert that encompasses it. Cultivation is, consequently, very limited; and the parts which are cultivated yield only the coarser grains, which form the food of the inhab. Irrigation is effected with great labour, chiefly by means of very deep wells and tanks; but large and spacious tanks occur every 2 or 3 m., and rain water is carefully preserved, the periodical rains being scanty and uncertain. The heat of summer is oppressive, but the cold of winter is sufficiently great for the tanks to be covered with ice every morning during a part of Jan. Mineral products few; the chief are primary limestone and lithographic stone: no metals appear to be found. Wood is scarce. The better kind of houses are of stone; the others mere conical grass huts. The open nature of the country frees it from the most formidable wild animals: foxes, wolves, hyenas, and jackalls, are indeed met with, as are several kinds of antelopes, game of various kinds, wild ducks, &c.; but the uncertainty of water hinders both the animal and vegetable kingdom from thriving. Jesselmere is better suited for grazing than agriculture; but neither herds nor flocks are numerous. The horned cattle are of medium size, and in different quality: the sheep, though small, have excellent

wool. The mass of the pop. consists of Bhattee Rajpoots. The commerce of Jesselmere is perfectly insignificant; what little wealth it does possess arises from its being on the chief road between Central India and the Indus; and the duties imposed on the transit of merchandise passing by it constitutes the chief resources of its ruler. It has no exports of its own; and its only manufacture is that of woollen cloth of a very fine texture, but in no demand elsewhere. Indigo and cotton cloths are imported from Malwah, sugar from Jeypoor and Delhi, iron and brass from Nagore. From 20 to 25 thousand maunds of opium pass annually through Jesselmere to Sind; the return articles of transit thence being sulphur, assafoetida, rice, and tobacco. The revenues of the rajah do not amount to 2 lacs of rupees yearly, more than half of which is derived from transit duties. The remainder is made up of fines, levies, salt taxes, and the land revenue, which latter is about 1-10th or 1-11th part of the nett produce. About 1,200 rupees are derived yearly from the salt monopoly, some portion of which article is obtained in the principality; but most of it, as well as of grain, is imported from the neighbouring states. Jesselmere contains 2 towns and 84 villages; but except in its cap., every where betrays the strongest marks of poverty.

JESSELMERE, a town of N.W. Hindostan, prov. Rajpootana, cap. of the above rajahship, 120 m. W.N.W. Jeypoor; lat. 26° 56' N., long. 70° 54' E. Pop. probably 20,000. (*Burnes*.) It is of an oval shape, about 2 m. in circuit, and surrounded by a rampart of loose stones. At its S.W. angle is a fort built on a scarped rock about 80 or 100 ft. higher than the city; and it presents a commanding appearance externally, and is in reality a place of considerable strength. It is of a triangular shape, its two longest sides, about 300 yards in length each, facing the W. and N. The only entrance is on the N. side, leading through several narrow and strong gates. The whole of the works are of firm substantial masonry, and comprise a vast number of towers (the natives say 175). These stud the brow of the hill on all sides, and give it a very remarkable appearance; some are as much as 40 ft. in height. This fortress is the residence of the rajah, and is supplied with water from wells 80 fathoms deep. The town is regularly laid out, and, for an eastern city, its streets are wide. Its houses are lofty, spacious, terrace-roofed, and built entirely of a hard yellow limestone, sometimes elegantly carved. Some opulent merchants reside at Jesselmere, it being on the great commercial route from Malwah to the port of Kurachee. (*Burnes in Geog. Journ.*, iv. 105—115.)

JESSORE, a distr. of British India, presid. and prov. Bengal, chiefly between the 22d and 24th degs. of N. lat.; and the 89th and 90th of E. long.; having N. the main stream of the Ganges, separating it from the distr. Rajeshaye; E. Dacca and Backergunge; W. Nuddea and the 24 Pergannahs, and S. the Bay of Bengal. Length, N. to S., about 160 m.; average breadth, 32 m. Area, 5,180 sq. m. Pop. (1822) 1,183,590. It is a flat country, intersected by numerous interlacing branches of the Ganges; its S. part comprises a portion of the region called the Sunderbunds; and on the shore are many extensive marshes, in which salt is largely made on government account. The soil is very fertile, and a good deal of rice is grown. Indigo, tobacco, mulberry, betel nut, and long pepper, are also raised; but a great proportion of the land is uncultivated, and covered with jungle. Chief towns, Jessore or Moorley, the residence of the Zillah authorities, Culna, and Mahnudpoor. Land revenue (1829-30), 120,935l. (*Hamilton's E. I. Gaz.*; *Parl. Reports*.)

JEYPOOR, or JYEPOR, a city of N.W. Hindostan, prov. Rajpootana, cap. of a subsidiary state of the same name, in a barren valley, 150 m. S.W. Delhi; lat. 26° 55' N., long. 75° 37' E. Pop. estimated at 60,000. This is altogether the handsomest and most regularly built city of Hindostan. It is surrounded by a battlemented wall of grey stone, flanked with towers, and defended or commanded by a citadel and a line of forts on the adjacent heights, a few hundred feet in elevation. Jeypore is laid out, like most modern European and American cities, in regularly square blocks of houses. A main street, 2 m. long, and about 40 yards broad, traverses it W. to E., and is crossed at right angles by four others of equal width, though much shorter. At the points of intersection are spacious market-places; and there are two good squares, which, like the principal streets, are crowded with shops. The great thoroughfares are, however, disfigured by hovels, platforms, and stalls, erected along the centre of them, which detract greatly from their appearance. The houses are generally 2 stories high, but some are 3 or 4 stories, with ornamented windows and balconies, and are often adorned with frescoes and sculptures. The chief public edifice of Jeypoor is a magnificent palace, constructed, it is said, by an Italian architect, in the 15th century, for the rajah Jey Singh, under whose reign this city was one of the principal seats of Hindoo learning. This palace, with its fine gardens, occupies about 1-6th

bour, the narrow entrance to which has 12 fathoms water in the centre of the channel. It is protected by several strong batteries and forts, and a light-house is constructed on a rock at the N. side of its entrance. The town extends along nearly the whole N. side of the port. It consists mostly of one main street, about 1 mile in length, and from 40 to 50 ft. broad, from which, at almost every step, stages, called *fish-flukes*, project into the sea. There are some good stone and brick houses, and other handsome buildings, erected principally since the great fires that devastated St. John's in 1816 and 1817; but most part of the town is built of wood, and, with all its improvements, it still bears the aspect of a mere fishing station.

"In time of war, St. John's is a place of great importance. There are a great number of shops, and a still greater number of public houses, in proportion to its size, in this than in most towns. Commodities were formerly dear; at present, shop goods are as low as in any town in America; and fresh meat, poultry, and vegetables, though not so cheap as on the continent, are not unreasonably dear.

"The pop. of St. John's fluctuates so frequently, that it is very difficult to state its numbers, even at any one period. Sometimes, during the fishing season, the town appears full of inhabitants; at others it seems half deserted. At one time, they depart for the seal fishery; at another to different cod-fishing stations. In the fall of the year, the fishermen arrive from all quarters to settle their accounts with the merchants, and procure supplies for the winter. At this period St. John's is crowded with people; swarms of whom depart for Prince Edward Island, Nova Scotia, and Cape Breton to procure a livelihood in those places, among the farmers, during winter. Many of them never return again to the fisheries, but remain in those colonies; or often, if they have relations in the U. States, and sometimes when they have not, find their way thither.

"Society in St. John's, particularly when we consider its great want of permanency, is in a much more respectable condition than might be expected; and the morals and social habits of the inhab. are very different from the description of Lieutenant Chappell, who represents the principal inhab. as having risen from the lowest fishermen, and the rest composed of turbulent Irishmen, both alike destitute of literature. The fishermen, who are principally Irishmen, are by no means altogether destitute of education: there are few of them but can read and write; and they are, in general, neither turbulent nor immoral. That they soon become in Newfoundland, as well as in all the other colonies, very different people to what they were before they left Ireland, is very certain. The cause is obvious; they are more comfortable, and they work cheerfully. When, after a fishing season of almost incredible fatigue and hardship, they return to St. John's, and meet their friends and acquaintances, they indulge, it is true, in idleness for a short time, and occasionally in drinking; but when the hazardous life they follow is considered, we need not be surprised that they do so, especially in a place where rum is as cheap as beer in England." (*McGregor's British America*.)

Fort Townshend, on a steep height above the town, was formerly the residence of the governor; but a new edifice has been recently built for this purpose, on so extravagant a scale, that it is said to have cost 80,000*l*. The custom-house, church, and other public buildings present nothing remarkable. A Lancastrian school, with a government endowment of 100*l*. a year, was attended, in 1836, by 216 boys; a girls' school with 600 pupils, chiefly supported by voluntary subscriptions to the amount of about 360*l*. a year; and various other schools and benevolent associations. The inhab. are generally possessed of the rudiments of education, and many of them pretty well informed. Several weekly newspapers are published in the town. Most of the pop. are R. Catholics, and this is the see of a R. Catholic bishop. It is a good deal agitated by party contentions.

In 1838, 110 vessels, of the aggregate burden of 9,300 tons, were fitted out, at St. John's, for the seal fishery. Agriculture is scarcely pursued at all in the neighbourhood; the ground being rugged and stony. Potatoes form the chief crop. Provisions and other commodities, are dearer than on the American continent, from which, indeed, they are mostly imported. (For the import and export trade of St. John's, &c., see *NEWFOUNDLAND*.) (*McGregor's Brit. America*, i. 165—173.; *Parl. Papers*.)

JOHNSTON, a manufacturing town of Scotland, par. of Paisley, co. Renfrew, on the Black Cart, 3 m. W. Paisley, and 18 m. W. by S. Glasgow. The rise of this town is remarkable, being more rapid than that of any other place in Scotland: the ground on which it now stands began, for the first time, to be feued or let on building leases in 1781, when it contained only *few* persons. In Oct. 1782, 9 houses were built, and 2 more were being erected. In 1792, the inhabitants amounted to 1,434; in 1811 to 3,647; in 1831 to 5,617; and

now (1840) they are estimated at upwards of 7,000. The place was formerly called "the Brig o' Johnston," from a bridge over the river in the immediate vicinity. It is built on a regular plan, and lighted with gas. There are two squares, besides numerous streets, and public works. The houses are, for the most part, of good mason-work, two and three stories in height. To each house is attached an adequate extent of garden ground. It has an established church, and various dissenting places of worship. In its immediate neighbourhood is Johnston Castle, the residence of Mr. Houston, lord of the manor. There are excellent grammar and English schools; two reading-rooms, three public libraries, several printing presses; various booksellers, lawyers, medical practitioners, &c. The civil polity of the town is managed by a committee elected annually by the feuars. A monthly justice of peace court is held in the assembly rooms.

Johnston is chiefly distinguished for its manufactures. It had, in 1839, 15 cotton mills, employing in all 1,456 persons, of whom 694 were between 9 and 18 years old. This is exclusive of mills at Elderslie, Linwood, and other places in the immediate vicinity. With two slight exceptions, the mills are all propelled by water. There are, besides, in Johnston, two brass and two iron foundries, on an extensive scale; with five machine manufactories, employing 120 individuals, as well as various minor branches of industry. The Glasgow and Ardrossan Canal, projected in 1806, has been completed only from Glasgow to Johnston. It was on this canal that light iron boats, or gig-boats, for the rapid conveyance of passengers, were first (1831) tried and established. The Glasgow, Paisley, Kilmarnock, and Ayr Railway passes Johnston; so that this village enjoys every advantage in the way of internal intercourse. Near Johnston are four collieries. (*Factory Reports; Fowler's Com. Direct. for Renfrewshire; New Stat. Acc. of Scotland, & Renfrewshire*, pp. 201—203.)

JOIGNY (an. *Joviniacum*), a town of France, dép. Yonne, cap. arrond., on the Yonne, 15 m. N.W. by N. Auxerre. Pop. (1836), 4,700. A handsome quay runs along the bank of the river, above which the town rises on a steep declivity, crowned with the remains of an ancient castle. Joigny is surrounded with old walls, and entered by 6 gates; it has 2 suburbs, with one of which it is connected by a handsome stone bridge of 6 arches across the Yonne. The streets are narrow, steep, and inconvenient; but some of the houses are good. It has a cathedral built in the 15th century, 2 other Gothic churches, cavalry barracks, &c., with vinegar and other factories. (*Hugo, art. Yonne*.)

JORDAN (Arab. *Sheriat-el-Kebir*), a river of Palestine famous in sacred history; it rises in lat. 32° 35' N., long. 33° 26' E., a few miles N. of Banias (the an. *Cæsarea Philippi*), in a small pool formerly called *Phiala*, on the W. slope of Djebel-es-Sheikh, the *Antilibanus* or *Mount Hermon* of antiquity. After a S. course of about 40 m., during which it crosses the fenny Bahr-el-Hool (an. *L. Merom*), it opens into the lake Tabariah or *Gennesareth*, close to the ancient town of Bethsaida. At the S. end of this fine sheet of water (15 m. long, and about 7 broad), on and near which occurred so many striking scenes in the history of Christ, the Jordan enters a narrow pent-up valley called el-Ghor, and after running through it with a tortuous southerly course of about 90 m., empties its waters into the Dead Sea, its entire length being about 150 m. The discoveries of Burckhardt in the Wady-el-Araby, which he traced completely up from the Red Sea to the lake Asphaltites, have led to the supposition that before the volcanic movement which so altered the surface, this river had a continuous course down this valley to the gulph of Akabah (see *DEAD SEA*). Its tributaries on the W. side are mere torrents, one of the largest of which is the brook *Kedron*, rising in the suburbs of Jerusalem: the E. affluents comprise the *Sheriat-el-Mandhur* (an. *Jarmok*, Gr. *Ἰερμόης*), and the Wady Zerka, which is the scriptural *Jabbok* (see *Deut. iii. 16*). The breadth and rapidity of the stream vary in different parts and at different seasons. The floods occur in Feb. and March, and at that season, when filled with the melted snow of Mount Lebanon, it is from 80 to 70 yds. wide, and about 17 ft. deep, with a current so rapid that it is not safe even for an expert swimmer to bathe in it. In the dry seasons it is low, and has a comparatively languid current; and to this circumstance, probably, may be attributed the discrepancies in the statements respecting the nature and magnitude of the river. The channel, however, as appears from Maundrell and Burckhardt, having cut its way through a loose sandy soil, is much deeper now than formerly, and the waters, even in floods, run within narrower limits. A second and higher bank now skirts the actual bank at about a furlong's distance on either side, and the intervening space is so filled up with bushes and trees (tamarisks, willows, oleanders, myrtles, &c.) that the stream is completely hidden from view till its

upper and dry channel has been passed. Lord Lindsay says:—"The river is concealed till you are close upon it, by dense thickets of trees, reeds, and bushes, 'the pride of Jordan' (Zech. xl. 3.), growing luxuriantly to the very water's edge. The lions, hippopotami, &c. (Jer. xlix. 19.), that formerly haunted these thickets are extinct; but wild boars are still found there." "The nightingales," says the same writer, "sung in the cool, starlight night from the trees; and the scene altogether was most delightful." (*Travels in Egypt, and the Holy Land*, vol. ii. p. 65.)

The water is described by Robinson as being rather warm than cold, of a white sulphureous colour, but free from any taste or smell. On analysis, however, it proves to be strikingly dissimilar to that of the Dead Sea; for while the latter contains $\frac{1}{2}$ part of its weight of salts, the former has only $\frac{1}{300}$ th part of the proportion of solid matter contained in the water of the lake. (See *Dr. Marcat, Phil. Trans. for 1807.*)

The Jordan has been the scene of many events in which biblical scholars must be deeply interested. This river valley was the dwelling of Lot, who "pitched his tents towards Sodom," the men whereof "were wicked, and sinners before the Lord exceedingly." Here the four kings, persecuted by the five powerful princes close to the Salt (or Dead) Sea, fought, and regained their liberty; and the power of the latter was afterwards destroyed by divine interference. (*Comp. Gen. xiv. 1-12., with xix. 24-26.*) At a later, but still very early historical period, when the clans of Israel were returning, after an absence of four centuries, to the possessions of Abraham, the great sheikh of a nation that was yet only in the nomad state, the ark, by command of Jehovah, was carried by the priests before the people into the stream, and "the waters which came down from above, stood and rose up upon an heap; and those that came down towards the sea of the plain, even the Salt Sea, failed, and were cut off; and the people passed over right against Jericho." (*Josh. iii. 14-16.*) It is said that the prophets Elijah and Elisha afterwards divided its waters to prove their divine mission, and the special fact that "the spirit of Elijah doth rest on Elisha." (*2 Kings, ii.*) In Christian times, it has been celebrated as the stream in which Jesus Christ received from John the baptism which prepared him for the ministrations destined to exercise so important an influence over mankind. By modern devotees in Palestine, as elsewhere, indeed, throughout Christendom, the spirit of this institution has been forgotten, and a superstitious attention to the form substituted in its stead; hence, every year pilgrims, at the great Easter season (about April), are found rushing, young and old, rich and poor, sick and sound, men, women, and children, into the stream. "All," says Mr. Elliott (an English clergyman), "carried with them the piece of cloth with which they wished to be enveloped after death." The Moslems ridicule these vain ablutions, and their violation of decorum; and the Protestant cannot but lament the degradation they exhibit. (*Burckhardt's Syria*, p. 260-412; *Elliott's Travels*, vol. ii. p. 476; *Stephens's Inc. of Travel*, vol. ii. p. 261; *G. Robinson's Palestine*, vol. i. p. 69-75; *Mod. Trav.*, &c.)

JORULLO, JURUYO, or XURULLO, an active volcano of Mexico, state of Valladolid, in an extensive plain 70 m. S.S.W. the city of that name, and 80 m. from the Pacific; remarkable not only for its extent, but as being the only volcano of any consequence that has originated in New Spain since its conquest by Europeans. Its origin was, perhaps, one of the most tremendous and extraordinary phenomena that has ever been witnessed; for in one night there issued from the earth a volcano 1,600 ft. high, surrounded by more than 2,000 apertures, which still continue to emit smoke. Humboldt, who visited Jorullo, describes its appearance and formation nearly as follows:—"A vast plain extends from the hills of Aguasarco, to near the villages of Teipa and Petatlan, from 2,460 to 2,624 ft. above the level of the sea. In the midst of a tract of ground, in which porphyry, with a base of greenstone, predominates, basaltic cones appear, the summits of which are crowned with evergreen oaks, small palm trees, &c., their beautiful vegetation forming a singular contrast with the aridity of the plain, laid waste by volcanic fire. Till the middle of the 18th century, fields cultivated with sugar-cane and indigo occupied the extent of ground between the rivers Cultamba and San Pedro. From June 1759, hollow subterranean noises, accompanied by frequent earthquakes, succeeded one another for from 50 to 60 days. At length, in the night between the 28th and 29th of Sept., a tract of ground from 3 to 4 sq. m. in extent, which goes by the name of *Malpays*, rose up in the shape of a bladder. The bounds of this convulsion are still distinguishable in the fractured strata. The *Malpays*, near its edges, is only 39 ft. above the old level of the plain called the *Playas de Jorullo*; but the convexity of the ground thus thrown up increases progressively towards the centre to an elevation of 524 ft.

Flames were now seen to issue forth, it is said, for an extent of more than $\frac{1}{2}$ sq. league; fragments of burning rocks were thrown up to prodigious heights; and, through a thick cloud of ashes, illumined by volcanic fire, the softened surface of the earth was seen to swell up like an agitated sea. The rivers of Cultamba and San Pedro precipitated themselves into the burning chasms. Thousands of small cones, from 6 to 9 ft. in height, called by the natives *hornitos* (ovens), issued forth from the *Malpays*, from each of which a thick vapour ascends to the height of from 20 to 50 ft. In many of them a subterraneous noise is heard, which appears to announce the proximity of a fluid in ebullition. In the midst of the ovens, six large masses, elevated from 1,312 to 1,640 ft. each above the old level of the plains, spring up from a chasm, the direction of which is from N.N.W. to S.S.E. The most elevated of these enormous masses, the great volcano of Jorullo, bears some resemblance in shape to the *Puy de Auvergne*, in France. It is continually burning, and has thrown up from the N. side an immense quantity of scorified and basaltic lavas, containing fragments of primitive rocks. These great eruptions of the central volcano continued till Feb. 1760. In the following years they became gradually less frequent; but the plains of Jorullo, even at a great distance from the scene of the explosion, were long uninhabitable, from the excessive heat which prevailed in them."

The Cultamba and San Pedro totally disappeared on the occasion above mentioned; but two new streams are now seen bursting through the argillaceous vault of the *hornitos*, having the appearance of mineral waters, in which the thermometer rises to 126° Fahr. The Indians give these streams the names of the former rivers, because, in several parts of the *Malpays*, great masses of water, with which they are supposed to be continuous, are heard to run in a direction from E. to W., as the Cultamba and San Pedro did originally. Jorullo is situated in the great volcanic band of Mexico, which runs E. and W., nearly at right angles, to the Cordillera, including the peaks of Orizaba, Puebla, Toluca, Tancitaro, Colima, &c.; and of which Humboldt conjectures the Revillagigedo islands, in the Pacific, may mark the continuation. (*Humboldt; Ward's Mexico; Encyc. Americana; Mod. Trav.*, xxvi. 121-127.)

JOUNDPOOR, or MARWAR, a state of N.W. Hindostan, subsidiary to the British, and the most extensive and powerful in Rajpootana; between the 24th and 28th deg. of N. lat., and the 70th and 75th deg. of E. long.; having E. the states of Odeypoor and Jeypoor, and the British territory of Ajmere, from which it is separated by a mountain range; N. Bikanere; W. Jesselmere, and Sinde; and S. some smaller rajahships on the borders of Gujrat. Length, E. to W., about 260 m., by about the same breadth. Area estimated at 70,000 sq. m. Pop. uncertain.

Joundpoor and Jesselmere (which see), may be taken as pretty fair types of the several Rajpoot states of N. W. India; the former being, however, the most extensive and valuable of any, and the latter the least so. The wealth of Joundpoor has been much undervalued; and it has been erroneously considered as a portion of the sandy desert. Its exports in wheat are considerable; the soil is favourable to many other kinds of grain; and its central parts are highly productive. The country consists generally of open plains; the hills being almost confined to the S. The soil is not arid (as in Jesselmere, Bikanere, &c.); but is almost every where watered by torrents, and affluents of the Loonee or Salt river. This river rises in Ajmere, and flows through the centre of Joundpoor to enter the Runn of Cutch. Its waters are distributed over the adjacent wheat lands, which extend along its banks from Ajmere to the Runn, by means of earth aqueducts, sometimes a mile in length. The fields are surrounded with dykes to prevent the egress of the water; and being thus irrigated, Joundpoor produces heavy crops of barley, *bajree*, *jowaree*, and other kinds of grain. Neither the climate nor soil is favourable to the poppy; but an inferior kind of opium is grown in the E., where it is an article of large consumption and export. Tobacco is produced in some parts; but not in a sufficient quantity to supersede the necessity of importing it from Gujrat. Cotton is an important article of produce. Marwar is celebrated for its camels, which may be purchased in every village, at from 50 to 60 rupees each, and which have contributed greatly to the commercial importance of the state, by facilitating the conveyance of almost every kind of goods. Goats, sheep, and hogs are numerous; mutton is good, but the wool is not so much prized as that of the poorer countries. (*Jesselmere, &c.*) Salt is a very important article of produce. Large tracts are impregnated with it, especially about Punchpuddur, on the Loonee towards Cutch. It is got by digging pits of about 120 ft. by 40, and about 10 ft. deep in the saline soil. A jungle shrub is then thrown in upon the water which exudes; this assists the crystallisation, and in the course two years, the moisture having evaporated, a mass of salt, some-

from 6 to 8 ft. deep, is left. The commerce of Joundpoor is extensive, its great export being Pulses, about 40 to 50 % of the crop. The town is the entrepot between the N. coast and Upper India, and the largest by which the Maratha system is regulated to China and W. Asia. The best trade of Pulses is to Upper and for all pulses proceeding into the exports were never less than 100,000 mowahs and influence 1000. A capital of 100 mowahs of 10 mowahs, and the Pulses market exceeds that of Bombay, which would give an estimate of 1000 to 10,000 mowahs. The export is sent by land to Burmah to India, a distance of 100 m. where it is shipped to Calcutta. The export of this journey are very great in comparison with a distance are obtained by the route of Joundpoor, Benares and other cities, through which the pulses pass. The Joundpoor government alone demands 10 mowahs per mowah sent. It is customary with the Pooné government to assign state rights to contributors, who agree to deliver a sale of 1000 mowahs, assigned by English planter or otherwise, on the strength of his report for each season. The state reports of the quality of the pulses in Joundpoor, Benares, &c. and has some extensive dealings in such with which it supplies the upper parts of Bengal and in direct or parts of Upper India. It imports from China, by its more remote, tea, muslin, &c. &c. from Lahore, Cashmere shawls from Delhi and Joundpoor, shawls, muslin and cotton cloths and sugar. From China it receives opium, which is sold here. It is a busy town, and European goods from Bombay. Its commerce is important, but even wholly within the last 10 years. The town is chiefly British Rajputana, a hindu and some few of the people agree. The rajah is of this tribe and being considered the big (Hindu) land, has a paramount influence for beyond the limits of his own territory. Hindu, Chinese and Jains, the last of whom are the religious, comprise most of the remaining people. The government is a kind of feudal monarchy, the chiefs, who are both numerous and powerful, holding their lands on the tenure of military service. It is said that the rajah has been told the land is sufficient to support a force of 10,000 men, but this is exaggerated. The authority he exercises in the British government is 100 mowahs. The revenues of the state are considerable. The royal lands yield 10 mowahs of revenue annually, and the town of Pooné alone yields half a mowah. The government on the land is always paid in kind varying from 100 to 1000 mowahs of the produce. Within the limits of Joundpoor there are said to be 1,000 towns and villages, many consisting of from 100 to 1000 houses. Chief towns, Joundpoor, the cap. Pooné, Rajputana, and Benares.

Joundpoor, a town of Hindustani, great Rajputana, cap. of the above kingdom. It is a town surrounded by rocky mountains, and on a hill of 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above kingdom. It is a town surrounded by rocky mountains, and on a hill of 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above state on the Ganges, 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

never under any ordinary circumstances, from the great expense attending the land carriage, but it is difficult with its weight and bulk, which often all charges may be said to be of the price of the article, and even at Benares, 100 to 150 per cent. They are in general damaged among the lower classes, and the quantity exported to other parts of the Empire is little short of that sent from Benares. The principal market in the neighbourhood of Benares, and the principal market for the article is among the lower classes, and the article is in its vicinity is strongly impregnated with sulphur of soda, which is extracted by boiling for medicinal purposes. (Horn, Jour. de la France, 1. 100-101, 1. 100-101, 1. 100-101.)

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above state on the Ganges, 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above state on the Ganges, 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above state on the Ganges, 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

JOUNDPOOR, a town of British India, great Rajputana, cap. of the above state on the Ganges, 1000 ft. W. of the cap. Pop. probably 10,000. Benares, a town, situated on the banks of the Ganges, is the residence of the rajah, a few miles to the south, placed on a low mountain, and used to have some resemblance to Windsor Castle. Benares is the cap. of the state, and is the cap. of the state.

of the 15th century a place of importance, and the cap. of an indep. sovereignty. It was annexed to the Mogul empire by Akbar, under whom was built its magnificent bridge over the Gompti, which is now in perfect preservation, and is one of the finest works of the kind in India. A stone fort, a mosque of great beauty, and a number of ruined edifices and monuments, attest the former greatness of Juggernaut. The modern town is wholly built of mud; it is, however, the residence of the collector, judge, and other chief British authorities of the district. (*Hamilton: Mod. Trav., &c.*)

JUGGERNAUT (*Jaggannat'ha*, "the lord of the world"), a town and celebrated temple of Hindoostan, the latter being one of the chief places of Hindoo pilgrimage, and, according to Hamilton, the most sacred of all the religious establishments of the natives of India. The town stands on the sea coast of the distr. of Cuttack, presid. Bengal, prov. Orissa, beside a branch of the Mahanudda, 45 m. S. Cuttack, and 260 m. S.W. Calcutta; lat. 19° 49' N., long. 85° 54' E. It contains nearly 5,800 houses, with 30,000 inhab. It is for the most part mean and dirty, consisting of low brick buildings, with here and there large *scrabs* and some handsome residences. The chief street is wholly composed of religious edifices, interspersed with plantations; and at its S. end stands the great temple of the divinity or idol. This structure is imposing only from its immensity; its execution is rude and inelegant, and its form displeasing to the eye. It is built of coarse red granite, and was completed in 1198, at a cost of from 40 to 50 lacs of rupees (400,000*l.* to 500,000*l.*). The establishment of which it forms a part comprises about 50 temples dedicated to various deities, within a nearly square area inclosed by a stone wall 24 ft. high, and measuring 676 ft. in length on two of its sides, and 670 ft. on the two others. The principal gate of entrance to this area is on the E. side, from which a broad flight of 22 steps leads to a terrace raised about 25 ft., and inclosed by a second wall 445 ft. square. On this terrace is the first apartment, called the Bhog Mandap, a building 60 ft. square, in which the great idol is worshipped during the bathing festival; and in a line, and connected with it by a low portico, is the anti-chamber opening into the great tower or sanctuary. This tower rises to 180 ft. above the area on which it is raised, or rather more than 200 ft. above the ground, and forms a valuable landmark to mariners on this dangerous coast. Its ground plan is 28 ft. square within the building; its shape is conical, its walls are externally covered with stone statues in relief, and its roof is ornamented with representations of monsters of various kinds. Little pains, however, appear to have been taken in the sculpture of these decorations, and of late the temple has had an outer coating of *chamam* or mortar, while its figures have been daubed with red paint: within this sanctuary, seated on their thrones, are the rude statues of three of the most revered deities of Hindu faith — Juggernaut or Vishnu, his brother Balarama or Mahadeo, and his sister Subhadra or Kali; the temple being devoted to all three, though particularly to the first. Adjacent to this edifice are two other temples, much smaller, and of a pyramidal form. The E. gate of entrance to the outer inclosure is flanked by colossal figures of lions or griffins in a sitting posture, and porters of Hindu mythology. In front of it is a column, remarkable for its light and elegant appearance, composed of a single block of dark basalt, 40 ft. high and 8 in diameter, supporting a sitting figure of the god Huniman. This pillar was brought thither from the half ruined black pagoda of Kanarak (which see), less than a century since. On the N.E. side of the temple is the collection of bungalows forming the European station.

All the land within a distance of 20 m. from the pagoda is accounted holy by the Hindoos, and is held rent-free by the cultivators and others, on condition of their performing certain services in and about the temple. The priests and other persons deriving their subsistence from the establishment, are said to amount to 3,000 families! exclusive of 400 families of cooks, to prepare the holy food so much sought after by pilgrims.

"The provisions, &c., furnished daily for the idol and his attendants, consist of 220 seers of rice, 97 seers of *kallai*, 24 of *swung*, 188 of clarified buffaloes' butter, 90 of molasses, 26 of vegetables, 100 of milk, 13 of spices, 20 of salt, and 22 of lamp oil. The holy food is presented to the idol 3 times a day, and the gates are cautiously shut during this presentation, and none but a few personal servants of the idol are allowed to be present. This meal lasts for about an hour, during which period, the dancing-girls attached to the temple (consisting of 120), dance and sing in the room with many pillars. On the ringing of a large bell, the doors are thrown open, the food is removed, and the rajah of *Khurda*, as high priest of the temple, divides it with the priests." (*Trans. As. Soc. III. 255.*)

The images of Juggernaut, Balarama, and Subhadra, are nothing more than wooden busts, about 6 ft. high, fashioned into a rude resemblance of a human head,

resting on a sort of pedestal. They are painted white, black, and yellow respectively, with grim distorted features, and decorated with different coloured head-dresses. The two brothers have arms projecting forward, horizontally, from the ears: the sister is without arms. These monstrous figures may, in general, be seen daily, and are publicly exposed twice a year; when Juggernaut and his brother, after undergoing certain ablutions, assume the form of Ganesa, the elephant-headed god, a transformation effected by means of a mask. Thus dressed, they are placed on the high terrace, overlooking the outer wall of the temple, surrounded by crowds of priests, who fan them to drive away the flies, whilst the multitude below gaze in stupid admiration. But the grand festival, or *rat'h satra*, takes place in March, when the sun has entered Aries. This has been described as follows, by a British eye-witness, for some years resident at Poori, Juggernaut. "Three large *rat'hs*, or cars of wood, are prepared for the occasion, of which, the first (intended for Jaggannat'ha) has 16 wheels, each 6 ft. in diameter; the platform, to receive the idol, is 26 ft. square, and the whole car is fully 45 ft. from the ground. The wood-work is ornamented with images of different idols, and painted, and the car has a lofty dome covered with English woollens of the most gaudy colours, bought at the import warehouse in Calcutta; a large wooden image is placed on one side as a charioteer, and several wooden horses are suspended in front of the car with their legs in the air. (An exact model of the car of Juggernaut, about 3 ft. square and 4 ft. in height, exists in the museum of the Royal Asiatic Society.) Six strong cables are fastened to the *rat'h*, by which it is dragged on its journey. The concourse of pilgrims is always very great, and a loud shout from the multitude announces the approach of Jaggannat'ha, who is carried from the temple by a number of priests, appointed for the purpose. A short time after, the rajah of Khurda, as hereditary high priest, makes his appearance in a state-palanquin of a strange construction, followed by large state elephants, and generally alights near the *rat'h* of the idol Balabhadra. The latter, and Subhadra, are placed upon two separate *rat'hs*, like that of Jaggannat'ha, except being a little smaller, the one having only 14 wheels, and the other 12. The rajah is surrounded by a large train of priests, and immediately prostrates himself before the idol Jaggannatha, amidst the shouts of pilgrims and the piercing notes of the shrill silver trumpets; he then with a broom sweeps the floor of the car, and is presented by the priests with a silver vessel, containing essence of sandal-wood, with which the floor is sprinkled all around the idol. The rajah receives from Jaggannat'ha, as a mark of honour, a garland of flowers, which the priests take from the image, and put round the rajah's neck. The rajah then descends from the principal car, and proceeds bare-footed to the car of each of the other idols, and endeavours to propel them forward, without which ceremonies it is supposed they could not afterwards be moved. On a signal being given, a most active scene commences, and several thousand men, each holding a small green branch in his hand, come running to the *rat'hs*, clearing their way through the crowd for a considerable distance in regular files. They immediately lay hold upon the cables, each man having first touched the car with his branch; and then, aided by the pilgrims (men and women), pull the *rat'hs* to their destination, taking care to keep their faces towards the idol, who is driven to his garden-house, where he is worshipped for four days, and then returns in the same way to the temple." (*Mansbach in Trans. Asiat. Soc., III. 256—259.*) Besides that described, 12 other principal, and many minor, festivals are celebrated during the year. The worship of Juggernaut is attended by every sect and class of Hindoos, who meet on equal terms, *all caste being abolished within the precincts of the temple.*

That excess of fanaticism, which is said to have prompted the pilgrims to court death, by throwing themselves, in crowds, under the wheels of Juggernaut, either never existed, or has long ceased to actuate the worshippers of the idol. During four years that Mr. Mansbach witnessed the festivals, only three cases of self-immolation occurred; one of these was probably accidental, and the two others were suicides, committed by sufferers to rid themselves of painful diseases. The greatest misrepresentations were formerly circulated in Europe respecting the number of widow-burnings, pilgrims, loss of life, &c., at Juggernaut. It is true that, for many miles round the temple, the sides of the roads are literally whitened with the bones of devotees, who have perished by the way-side. But this is not the result of any violent modes of destruction, voluntary or otherwise. If a Hindoo have reason to believe dissolution at hand, he forthwith collects his remaining strength, and should he fortunately succeed in dragging his diseased body within sight of the sacred edifice, he will lie down in peace, and die with a perfect confidence of future happiness; besides which, thousands set out on a pilgrimage thither in health, and in the full intention of returning, whose

subsistence failing by the way, devote themselves (in fact they can do nothing else) to death by starvation. An unfounded clamour was long raised in England against the government of British India for promoting idolatry, as it was said, by continuing to exact taxes on the pilgrims to Juggernaut, Gaya, and other places, as had previously been done by the native sovereigns. But the levy of taxes on pilgrims seems rather an odd way of promoting idolatry! However, in deference to the well-intentioned, though absurd, misrepresentations propagated in England on the subject, these taxes have been repealed, to the great satisfaction of the "idolaters." The number of pilgrims to this and other shrines has since greatly increased; and the natives are extremely well pleased by this act of liberality on the part of government. It may be right to mention, that no part of the pilgrim-tax ever came into the general funds of the government, but was wholly laid out on the repair of roads, and the maintenance of a proper police at the different places of pilgrimage. (See *Asiatic Researches*, vols. viii. x. xv.; *Trans. of the Royal Asiat. Soc.*, vol. iii.; *Hamilton's Hindostan and E. I. Gaz.*; *Asiatic Journal*, &c.)

JULIERS (Germ. *Julich*), a town of Rhenish Prussia, cap. circle, on the Roër, a tributary of the Maese, 23½ m. W. Cologne, and 16½ m. N.E. Aix-la-Chapelle. Pop. 3,130. It has a strong citadel, 3 churches, a fine old town-hall, circle court of justice, police court, high school, &c., and manufactures of woollen cloth, leather, and vinegar.

Julliers is believed to be identical with *Juliacum*, in Antonine's Itinerary. After the extinction of the Roman dominion, it became the property of independent counts of the Germanic empire, who were created dukes by the emperor Charles IV., in 1356. The family of the dukes of Julliers becoming extinct in 1609, the town was taken by Prince Maurice of Nassau in the following year; in 1622 it was taken by the Spaniards, who held it till 1659. In 1794 it was taken by the French, who afterwards made it the cap. of the dep. Roër. The former duchy of Julliers is the most W. portion of the Prussian dom., and is remarkable for its fertility, and its linen manufacture. (*Dict. Géog.*; *Schreiber*; *Berghaus*.)

JUMBOSEER, a town of British India, presid. Bombay, distr. Baroach, on a river of the same name, 25 m. N.N.W. Baroach. In 1820, it had upwards of 10,000 inhab. It carries on a considerable trade with Bombay, to which it sends cotton, grain, oil, and piece goods. (*Hamilton's E. I. Gaz.*)

JUMILLA, a town of Spain, prov. Murcia, 36 m. N. by W. Murcia, and 75 m. S.S.W. Valencia. Pop., according to Miñano, 8,267. It is situated on the S. slope of a hill, at the summit of which is a castle commanding the town; streets straight and of moderate width, but not paved: the public buildings comprise 2 churches, 2 convents, a public granary, and an hospital. The town contains about 30 oil and corn mills, 2 soap manufactories, and an establishment for making firearms: the salt-pans being under the direction of government, cannot be in a prosperous condition. A considerable fair is held here, Dec. 2. The climate, though not so genial as in neighbouring towns situated at a less elevation, is, on the whole, salubrious; and corn and fruit are abundant. Grazing, however, is the principal pursuit of the people in and near the town; and Miñano states that, at an average, 35,000 head of sheep and goats are pastured on the surrounding hills.

Jumilla was taken from the Moors, who, having founded or rebuilt it, gave it its present name, by a king of Arragon: it was again taken from Arragon by Henry of Trastamare, who made it subject to the crown of Castile. (*Miñano, Dict. Géog.*; see **MURCIA**.)

JUMNA (Sanscr. *Yamuna*, the *Jomanes* of Pliney), a river of Hindostan, and the chief tributary of the Ganges. It rises on the S.W. side of the great Himalaya range, about lat. 30° 55' N., and long. 78° 24' E.; and has been traced to an elevation of about 11,200 ft. above the sea, at the foot of an abrupt mountain nearly 4,000 ft. higher. Over the wall of this mountain falls a streamlet, probably caused by the melting of the snows on the summit, and which appears to be the true source of the river. For some miles the Jumna proceeds through a glen no more than about 40 yards in width at its bottom, and bounded by mural precipices of granite many thousand feet in height. The stream is here concealed by a thick bed of frozen snow, which arches over the course of the river beneath, supported by the shelving walls of the ravine. About half a mile below the point to which the Jumna has been traced, is Jumnotri, a celebrated place of pilgrimage and ablution with the Hindoos. At this spot are numerous hot ferruginous springs, some of which rise in the rocky wall 10 or 12 ft. above the bed of the river; and having melted the snow for 20 or 30 yards round, mix with the waters of the Jumna, rendering them sensibly warm. Some of the springs are hot enough to boil rice, their temperature having been found as high as 194.7° Fah., or near the point at which water is converted into steam at that elevation,

about 10,840 ft. above the sea. Before arriving at them, the Jumna is only about 3 ft. in width and a few inches deep; but these, causing a continual melting of the snow, contribute greatly to augment its supply of water. About 50 m. below its source, the Tonse unites with the Jumna; and though double the size of the latter, takes its name. From this point to Delhi the river flows generally in a S. direction; it thenceforward gradually declines to the S.E. Throughout its whole course it usually runs parallel to the Ganges, the tract between the two rivers, called the *Doab*, varying from 20 to 80 m. in width. At its emerging from the hilly region, about lat. 30° 15', the bed of the Jumna, which is 1,000 yards broad, is full in the rains, though in the dry season the river is not more than 100 yards across. It is not usually very deep, being fordable in several places above Agra; in its progress through the prov. of Delhi it divides into various branches, inclosing large islands. It joins the Ganges at Allahabad, where its breadth is fully equal to that of the latter river. Its entire length is estimated at 780 m. It receives no tributaries of any consequence in the upper part of its course; but in the lower, the Chumbul, Sind, Betwah, and Cane, join it from the S., and the Rinde from the N. Delhi, Agra, Allahabad, Etaweh, and Kalpee, are on its banks. From its shallowness, the Jumna is little serviceable to commerce, and its waters in the great plain of the upper provs. are so impregnated with natron, that vegetation is rather hindered than promoted by its inundations. The country to the W. of Delhi is, however, fertilised by the canal of All Mordan Khan, cut from it immediately after its leaving the hills; and the upper portion of the Doab is irrigated in a similar manner by the Zabeta Khan's canal, 200 m. in length, which also commences at the foot of the hilly region, and proceeds to Delhi. (*Geog. Journ.*, iv.; *Fraser*; *Hodgson*; *Asiat. Researches*, xii.; *Hamilton, E. I. Gaz.*, &c.)

JUNGEYPOOR, a town of Hindostan, prov. Bengal, distr. Moorshedabad, on an arm of the Ganges, 25 m. N.N.W. Moorshedabad. It is one of the principal stations in the British territories for the culture of the silk-worm. The mulberry is cultivated to a great extent from annual shoots; and large quantities of indigo are also grown in the neighbourhood.

JUNGLE MEHALS, a distr. of British India, presid. and prov. Bengal, between lat. 23° 30' and 24° N., and long. 86° and 88° E.; having N. the distr. Beerbhoom, E. Burdwan, S. Hooghly and Midnapore, and W. Ramghur. Area, 6,990 sq. m. Pop. (1829-30) 1,304,740. "The name of this district implies a waste territory and backward stage of civilisation; yet it appears, from the report of the circuit judge in 1815, that no instance of gang-robbery or arson had occurred during the previous six months, and in India, where a country furnishes few materials for history, it may be presumed to be going on tolerably well." (*Hamilton's E. I. Gaz.*) Total land revenue (1829-30), 44,942l.

JURA, a frontier dep. of France, region of the E., formerly included in Franche Comté, between lat. 46° 16' and 47° 18' N., and long. 5° 19' and 6° 12' E., having N. Haute Saône, E. Doubs and a part of Switzerland, S. Ain, and W. Saône-et-Loire and Côte d'Or. Length, N.W. to S.E., 70 m. Area, 496,930 hectares. Pop. (1836), 315,355. More than two thirds of the surface, principally in the S. and E., is covered with mountain ranges belonging to the Jura system, the principal summit of which, the Reculet, 5,633 ft. high, is in this dep. Rivers numerous: the chief are the Doubs and Ain. There are several small lakes, and in the N.W. some large marshes. In the plains the atmosphere is moist and heavy, while in the mountains it is dry, and the winters long and severe. In 1834, the arable lands were estimated at 183,113 hectares; meadows at 50,547; vineyards at 21,027; forests at 115,614; heaths, wastes, &c., at 79,000 do. According to Hugo, *l'agriculture du département paraît aussi perfectionnée qu'elle peut être*. Sufficient corn is grown for home consumption, chiefly wheat, barley, maize, and oats. In 1835, the crop of potatoes was estimated at 719,000 hectol. Upwards of 400,000 hectol. of wine are produced annually, some of which is very good. The mountains afford excellent pasture, on which many black cattle are fed; and *châlets* are established on them, as in Switzerland. The butter and cheese of the dep. are much esteemed. In 1830, the horned cattle amounted to nearly 155,000 head: sheep are much less numerous. Horses and mules are extensively bred; and hogs, poultry, and bees, are also very plentiful. In 1835, of 122,241 properties subject to the *contribution foncière*, 61,337 were assessed at less than 5 fr., and 19,865 at from 5 to 10 fr. The number of large properties is much below the average of the deps. There are several iron mines, and quarries of marble, alabaster, and gypsum. The dep. has also ores of lead, coal, copper, and even gold, but no mines of these metals are at present wrought. Iron forges and paper factories are numerous; cotton and linen fabrics, chamois and other leather, glue, mineral acids, and marble ornaments, are among the other chief

manufactures. Watches and trinkets are made at Mores, and ivory, bone, horn, marble, and wooden articles are sent all over Europe from the turning establishments of St. Claude. Jura is divided into 4 arrond.: chief towns, Lons-le-Saulnier, the cap., Dôle, Poligny, and St. Claude. It sends 4 mems. to the ch. of dep. Number of electors (1838-39), 1,156. Total public revenue (1830), 7,532,947 fr. (*Hugo, art. Jura; French Official Tables, &c.*)

JURA MOUNTAINS, a chain of central Europe, usually classed with the Alpine system, and including the mountains of W. Switzerland, and those between the Lake of Geneva, the Rhone, the Saone, and the Doubs. The range commonly thus designated has a length of about 160 m., with an average breadth of 30 m., commencing S. on the banks of the Rhone, and running N.E. to the junction of the Rhine and Aar; but connected mountains of analogous composition run N. through Suabia and Franconia, and S.W. along the right bank of the Rhone to the vicinity of Narbonne, so that the Jura range, in its most extended sense, has a length of about 600 m. The Swiss Jura, of which alone any notice will here be given, consists of several long parallel chains, enclosing narrow longitudinal valleys, such as the Val de Joux (in which is the mountain-lake of the same name, 3,260 ft. above the sea), the Val Travers, the Val de Ruz, and the valleys of the Valserine, Doubs, Birs, and other rivers. Transverse valleys, similar to those in the main Alpine system, are of rare occurrence, and the range throws off only one lateral spur, viz. the chain of Mount Jorat, passing between the lakes of Geneva and Neuchâtel, and joining the Bernese Alps. The slope is rapid on the Swiss side, but more gentle towards France; and the ridge, as seen from a distance, presents a regular undulating line with rounded dome-like summits, contrasting strongly with the abrupt crags and towering peaks of the Alps. The chain sinks, as it advances N.: the culminating point, *le Reculet*, is 5,633 ft. high, and 8 others rise above 5,000 ft.: the roads across the ridge have an elevation varying from 3,600 to 2,500 ft. above the sea. Snow lies on the highest ground about 7 months in the year, and there are no glaciers. The geological constitution of the Jura mountains, which has been described at length by Von Buch, Boué, and also by different writers in the *Geological Transactions* (London), is limestone of the oolitic series. The strata comprise most of the varieties lying between the lias and the compact limestone, answering to the Portland stone of English geologists; and the beds are thrown up at high elevations, thus causing the formation of those longitudinal valleys which are a characteristic feature of the Jura. On the S.E. slopes, and, as Lyell observes, exactly opposite the principal openings by which great rivers descend from the Alps, lie numerous "erratic" blocks of extraordinary magnitude. How these granite fragments came to their present situation is wholly matter of conjecture; but if it be true, as Lyell supposes, that the limestone layers of the Jura were upraised by some internal commotion, it is not improbable that these boulders were detached from the Alpine summits, and transported to lower platforms, which have been subsequently elevated. (*Princ. of Geol.*, vol. iii. p. 424.) The vegetation of the Jura nearly resembles that of the Alps: box-trees are very abundant on the N.W. side, and the hills near Poligny are covered with firs, the timber of which furnishes materials for the industry of the pop. during the winter months, and is also a considerable article of trade with the surrounding districts. Many of the villagers, also, on the mountain sides, and in the valleys, are employed in making watch-movements, which find a ready market at Geneva and other towns in which the watch trade is extensively pursued. (*Bruguière; Orographie de l'Europe; Ech. Manuel du Voy. en Suisse, &c.*)

JURA, one of the Hebrides, which see.

JUTLAND, a large prov. of Denmark, formerly comprising the whole continental portion of the Danish dominions, but which is now restricted to the part of the peninsula belonging to Denmark to the N. of Sleswick, extending from about 55½° to nearly 59° N. lat., being about 170 m. in length, and from 60 to 80 in breadth, comprising an area of 9,550 sq. m. Pop. in 1834, 525,952, having increased at the rate of about 1 per cent. per annum during the present century. It is of an oblong form, with the addition of a triangle towards the N. Surface generally flat. It has few rivers, and none of any considerable magnitude; but it is deeply indented, and in part traversed by inlets or arms (fiords) of the sea. Soil very various. In the middle it is dry, sandy, and occupied by extensive heaths; on both shores it is more fertile; and on the W. coast, particularly towards the S., there are large tracts of very rich marsh-land, defended by dykes from being overflowed by the sea. Agriculture, though still backward, has made great progress during the present century. Rye, oats, and buckwheat are the crops most generally raised; and they, along with cattle of excellent quality, horses, and butter,

form the principal articles of export. Hogs are so very plentiful, that Jutland has been called "the land of bacon and rye bread!" Fish very abundant in the fiords or inlets of the sea. Minerals and manufactures unimportant. Principal towns, Aalborg, Aarhus, Wyborg, &c.

K.

KAFFA, or **THEODOSIA**, a sea-port town of European Russia, on the S.E. coast of the Crimea, lat. 45° 1' 37" N., long. 35° 23' 37" E. Pop. 7,260. It is believed to stand on the site of the ancient Theodosia, founded by Milesian colonists in remote antiquity. The Athenians carried on a great trade with this city, importing from it vast quantities of corn, with slaves, lumber, and naval stores, hides, and honey.* After undergoing many revolutions, it fell, in the 13th century, into the possession of the Genoese, who rebuilt it, and made it the chief seat of their power during the lengthened period of their ascendancy in the Black Sea. In 1475 it was taken by the Turks; but it continued, down to its conquest by the Russians, to be a large, populous town. It, however, suffered severely from this event, partly in consequence of the devastations committed by the Russian soldiery, and partly through the emigration of its Tartar inhab. Latterly, however, it has begun to revive; though, owing to the superior advantages enjoyed by Kertech as an *entrepôt* for the trade of the sea of Azoff, it does not seem very probable that Kaffa will ever recover her former importance. The road, or bay of Kaffa is very extensive, and capable of accommodating a great number of vessels. It has deep water throughout; the holding ground is good; and, with the exception of the E., it is sheltered from all winds. (*Hugemeister on the Trade of the Black Sea*, p. 64, &c., Eng. Trans.; *Purdy's Sailing Directions for the Black Sea, &c.*, p. 208, &c.)

KAIRA, a distr. of British India, presid. Bombay; between lat. 22° 15' and 23° 35' N., and long. 72° 40' and 73° 30' E.; area, 1,827 sq. m. Pop. (1828) 484,225. It consists principally of territory ceded at different times by the Peshwa and Guicowar, is well watered, and contains a great deal of good soil; but having been inhabited by a turbulent pop., it was greatly neglected before it came into our hands; and it still contains much waste land; while education appears to be in a lower state than in most British districts. The land is assessed under the village system, and the assessment is realised without difficulty. Total amount of land revenue (1818-19), 175,874.

KAIRA, a town of Hindostan, cap. of the above collectorate, 113 m. N.N.W. Surat; lat. 22° 47' N., long. 72° 48' E. It is a neat town, surrounded by bastioned ramparts and walls in good repair. Its streets are narrow, but tolerably clean, and its houses are solid, lofty, and adorned with a great deal of carving. Its chief public buildings are the district court-house, a handsome Grecian edifice, a large and secure prison, a church, an English school, and, near the centre of the town, a large Jain temple. The cantonment of Kaira, about 1½ m. distant, is, unfortunately (like many of the settlements in India founded by the British), in a very unhealthy situation; but it is extensive and well laid out, with good barracks, an hospital, a regimental school, and a tolerable English library.

KAIRWAN, or **KEERWAN**, a large city of N. Africa, at present the chief source of Mohammedan bigotry in that country, regency Tunis, 85 m. S. from the city of Tunis; lat. 35° 36' N., long. 95° 57' E. Pop. estimated, but on no good authority, at 50,000. It is situated in a barren sandy plain, and is surrounded by a low wall: the public buildings comprise a large citadel and several mosques, two of which are extremely magnificent, supported, as Shaw affirms, "by an almost incredible number of pillars." (*Travels*, p. 116.) The houses are clean and respectable; and the streets wide, and ornamented with columns, capitals, and highly raised Cufic inscriptions. It is regarded as the second town in the regency; and its Kadee, or governor, may be said to be almost independent of the Bey of Tunis. He fixes the price of provisions, which are said to be, though certainly not on account of his interference, a half cheaper than at Tunis; but, with all his influence, he cannot so far overrule the bigotry of the inhabs. as to ensure a good reception to the Christian traveller, who, if he venture within the walls, must take on himself all the risks of his enterprise. Kairwan is famous for its yellow Morocco boots and slippers, the delicate dye of which it has hitherto been found impossible to equal. It was formerly a place of great literary eminence, possessing well-endowed institutions and good libraries, from which Europeans have derived a large portion of their knowledge of Arabic literature; but of its present claims to

* For an account of the trade of the Athenians with this emporium, see Clarke's *Commerce of Roman, Paphlagonian, and Saron Colon*, p. 55.

such distinction we have no information, as the extreme jealousy of the people shuts out all local inquiry.

Kairwan is supposed by Shaw to occupy the site of the *Vicus Augusti* in Antonine's Itinerary; but, notwithstanding the deference due to so great an authority, this supposition is contested by Temple and others, apparently on pretty good grounds. The present city was built about A. C. 670, about the time when Africa was invaded by the general of the Ommiyade, khalif Moawiyad I. In 802, the governor of W. Africa threw off his allegiance to the khaliph, declared himself independent, and established his capital at Kairwan. In 969, the seat of government was transferred to Cairo, since which its importance, though still considerable, has materially declined. (*Shaw's Travels; Temple's Excursions*, vol. ii. p. 92—96.)

KAISARIAH (an. *Mazaca*, and afterwards *Cæsarea*), a town of Asiatic Turkey, prov. Karamania, sandjak of its own name, on the Karasa (an. *Milas*), a tributary of the Euphrates, 140 m. E. N.E. Konieh, and 135 m. S.E. Angora, lat. 38° 42' N., long. 35° 20' 20" E. Pop., according to Kinneir, about 25,000, of whom 2,000 are Armenians, Greeks, and Jews. It is situated on the E. side of a fertile plain of great length, and in a recess formed between two spurs projecting from the lofty, snow-covered Mount Erdjisk, the *Argæus* of antiquity. The houses, though built of stone and brick, have a mean appearance, and the streets are said to be the filthiest in Turkey. It is surrounded by a wall now in ruins, and in the suburb are some interesting remains of a Roman city. Several mosques, one Greek and two Armenian churches, a convent, and some mausoleums, are the chief public buildings. Kaisariah is the emporium of an extensive trade, and the resort of merchants from all parts of Asia Minor and Syria, who come to purchase cotton cultivated in the vicinity in great quantities, and sold either in a raw state or when manufactured into cloth. Cotton thread and cloth constitute the chief articles of industry; and there are some tanneries of yellow Morocco leather. The land in the neighbourhood is fertilised by the inundations of the Karasa, and produces an abundance of large and delicious-flavoured fruits and vegetables. The climate is very healthy, except within the town, where epidemics prevail, owing to the offal, &c. left in the streets to decay and infect the air.

Mazaca, the anc. cap. of Cappadocia, took the name of Cæsarea in honour of Tiberius. Its antiquity is attested by Strabo, who also gives an excellent description of the neighbouring mountain. It was the residence of the kings of Cappadocia previously to its being annexed to the Roman empire, after which it continued to increase in size and beauty. An amphitheatre and many temples were erected; and in the reign of Valerian, when Shapoor I. king of Persia pillaged the city, and massacred its inhab., it is said to have had a pop. of 400,000 persons, though this is most probably far beyond the mark. (*Gibbon*, i. 439.) Its dimensions were contracted by Justinian, who rebuilt the walls: it was raised to the dignity of an apostolic see, and gave birth to St. Basil. Having been destroyed by an earthquake, it was afterwards rebuilt, and by turns became subject to the sultan of Iconium, the princes of Karaman, and the grand seignor. (*Kinneir's Asia Minor*, p. 98—106; *Geog. Journ.*, vol. viii.; *Dict. Géog.*, &c.)

KAISARIAH, a ruined town and sea-port of Palestine. (*See CÆSAREA*.)

KALISZ, a city of Poland, and the most westerly in the Russian dominions, cap. palat. of the same name, on an island in the Proena, immediately within the Russian frontier, 128 m. W. S.W. Warsaw, and 70 m. S.E. Posen. Pop. estimated at 15,000, of whom 2,500 are Jews. This is one of the finest cities in the kingdom. It is surrounded by old walls flanked with towers, and entered by five gates; and has a citadel founded by Cassimir the Great. Its streets are broad and well paved, and several are planted with trees: its houses are generally good. The most remarkable public edifices are the former palace of the volvodes, now occupied by the courts of law, the cathedral, church of St. Nicholas, and the Lutheran church. Besides the cathedral, there are five R. Catholic churches and six convents, a synagogue, a R. Catholic gymnasium or lyceum, with a fine library, and large scientific collections, a military school with 200 students, several superior female seminaries, elementary schools, attended by about 300 children of both sexes, a school of midwifery, &c. (*Horschebmann's Stein*, i. 701.) It has also a theatre, a house of charity, and three hospitals. Kalisz is a town of some industry, having manufactures of linen and woollen cloths, and leather. A fine road leads to Opatowek, a village about 6 m. distant E. S. E., celebrated for its large manufacture of woollens, and its gardens, which form the favourite resort of the inhab. of Kalisz. This city was founded about 635, and was long the residence of the dukes of Great Poland. Near it, in 1706, the Poles totally defeated the Swedes; and in Sep. 1835, a grand military muster and

review took place at Kalisz, attended by the sovereigns of Russia, Austria, and Prussia. (*Malte-Brun; Tableau de la Pologne; Balbi; Sicin*.)

KALPEE, or CALPEE, a large and populous town of British India, presid. and prov. Agra, on the S. bank of the Jumna, 45 m. S.W. Cawnpore. It is a place of considerable trade, being an entrepôt for the transport of cotton from the S.W. of India to the Gangetic provs.; and has also manufactures of sugar-candy, paper, &c.

KALUGA, a government of Russia in Europe, near its centre; chiefly between lat. 53° 30' and 55° 30' N., and long. 33° 40' and 37° E., having W. the gov. of Smolensk, N. the latter and Moscow, E. Tula, and S. Orel. Area, according to Kœppen, 11,470 sq. m. Pop. in 1846, 1,006,400. Surface an almost uninterrupted plain, watered by numerous rivers, of which the Oka and its tributaries are the principal. Climate tolerably mild for the lat. Soil mostly either sandy or hard clay, and not fertile. Forests occupy more than half the surface. Arable lands rather more than 2-5ths; but a good deal of manure is required to render the latter even moderately productive; and the agricultural produce is not adequate to the consumption of the inhabitants. Rye is principally grown; but oats, wheat, and barley, are also cultivated; as are hemp and flax. Cattle not numerous, and but little valued; but there are in the gov. 2 extensive studs for the breeding of superior horses. The fisheries are insignificant; little game is met with. Bog-iron is found, but in no great quantity, and a good deal has to be imported to supply the various iron works. This government being so little suitable for agriculture, the attention of its inhabitants has been naturally turned towards manufacturing industry; in this respect, Kaluga ranks immediately after the governments of Moscow and Vladimir. In 1830, 18,600 workmen were employed in distilleries and manufactures of sail cloth, linen and cotton goods, leather, soap, candles, and hardware. The manufacture of beet-root sugar has been lately introduced. Nearly all the peasants' families employ a considerable portion of their time in weaving. Many of the merchants in this government are opulent, and some have commercial transactions with foreign countries, through Archangel. The chief exports are oils, spirits, potash, honey, linen, sail-cloth, and other manufactured goods. The chief commercial towns are Kaluga, and Borofsk. The inhabitants are nearly all of the Russian stock. Kaluga is divided into 11 districts, and is under the same military governor with Tula. Its scholastic institutions are under the university of Moscow, but they are extremely deficient; and it has only one printing press, which is the property of the crown!

KALUGA, a town of Russia in Europe, cap. of the above gov., on the Oka, near where it suddenly turns eastward, 105 m. S.E. Moscow. Lat. 54° 30' 27" N.; long. 36° 17' 12" E. Pop. 25,660. (*Schnitzler*.) Though comprising no more than about 3,800 houses, it is said to occupy a space of 10 versts, or little short of 7 m. in circ., and is divided into 8 quarters by the Oka and its tributary the Kaloujeka. It is an ill built town, with narrow, crooked, and ill-paved streets, and wooden houses. There are, however, some good public edifices, as the high church, government-house, town-hall, and theatre. Of the 24 churches, 23 are of stone; a convent, also a stone building, gymnasium, seminary for poor children of noble birth, foundling asylum, several work-houses and hospitals, and a house of correction, are the other chief public establishments. Kaluga is one of the most important manufacturing and commercial towns in the empire: it has 5 sail-cloth factories employing 400 weavers, and 1,000 spinners, between 30 and 40 oil factories, numerous tan-yards, some sugar-refineries, and manufactures of woollen cloth, cotton fabrics, hats, paper-hangings, earthenware, soap, vitriol, &c. Besides carrying on an extensive internal trade, its merchants make large exports of lamb-skins, Russia leather, and wax, to Dantzic, Breslau, Berlin, and Leipsic. (*Schnitzler, La Russie*, pp. 133—138; *Possart, Russland*, pp. 517—520.)

KAMINIETZ (Polish, *Kamieniec Podolski*), a town of Russian Poland, gov. Podolia, of which it is the cap., on the Smotryez, about 12 m. from its junction with the Dneistr, 215 m. S.E. Kief, and 300 m. N.W. Odessa; lat. 48° 40' 30" N., long. 27° 1' 30" E. Pop., in 1830, according to an official document, 15,599; but this is probably much exaggerated: in 1832 it had only 600 houses and 8,000 inhab., many of whom were Jews. It is irregularly laid out, with narrow streets, and wooden houses. It has, however, some conspicuous edifices of stone and other solid materials; including the cathedral, dedicated to St. Peter and St. Paul, a Gothic building containing 15 altars and a nave, supported by 150 columns. Near it is a column supporting a statue of the Saviour. The church of the Dominicans, originally constructed of wood, in 1360, was rebuilt in stone after the expulsion of the Turks in the 18th century. There are in all 5 R. Catholic, and 4 Greek churches, and 1

Armenian church, a fine edifice, completed in 1767. The R. Catholics have several convents. The other chief public buildings are the government library, circle school, and new gymnasium, commenced in 1837.

The town was formerly walled, but its works were levelled, by order of the Russian government, in 1812. * It is, however, still defended by a citadel and another fortress. The former, situated on a steep isolated rock overlooking the town, might be made impregnable, but it is commanded by some more lofty adjacent heights. Kaminiac was however, for a lengthened period, the principal bulwark of Poland on the side of Turkey. It was founded by the sons of Olgherd, in 1331, after that prince had wrested Podolia from the Tartars. It was soon after fortified, and in 1374 attained the rank of a city. It remained attached to Poland till its final capture by the Russians in 1793, except from 1672 to 1699, during which it was in the possession of the Turks. (*Schnitzler, La Russie*, pp. 500, 501.; *Possart, Das Kaiserth. Russl.*, p. 873.)

KAMTSCHATKA, a large peninsula at the N.E. extremity of Asia, forming a part of the Russian gov. of Irkutsk, and bounded N. by the country of the Tchukchi, E. by the Aleutian archipelago, and W. by the sea of Okhotsk. It lies between the 51st and 62d parallels of N. lat., and the 166th and 167th deg. of E. long.; has a length of about 800 m., and a breadth varying from 100 to 250 m., the area being very loosely estimated at 80,000 sq. m. Supposed pop. only 5,000, of whom about 1,500 are Russians. The coast line on the W. side is tolerably regular, the Gulph of Penginsky, at its N. end, forming the only considerable exception; but on the E. side are several extensive bays, enclosed respectively between the capes Chipunsky, Kronotsky, Kamtschatka, Ozeruoy, and Olutorsky, the last of which is near the N.E. end of the peninsula: C. Lopatka (lat. 51° 0' 15" N., long. 152° 2' 15" E.) is the S. extremity of Kamtschatka. The coast, generally speaking, is abrupt and rocky, especially on the E. side, and the peninsula, when viewed from the sea, presents the appearance of a barren and desolate rock; but in the interior there are plains of considerable extent, having a soil well adapted for tillage. The high lands, which cover about two thirds of the entire surface, consist of a chain of volcanic mountains, running in a S.S.W. direction. Many volcanoes in this chain have been ascertained by Erman and Lutké to be in a high state of action; and it seems very probable that, geologically considered, they form only one extremity of a great volcanic belt, continued through the Kurile and Japanese islands, Formosa, and the islands of the E. Indian archipelago.

The following statements are drawn up from the observations of the naturalists in Commodore Lutké's expedition, in 1827-30, and of Prof. Erman, who visited Kamtschatka in 1829. In the main range running N. from C. Lopatka, 13 summits, with craters and hot springs, have been observed within the 51st and 56th parallels, one other height being isolated, and lying W. of the principal chain. The elevation of 9 summits has been accurately measured, and appears to be as follows:—

Assatchinsky	- 8,340 ft.	Kronotsky	- 10,610 ft.
Vilatchinsky	- 6,346	Klutchewsky	- 16,500
Avatcha	- 8,780	Tolbachin	- 8,250
Koriata	- 11,120	Chevelutch	- 10,690
Japonov	- 9,060		

The most active are Assatchinsky, Avatcha, and Klutchewsky. The scorize and ashes thrown from the first, in 1828, were carried as far as Petropaulowsky, 120 versts distant; and it appears to be more or less in continual activity. In 1827 there was a violent eruption of Mount Avatcha, during which, besides lava and stones, a very large quantity of water was ejected; a phenomena remarked also by Humboldt in the volcano of Karkuarizo, a little N. of Chimborazo, in the Colombian Andes, and known to have occurred, though in a less degree, during the eruptions of Etna and Vesuvius. At the summit is a crater several hundred yards in circ., formed by a wall 30 ft. high, composed of porphyry, felspar, and trachyte; and on the E. side, at an elevation of about 5,000 ft., is another crater, now extinct, and similar both in origin and appearance to the Somma of Mount Vesuvius. Klutchewsky, which, in common with six others, continually emits smoke, was during the last century in very violent action, sometimes for a year or two at a time, sending forth vitrified stones, lava, pumice, and water: after having been comparatively quiet for about 40 years, it broke out again during Erman's visit in 1829. It presents a large base, swelling in an elliptic curve, and crowned by four cones: its geological components are trachyte, Labrador felspar, obsidian, and lava, and on its sides are numerous thermal springs of high temperature. Indeed, the general formation of Kamtschatka is of igneous origin, comprising porphyry, jasper, felspar, schist, trachyte, dolomite, &c.; the W. side, however, is composed of Neptunian, secondary, and tertiary rocks, among

* Balbi (1837) says they have been since restored.

which may be distinguished various beds of lignites, sandstone, iron-sand, and chalk, in the last of which are found large quantities of yellow amber: fossil shells in great variety have been discovered in all the secondary and tertiary formations of this interesting peninsula. The shape of Kamtschatka precludes the possibility of there being any extensive rivers; and, accordingly, those met with resemble torrents more than rivers, being either nearly dry, or flooded and rapid: the Kamtschatka river, however, is alleged to be capable of admitting vessels of 100 tons about 150 m. up the stream.

The severity of the climate, though considerable, has been greatly exaggerated. The average temperature in the middle of winter is about 10° Réaumur; that of summer is about 70°; but the difference seems greater, owing to the prevalence of raw piercing winds, and thick fogs. Still, if any judgment may be formed from the health of the inhabs., it cannot be unwholesome; for they are robust and long-lived, and there are few diseases, except small-pox, syphilis, &c. introduced by the Russians, who also corrupted the pop. by familiarising them with the use of ardent spirits. (See *Dobell's Travels*, vol. i. p. 87.) The vegetation is generally considered to be very limited; but the limits are prescribed by man rather than by nature. Rye, barley, potatoes, cabbages, turnips, hemp and flax, with several other plants peculiar to the country, may be raised successfully, with moderate attention; but the people are, with few exceptions, devoted to hunting, able to live on game and dried fish, and extremely loath to engage in the more civilising, though less exciting pursuit of agriculture, the first attempts at which date no further back than 1810. Among the fruits may be mentioned the raspberry, red currant, whortle-berry, cranberry, a delicious species of strawberry called *kachnika*, a wild cherry called *cheroonka*, and a kind of apricot or plum. The forest trees comprise the birch, fir, larch, poplar, cedar, willow, and juniper. Pasturage has hitherto been little followed; but the abundance of grass shows that if there was an inclination towards it, the pursuit would be profitable. The animals usually hunted comprise bears, lynxes, sea and river otters, rein-deer, foxes of different colours, sables, beavers, &c.; and the number of skins exported is supposed to average about 30,000 a year, chiefly of foxes and sables. Among the birds, the principal are moor-game of different kinds, and many varieties of water-fowl, the eggs of which, saturated with oil, constitute the chief food of the inhabs. The fish caught in the rivers comprise many varieties of salmon, some of which are peculiar to the country, all serving most essentially to supply winter food: the sea also abounds with cod, herrings, &c., and seals; walrus and whales furnish oil, exclusively employed for domestic purposes.

The trade of Kamtschatka, owing to the exactions of the Russian governors, who, in consequence of their great distance from Petersburg, or even Tobolsk, have few checks on their own cupidity, is of course extremely limited. Taxes are taken in skins; and the people complain bitterly, that no equitable system of taxation has been authorised by the imperial government. Hence, wholly left to the mercy of individual officers, they justly apprehend the insecurity of property, and want the chief motive for improving the natural resources of the country: labour is confined to the supply of merely temporary necessities, domestic comforts are little known or cared for, and affluence is scarcely ever attained even by the most provident and laborious. Furs and dried fish are exported from Petropaulowsky, chiefly by the Russians and Dutch, who bring in exchange rice, flour, coffee, sugar, brandy, and whisky.

The natives, comprising the two tribes of the Kamtschatdales and Koriaks, who differ more in mode of life than in physical conformation, are of low stature, but stout and broad in the shoulders, with large heads, flat and broad faces, prominent cheek-bones, thin lips, lank black hair, and eyes deeply sunk in the head. Their features seem to identify them with the Mongolian race, to which they are certainly more closely allied than to the Esquimaux, with whom Cochrane and Langsdorff have erroneously classed them. The Kamtschatdales are described by Dobell as being shy and averse to strangers, but at the same time intelligent, and fully capable of improvement, if endeavours were made to instruct them in the arts of civilised life. Honesty, openness of character, and extreme hospitality, are prevailing features among them; but it has been remarked by more than one traveller, that their morals have been much debased by the introduction of felons from Siberia, and the quartering of Russian troops at Petropaulowsky: drunkenness has since that period been an increasing evil, and now threatens to be as destructive to the Kamtschatdales as to the Indian tribes of N. America. Their employment, when not agricultural, is hunting and fishing. They live in fixed habitations; but their dwellings are low, comfortless, and extremely filthy, sunk in the ground in the winter months, and raised on posts during summer, to facilitate the curing of fish.

which is hung up on lines to dry. In travelling they use dogs instead of horses. These animals somewhat resemble the English shepherd-dog, are extremely intelligent, and endure an almost incredible degree of labour and privation. They are fed during the winter, when they are principally used, on offal and decayed fish, and in the summer are allowed to roam abroad, and shift for themselves. Few Kamtschatdales have less than six, and some upwards of twenty, the whole number of dogs being estimated at 3,000. When used for draught they are harnessed, two and two to a sledge, one particularly well trained being placed in front as leader. The sledge is in the shape of an oblong basket about 3 ft. long, and raised 3 ft. from the ground: the driver usually sits sideways, like a lady on horseback, and urges the dogs by throwing at them a stick, which he afterwards catches with great dexterity. Occasionally parties travel in company; "and then," says Dobell, "the eagerness and impatience of the dogs, and the rivalry of the *kyoorshiks*, or drivers, are worthy to be compared with the exertions of the high-blooded coursers of Newmarket; nor does the management and driving of the dogs require much less skill and attention than are needed in the latter case, to arrive at perfection, and gain the palm of victory." The Koriaks, who inhabit the N. part of the peninsula, a wandering tribe, subsist on the produce of their herds of rein-deer, which they also use to draw their sledges. The number of Koriaks is unknown, and they are not included in the estimates of the population.

Kamtschatka was first known to the Russians in 1696, when Vladimir Atlasov invaded the peninsula, and made great part of it tributary to Peter the Great. The conquest was completed in 1706, since which, regular tribute has been paid, in furs, to the governor of Irkutsk. There are 4 districts, each of which is governed by a *toion*, or lieutenant, whose business is to preserve peace, enforce the orders of government, and collect the tribute, the quantity of which varies according to the character of the governor, and the favour which particular persons happen to enjoy. The commander of the troops resides at Petropaulowsky, which for some years has been the principal place. Its population, however, does not exceed 700, while that of Nishni-Kamtschatk, the former capital, has scarcely 150 persons. Bolcheresk, a small harbour on the W. side of Kamtschatka has a pop. of about 200. (*Cochrane's Travels in Siberia*, li. 27—56.; *Lutke's Voyages*, lii. 64—98.; *Erman: Reise um die Erde*, l. 415—420.; *Dobell's Kamtschatka*, &c., l. 1—188.)

KANDAHAR. See CANDAHAR.

KANNAGHERRY (*Khanagiri*), a town of Hindostan, prov. Bejapoor, formerly the cap. of a Hindoo principality, 19 m. N.W. Bijnagur. It is beautifully situated in a valley, enclosed by wooded declivities, and partially encircled by a rivulet. The principal street is very spacious, and at one extremity is a fine pagoda to Krishna, the interior of which is elaborately ornamented with stucco bas-reliefs. Various other temples have been converted into dwelling houses or stables by the Mussulman pop.; and the vicinity abounds with fragments of Hindoo monuments. (*Hamilton's E. I. Gaz.*)

KANOJE (*Kanyacubja*), a town of Hindostan, prov. Agra, and, according to Rennell, possibly the an. *Calinipara* mentioned by Pliny, about 2 m. from the Ganges, 118 m. E. by S. Agra, and 67 m. W.N.W. Lucknow; lat. 27° 4' N., long. 79° 47' E. It is now degraded into a mere second-rate town of the district of Etawah; but it is mentioned by Ferishta as having been once the cap. of the principal kingdom along the Ganges, comprising the mod. provs. of Delhi, Agra, Oude, and Serinagur. The Indian histories are full of accounts of its grandeur and extent; and for a distance of 6 m. the traveller now wanders over a tract covered with scattered ruins of brick and other buildings. The most perfect vestige of the an. Hindoo city is a portion of a small and rude pagoda, its interior adorned with figures of Lakshmi and Rama, surrounded by the Hindoo pantheon in miniature. There are several handsome tombs, mosques, and other Mohammedan edifices in stone, Kanoje having been taken by the Mohammedans under Mahmoud of Ghizni, in 1018. Under the Moguls it gave its name to a clrcar; but it soon lost its importance, and, to complete its ruin, it was sacked by the Mahrattas in 1761. The mod. Kanoje consists of only a single street, and presents nothing worthy of note, except a citadel, close to which is the termination of a canal communicating with the Ganges. (*Rennell, Memoir, &c.*; *Lord Valentia*; *Hamilton's E. I. Gaz.*)

KARA-HISSAR. See APIUM KARA-HISSAR.

KARAK, or KHARRACK (the *Icarus* of Arrian), an island of the Persian Gulph, now belonging to the British, lat. 29° 13' N., long. 50° 21' E., 35 m. N.W. Bushire. It has an area of 12 or 13 sq. m., with a pop. of about 300 or 400. "It affords a safe anchorage at all seasons, but more particularly during the severe gales which blow from the N.W., and are the prevailing winds in this sea. The greater part of the island is so rocky,

that little use can be made of it; but the E. side, being somewhat lower than the other parts, is capable of being cultivated. It has abundance of water. The inhab. gain a livelihood by gardening and fishing, and manufacture a small quantity of common cloth for their own consumption. The island of Corgo, lying about 1½ m. or 2 m. N. Karak, contains about 2 sq. m., and is of a light sandy soil. It has also plenty of water, but not of so good a quality as that of Karak; and although not inhabited at present, it is capable of being cultivated, and will produce both wheat and barley during the rainy seasons." (*Kinnaird's Pers. Empire*, p. 18, 19.) Pearls of a superior colour and description are fished around the coasts of both islands. The Dutch, after having been obliged to abandon their factory at Bussorah, founded an establishment at Karak in 1748. They were, however, driven from it by the Arabs, about 1765. Karak was subsequently occupied by the Persians; and in 1807, for a short period, by the French. During our recent disagreement with the shah of Persia, the British resident, previously stationed at Bushire, removed thither; and the island was taken possession of by an English force in 1839. Its acquisition will give us the complete command of the Persian Gulph, and will be also serviceable from its affording a secure anchorage for our ships, and a station where they may water and refit. (*Kinnaird's Pers. Empire*; *Asiat. Journal*.)

KARAMAN, a town of Asiatic Turkey in Karamania, 58 m. S.S.E. Konieh; lat. 37° 10' N., long. 33° 5' E. Pop. 15,000. It stands at the S. extremity of a large plain, and at the foot of the lofty range of Bedlerin-dagh, a branch of Mount Taurus: it covers with its squares and gardens a large area; the houses are of mud and sun-dried bricks, and have a mean wretched appearance; but the climate is salubrious, and water abundant. The public buildings comprise four mosques, with the ruins of others, numerous khans and hummums, and a castle on a height, now mouldering to decay. Karaman trades with Kaisariah, Smyrna, and Tarsus, in cotton fabrics, hides, and nut-galls; and it has a pretty extensive manufacture of blue cotton cloth, worn by the lower classes.

Karaman, which occupies the site of the ancient *Laranda*, is said to have been founded by Karaman Oghe, a powerful prince living in the 14th century. It was the cap. of a Turkish kingdom, which lasted from the time of the partition of the Seljuck dominions of Iconium till 1486, when Karamania was subjected by the Ottoman emperor Bajazet II. Konieh then became the seat of the pachalic, and from that period Karaman has been gradually falling into decay. (*Kinnaird's Asia M.*, p. 211.; *Leake's Tour*, p. 99.)

KARAMANIA. See TURKEY IN ASIA.

KARASUBASAR, a town of European Russia, Crimea, 15 m. E. Simpheropol, inhabited by Tartars, Greeks, Russians, Jews, Armenians, &c. Pop., according to the official returns, nearly 11,000, which, if they may be depended upon, show a great increase within the last dozen years. Streets narrow, winding, and dirty. There are several graceful looking mosques, a new Rom. Catholic church, a large building, or khan, occupied by shops, &c. It is celebrated for the manufacture of a very superior sort of red and yellow morocco leather, and it contains several tanneries, candle and soap works, potteries, and tile-works. It is also the great mart of the Crimea for fruit, wine, and cattle. There is a weekly market, and a great annual fair. (*Schnitzler, La Russie*, &c., p. 736.; *Lyell*, l. 356.)

KARLSBURG. See CARLSBURG.

KARS, a town of Turkish Armenia, formerly cap. of a pachalic of the same name, on the Arpah-Chai, a tributary of the Aras or Araxes, 85 m. N.E. Erzeroum, and 160 m. E. by S. Treblond; lat. 40° 28' N., long. 41° 10' E. Pop., in 1835, not exceeding 2,000 families. It is situated on the N. side of a plain, which, though about 4,000 ft. high, is extremely fertile: a part of it is walled, and there is a citadel, which, however, is commanded by heights within musket-shot on the other side the river. Two stone bridges unite the two portions of the city divided by the river, which encircles the walled portion on three sides. The houses of the citadel are tolerably large and well built, but those in the town below are of the underground architecture usual in the Armenian villages. The public buildings comprise several mosques, and one Armenian church outside the walls: the Armenian convent is uninhabited and in ruins. Kars being the centre of a fine corn-growing district, had formerly a considerable trade in farming produce; but it was nearly destroyed during the Russian invasion, and is only slowly recovering.

Kars, the origin of which is doubtful (*Tournefort*, li. p. 295), was formerly a large town, with a pop. of nearly 8,000 families; but it is now little better than a heap of ruins. During the Russian occupation, a large part of the Turkish pop. abandoned it, while at the same time the Armenians emigrated with the retreating army of the Russians, leaving many deserted villages and much unoccupied land. The present inhab. are about half

Turkish and half Armenian; the former being described as turbulent and impatient of subordination to the pacha of Erzeroum, under whom it is now a sandjak, and the residence of a mutzelli. (*Smith and Dwight's Miss. Researches*, p. 91.; *Geog. Journ.* vi. 199.)

KASAN, one of the eastern governments of Russia in Europe, having N. Viatka, E. Orenburg, S. Simbirsk, and W. Nijegorod. Area, 24,000 sq. m. Pop. 1,343,000, partly Russians and partly Tchouvaches, of Finnish origin, Tartars, &c. It is traversed for a considerable distance by the Wolga, the Kama, one of the principal affluents of the latter, and by some lesser streams, and is interspersed with numerous lakes. Surface generally flat, but in parts undulating and hilly; soil almost everywhere fertile, producing, with very imperfect culture, abundant crops of rye, wheat, hemp and flax, &c. Forests very extensive, covering nearly half the surface. Climate in winter very severe; but the summer, though short, is generally fine. Grazing is not well understood, and but little attention is given to the rearing of cattle. The fishery in the Kama is very productive. There are numerous distilleries, saw-mills, and potash works, with tanneries, &c. More than half the government belongs to the crown, which, in 1816, had 356,166 peasants. The public revenue in 1827 amounted to 6,205,314 roubles, of which 4,699,342 consisted of the *obrok* or rent paid by the peasants belonging to the crown. (*Schnitzler, La Russie*, &c., p. 665., &c.)

KASAN, a city of European Russia, cap. of the above government, on the Kasanka, about 4 m. above where it falls into the Wolga; lat. $55^{\circ} 47' 26''$ N., long. $49^{\circ} 21' 9''$ E. Pop., in 1833, 57,000. After being burnt down by Pougatcheff in 1774, Kasan was rebuilt, by order of Catherine II., on a more regular plan. It was again the prey of an accidental conflagration in September 1815, by which it was more than half destroyed; but, like Moscow, it has risen from its ashes larger and better built than ever. It stands on very uneven ground, interspersed with lakes, and consists, like most other Russian cities, of three parts: the kremlin or citadel, on a considerable eminence; the town, properly so called; and the *slobodes*, or suburbs. The town is well built, and has broad and spacious squares and market-places. In the suburbs, which are principally occupied by the Tartar pop., the houses are of wood, and the streets disgustingly filthy. Principal buildings, the grand cathedral, founded in 1552; the cathedrals of St. Peter and St. Paul, with several other cathedrals and churches, some of them built in the course of the present century. The convent of Bogoroditskoi Kasanskoi, rebuilt by the emperor Alexander; the hotel of the general governor; the archiepiscopal palace; the hotel of the nobles; the bazaar; the military hospital; the arsenal, &c. Kasan is one of the most literary towns in Russia. It has a university, founded in 1814, but which was not opened till 1814. It had, in 1835, 70 principal and subordinate professors, 238 pupils, and a library of above 28,500 volumes. Its principal object is to supply instruction in the eastern languages, or in Arabic, Persian, Turkish, Tartar, and Mongul; within the last three or four years a professorship has been established for giving instruction in the Chinese language and literature. The city has also one of the four great theological academies, with a gymnasium, an observatory, a grammar-school, a Tartar school, a school for the instruction of school-masters, &c.; and several journals and publications issue from its press, among which are comprised some works in the Turkish language. A great cloth manufactory, established by Peter the Great, is now the property of individuals, and employs about 1,000 work-people; and there are besides manufactories of cottons, hardware, earthenware, and tiles, with tanneries, soap-works, distilleries, &c. Kasan is the seat of an admiralty; and vessels are constructed for the navigation of the Wolga and the Caspian. It also carries on an extensive trade, for which its situation adjoining the Wolga gives it peculiar facilities. About 15,000 of the pop. are Mohammedans. The rest, with the exception of a few Protestants, belong to the established Greek church. (*Schnitzler, La Russie*, &c. p. 671., &c.)

KASCHAU, a royal free city of Hungary, in the circ. on this side the Theiss, co. Abaujvar, on the Hernad, 123 m. N.E. Pesth. Pop. 13,600. It is well-built, with fine squares, and regularly laid out streets; and has 13 Rom. Cath. and 2 Lutheran churches, besides a theatre, and several other handsome public buildings. The chief public establishments are a royal academy, with a library of 10,000 vols., and a fine collection of natural history, a gymnasium, an episcopal seminary, a school for nobles (*adleges Kossuth*), and a military asylum: it is the seat of a county-assembly and court of justice; and has manufactures of tobacco, cutlery, earthenware, paper, &c.; and a large transit trade with Poland. (*Österr. Nat. Encyc.*; *Berghaus*.)

KATRINE (LOCH), a lake of Scotland, in the district of Monteith, in the S.W. part of Perthshire, on the confines of Stirlingshire, 6 m. W. Callander, and 5

m. E. from Loch Lomond. This, which is the most westerly and largest of a chain of lochs, consisting of lochs Venacher, Achray, and Katrine, the principal feeders of the Teith, is about 10½ m. in length, and from 1½ to 2 m. in width, of a serpentine form, and very deep. It is embosomed among lofty mountains, divided by deep ravines, whose sides, in parts clothed with wood down to the water's edge, and in parts consisting of bold rugged precipices, give it every variety of wild, picturesque scenery. Still, however, it was but seldom visited, and little known, till Scott made it the scene of his fine poem of *The Lady of the Lake*, when it at once attained the maximum of celebrity, and has since been annually resorted to by crowds of visitors. At the E. end of the loch, between it and Loch Achray, is the celebrated pass of the Trossachs, so beautifully described in stanzas 11—13. of the first canto of *The Lady of the Lake*.

KAZAMKEN, a town of Asiatic Turkey, prov. Irak-Arabi, on the W. bank of the Tigris, 8 m. N. Bagdad. Pop. 8,000. ? chiefly Persians, who have been induced to settle here on account of its being the burying-place of two celebrated imams, to whose memory a noble mosque has been erected. It is ornamented with two gilded cupolas, and, like those of Meshed Ali and Kerbela, is supported by the contributions of pilgrims. The town has a decent bazaar, many coffee-houses, 3 *hamams*, and a caravanserai; and on the opposite side of the river is the tomb of Imam Abu Hanafi, another Mohammedan saint. (*Kinnaird*.)

KEDGEREE, a town of British India, prov. Bengal, on the W. side of the Hooghly river, near its mouth, lat. $21^{\circ} 55'$ N., long. $89^{\circ} 16'$ E. It stands in a low, swampy situation; but, according to Hamilton, it is, notwithstanding, much healthier than Diamond Harbour, and ships of war, unless compelled by strong reasons, should never go higher up the river. A light-house has been erected a few miles further down, and of late years one has been established at Kedgerree, the charge for which, on ships sailing under British or American flags, is 3d. per ton per annum. The charge for pilotage to Kedgerree is half the full pilotage from the sea to Calcutta. A government marine officer is stationed at this town, who makes daily reports of the ships which arrive and sail. (*Hamilton's E. I. Gaz.*; *Commercial Dict.*)

KEDJE, a town of Beloochistan, prov. Mukran, of which it is the cap., on a rivulet, by which the surrounding district is well irrigated, 274 m. S.W. Kheilat; lat. $26^{\circ} 24'$ N., long. $62^{\circ} 28'$ E. Pop. unknown, but it is said to have once contained 3,000 houses. It stands clustered around the base of a precipice, on which is a fortress; and was formerly a place of considerable trade, which having declined, the town has fallen into decay. (*Pottenger's Beloochistan*, p. 304.)

KEIL, a town of Baden, circ. Middle Rhine, on the Rhine, immediately opposite Strasbourg, and 10 m. N.W. Offenbourg. Pop. about 1,000, or, with its immediate environs, nearly double that number. It was formerly a fortress, and was esteemed an important bulwark of Germany. It was fortified by Vauban in 1688, ceded by France to Baden in 1697, taken by the French in 1703, 1733, 1793, and 1796; by the Austrians, also, in the latter year; and re-taken by the French in the succeeding. After the peace, its works were dismantled, Gernersheim being fortified by the Germ. Confed. in its stead. The town is connected by a bridge of boats with the opposite bank of the Rhine, near Strasbourg. Its inhab. employ themselves chiefly in transit trade. (*Berghaus*; *Schreiber's Dict. Géog.*)

KEIGHLEY, or KIGHLEY, a market town and par. of England, in the W. riding of co. York, wap. St. Andrew and Ewecross, on an affluent of the Aire, 16 m. W.N.W. Leeds, and 178 m. N.N.W. London; area of par. 10,160 acres. Pop., in 1841, 13,413, being an increase of 20 per cent. on that of 1831. The town is beautifully situated in a valley close to the range called the Blackstone Edge; and though irregularly built, comprises many handsome stone houses: it is well paved, sufficiently supplied with water, and lighted with gas. A neat and commodious court-house, and a spacious market-place, were erected in 1833, and more recently a Mechanics' Institute has been built on ground given by the Earl of Burlington, who has large possessions in and near the town. The church was built in 1806, on the site of one erected in the reign of Henry I., and is a large and handsome structure, with a lofty steeple, containing a fine peal of bells: the living is a rectory in the gift of the Duke of Devonshire. There are also places of worship for Independents, Baptists, Wesleyan new connection, and Primitive Methodists, Swedenborgians, and the Society of Friends; and to all of these, as well as to the church, large Sunday schools are attached, furnishing religious instruction to about 1,800 children of both sexes. A free grammar-school, founded and well endowed in 1713, a girls' national school, and an infant school, are the chief educational establishments; and a mechanics' institute, founded in 1825, and now in union with that at Leeds,

has conferred many benefits on the working classes. The worsted manufacture, especially of coarse stuffs, merinos, and worsted yarns, is carried on to a considerable extent; and the produce is sold in the piece-halls of Halifax and Bradford: 38 worsted-mills gave, in 1838, employment to 2,125 hands, and 5 cotton-mills to 198 hands; about 1,800 looms are at work within the par. The Leeds and Liverpool canal, which passes near the town, affords cheap conveyance for manufactures, &c., and establishes a communication with Hull on the one hand, and Liverpool on the other. A county court is established here, before which 1,197 plaints were entered in 1848. Under the Boundary Act Kelghley is a polling place for the W. riding. It is also the head of a union, comprising 6 pars.; the expense of maintaining the poor of this par. having amounted to 3,122*l.* in 1847. Markets, well supplied, on Wednesday: fairs, May 8. and 9., and Nov. 7., 8., and 9.

Kelghley is known in the history of the great civil war, as having been the scene of an encounter, in 1645, between the king's troops, and a division of the parliamentary army, under Colonel Lambert. Its name is derived from an old family called Kelghley, one of whose members married a Lord Cavendish, from whom the present Duke of Devonshire and the Earl of Burlington are descended. (*Baines's Gazetteer of Yorkshire; Parl. Rep.*)

KELLS, a town of Ireland, prov. Leinster, co. Meath, adjacent to the Blackwater, on the top and sides of a gentle hill, 35 m. N. W. Dublin, and 21 W. Drogheda. Pop., in 1841, 4,205, since which it has not increased. It consists of three principal and some smaller streets, and has some good houses; but, generally speaking, it is a poor, mean place, and is neither lighted nor watched. Here is a fine old church, contiguous to which is a pillar or round tower 99 ft. in height. It has, also, a R. Cath. chapel, a court-house, market-house, bridewell, fever hospital, a national school, and a school supported by Lady Headfort. A lace manufactory is said, in the *Municipal Boundary Report*, to employ 100 hands, and there is also an extensive brewery.

This is a very old town; a synod having been held here in 1152, and a castle erected on the site of the present market-place in 1178. Here, also, was a monastery, some remains of which still exist, and are called St. Columb Kill's House, from the name of its reputed founder. In one of the streets is a fine stone cross. The bor. returned 2 mems. to the Irish H. of C., but was disfranchised at the Union. The magnificent seat of the Headfort family is in its vicinity. Post-office revenue, in 1830, 678*l.*; in 1836, 715*l.*

KEITH, a bor. of barony and market-town of Scotland, co. Banff, on both sides the Isla, a tributary of the Deveron, 41½ m. N. W. Aberdeen. Pop., in 1801, inc. the par., 3,234; in 1841, 4,456. Keith is, properly speaking, composed of three towns, namely, Old Keith and New Keith, on the S. of the river, and Fife Keith, on the N., the whole lying in the centre of an amphitheatre of hills. The first, which is very old, is but of mean appearance and irregular shape; the second, begun to be erected in 1750, stands on a gentle eminence to the S. E. of the former, and consists of one principal street divided into several portions; the third, or Fife Keith, which had its origin in 1816, is connected with the two former towns by two bridges over the Isla. New Keith is the largest and best built of the three divisions in question, and in it most part of the public buildings are situated, such as the par. church, a Gothic building, with a tower 104 ft. high, and a R. Cath. chapel, after the plan of St. Maria de Vittoria at Rome. It has also an episcopal chapel, and two meeting-houses, belonging to the Associate Synod. The means of education are very ample. There are 4 subscription libraries. A considerable number of persons are employed in weaving woollen and linen cloth for the Aberdeen manufacturers; and it has also about 35 "customer weavers" employed by private persons for articles of local consumption. There are three branch banks in the bor. In addition to weekly markets, Keith has four annual fairs, all of considerable importance: Summer-eve Fair, held in September, is by far the greatest fair in the north for cattle and horses.

A skirmish took place in 1745 at Old Keith, between the forces of the Pretender and those in the royal service, in which the former had the advantage, and carried off 150 prisoners. James Ferguson, the celebrated self-taught astronomer, was born in the vicinity of Keith: the only school he ever attended was one at Keith, and that for only three months. He died in 1776. His "Autobiography" is well known. (*Beauties of Scotland*, vol. iv. § *Banffshire*; *Chambers's Gaz.*)

KELSO, an inland market-town of Scotland, co. Roxburgh, beautifully situated on the left bank of the Tweed, near the point where it is joined by the Teviot, 38 m. S. E. Edinburgh, and 20½ m. S. W. Berwick-upon-Tweed. Pop., in 1801, 3,286; in 1841, 4,694: of the town and par. at the latter date, 5,238. The town, which is peculiarly neat and handsome, consists of 4 principal and

some smaller streets. The former meet in a square or market-place in the centre of the town, consisting of well-built houses, which, like those in other parts, are mostly of freestone and slated. On the E. side of this square is the town-house, an edifice of two stories, with a pediment in front supported by 4 Ionic columns, surmounted by a handsome balustrade, and dome springing from the centre of the roof. The old par. church being a "misshapen pile," a new or second par. church was built here in 1837 in the Elizabethan style, with a quadrangular tower 70 ft. high. The bridge across the Tweed, from a plan of the late Mr. Rennie, is said to have been the prototype of Waterloo bridge over the Thames by the same architect. It has 5 elliptical arches; its total length is 494 ft.; the breadth of the roadway is 25 ft., and the greatest height from the bed of the river 42 ft. It was finished in 1803 at an expense of 18,000*l.* In the immediate vicinity of the town, on the W., is Fleurs, the seat of the ducal family of Roxburgh, the feudal superiors of the bor.; a mansion erected in 1718, but recently repaired and modernised, combining, as Sir W. Scott has observed, "the ideas of ancient baronial grandeur with those of modern taste." But the most prominent object in or round Kelso is its venerable abbey, founded in 1123 by David I. for Tyronensian monks, and endowed with immense possessions and privileges. Its form is that of a Latin cross, and it affords a fine specimen of the Saxon or early Norman style of architecture. It has long been in a state of dilapidation; but the Scotch reformers are guiltless of the demolition of this noble fabric: for, having been occupied as a place of security by the townspeople in 1545, it was then battered down by the English under the Earl of Hertford. The parts now remaining are the N. and S. aisles, each having two round towers, with two sides of the central tower, now only 91 ft. high. The thickness of the lower walls is 5½ ft. The pillars are clustered; the arches circular. Part of the ruin served as the par. church from 1649 till 1771, when it was deserted, from the idea of insecurity, for another place of worship. The Roxburgh family have of late laudably exerted themselves to repair and perpetuate this fine ruin. Kelso has been characterised by Scott, in his "Autobiography" (p. 39.), as "the most beautiful, if not the most romantic, village in Scotland." "It presents objects," he says, "not only grand in themselves, but venerable from their associations." The best view of the town and environs is from the bridge.

In addition to the old and new par. churches previously noticed, there are five other places of worship in the town, belonging respectively to the Episcopalians, Cameronians, Original Seceders, Relief and Associate Synod.

There are 10 schools in the bor. and par., attended by about 700 scholars; so that about a seventh part of the people are, at the same time, being educated; and this without including Sunday schools, of which there are 6. Kelso has 6 subscription libraries; the oldest, containing about 5,000 vols., having been instituted in 1750. The "Kelso Physical and Antiquarian Society" would do credit to a much larger town. There are two reading-rooms; two newspapers, one published weekly, the other twice a week. Kelso was the first provincial town in Scotland that introduced the printing-press. (*Irving's Scot. Poets*, i. 75.) The first edition of Scott's *Minstrelsy of the Scottish Border*, was printed in Kelso by James Ballantyne, who afterwards brought the typographical art to high perfection in Edinburgh, where he carried on the printing business in partnership with Scott.

A dispensary was founded here in 1777. Poor-rates were introduced in 1795; and yield, ex. other sources of income, a sum of about 1,700*l.* a year. About 40 children are educated at the expense of the par.

The currying of leather, and the manufacture of woollen cloths, linen, stockings, and hats, which are the chief branches of industry, do not together employ more than 150 hands, and some of these branches are disappearing. The town, which is chiefly dependent on its retail trade, is remarkable for its numerous handsome shops. It has a weekly corn-market, at which a great deal of business is transacted; and several annual fairs for cattle and sheep. There are four banks in the town; exclusive of savings' bank.

Kelso was originally a species of suburb to the bor. of Roxburgh, on the opposite bank of the Tweed. But the foundation of the abbey gave Kelso a more important character: and on the final destruction of Roxburgh, in the 15th century, its inhabs. transferred themselves thither. No traces now remain of the bor. of Roxburgh, and but few of its castle; though the latter was for centuries one of the most important Border fortresses. In 1460, James II., having taken the town of Roxburgh and demolished it, laid siege to the castle, during which he was killed by the bursting of a cannon. The queen, attended by her infant son, James III., encouraged the besiegers, and in a few days, the fortress was compelled to surrender. It was then destroyed; since which time it has remained in ruins, though partially repaired by the

English, under Somerset, in 1547. Soon after the Reformation, the lands and possessions of the abbey were conferred on the ancient family of Kerr, of Cessford, in the hands of whose descendants, the family of Roxburgh, they still remain. Kelso has repeatedly suffered from conflagrations, not in warlike times merely, but in pacific, as in 1686 and 1738. (*Morton's Monastic Annals of Teviotdale; Haig's Hist. of Kelso; Tennant's Tour; New Stat. Acc. of Scotland, Roxburghshire*, p. 298.)

KEMPTEN (an. *Campodunum*), a town of Bavaria, circ. Swabia and Neuburg, cap. distr. of same name, on the Iller, 80 m. S.S.W. Augsburg. Pop. about 6,000. It consists of two parts, an old town surrounded with walls nearly encircled by the new town. The former is the commercial portion of Kempten; the latter, seated on higher ground, comprises the abbey, where was formerly held the court of the abbot of Kempten, an ecclesiastic possessing, besides the town, an independent territory of 340 sq. m., ceded to Bavaria in 1802. Kempten has a fine collegiate church, aqueduct, and theatre, an hospital, founding asylum, public library, &c.; and is the seat of the council for the circle, courts of law for the circle and town, a board of tolls, a gymnasium, and high-school. It has manufactures of linen and cotton fabrics, and a brisk trade in these goods, and in wool, cattle, and Italian produce. The Iller becomes navigable near Kempten. Adjacent to the town is the eminence of Hilarmont, on which are the ruins of a fortress supposed to be Roman, and where various Roman coins have been found. (*Stein; Berghaus, &c.*)

KENDAL (KIRBY), a market-town, parl. bor. and par. of England, co. Westmoreland, ward of same name, 40 m. S. Carlisle, and 219 m. N.N.W. London. Pop. of parl. bor. (which comprises the townships of Kendal, Kirkland, and Nethergraveship), in 1841, 11,519. The town, on the side of a hill, at the bottom of which the river Kent (crossed here by three bridges), runs nearly N. and S., consists principally of one long street on the line of the Carlisle road, and a lateral street leading down to the river on the Appleby road. The houses are well built of stone, and being whitened, and roofed with blue slates, have a remarkably clean and neat appearance. The town-hall is an elegant building, and the market, for butchers' meat, is neat and commodious. At the N.W. end of the town is a large and well arranged workhouse, and near it is a house of correction. The other principal buildings are a handsome hall, belonging to the society of "odd fellows," the assembly and news rooms, theatre, and several extensive factories. The church, near the S. entrance of the town, is a large Gothic structure, with a square tower: the living is a vicarage in the gift of Trinity College, Cambridge. There are two other episcopal places of worship, and 10 belonging to different denominations of dissenters. Among the educational establishments, are a well endowed grammar-school with university exhibitions, a blue-coat charity, a green-coat school, a large national school, supported both by endowment and subscription, a school of industry, an infant school, and several Sunday schools. There is also a thriving mechanics' institute. The charitable institutions comprise an hospital for old unmarried women, endowed with 100*l* a year, a dispensary, and a lying-in charity; and the corporation has the trust of charitable funds to a considerable amount.

Kendal has long been noted for its weaving industry; and in the reigns of Richard II. and Henry IV., special laws were enacted for the protection of its manufactures. The present manufactures comprise linseys, serges, baizes, the coarser kinds of kerseymeres, and carpets. There were 12 woollen mills, which employed, in 1838, 342 hands; and about 3,000 persons were employed in weaving, and otherwise preparing cloth. The wages of adult weavers (good hands) average 10*s*. a week when fully employed; but the trade has sometimes been much depressed, and great distress has consequently prevailed among the working classes. Sum raised by rates and expended on the poor in 1846-47, 2,467*l*. The marble works, for cutting and polishing marble, quarried at Kendal Fell, employ several hands; and the machinery is very ingenious. There is water-communication by a canal with Lancaster, and a railway has been projected to connect Kendal with Carlisle northward, and with the N. Union, and the other great lines of England. A joint-stock bank, and two private banking establishments furnish ample accommodation to the manufacturers, and a savings' bank has a large number of depositors. Two newspapers, of opposite politics, the "Westmoreland Gazette," and "Westmoreland Advertiser," are published every Saturday, and are said to be well conducted, and pretty extensively circulated.

Kendal was first incorporated by Queen Elizabeth, and a second charter was granted by Charles I. Under the Municipal Reform Act, it is divided into three wards, the municipal officers being a recorder, a mayor, and 5 other aldermen, with 18 councillors. Corporation revenue, in 1847-48, 760*l*. The Reform Act conferred on

Kendal the important privilege of sending 1 mem. to the H. of C.: the electoral boundaries include the townships of Kendal and Kirkland, with those parts of Nethergraveship which adjoin Kendal. Registered electors, in 1849-50, 385. Markets, well attended, on Saturday; cattle fairs, March 22., April 29., and November 8.

Near Kendal, on the opposite side of the river, are the ruins of a castle, commandingly situated on a rocky eminence, and celebrated as the birthplace of Catherine Parr, one of the queens of Henry VIII. A large portion of the outer wall, and two towers, still remain to mark its former extent.

KENILWORTH, a market-town and par. of England, co. Warwick, hundred Knightlow, 5 m. N. Warwick, 18 m. S.E. Birmingham, and 96 m. N.N.W. London. Area of par. 6,460 acres: pop., in 1841, 3,149. It is delightfully situated on an affluent of the Avon, and consists chiefly of one long street, about 1 m. in length, part of the road from Warwick to Coventry. In the lower part of the town is the church, a Gothic building of different periods, having a handsome tower and spire; and near it are the ruins of an abbey, valued at the dissolution of the monasteries at 644*l*. On the higher ground are several handsome houses; and at the top of the hill on which the town stands are the ruins of a castle, the ancient fame of which has been made familiar to all Europe by the Magician of the North. There are several places of worship for dissenters, to each of which, as well as to the church, are attached well attended Sunday-schools. A free-school was founded in 1794, and there is a large national school. Among other charities, are almshouses for 16 widows, and an apprentice fund. Ribands, gauzes, and combs are made here; and there are chemical works for the preparation of Glauber salts, sal-ammoniac, and Prussian blue; but they are not important. Markets on Wednesday; horse and cattle fairs, April 30. and Sept. 30.

Kenilworth Castle, whose extensive ruins bear ample testimony to its ancient splendour and magnificence, was erected in 1120 by Geoffry de Clinton, treasurer and chamberlain to Henry I., and in the reign of Edward I. the Earl of Leicester held a tournament here, which was attended by 100 knights with their ladies. The estate afterwards reverted to the crown, and was given by Queen Elizabeth to her unworthy favourite, Dudley, Earl of Leicester, who is said to have expended on its improvement 60,000*l*., a vast sum for those days. "The outer wall," says Sir W. Scott, "inclosed seven acres, a part of which was occupied by extensive stables and by a pleasure-garden, with its trim arbours and parterres; and the rest formed the large base-court or outer yard of the noble castle, which was itself composed of a huge pile of castellated buildings surrounding an inner court. A large and massive keep, called Caesar's Tower, was of uncertain though great antiquity; and that noble and massive pile, which yet bears the name of Lancaster's Buildings, was erected by John of Gaunt, 'time-honoured Lancaster.' The external wall was on the S. and W. sides adorned and defended by a lake partly artificial, across which was a stately bridge, and on the N. side was a barbican, which, even in its present ruinous state, is equal in extent and superior in architecture to the baronial castle of many a northern chief. Beyond the lake lay an extensive chase, full of deer and game, and abounding with lofty trees. Queen Elizabeth twice visited this noble palace; and here, in 1575, she was entertained, with her whole court, with princely magnificence during 17 days, at the enormous expense of 1,000*l*. per diem. The castle was plundered and ultimately left in a state of ruin by Cromwell's soldiers, who appropriated to themselves the adjacent lands. After various changes, the estate came into the possession of Hyde, Earl of Clarendon, and is still held by that noble family." (*Sir W. Scott's "Kenilworth,"* vol. ii., with notes; *Bingley's Beauties of England and Wales, &c.*)

KENNERLY (CAVE-TEMPLES OF). See **SALSETTE**.

KENSINGTON, a town and par. of England, co. Middlesex, hund. Ossulston, in the suburbs of London, 1½ m. W. Hyde Park corner, comprising (with the hamlets of Bayswater, Earl's Court, Brompton, and Little Chelsea,) an area of 2,680 acres. Pop., in 1841, 17,319. It consists of a main street forming a part of the London road, and of several subordinate streets running from it N. and S., one of which leads into a handsome square. The houses are well built, and many good detached residences are scattered in the outskirts. The par. church is a plain but spacious building, erected in 1690; and the living is a vicarage in the gift of the Bishop of London. There are also 2 district churches, and a proprietary episcopal chapel, with several places of worship for dissenters (the largest of which, built in 1794, belongs to the Independents). A large charity school, national and Lancastrian schools, and several private boarding schools, furnish instruction to all classes; and there are numerous charities for the relief of the aged and sick

poor. The trade of the town chiefly depends on the many families of rank and wealth resident in and round it.

Kensington is the chief locality of a poor-law union, comprising, besides itself, the pars. of Chelsea, Fulham, Hammersmith, and Paddington. The expense of maintaining the poor of this par. amounted to 10,675*l.* in 1847.

The palace, which, with its gardens, forms the chief object of attraction, is an irregular brick building, purchased by William III. of the Earl of Nottingham. Among other additions made by that monarch, the whole S. front was rebuilt under the direction of Sir C. Wren, and the interior received great improvements and embellishments: the W. front was rebuilt by Kent, in the reign of George II. The state rooms comprise 12 handsome chambers, well adapted for occasions of ceremony; but few of them, except the galleries, are of commanding proportions. The staircase, painted by Kent, is intended to represent a number of spectators on a court day; and the artist has introduced several portraits of characters connected with the court of George I.: the style, however, is *bizarre*, and in very bad taste. The presence chamber is now hung with pictures, many of which were highly valued by the late president West. This palace was the residence of William and Mary, Anne, George I., and George II., all of whom (except George I.) died within its walls. George III. removed the town residence of the court to St. James's; and Kensington palace has since been allotted to junior members of the royal family. The childhood of Queen Victoria was spent in it; and it was for many years the town residence of the Duke of Sussex. The duke's library, which has been sold, was very valuable, especially the collection of bibles and biblical works, inc. about 300 rare MSS. The gardens occupy an area of about 350 acres, and have been for many years an attractive public promenade. Holland House, a brick structure, in the Elizabethan style, at the W. end of Kensington, was built in 1607, and descended in the reign of Charles I. to the Earl of Holland. Addison occupied it after his marriage with the dowager Countess of Warwick. In 1766 it was purchased by Henry Fox, Lord Holland, in whose family it still remains. The library is 112 ft. in length, and contains a valuable collection of books, especially in Spanish and Portuguese literature. There are many good pictures, and in the hall is a sitting statue of C. J. Fox. About 200 acres of land are attached to the house, which is one of the finest residences in the vicinity of London.

KENT, a marit. co. in the S.E. part of England, being the nearest of any in the kingdom to the Continent, having N. the Thames and its estuary, E. and S.E. the German Ocean and the Straits of Dover, S. Sussex, and W. Surrey. Its greatest length, from Deptford to the N. Foreland, is about 64, and its greatest breadth about 30 m. Area, 996,480 acres, of which above 900,000 are said to be arable, meadow, and pasture. This is a finely diversified and beautiful co. Two parallel ridges of hills traverse its whole extent from E. to W. The upper, or most northerly of these ranges, extending from Westerham, on the confines of Surrey, to Dover, being composed chiefly of chalk, and thence called the chalk ridge; while the lower, or most southerly range, about 8 m. from the former, is usually called the ragstone range, from its consisting principally of ragstone and ironstone. The country to the N. of the upper range, including the isles of Sheppey, Grain, and Thanet (*see* THANET), is generally very fertile, and contains a good deal of marshy and of rich loamy land, producing the finest wheat. Romney Marsh, a celebrated grazing district (*see* ROMNEY MARSH), and the *Weald*, lie to the S. of the lower or ragstone range. The latter, which extends into Sussex and Surrey, is a very singular tract. Its soil is generally stiff and clayey, but in parts sand predominates. For a lengthened period it formed an immense forest; but was gradually, though slowly, brought into tillage. Its soil continues to be particularly well adapted to the growth of timber, especially oak, which here attains to the greatest luxuriance. At this moment most inclosures in the *Weald* are surrounded with oaks, and every wood and coppice is full of them. "When viewed from the adjoining hills, which command a prospect over the whole of it, the *Weald* exhibits the most delightful scene that can be imagined. It appears to the eye an extensive level country (the few hills in it being so small and inferior to those whence it is viewed), covered with all the richness of both art and nature; the variety of small inclosures of corn and meadow, and the houses, seats, and villages, promiscuously interspersed among the large and towering oaks, which grow over the whole face of it, have the most pleasing effect, and represent to us, even at this time, something, though a great improvement of its original state, in the idea of an inhabited and well cultivated forest." (*Hasted's Kent*, i. 293. 298., 8vo. ed.) From its proximity to the Continent the climate of Kent is colder in winter, and the E. winds in spring are said to be more piercing than in other cos.

in the same parallel more to the W.; but, on the other hand, the summers are warmer, and its autumns less liable to wet, which renders it especially fitted for the production of corn and fruit. Agriculture is in a very advanced state in Kent, and it has a greater variety of products than any other co. in the kingdom. Its wheat, barley, beans, and pease are all excellent. With the exception of the Isle of Thanet, turnips are extensively raised on the light soils. Hops are produced in large quantities, especially in the district between Maidstone and Canterbury. Most part of the cherries, filberts, plums, and other fruits brought to the London markets, are supplied by the orchards between Maidstone and Tonbridge, &c.; while the Isle of Thanet and other places furnish supplies of spinach and of various seeds. Though Kent feeds large numbers of cattle, it cannot be called a grazing co.: the stock of sheep is, however, very large. Romney Marsh has a peculiar breed that furnishes long, combing wool. There is a great deal of timber in other parts of the co., exclusive of the *weald*. Property much divided, and there are no great estates. Size of farms very various; but, owing to the sort of garden culture carried on in many parts, they are mostly, perhaps, rather small; many varying in extent from 10 to 30 acres, while there are but few above 200 or 250 acres. Average rent of land, in 1843, 26*s.* 7*d.* an acre. The yeomanry of Kent are a very superior class; and besides their own, some of them occupy extensive hired farms. All lands in Kent, unless specially exempted by an act of the legislature, are held by the tenure of *gavelkind*; descending, in the event of the father dying intestate, not to the eldest son, but to all the sons alike in equal portions; and if there be no sons, they divide equally among the daughters. This is supposed to have been the common tenure in England before the Conquest; but, exclusive of Kent, it now obtains in but a few places. Some estates have been *disgavelled*, or excepted by a special act of parliament, from this tenure; and partition is now, in most instances, prevented by testament. But such lands as are not *disgavelled*, or settled by testament, are invariably disposed of in the way stated above. (*Hasted's Kent*, i. 311—321. 8vo. ed.) The customs that prevail with respect to the entry to farms operate injuriously on agriculture; and owing, as is said, to the prevalence of smuggling on the coasts, and the abuse of the poor laws, the peasantry were lately supposed to be a good deal demoralised; but both these sources of disorder are now in the way of being obviated. Ironstone is abundant in many parts; and previously to the employment of coal in the making of iron, the *weald*, from the abundance of its timber, was a principal seat of the iron trade; but this has been long abandoned. With the exception of ship-building carried on at Deptford, Woolwich, Chatham, and other places, manufactures are unimportant; they consist of paper, made at Maidstone and Dover, gunpowder at Dartford and Faversham; and toys at Tonbridge. Exclusive of the Thames, the principal rivers are the Medway (which *see*), Stour, Rothe, Darent, and Ravensbourne. Kent is divided into the two nearly equal divisions of E. and W. Kent, each having its own court of sessions. Principal towns, Greenwich, Deptford, Chatham, Rochester, Canterbury, and Dover. It is divided into 5 lathes, 63 hundreds and 15 liberties, and 411 parishes. It sends 18 mems. to the H. of C., viz. 2 for each of the 2 divisions of the co.; 2 for each of the bors. of Canterbury, Rochester, Dover, Greenwich, Maidstone, and Sandwich, and 1 each for Chatham and Rye. Registered electors for the co. in 1849-50, 16,217, being 6,987 for the E., and 9,230 for the W. division. In 1841, Kent had 95,482 inhab. houses, and 548,337 inhab., of whom 272,532 were males, and 275,805 females. Sum expended on the relief of the poor, in 1846-47, 208,258*l.* Annual value of real property, in 1815, 1,687,443*l.* Do. in 1843, 2,907,606*l.*

KENTUCKY, one of the U. S. of America, in the central part of the Union, between lat. 36° 30' and 38° 30' N., and long. 86° and 89° W.; having N. the States of Ohio, Indiana, and Illinois, from all which it is separated by the Ohio river, W. Missouri, from which the Mississippi divides it, S. Tennessee, and E. Virginia. Length, E. to W., nearly 400 m.; breadth, varying from 40 to 175 m. Area, estimated at 39,000 sq. m. Pop. (1840), 779,828, of whom 182,250 were slaves. The general slope is towards the N.W. The E. extremity of the state is occupied by some offsets of the Alleghany mountains; and along the Ohio the country is broken, and contains many abrupt hills, and deep and fertile valleys, often densely wooded. Towards the centre of Kentucky the surface is undulating; the W. is comparatively level. In the latter direction is an extensive tract, called the "barrens," not sterile, however, as its name would seem to imply, but comprising some of the fine pasture land for which Kentucky is distinguished; and studded with oak and other forest trees. Next to the Ohio and Mississippi, the chief rivers are the Cumberland, Green, Kentucky, Licking, and Tennessee, which have numerous affluents, and are all tributary to the Ohio. Most

of them rise in the S.E. and mountainous part of the state. Cumberland river, the course of which is principally in Kentucky, has an entire length of 440 m., and is navigable for steam-vessels to Nashville in Tennessee, and for boats to near its source. Most of the other rivers above mentioned are navigable for more than 100 m. in the winter; but in summer the large streams are diminished to a greater extent than those of any other state in the union, and the small ones are entirely dried up. The whole of Kentucky appears to rest upon a bed of limestone, which rock is usually met with about 8 ft. below the surface. Bituminous coal is found along the banks of some of the rivers, and iron of excellent quality in numerous places. There are many salt springs, from which salt is obtained in sufficient quantities, not only for the supply of Kentucky itself, but of a great part of Ohio and Tennessee. Nitre, and fine white marble are plentiful. In the limestone formation, in the S.W., are several stupendous caverns, one of which, Mammoth Cave, in Warren co., is supposed to be 8 or 10 m. in extent. The climate in the E. and central parts is highly salubrious; but in the W., especially along the Mississippi, it is unhealthy, no year elapsing without a considerable mortality from fevers, agues, &c. Great extremes of heat and cold are experienced in the state; and, considering its lat., its winters are both long and severe. The soil is generally fertile: of 83 cos., into which Kentucky is divided, 50 consist of rich land, and are comprised in the tract called the "Garden of Kentucky," 150 m. in length, and from 50 to 100 m. in breadth, in the centre of the state. Nearly all the European grains, Indian corn, and tobacco are cultivated. The hills along the N. boundary are under culture wherever their declivities are not too steep for the plough; and in those places they are generally covered with forest trees of vigorous growth, as oak, pine, elm, sycamore, chesnut, black walnut, locust trees, &c. The vine, mulberry, and a great variety of other fruits are grown. Hemp is a staple product. In the central tracts the land is generally well cultivated, and the farm-houses and offices are good. Artificial grasses and red clover are sown; white clover is of spontaneous growth. The chief branch of rural industry is the rearing of horses and cattle. The Kentucky horses are of acknowledged excellence, and bred in large numbers. Their superiority is so great that many are sent over the mountains to the Atlantic States, and the principal supply of saddle and carriage horses for the lower country is drawn from Kentucky; the horses being sent down the Mississippi in flat-bottomed boats. Mules are numerous, and of excellent quality; when full grown, they average from 15 to 16 hands, and are sometimes 17 hands high: their price varies from 80 to 160 dollars. Many of the central counties are cultivated by large proprietors, who rear cattle very extensively, with which they supply the W. markets. Large droves of the first quality are also exported to Virginia and Pennsylvania. Hogs are reared in large numbers on the barrens. Manufactures are of secondary importance: the chief are those of cotton and woollen cloths, cordage, salt, iron goods, and maple sugar. Cattle, hemp, wheat, and tobacco are the principal articles of export. Most of the external trade is carried on through New Orleans. The means of internal communication are rapidly extending. In January 1838, 308 m. of turnpike road had been completed, and 215 m. more were under contract, and in progress. In the same year, 31 m. of the Lexington and Ohio railway were open; and 20 m. of that between Frankfort and Louisville were nearly completed. Several other railways are in contemplation; among which is one designed to extend from Charleston in S. Carolina to the Ohio, its entire length being estimated at 640 m. Improvements in the river navigation are at the charge of the state; the construction of locks, dams, &c. on Green River was begun by the government, in 1834. A canal near Louisville, 2 m. long, by which the rapids are avoided, was completed in 1831. In January, 1850, Kentucky had 4 banks of its own, and 13 branch banks, with an estimated united capital of 7,030,900 dollars. Frankfort on the Kentucky is the cap., and seat of the legislative government; but Louisville is the largest commercial emporium. Lexington is the other principal town. The legislative power is vested in a senate, which consisted, in 1848, of 38 mems., and in a House of Representatives of 100 mems. The senators are elected for 4 years, one-fourth of their whole number being returned yearly. The representatives are elected annually. The right of election is in every free male citizen 21 years of age, who has resided in the state for 2 years preceding the election, or for one year in the county for which he desires to vote. The governor and lieutenant-governor hold office for 4 years; and are re-eligible only after the lapse of 7 years. Justice is administered in a supreme court, a court of chancery, and 16 district courts. The U.S. circuit-court is held at Frankfort. The militia of the state consisted, in 1838, of 75,926 men. In 1837, Kentucky had upwards of 1,000 ordinary schools

for public instruction; and there were many superior schools in the chief towns. Transylvania University, the oldest establishment of the kind in the W. part of the Union, is at Lexington (which see). Centre college, at Danville, founded in 1822, had (1849) an average attendance of 120 students. St. Joseph's college, at Bardstown, founded 1819, has a library of 7,000 vols., and generally about 130 students. There are colleges at Augusta, on the Ohio, Princeton, and Georgetown; a state-literary fund, several lunatic and deaf-and-dumb asylums, hospitals, &c. In 1839, 31 periodical publications were issued in the state. The earliest permanent settlement of this territory was made by settlers from N. Carolina, in 1773. Kentucky continued to form a part of Virginia till 1790, when a separation was effected; and in 1792 it was admitted into the Union as an independent state. It sends 13 mems. to Congress. (*American Cyclopædia and Almanack; Pitkin's Statistics of the U. S.; Mitchell; Darby; Stuart's Three Years in America; Hoffman.*)

KERBELA, or MESHED HOSSEIN, a town of Asiatic Turkey, prov. Irak-Arabi, 50 m. S.W. Bagdad. Pop. uncertain, but very considerable. It stands on a plain about 6 m. W. of the Euphrates, with which it is connected by a canal said to be more ancient even than the era of Alexander. It has 5 gates, a well-supplied bazaar, and 7 caravanserais; but the chief ornaments of the city are the tomb of Hossein, adorned with a gilded cupola, and a noble mosque. Its chief lustre has been derived from Hossein, son of Ali by Fatima, the daughter of the prophet, who was slain near it, and to whose tomb numerous pilgrims of the sect of Ali flock from all quarters, but especially from Persia, to pay their devotions. It is subject to the Turks, but still the majority of the inhab. are Persians; and it has always been a favourite object of their king to obtain possession of this place, as well as of Meshed Ali and Kazameen, both of which are, like Kerbela, the resort of pilgrims. The environs of the town and borders of the canal are shaded by extensive plantations of palm-trees, and the walls, which are upwards of 2 m. in circuit, are kept in good repair, to secure the riches of the holy city against the predatory excursions of the Wahabees, by whom it was plundered some years ago.

Kerbela occupies the site of *Vologesia*, a small town built by Vologese, one of the Parthian kings, contemporary with Nero and Vespasian. (*Kinney.*)

KERESOUN (an. *Cerasus*), a town and sea-port of Asiatic Turkey, on the S. shore of the Black Sea, pach. Trebizond, from the town of which name it is distant 88 m. W. by S.; lat. 40° 57' 10" N., and long. 38° 24' E. Pop. about 3,000, half being Armenian and Greek. It stands on an elevated rocky promontory bounding an extensive bay to the E., and appears to have been formerly a place of great strength. A considerable part of the ancient wall still exists; but the present town is in a ruinous condition, and the people bear the appearance of being in abject poverty. There is some little trade in corn with the Crimea; and trading vessels are built in the bay under the city walls.

Cerasus was visited by Xenophon on his return with the ten thousand; and he calls it a "Hellenic colony, situated in the country of the Colchi." (*Anab. v. 3.*) It is also said to be the native country of the cherry, which hence received its name. It was here that Mithridates ordered his wives and sisters to be poisoned after the battle of Cabira, when it fell into the hands of Lucullus; but that it was, as Arrian states, identical with the Pharnacia which was the residence of the kings of Pontus, is, to say the least, extremely doubtful. (*Cramer's Asia Minor*, i. 281.) Keresoun was conquered by Mahmoud II., and has since been attached to the Turkish empire. (*Kinney's Asia Minor*, p. 329.; *Renell's Geog. of W. Asia*, vol. ii.)

KERKOUK (*Demetrias*, Strab.; *Corcura*, Ptol.), a large town of Asiatic Turkey, in Lower Kurdistan, cap. sandjak, 100 m. S.E. Mosul, and 130 m. N. Bagdad. Pop., according to Kinney, 13,000. It is situated on a commanding eminence nearly perpendicular on all sides, below which is an extensive suburb: it is surrounded by a mud wall, but beyond this are extensive suburbs. Besides numerous mosques, it has 3 R. Catholic churches and 1 Armenian do. The streets are narrow and filthy; and the meanness of the houses leaves no doubt with respect to the poverty and wretchedness of the inhab. The surrounding district is uneven and hilly; and on the N. side a low range of barren and rocky mountains separates it from the fine plain of Altun-Kupri. In the pass through these mountains are numerous naphtha pits, yielding an inexhaustible supply of that useful commodity, which is sent in earthen jars all over the neighbouring country. (*Kinney's Persia*, p. 298.; *Olivier*, iv. 300.)

KERMAN (an. *Caramania*), a prov. of Persia, between lat. 25° 30' and 31° 20' N., and long. 54° 30' and 60° 20' E., having N. Khorassan, E. Afghanistan and Beloochistan, S. the Persian Gulph, and W. the provs. Fars and Laristan. Shape triangular; extreme length

380 m.; breadth, 250 m.; supposed area, 65,000 sq. m. Pop. alleged to be under 600,000, having greatly decreased of late years through the wars of extermination waged by the Persians on the Guebres or Parsees. Kerman, generally speaking, is mountainous; but the elevation of the high ground varies considerably from mere hills to lofty ridges, scarcely lower than those of the great mass in which they originate. The principal range divides Nurmansheer from Laristan, and thence runs W. with many ramifications. The interior of the prov. is not irrigated by a single river, and the natives could not possibly exist, but for a few mountain springs, and the diligence used in cutting *karezes* or subterraneous reservoirs, for watering the land. The Rud Shuir, which runs through the S. part of Kerman into the Persian gulph, is at present very imperfectly known. The climate is accounted the least healthy of any part of Persia; the hills, which are clad with snow nearly all the year, being extremely cold, and the long narrow valleys between them oppressively hot. The winds from the mountains are deliciously cool; but, as they bring with them agues, and epidemic fevers, the natives prefer sultry weather. The N. portion of the prov., and that close on the coast, are arid sterile deserts; but in Nurmansheer and a few other central districts where irrigation has been properly followed up, layers of alluvial soil and rich vegetable mould are found to be exceedingly productive. Wheat, maize, and barley; cotton, tobacco, saffron, and madder, are raised with facility, and in the greatest perfection. Dates, oranges, lemons, grapes, almonds, and pistachios, with other fruits of S. Europe, are of common occurrence; and mulberry-trees are largely cultivated for the silk-worms, in breeding which the inhabs. have attained considerable celebrity. The gum-plants, the produce of which is not less esteemed than that from Arabia, comprise the assafœtida, mastic galbanum, sandaric ammoniac, sarcacolla, and tragacanth. Much attention is likewise given to the cultivation of the white rose, from which is distilled an *attar* or essence highly valued in Asia. Pasturage, however, is a more favourite pursuit than tillage. The breed of sheep peculiar to this prov. called *dambedor*, is small and short-legged, with a long bushy tail; its wool fetches a higher price in the market than that of any other variety in Persia. Camels also, and goats, are bred in great numbers, as their hair is thought to make a fibre at once stronger and more delicate than that of animals reared elsewhere. Oxen and horses are little attended to. The forests are infested with wild beasts of the cat and bear tribe; and there are many species of serpents, some being highly venomous. On the S. coast sea-fish is abundant; but the pearl-fishery, once very profitable, has been abandoned in consequence of the too great depth of the oyster-beds. The mineral riches might be made a source of considerable wealth, for most metals are abundant; but iron, copper, and sulphur are the only products hitherto obtained. The manufactures comprise fine woollen fabrics, carpets, goats' and camels' hair shawls, coarse linens, and a peculiar kind of matchlock, much esteemed in the E. These articles, with *chenna*, a yellow dye, fruits, gums, &c., are either sent N. by caravans, or exported from the port of Gombroon.

The inhabs. were formerly almost exclusively Guebres; but the number of these is now less than 40,000. The Persians constitute the chief mass of the pop.; but there are also many Belooches and Arabs of different tribes. The government is vested in a beglerbeg; and the prov. is divided into 9 districts, each of which is under a hakim or lieutenant. The taxes on land, and imposts on manufactured goods, are very oppressive, and operate as a great hinderance to industry. The S. part of Kerman, called Moghostan, is not subject to Persia, but to the Imâm of Muscat, who receives from it a yearly tribute of 7,000 tomans. The Arabs of various tribes are governed by their respective sheiks. (*Kinneir's Persia*, p. 194—201.; *Pottinger's Travels*, p. 220—227.; *Hage-meister sur l'Asie Occidentale*, &c.)

KERMAN, or SERJAN (an. *Carmana*), a city of Persia, and cap. of the above prov., 230 m. E. Shiraz, and 340 m. S.E. Isfahan; lat. 29° 56' N., long. 56° E. Pop. estimated by Pottinger at 30,000. This city, which was once more prosperous and extensive than at present, stands on the W. side of an extensive plain, so close to the mountains as to be completely commanded by two of them. The walls, pierced by 4 gates, are high and built of mud, flanked outside by a dry ditch, 20 yards wide, and 10 yards deep. On the S. side of the town is a citadel, in which the governor resides. The bazaar, well supplied with every article of necessity and luxury, is covered in with very elegant domes, built of a beautiful blue stone procured in the adjoining mountains. There are nine good caravanserais within the walls, several mosques, baths, &c.; but most of them are in a ruinous condition. The trade of Kerman, however, is still very considerable; and it is celebrated for its manufactures of shawls, carpets, and matchlocks, which are exported to Khorassan, Balk, and Khiva, Arabia, Sindh, and all

parts of India. The shawls of Kerman are of coarser quality, but approaching nearly in colour and general appearance to the inferior Cashmeres. Immense quantities of the commoner kinds are sent to all parts of Turkey; they are about 2 yards square, very low in price, and are generally worn by the lower classes in W. Asia.

Kerman, formerly one of the proudest cities of the Persian empire, owed much of its former opulence to its situation on the road from Bokhara to Gombroon, a port which has been almost superseded by Bushire. Domestic and foreign wars, however, with repeated pillages, have all but ruined it. In 1794 it was besieged and taken by Aga Mahommed Khan; the walls and public buildings were then levelled to the ground, a licentious soldiery were allowed to pillage it during three months, vast numbers of the inhabs. were put to death, and 30,000 are said to have been sent into exile. From these calamities Kerman is only very slowly recovering, nor does the present state of its trade warrant the conclusion that it will ever attain its former importance. (*Kinneir's Persia*, p. 198.; *Pottinger*, &c.)

KERMANSRAW, or KERMANSRAH, a city of Persia, the cap. of Persian Kudistan and of a district bearing its own name; 82 m. W.S.W. Hamadan, and 320 m. S.W. Isfahan; lat. 34° 26' N., long. 47° 15' 15" E. Pop. 30,000. It stands a short distance from the right bank of the Kerkah or Karasu, in a beautiful plain open to the S., but inclosed on every other side by lofty mountains. It is surrounded by a substantial brick wall, having round towers at its four angles and a deep ditch in front. The citadel, strongly fortified, is the residence of the beglerbeg, who belongs to the royal family of Persia. The streets are narrow, crooked, and unpaved; but the town is adorned with many gardens, has 14 *hamams* or public baths, 4 mosques, several bazaars, and a spacious caravanserai kept in tolerable repair. Its manufactures consist chiefly of woollen carpets and swords, mostly sent to Bagdad, with cotton, very delicious grapes, and other products of the rich soil belonging to the district. Considerable advantages accrue to the town in consequence of its situation on the great caravan road between Persia, Caubul, &c. and Asiatic Turkey. Great improvements have been made by the existing dynasty in its fortifications and public buildings, and it has become the residence of one of the members of the reigning family; so that its pop. and general importance have been steadily increasing during the present century.

About 6 m. E. of Kermanshaw, on the road to Hamadan and in the N. range of mountains, are the excavations and sculptures of Taki-Bostan. The most considerable of these is an arch cut in the rock, 60 ft. high, 20 ft. deep, and 24 ft. wide; on the top is an emblematic figure, flanked by two angels, the sculpture of which is tolerably perfect and in good taste. At the extremity of the arch is the figure of a mounted warrior clothed in chain armour, with a shield on his left arm, a lance in his right hand, a quiver at his side, and a tiara on his head. The horse is well proportioned and tolerably carved. The representation of a boar-hunt occupies the entire left side of the arch; it is remarkably well executed, "some parts being so exquisitely finished (according to Kinneir) that they would not have disgraced the finest artists of Greece and Rome." At the upper end of another cave, similar in shape and size to that just described, is a *basso-relievo* of two kings in the costume of Persepolis, and wearing globular crowns identifying them with members of the Shapour dynasty. Near the entrance of this cave, also, are three figures, two of which are treading on the third, who is prostrate. The origin of these sculptures is a matter of doubtful conjecture: some attribute them to Semiramis, while by others they are ascribed to the successors of Alexander; but, if Silvestre de Sacy's translations of the Pehlvi Inscriptions be correct, we cannot greatly err in attributing them to the monarchs of the Sassanian dynasty. (For further particulars, see *Ker Porter's Travels*, ii. 163—204.; *Kinneir's Persia*, 132—136.; and, above all, *Ritter's* very full and satisfactory description, *Erdkunde von Asien*, part ix. p. 367—386.)

The date of the foundation of Kermanshaw is not accurately known, but it is generally attributed to Bahram (Vararanes IV.) the son of Shapour II., about 400 years after Christ. Kobad improved it, and built a citadel, which, after having been almost destroyed by the Turks, was re-established by Kouli-khan, when he restored its independence in 1723.

KERRY, a marit. co. in the S.W. part of Ireland, prov. Munster, having N. the estuary of the Shannon, E. and S. the co. of Limerick and Cork, and W. the Atlantic Ocean. Area, 1,148,720 acres, of which 552,862 are unimproved mountain and bog, and 14,669 water, including the lakes of Killarney, so famous for their scenery (see KILLARNEY). This co. is particularly wild, rugged, and mountainous. Macgillicuddy's Reeks, the highest mountains in Ireland, lie to the W. of Killarney; and several other mountain ridges rise to above 2,000 ft. in height. The coast is deeply indented by Tralee and Dingle bays, and the estuary of the Kenmare: Dunmore Head, bo-

tween the bays now named, in lat. $51^{\circ} 7' 30''$ N., long. $10^{\circ} 28' W.$, is the most westerly land in Ireland, and consequently in the U. Kingdom. The climate is particularly mild, but also extremely moist. The soil in the low grounds mostly rests on a limestone bottom; it is very fertile, and produces fine herbage, which the mildness and moisture of the climate maintains in a constant state of verdure throughout the year. The arbutus flourishes in the greatest vigour round Killarney, and in other places in this co. Large flocks of goats are fed on the mountains, which also depasture great numbers of the pure Irish breed of middle-horned cattle. There are some rather extensive dairy farms; but, speaking generally, agriculture is at the lowest ebb. Tillage farms are, for the most part, very small, and the occupiers miserably poor. The potato is the only article they reserve to themselves; cattle, corn, butter, pigs, eggs, &c., all go to market to make up the rent. Still, however, improvements are taking place; good roads now lead into districts that were formerly next to impervious; and some landlords, among whom Lords Headly and Lansdowne deserve to be especially noticed, have laboured, with considerable success, to introduce an improved system of management on their estates, and to meliorate the condition of the occupiers. In some parishes the greater part of the tillage is performed by means of the *loy* or spade; but Scotch and other improved ploughs are beginning to be introduced. The sea-weed, which abounds along the sea shore, furnishes an ample supply of manure; but it is in most parts neglected or injudiciously applied. Houses and cabins as bad as possible. Property mostly in very large estates; but some of them are leased for ever. Average rent of land 7s. 2d. per acre, being, Donegal excepted, the lowest in the kingdom. The Irish language is in many parts used to the total exclusion of the English; and, in consequence, old customs and habits maintain their ground in a remarkable degree. Minerals, though in a great measure unexplored, are, no doubt, of considerable value and importance. Copper mines have been wrought near Killarney, and one is now wrought on a small scale at Cahirciveen. Valentia Island produces good slate for roofing and flagging. Manufactures can hardly be said to exist. Principal rivers, Feale, Lane, the outlet of the lakes of Killarney, Roughtan, and Mang. Principal towns, Tralee, Killarney, and Dingle. Kerry is divided into 8 baronies and 83 parishes; and sends 3 mems. to the H. of C., viz. 2 for the co. and 1 for the bor. Tralee. Registered electors for the co., in 1849-50, 689. In 1841 Kerry had 46,628 inhab. houses; 51,593 families; 293,880 inhab., of whom 147,307 were males, and 146,573 females.

KERTSCH, a sea-port town of European Russia, in the Crimea, on a spacious bay on the W. side of the Straits of Yenikale, lat. $45^{\circ} 21' 30''$ N., long. $26^{\circ} 28' 20''$ E. It has recently been a good deal improved; and contains some handsome edifices, and from 2,000 to 3,000 inhab. This town occupies the site of the ancient *Paniscapum*, the seat of the Bosphorian kings, and once the residence of Mithridates. The quarantine for the sea of Azoff has been established here; and it seems probable that it will at no distant period supersede Taganrog as the emporium of that sea. Corn, salt, and hides, are the principal articles of export. In the outer road, 5 or 6 m. from the town, there are 19 ft. water; in the inner bay there are 14 ft., and close in shore it shoals to from 9 to 11 ft. (*Hagemister on the Trade of the Black Sea*, p. 63., Eng. trans.)

KESMARK (Germ. *Kaisersmarkt*), a royal free town of Hungary, co. Zips, on the Poprad, a tributary of the Vistula, at the foot of the Tatra mountains, 130 m. N. E. Pesth. Pop. 4,390, of whom about 2,500 are Protestants. It is surrounded with old and decayed double walls, and entered by three gates, near one of which the Emp. Sigismund, in 1433, erected a large tower, to protect the town against the attacks of the Hussites. Paget says, "In Kesmark there is nothing remarkable, except the ruins of an old castle which formerly belonged to the family of Tökölly, by whose restless ambition, and warlike talents, Hungary was involved in a series of civil wars, which, but for Sobieski's timely aid, would probably have ended in delivering the whole country into the power of the Turks." (Vol. i. p. 443.) Kesmark has, however, several handsome public buildings, as the town-hall, with an elegant tower, and the large R. Catholic church; besides a R. Catholic high school, Protestant lyceum, girls' school, &c. Many of its inhabs. are linen weavers and dyers; others carry on a brisk trade with Galicia in wine and garden produce. (*Oesterr. Nat. Encyc.*; *Berghaus*; *Paget's Hungary*.)

KESWICK, a market town of England, co. Cumberland, ward of Allerdale, par. of Crossthwaite, on the Greta, in a well cultivated valley at the foot of Skiddaw, and contiguous to the N. end of Derwent-water, or Keswick lake, 22 m. S. by W. Carlisle, and 18 m. E. by N. Whitehaven. Pop., in 1841, 2,242. This neat and finely situated town, which may be regarded as the cap. of the

English lakes, consists principally of one long street of well-built houses. It has manufactures of linsey-woolsey stuffs, and fancy waistcoatings; black lead pencils are also made in the town, of lead from the famous mine in Borrowdale; and the potting of char taken in the lake is a considerable business. Copper mines were formerly wrought in the vicinity, but they have been long abandoned. The principal dependence of the place is on the crowds of visitors to the adjacent lakes and mountains, who are here supplied with lodgings, guides, conveyances, &c. It has a free-school, a national school, a workhouse, and two museums, containing many fine specimens of natural history peculiar to the county. Property, which at present produces above 200l. a year, was bequeathed in 1642, by Sir John Banks, Chief Justice of the Common Pleas, for behoof of the poor of this, his native town.

Keswick lake, or Derwent-water, is about 3 m. in length, by rather more than 1 m. in breadth, extending over an area of 1,282 acres. It has numerous small islands, is embosomed among lofty mountains, and, from its picturesque scenery, is deservedly called the "gem" of the lakes. (*Tattersall's Guide to the Lakes*, p. 57, &c.)

KESZDI-VASARTHELY (Germ. *Neumarkt*), a town of Transylvania, in the Szekler-Land, 45 m. N. E. Cronstadt. Pop. about 3,000. It has a Protestant gymnasium, several breweries and distilleries, and manufactures of hats, paper, and cloth; but it is chiefly noted for its military establishments. It is the head quarters of the second regiment of Szekler infantry, in the Transylvanian military frontier, and has a celebrated military school. "This institution was founded by the late emperor, and is supported partly by a royal grant and partly by the Szeklers themselves. The regulation of it is entirely in the hands of the government. On the foundation there are 100 boys, from 6 to 18 years of age, who are fed, clothed, and taught, free of all expense. A few additional scholars are admitted on the payment of about 16s. per month. The children, when they have finished their education, are drafted into the infantry, and often rise to the rank of officers. The course of education, besides drilling, exercising, &c., includes writing, reading, arithmetic, geography, mathematics, military drawing, and the German language. In fact, all the lessons are given in German, all the books are German, and the children are even obliged to speak German to each other. The national language is never heard within the walls of the school." Hence the Szeklers affirm, that the grand object of the school is to denationalise their children, and make them renounce their native language; so that its institution, whatever may be its ultimate influence, tends, in the mean time, to keep alive the distrust which these borderers entertain of the Austrian government. (*Paget's Hungary*, i. 417, 418.; *Oest. Nat. Encyc.*)

KESZTHELY, a market town of Hungary, in the circ. on the other side the Danube, co. Szalad, near the W. end of lake Balaton, 28 m. S. W. Veszprim, and 98 m. S. Presburg. Pop. 7,500. "It is," says Mr. Paget, "a thriving little town, and of considerable importance from the great school of agriculture founded here by Count George Festetics, and known as the Georgicon, which, though no longer in so flourishing a state as formerly, has still several professors and practical teachers maintained at the Count's expense." The object of this establishment is to form useful and well-instructed officers and accountants for the management of estates, to give instruction in particular branches of husbandry to the peasantry, and to furnish opportunities for farmers to improve their knowledge of agriculture. Eight or ten scholars are pensioned by the Count, the rest being independent students; and the school is divided into 6 sections, 1. for scientific agriculture, and its auxiliary sciences; 2. for the law of property, as affecting landlords and tenants; 3. for practical husbandry, as taught to the peasantry; 4. for forest-planting and the chase; 5. for horse-breeding, training, &c.; and, 6. for teaching girls the branches of knowledge connected with housekeeping. The complete course appointed for the pensioners lasts 3 years; but others may select their pursuits, and limit themselves to one or two years, as they think proper, the theoretical course lasting from the beginning of Nov. to the end of Aug. In the Georgicon, large apartments are fitted up as lecture-rooms, depositories for philosophical instruments, museums, &c.; chambers are set apart for the pensioners; and the lower floors are occupied by the farming servants and their families, and by a spacious workshop for carpenters and coopers. The outbuildings comprise stalls for fattening cattle, a shed for sheep, a granary, brewhouse, and a house for silkworms and the winding of silk; gardens and orchards of different kinds are laid out for the purpose of teaching horticulture in all its branches, and on a farm set apart from the rest of the Count's estates, practical instruction is given in the rotation of crops after the Norfolk system. In fact, the Georgicon, as described at length by Dr. Bright, (to whose valuable

work we beg to refer the reader, who desires further information,) is a most complete establishment, and if conducted at present with the same vigour as at the time of the Doctor's visit, it cannot fail of being highly serviceable. The other educational institutions are a Catholic gymnasium, a high and normal school. The public buildings comprise besides the Georgicon, a fine castle, in which Count Festetics resides, and which contains a library of 15,000 volumes, 2 Catholic churches, a convent, and an hospital. Wine, from the extensive vineyards in the neighbourhood, is a considerable article of trade, and several hands are employed in weaving woollen fabrics. (*Page's Hungary*, vol. ii. 577.; *Bright's Travels in Lower Hungary*, pp. 360—389.)

KETSKEMET, or **KUZKEMET**, a market town of Hungary, circ. on this side the Danube, co. Pesth, 50 m. S. E. the cap., lat. $46^{\circ} 54' 29''$ N., and long. $19^{\circ} 43'$ E. Pop., in 1845, 42,000. The houses are generally low, the streets long, narrow, and crooked, and the surrounding districts of a dull monotonous character: there are five churches, (two Rom. Cath., and one each belonging to Greeks, Lutherans, and Calvinists,) a Franciscan convent, a reformed college and gymnasium, a *Piarist* college, a normal school and a school of design, an orphan asylum, and a military hospital. The breeding of horses, cattle, and sheep is the chief employment of the pop.; and there are some tanneries and soap factories. (*Oest. Encyc.*; *Dict. Géog.*)

KETTERING, a market town and par. of England, co. Northampton, Huxloe hund., on an affluent of the Nen, 14 m. N. E. Northampton, and 65 m. N. N. W. London. Area of par., 2,840 acres. Pop., in 1841, 4,867. The centre of the town comprises a spacious area, surrounded by well-built houses and shops, with a commodious sessions-house; but in the suburbs are many low thatched tenements that have a mean and wretched appearance. The church, considered a fine specimen of ecclesiastical architecture, has an elegant embattled tower at its W. end, surmounted by a light crocketed spire: the living is a rectory. There are places of worship also for Wesleyan Methodists, Baptists, Independents, and the Society of Friends. Sunday schools are attached to all, except the last; and there is a small free school; this, and an almshouse, for 6 poor widows, are the only endowed charities of the town. Several hundred weavers are engaged at Kettering, and the neighbouring villages of Rothwell and Desborough, in making silk plush for hats: a great number of hands were formerly employed in woollen and worsted weaving, but this branch of industry appears to have declined of late years.

KEW, a village and par. of England, co. Surrey, hund. Kingston, on the S. bank of the Thames, about 7 m. W. London. Area, 230 acres; pop., in 1841, 923. This village, which is connected with Brentford on the opposite side of the river by a handsome stone bridge of 7 arches, consists principally of the houses on and near a large and neatly kept green. The par. church is a small brick structure with a turret at the W. end. Many handsome residences are scattered over the village, but none deserves particular mention except Kew House, or Palace, a red brick building of the age of James I., for many years the favourite residence of George III. and his queen. It was taken on lease from S. Molyneux, Esq., by Frederick, Prince of Wales, and was greatly improved in its interior fittings by Kent. George III. acquired the property in fee simple, and it is still occupied by members of the royal family or persons belonging to their households. Near this house, and close to the river's bank, a new palace was commenced by George III.; but the situation and plan of the building proved to be ill chosen: it was never completed, and was ultimately taken down in 1827. The grounds, which were first laid out by Sir William Chambers for Frederick, Prince of Wales, have since been greatly improved. They are under the management of the Commissioners of Woods and Forests, and consist, at present, of what are called the pleasure grounds, comprising about 130 acres, open to the public twice a week, and of the royal gardens, comprising about 75 acres, open to the public every lawful day. The improvements in the latter, which began in 1840, have been on a very grand scale, and they now form one of the favourite resorts of the Londoners, having been visited, in 1849, by 137,865 persons. The palm-house, completed in 1848, is an extraordinary fabric. It is somewhat in the form of the hull of a large ship with the keel upwards, having attached to it the hulls of smaller ships, one at each end, the ribs being of cast-iron, and the intermediate spaces of glass. It is 362 feet in length; the central compartment is 100 ft. in width, and 66 ft. in height, and the wings respectively 50 ft. wide and 30 ft. high. The central portion has a gallery all round, reached by a spiral stair, at the height of 30 ft. from the floor. The glass is tinted green to mitigate the intensity of the light; and the structure is heated by hot water pipes distributed beneath the floor, the smoke being conveyed by an under-

ground flue to an ornamental tower at a little distance. Opposite the palm-house is a fine piece of water; and the whole garden, whether reference be made to its fittings-up, or to the infinite variety of rare and valuable plants with which it is furnished, reflects the highest credit on the public liberality, and on the taste of those by whom it has been planned and directed. In the pleasure-gardens are different grotesque, if not very elegant, buildings; the largest and most celebrated being an octagonal Chinese pagoda of 10 stories and 163 ft. high, from the top of which is an extensive view of the surrounding country.

KEYNSHAM, a market town and par. of England, co. Somerset, hund. of its own name, at the confluence of the Chew with the Avon, 5 m. E. S. E. Bristol, and 100 m. W. London. Area of par. 3,330 acres. Pop. in 1841, 2,807. The town is built on a rock, and consists of a single street, about a mile long. The church, which stands in the centre of the town, is a large and handsome edifice, with a fine lofty tower at its W. end, and some curious monuments: the living is a vicarage, in the gift of the Duke of Buckingham. The Wesleyan Methodists and Baptists have places of worship, to each of which, as well as to the church, Sunday schools are attached. A well conducted charity school also furnishes a plain education to poor children of both sexes. The river Chew runs through the E. end of Keynsham, and falls into the Avon at the bridge, which is of stone, and consists of 15 arches; another bridge crosses the Chew on the Bath road. The tides of the Avon ascend up to this town. The clothing trade, formerly considerable, has now almost wholly fallen to decay, though a few people are still employed in spinning and winding for the clothiers of Bradford and Shepton-mallet. Coarse linen-weaving has been introduced within the last 15 years, with little success; but a good deal is done in malting.

KEY-WEST. See SUPPLEMENT.

KHARKOFF, a government of European Russia, having on the N. Tchernigoff and Kursk, on the E. Voronezh, on the S. Ekaterinoslaff, and on the W. Poltava. Area, 21 sq. m. Pop. in 1846, 1,467,400. This, like the other governments of Little Russia, has a flat, monotonous surface, and a very fertile soil. It has nearly 470,000 declatines of forests. Principal rivers, Donetz, Orkol, and Vorskla; but none of them are navigable, at least, for any considerable distance. All sorts of corn are raised, the produce in ordinary years amounting to above 5,000,000 chetwerts, of which about 1,000,000 are exported. Flax and hemp, tobacco, hops, &c., are also raised, and the potato is extensively grown. Cattle excellent; there are few peasants without bees. With the exception of distilleries, which are numerous, and some tanneries, and establishments for the preparation of tallow and saltpetre, manufacturing industry can hardly be said to exist. The pop. consists of Little Russians, Great Russians, and Cossacks. Some regiments of cavalry are colonised in this government. (*Schnitzler, La Russie*, &c., p. 471.)

KHARKOFF, the cap. of the above government, on the Lopanh, lat. $49^{\circ} 59' 27''$ N., long. $36^{\circ} 26' 32''$ E. Pop. 30,000. It is built of wood; has narrow, crooked, and dirty streets; the ramparts by which it was formerly surrounded have been converted into gardens and public walks. It is the residence of the provincial authorities, and has a cathedral, a gymnasium, an ecclesiastical seminary, &c. Kharkoff is the seat of a university, founded in 1804, which, in 1846, had 83 professors and masters, and 486 pupils. It possesses a pretty good library, and a valuable collection of medals. This town is the seat of a considerable commerce. Four fairs are held each year, of which that called Krechtchenski (Jan. 3-15), and that of the Trinity, are the most extensive. If we may depend upon the official accounts, merchandise to the amount of 31,544,774 roubles was brought, in 1833, to the first of these fairs, above two thirds of which was disposed of. One of the other fairs is exclusively, or principally, for wool. (*Schnitzler, ut supra.*)

KHELAT, or **KELAT**, a city of Beloochistan, of which it is the cap., and a fortress of considerable strength, now in possession of the British; on an elevated site, on the W. side of a highly cultivated plain about 250 m. N. the Indian Ocean, and 240 m. S. by W. Candahar; lat. $29^{\circ} 7'$ N., long. $65^{\circ} 45'$ E. Pop. estimated by Pottinger at 20,000, chiefly Beloochees, Brahooes, Hindoos, and Affghans. The town, of an oblong form, is described by Pottinger, in 1810, as encompassed on three sides by a mud wall, 18 or 20 ft. high, flanked at intervals of 260 paces, by bastions pierced, as well as the wall itself, with numberless loopholes for matchlocks. The defence of the fourth side is formed by the W. face of the hill, on which the town is partly built, being cut away perpendicularly. On the summit of this eminence stands the palace of the khan, enclosed by a mud wall, with bastions, kept in better repair than any other portion of the fortifications. In 1839, Major Willshire said, "The defences of the fort, as in the case of Ghiznee, far ex-

ceeded in strength what I had been led to suppose from previous report; and the towering height of the inner citadel was most formidable both in appearance and reality." (*Parl. Report on Khelat.*) It is, however, commanded by heights to the N. and W.; it has three gates, and above 2,500 houses within the walls; and, in 1810, about half as many more were comprised in the suburbs. The houses are of half-burnt brick, on wooden frames, and plastered over with mud or chunam. The streets are generally broader than is common in the E., and have a raised footway on either side; but their centre is a receptacle for all sorts of filth; and they are dark and gloomy, from the upper stories of the houses nearly meeting. The markets are well furnished with flesh, vegetables, and other necessities, at a cheap rate; and the town is supplied with excellent water by a spring, which, according to Pottinger, is tepid during the night, but after sunrise becomes cold, and remains so the whole day. Some water-mills are turned by the stream from this source. Khelat has some trade and manufactures, respecting which see BELOOCHISTAN (Vol. I. p. 350.).

The many outrages alleged to have been committed on the followers of the army of the Indus, at the instigation of the khan of Khelat, compelled our interference; and Khelat was taken by storm by the British, Nov. 13. 1839, after a siege of a few hours.

KHERSON, a gov. in the S. part of Russia, in Europe, on the N. shore of the Black Sea, between the rivers Dniestr, on the W., and Dniepr, on the E. Area, variously estimated at from about 25,000 to 30,000 sq. m. Pop., in 1838, including the military colonies, 765,000. Besides the great boundary rivers, already specified, it is divided into two not very unequal portions by the Bug. In the N. part of the government, the surface is undulating and covered with immense forests; but elsewhere it consists mostly of an immense steppe, without trees, and covered with grass the height of a man. Generally, the portion on the W. side of the Bug is decidedly more fertile than that on the E. side. Climate in extremes, the rivers being mostly frozen over for a short time during winter, while in summer the thermometer rises sometimes to above 25° Réaumur. Agriculture has made little progress, and is but a secondary pursuit, the rearing of cattle and sheep forming the chief employment of the inhab. The breed of sheep has been much improved, and is now the best in the empire. Among the horned cattle, buffaloes are common. Flax and hemp, tobacco, saffron, liquorice, &c., are all cultivated; and a good deal of an inferior acid wine is made. There are establishments for the cleaning and sorting of wool, tanneries, tallow and candle works, with manufactories of cloth, &c. The commerce of the government centres entirely at Odessa and Kherson, and is very extensive.

KHERSON, the cap. of the above government, on an eminence on the right bank of the Dniepr, about 60 m. above Kinbourn Fort, at the entrance of the estuary to that river, lat. 46° 37' 46" N., long. 32° 38' 23" E. It was founded in 1778; was fortified in 1780; and soon after became a large and flourishing town. Owing, however, to the difficulty of navigating the Dniepr, which, for 15 m. below Kherson, is shallow and encumbered with shifting sand banks. Odessa, founded in 1792, soon took precedence of it as a commercial emporium, and it began to decline. Its pop., amounted, in 1834, according to the official accounts quoted by M. Schnitzler, to 24,508. It is divided into four distinct parts: the citadel, the admiralty, and the Greek and military suburbs. Within the first are the government buildings, arsenal, prison, barracks, and the cathedral. The latter is the burial place of the celebrated Prince Potemkin, the powerful favourite of Catherine II., who died near Yassy, in 1791.* In the admiralty are the docks, for constructing ships of war, cut out of the limestone rock. They are sent down the river on machines, called camels, but only when there is a large flood. The Greek suburb is inhabited by the burghesses, and the military suburb by sailors and artisans.

Within these few years a part of the mast trade that used formerly to be confined to Riga, has been transferred to Kherson; and, besides masts, staves, planks, flax and hemp, corn, cordage, tallow, wool, of which it is a principal market, &c., are sent down the Dniepr to Kherson. But owing to the cataracts and other obstructions to the navigation of the river between Ekaterinoslav and Alexandrofsk, these shipments can only be made in spring and autumn; and when the commodities have reached Kherson, it is found most convenient to ship them coastwise in small vessels for Odessa where they are put off board the ships in quarantine. In fact, owing to the difficulties now mentioned, the greater part of the corn from the *ci-devant* Polish provinces, shipped at Odessa, is not brought down the

Dniepr, but is conveyed, direct to its destination, in waggons drawn by oxen.

John Howard, the celebrated English philanthropist, expired at Kherson, on the 20th of January, 1790; and is interred about 3 m. N. from the town, where an obelisk has been erected to his memory. (For further particulars as to Kherson, see the art. DNIESTR, in this Dictionary, the works of Clarke and Lyall, as referred to in the note below; Schnitzler, *In Russie*, &c., p. 722.; Hagemester's *Report on the Commerce of the Black Sea*, Eng. trans., p. 70., &c.)

KHIVA, KHARESM, or ORGUNJE (an. *Chorasnia*), an indep. khanat of Turkestan, in Central Asia, properly comprising only a narrow strip of fertile land along the Oxus, in the lower portion of its course. Of late years, however, it has established a supremacy over the wandering Turkman hordes to the S. and W., and holds Merv (Murù), with its territory, on the road between Khorassan and Bokhara. Its dominion is believed at present to extend between the 36th and 44th degrees of N. lat., and 52d and 64th of E. long., having E. the Karakalpack territories and Bokhara, S. Afghanistan and the Persian prov. of Khorassan, W. the Caspian, and N. the Kirghiz Steppe and the Sea of Aral. The pop. of this extensive territory is estimated by Sir A. Burnes at only 200,000 at most, nearly the whole surface consisting of unproductive sandy wastes. The Oxus is the great fertiliser of the tract it passes through; many canals communicating with it have been cut for the purpose of irrigation, some of which are 30 m. in length; and the cultivated lands in the neighbourhood of the capital are surrounded with wet ditches. The climate and products are much the same as in Bokhara; the summer is warm, the air dry, and evaporation rapid; the winter is short, and ice lasts only a few days at a time. Agriculture is better attended to in the small extent of productive land comprised in this khanat than in some of the neighbouring countries. The lands, after being irrigated, are manured; but animal manure is scarce, from the fæces of the cattle being used as fuel, and their being seldom stalled. Wheat, barley, *djugari* (*Holcus saccharatus*), millet, sesamum, oleaginous plants, lentils, fruits, linseed, cotton, hemp, flax, and some rice, are grown. The vine thrives well; but the inhab., being chiefly Mohammedans, little or no wine is made. The distillation of brandy from raisins has, however, been introduced by the Persians; and, out of the capital, the inhab. indulge pretty freely in its use. An intoxicating liquor, as well as a narcotic product for smoking, is obtained from hemp. Little tobacco is grown. Many of the fruits are good, and the melons are excellent; but the culture of fruit-trees is nearly abandoned for that of grain or fodder. Wood is sufficiently abundant in the N., and is not dear in the capital; but over all the desert the only vegetation is a few stunted bushes. Horned cattle are few; sheep and goats are much more numerous, their flesh, with that of the horse, forming the chief animal food of the inhab. Camels are the principal beasts of burden, and almost every khivan possesses one. Agriculture and cattle rearing occupy most of the settled pop.; but some cotton and silk stuffs, shawls, &c. are made by the women, and exported to the neighbouring countries. The dominant race in Khiva, as in Bokhara, is the Uzbek, to which the khan belongs; the rest of the pop. consists of Oulgours, Turkmans, Karakalpacks, Tadjiks, about 2000 families, chiefly prisoners of war, from Bokhara, and a few Afghans, Jews, Armenians, Persians, Eimauxs, Kirghiz, &c. The Uzbeks enjoy no privileges over the rest, but they compose the chief portion of the khan's army. The Turkmans are altogether nomadic, and live principally by plunder, especially the capture and sale of slaves. They seize upon the subjects of Russia on the Caspian, and make many incursions into Khorassan: Bokhara and the whole of Turkestan is supplied by them with Persian captives. In 1835, according to Sir A. Burnes, there were as many as 2,000 Russian slaves in Khiva; and the capture of her subjects was one of the principal causes (and a substantial one certainly) of the late hostile attempts of Russia against Khiva. It is estimated that from 30,000 to 40,000 of the pop. of the khanat are slaves. They have frequently a piece of land given them to cultivate, or are permitted to exercise some handicraft, paying an annual rent to their masters for the privilege, from the produce of which they are afterwards frequently able to ransom themselves. No foreign slave, however, even after the purchase of his liberty, is permitted to leave the country. Meyendorf, in comparing this khanat with that of Bokhara, observes:—"Though the inhab. of the two countries are of the same race, and profess the same religion, the schools of Khiva have never enjoyed the same reputation as those of Bokhara; the Khivans are more barbarous than the Bokharese, as is attested by an inferior agriculture, worse habitations, a more limited commerce, less wealth, and a more savage mode of life." (*Voyage à Boukhara*, p. 111.) According to Burnes, the Khivans are at best

* Dr. Clarke says that the body was taken up by order of the emperor Paul, and deposited in "the first hole that could be found." (Vol. II. p. 534. 2vo. ed.) But Dr. Lyall assures us that this insane order, though given, was not obeyed. (l. p. 214.)

but an organised banditti, protected by the natural strength of their country. The trade of such a country may be dismissed in a few words. Four routes exist for communication with Russia: one through the Kirghiz steppe, W. of the Aral Sea, to Orenburg; a second by way of Sarachak, or Sarachik, on the Oural, also to Orenburg; a third through Sarachak to Astrakhan; and a fourth from Khiva to Karaghan, on the E. shore of the Caspian, whence goods are sent by sea to Astrakhan. (*Heeren, Researches on Asiatic Nations*, &c., transl. II. 288.) About 2,000 camels go annually to Orenburg, Astrakhan, and some towns of Caubul and Persia, with wheat, barley, silk and cotton fabrics, and yarn; and about a dozen large boats come annually from Astrakhan to Karaghan and the Gulph of Manghislak, with the products of Russia and the West, to be exchanged for those brought by the caravans from Khiva. The chief imports are slaves, coin, iron and copper, wrought and unwrought; handkerchiefs, wax, honey, sugar, tea, which, as in Bokhara, is a favourite article; cochineal, spices, hardware, &c. The commerce with Persia is insignificant. The merchandise which goes to Asterabad is conveyed on camels, at a charge averaging from 3½ to 4 roubles per *pood*, under the conduct of Turkman guides. The trade of Khiva is solely in the hands of Turkmen, Khivans, and Persians; none but Mohammedan merchants being suffered to transact business within the khanat. No foreign merchants pass through or into the country with ease or safety; when not openly robbed of a large portion of their goods, the caravans are delayed by the khan's officers, the bales of merchandise are opened, and much property has been at times extorted. The khan demands duties at the port of Manghislak, on the Caspian, which lies opposite Astrakhan, and sometimes (it is said) on the Jaxartes, E. of the Aral Sea. In order to reach Bokhara by a route avoiding Khiva altogether, the Russians attempted, in 1820, to send caravans by way of the latter river; but the khan took umbrage at a measure which turned the traffic from his own territories, and sent an army to the Jaxartes, which intercepted a caravan, and occasioned the destruction of its merchandise. Since then, no attempt has been made by the Russians to follow any route other than that through this khanat; but no intercourse of a really friendly nature has taken place between the two countries.

The commercial duties realised by the khan amount to, perhaps, half his total revenue, which latter is roughly estimated, by Helmersen (*Chiva*, &c. p. 45.), at 2,000,000 roubles, or francs: the remainder of this sum being made up of 1-5th of the produce of every predatory excursion of his subjects, a family tax of 3 ducats a year, taxes on war-horses, on land cultivated by slaves, &c. A regular transit duty of 2½ per cent. *ad valorem* is levied on all kinds of merchandise passing through the country. The government is despotic: for judicial affairs, each town has its *atalyk*, or judge; and in the cap. is a central court of justice in the last resort, composed of the *cadí* or chief priest, the four ministers, and other members nominated by the khan. The khan may sometimes raise a force of 10,000 men, and has a park of nine pieces of ordnance. His troops, which are mostly cavalry, are entirely composed of Uzbeks and Turkmen, and armed like those of Bokhara: some of the Turkmen carry bows and arrows. There are in the khanat, besides Mervé, only two towns worth notice, — Khiva, the cap. and seat of government, and Orgunje, the chief commercial town, and largest of the two.* Khiva was tributary to Bokhara till the late khan rendered it independent, early in the present century. The present khan, in 1832, led a hostile army into Mervé, which he subdued, but he has always maintained friendly relations with Bokhara. Political relations have long existed between Russia and Khiva, envoys having been sent from the one to the other as early as the time of Peter the Great. Latterly, the Russians have determined to put an end to the robberies committed by this horde; and though the impracticable nature of the country has hitherto hindered them from reaching Khiva, there is little doubt of their ultimate success.

KHIVA, a town of Central Asia, cap. of the above khanat, and residence of the khan; in an irrigated and fertile plain near the Oxus, 290 m. W.N.W. Bokhara, and 720 m. S.S.E. Orenburg, on the high road between those two cities: lat. 41° 40' N., long. 59° 23' E. Pop. doubtful, but probably from 10,000 to 12,000. The town is surrounded by a mud wall and wet ditch, and contains about 700 houses, the suburbs comprising 1,200 more. Khiva has a palace, which, like nearly all the rest of the dwellings in the town, and in the khanat generally, is of mud, though placed upon an eminence composed of stone. The only stone buildings in the town are three mosques, one having a handsome minaret; a school, and a caravanserai. Khiva is externally picturesque, being surrounded with gardens; but its streets are so narrow

as scarcely to admit a laden camel. Its pop. is very mixed; its chief trade is in slaves, for which it is the largest mart in Independent Turkestan. (*Helmersen, Chiva, Buchara, &c.*; *Meyendorff*; *Mouravief*; *Burnes, &c.*; *Heeren*; *Chinese Repository*; *Zimmermann's Memoir on Khivah*, 1841.)

KHOL, a town of Persia, prov. Azerbaijan, and cap. of a distr., 70 m. N.W. Tabriz. Pop., according to Smith, about 5,000 families, or 30,000 inhab. It is situated on a tributary of the Kur, about 25 m. N. from the lake of Urmlah, and is a handsome, well built town, in much better repair than most others in Persia. It has few mosques or large public buildings; but the regular streets, shaded with avenues of trees, give the town, on the whole, an appearance of respectability and even grandeur. A large and handsome bazaar, with a caravanserai, furnishes ample accommodation to the merchants, who carry on a considerable trade with Turkey and E. Persia. The suburbs were formerly inhabited by about 600 Armenians; but their number has greatly decreased since the war with Russia, when most of them migrated N. of the Araxes. The plain of Khoi is celebrated as the scene of a great battle fought in 1514 between Shah Ismael and Selim I., in which the Turks, though the most numerous, were signally defeated. (*Smith and Dwight's Miss. Researches*, p. 315.; *Jaubert, Voyage en Perse*, p. 148.; *Ritter, Asia*, ix.; *Kinnier's Persian Empire*, p. 154.)

KHOJEND, a town of Indep. Turkestan, in Central Asia, khanat of Khokan, near its W. extremity, cap. distr. of same name, on the Jaxartes, 90 m. W. Khokan, and said to be as populous as that city, or Samarcand, from which it is 150 m. N.E. It is built on rising ground, and protected by walls, which, however, are much decayed on the S. and W. sides. It is surrounded by wet ditches, and intersected by canals. It is of high antiquity; and near it, Nazarov says, are some remarkable ruins. Khojend has manufactures of coarse cotton goods; and a brisk trade in these, and in Russian merchandise. It is the station at which the caravans entering the khanat from Bokhara pay toll; as the town of Uch is for those entering from the Chinese dominions. (*Nazarov*; *Helmersen*; *Ritter, Asien Erdkunde*.)

KHOKAN, KOKAN, or FERGHANA, an indep. khanat of Turkestan, in Central Asia, between lat. 40° and 45° N., and long. 67° and 75° E.; having N. the Kirghiz steppe, E. and S. E. Chinese Turkestan, S. the table-land of Pamere and Bokhara, and W. the desert territory of the Karakalpacks. It is, for the most part, mountainous, comprising a portion of the region which forms the W. wall of the great table-land of E. Asia. (*See ASIA*, Vol. I. p. 167.) The Jaxartes (Sir or Sihoon), which rises not far beyond the E. boundary, traverses it E. to W., about its centre, watering many fertile tracts. Khokan is divided into 8 provinces or districts. Great extremes of climate are experienced at different seasons. The products are very similar to those of the countries to the S. and W. This khanat has a greater extent of cultivable and pasture land than Bokhara. In the S., corn and fruits, especially grapes and melons, grow in great perfection; and a proverb of Central Asia praises the "pomegranates of Khojend with the apples of Samarcand." This was the patrimonial kingdom of the Emperor Baber, who celebrates in lively terms its beauty and fertility. Cotton and the mulberry are articles of constant culture, silk being the chief staple, and one for which Khokan is famous. The pastures on the Jaxartes are excellent: sheep are the principal live stock, and wool is an important product. The camel, horse, and ass are extensively used; and horse-flesh is a common article of food. Game is very plentiful. Coal, iron, copper, jasper, lapis lazuli, &c. are the chief mineral products. The use of coal has been long known in Khokan, since Abulfeda speaks of "stones that flame and burn" being found there; and this important mineral may, at no very distant period, become a powerful auxiliary in civilizing this, at present, semi-barbarous region. The inhabs. are mostly Uzbeks; to which race, as in Bokhara and Khiva, the khan belongs. They are Mohammedans, and equally bigoted and strict in their religious customs with the Bokharise. The dialect they use is the Jagatai-Turkish. The rest of the pop. are chiefly Tadjiks (*see BOKHARA*, Vol. I. p. 397.) and Kirghiz, who inhabit the N. and E. The Tadjiks are deprived of the right of property, which they enjoy in Khiva and Bokhara, and are only suffered to cultivate the soil under the Uzbeks. After agriculture, and the rearing of sheep and silkworms, the chief occupation of the people is the manufacture of embroidered silks and cotton goods. The former are much worn by the Kirghiz hordes; the latter are sent in large quantities to Bokhara, the returns being made in Russian goods, as iron, steel, woollen cloths, otter-skins, cochineal, vitriol, sandal-wood, &c. Shawls and other Indian manufactures come from Cashmere and the Punjab, by Caubul

* This is the statement of Burnes. Hagemeister (1839) says, that all the commerce of the khanat is now centred in the cap.

and Balkh. The rest of the trade is chiefly with Budukshan; the intercourse with Chinese Turkestan is very limited, owing to the ill-feeling that exists between the khan of Khokan and the Chinese authorities. The same cause renders the intercourse between Yarkund and Bokhara less frequent; the nearest and best route between those cities leading through the valley of the Jaxartes. This route, though passing over mountains on which travellers experience difficulty of breathing, is passable except in the three summer months, when it is flooded by the melting of the snow. It may be travelled by a caravan in 45 days; and merchandise may be conveyed from Bokhara as far as Khokan in carts, the route between those two cities being the best in all Indep. Turkestan. Some Russian caravans from Semipalatinsk, Petropawlawsk, &c., go by the route through Khokan to the Chinese frontier; and 3 times the quantity of Russian piece goods are sold in this country that go to Bokhara. Of late, indeed, this khanat has begun to have a very active trade with Russia, the caravans engaged in this trade passing through a region much less interrupted by marauding parties than those between Russia and Bokhara, through the territories of Khiva and the Little Kirghiz horde. According to Burnes, a commercial intercourse is also kept up between Khokan and Constantinople. A duty of 2½ per cent., *ad valorem*, is laid on all merchandise imported by Soonite Musulmans, and 5 per cent. on the goods of all other individuals passing the frontier; but these duties are levied with little regularity. Internal commerce is entirely free, as in Bokhara, and the trade is second only to that of the last-named country. Each town possesses at least one caravanserai, and has stated fairs, at which a good deal of business is transacted. Besides the cap., the chief towns are Andejan, Khojend, Turkestan, and the others which give name to the several provs. The government is despotic; the khan, maintains an army of about 10,000 cavalry, which he can, on an emergency, increase to 30,000. According to some Chinese records, it would appear that this country was formerly subject to China; it has, however, for many ages thrown off its allegiance. In the early part of the present century, many of the adjacent Kirghiz tribes were reduced to subjection; but about 1830, the khan having supported the Mohammedans of Cashgar against their Chinese masters, was totally defeated in a great battle, and his territories invaded by the latter; since which the power of Khokan has been on the decline. This, and the neighbouring countries are interesting, from having been the seats of nations whose armies have frequently changed the political face of Asia, and even in some degree of Europe. Besides giving birth to Baber, the conqueror of Hindostan, who ascended the throne of Ferghana in 1494, Khokan, and its vicinity, abounds with localities intimately connected with the history of Jenghiz Khan and Timour.

It is probable that this country will, at no distant period, be united to Russia. The boundary between Russia and Khokan, as determined about 1828, was fixed at the Kuk-su, or "Blue river," long. 67° 30' E. (?); but, according to the *Asiatic Journal* (Aug. 1834, p. 374.), the Russians had then crossed that river, and erected forts on the Khokan side.

KHOKAN, a city of Central Asia, cap. of the above khanat, and seat of its gov., on the Jaxartes, 230 m. N.E. Samarcand, and about the same N.W. Cashgar. It is reported to be about half the size of Bokhara, which is supposed to contain 150,000 inhab. Khokan is an open town, but contains a palace fortified with a wall of mud, of which material most of the houses in the town are constructed. The only exceptions are three bazaars, built of stone, open twice a week for the purposes of trade; some ancient monuments in different parts of the city, and some large stables constructed of brick, and belonging to the khan. There are a great many mosques and public schools, and several caravanserais. Among the pop. are many Cashmerians, and some Hindoos, Jews, Nogai-Tartars, and Russians. The streets are narrow, unpaved, and unpleasant; but its vicinity is very productive, and sprinkled with numerous gardens, cultivated fields, meadows, and villages. (*Waikou, in Bengal Journal; Nazarov; Meyendorff; Burnes; Ritter, Asien Erdkunde*, v. 750—784., &c.)

KHONSAR, a town of Persia, prov. Irak-Adjimi, 82 m. W.N.W. Ispahan; lat. 30° 7' N., long. 50° 26' E. It is said, by Kinneir, to contain 2,500 families, or from 12,000 to 13,000 people. Its situation is singularly interesting and romantic, at the base of two ranges of mountains, running parallel to each other, and so very close, that the houses occupy the bottom, and, at the same time, the face of the hills to some height. The town is about 6 m. long, but only ½ m. broad, and each house is separated and surrounded by its own garden. The hills afford an ample supply of water; and the appearance of the black and barren rocks, without a particle of vegetation hanging over the gardens, forms a striking contrast with the luxuriant and variegated foliage of the planta-

tion. No corn of any kind is grown in the valley; but the fruit is so abundant, that it alone enables the inhab. to procure in return every article either of necessity or convenience. According to Kinneir, it yields an annual revenue of 5,000 tomans, exclusive of a payment usually made in dried fruits and cotton chints. (*Kinneir's Persia*, p. 128.)

KHOOLOOM, KHULM, or TASH-KURGHAN, a town of the khanat of Koondooz*, in Central Asia, on the Khulm river, a tributary of the Oxus, and on the high road between Balkh and Koondooz, 40 m. E. by S. the former, and 68 m. W. by S. the latter city. Lat. 36° 39' N., long. about 68° E. Pop., estimated by Burnes in 1832, at 10,000; and if this number may be depended upon, either the pop. had greatly declined during the preceding ten years, or (which is most probable) the number of houses had been much exaggerated by Moorcroft, by whom they were estimated at 20,000. According to the latter, "The houses are built of clay and sun-dried bricks, of one story, with domes, in the usual fashion of the country, and each stands by itself in a walled inclosure, often containing fruit trees. The streets are straight, of a moderate breadth, intersecting each other at right angles, and have commonly a stream of water running through them. The town is surrounded by a wall of earth, with wooden gates; a sufficient protection against sudden incursions of horsemen, but none against artillery. It is also guarded by two forts, one on an eminence, on the right bank of the river to the S.E.; the other on the left bank, and on the plain: both are of earth, and of no strength. There are 4 tolerably good serais for travellers. The inhab. are chiefly Tadjiks and Caubulees, with a sprinkling of Usheks. The shops for dyes and drugs are usually kept by Hindoos, who also act, in a small way, as bankers. The vendors of dried fruits are mostly from Caubul. The Uzbeks engage little in traffic. They are all, rich and poor, dressed much alike, in long gowns of striped cotton gingham. Bazaars are held every Monday and Thursday, when horses, asses, mules, camels, cows, sheep, and goats, are brought to their respective markets. A sheep sells at from two to four rupees; they are of the large tall variety, and the fat of the tail, and along the back, is commonly 1-3d of the weight of the sheep, including the bones. Cotton cloths, cotton in the pod, tanned leather, raw hides, fuel, grapes, raisins, pistachio nuts, pomegranates, dried plums, rock salt, brown leather boots with iron-shod heels, dyes, as the pomegranate bark, madder (indigenous), and indigo, from Hindostan, are exposed for sale, along with blankets of fine wool from Chitral, and raw wool from thence and Budukshan. Printed chintzes, quilts, and turbans are also brought from India. Coarse saddlery is much in request. There is one market entirely for melons, which are raised in this neighbourhood in great quantities. The sheep and furs of Koondooz are exchanged at Yarkund for tea, disposed of in Turkestan, at an advance of 600 per cent. The following were the prices of different articles at the time of our visit:—mutton 4 to 5 *pysas*† per *charah* (½ lbs.), beef 3 *pysas* ditto, sheep-tail fat 8 ditto, sheep butter 28 ditto, cow butter 20 ditto, oil 16 ditto, rice 4 ditto, wheat flour 7 *pysas* for 4 *charahs*, barley about 1½ maund for a rupee, &c. The workmen in wood, leather, and metals, were very indifferent, but demanded high wages, ½ to ¾ a rupee per day. Most of them, in fact, had lands, and were in some degree independent of labour." (ii. 449—452.) Khooloom has long been the station for receiving the custom-duties on all merchandise coming from the W. into Koondooz; which duties amount to 2½ per cent. *ad val.*

* Old Khulm (now entirely destroyed), is situated about 4 m. from Tash Kurghan. It was a place of importance in the time of Khilich Ali (a former chief of Balkh); but its situation on the plain exposed it to predatory incursions; and the Hazarehs dammed up or diverted the course of the river, upon which the fertilization of its soil depended. The chief therefore removed his capital to Tash-Kurghan, much to the regret of the people of Khulm, whose orchards had been celebrated throughout the E. for the quantity and quality of their produce." (*Moorcroft's Trav.* ii. 453, &c.; *Burnes' Bokhara; Madras Journal of Literature*, &c. *passim*.)

KHORASSAN (*country of the sun*), a prov. of Persia, lying between the 31st and 38th parallels of N. lat., and the 63d and 64th degrees of E. long., being bounded N.E. and N. by the Oxus and country of Balkh; S. by Caubul and Seistan; and W. by Irak, Asterabad, and Daghestan. Its boundaries, however, have been very different at different times; and its present area, which is small comparatively with the great extent of country that it comprised prior to the invasion of the Afghans, is roughly estimated at about 80,000 sq. m. Pop. uncertain.

* A paper in the *Madras Journal of Science*, &c., for Jan. 1840, states that Khooloom is an independent town; adding, however, that "nothing is more variable than the limits of a khanat in Asia."

† A *pysa* is the 50th part of a Mahmoud-Shahic rupee.

Its surface is much diversified by plains and mountains; a large portion consists of arid rocks, destitute of vegetation or fresh water, and of salt and sandy deserts, among which may be found a few fertile oases. The Elburz range of mountains crosses the N. part of the prov. eastward; and between this lofty ridge and the Caspian Sea is an immense uninterrupted plain, which includes the steppe of Khiwa, and forms a part of that extensive flat called by the natives *Dusht-el-Kipchak*. That portion of the plain which belongs to Khorassan is without a single cultivated spot or permanent habitation; and its scanty pop. comprises only a few tribes of wandering Turkmans. At the foot of the mountains, however, there are many rich valleys, watered by numerous rivulets, and formerly well peopled, and cultivated. This district, known in Persia as the *Attock*, once comprised several large towns, all of which are now in ruins, and totally deserted, in consequence of the incessant attacks of the Turkmans, who have obtained full possession of the whole tract. The Elburz mountains send ramifications southward, which penetrate from 60 to 100 m. into the plain. This range contains considerable quantities of iron, which, however, is not wrought: the turquoise mines of Nishapoor are rich, and if managed with skill would yield large revenues; but the exorbitant demands of the Persian government on the tenants of the land have led to the closing of many of the most productive mines. (*See NISHAPOOR.*) In this portion of the country are many fertile tracts, which, were there any security for property, would no doubt be cultivated and well peopled. The valley of Mushed is of great length, commencing about 10 m. N.W. of Sheerwan, and extending in a S.W. direction for upwards of 50 m. beyond Mushed. Its breadth varies from 12 to 30 m., and it comprises, besides Mushed (which has a pop. of 30,000), the towns of Chinnarân, Radkan, and Koochan, with a great extent of good land, cultivated by Koordish settlers. The W. limit of Khorassan is nearly that of the great saline desert, which forms its predominating feature. This tract, which, though considerably more lofty, is considered by Fraser (p. 251.) to be connected with the desert N. of the Elburz ridge, skirts the districts of Teheran, Kashan, and Ispahan, insulates that of Yazd, and extends from Toorsheez southward to the confines of Fars, Kerman, and Seistan, including hardly any habitable country except that near Beerjoon and Ghayn. Its E. limit is pretty correctly indicated by a line connecting the towns of Herat, Subzawar, Furrah, and Dooshak. The nature of this desert varies much in different parts. In some places it produces a few of those plants that thrive in a salt soil, while in others it consists of a crackling crust of dry earth, covered with salt efflorescence: a considerable portion is marshy, and in the lower parts water accumulates during winter, which is evaporated in the hot weather, leaving lakes of salt, on a bed of mud. Again, in certain districts, sand abounds in plains, interspersed with waving hillocks, easily moved by the wind, and sometimes so light and impalpable as to prove not only disagreeable but extremely dangerous to travellers, who not unfrequently are buried in its heaps. Of the rivers of Khorassan, the Tedzen (an. *Oxus*) is next in size to the Oxus: it appears to rise near Seraks, and after receiving the Meshed and other streams, falls into the Caspian Sea in lat. $38^{\circ} 41' N.$ The rivers of the interior are few and inconsiderable, and for the most part are lost in the sand, like the Zenderoon of Ispahan.

The climate of Khorassan varies according to the nature and elevation of the districts into which it is divided. In some parts it is temperate, in others extremely cold. The deserts are infested by the *simoom*, which is as fatal here as in Arabia. (*See Vol. I. 130.*) The cultivated districts produce the grains and fruits of S. Europe, with asafetida, tragacanth, and other gums; but timber is rare. Cattle-feeding is the chief employment of the nomad race that roam over the desert; and the camels and goats of Khorassan are celebrated for their fine soft hair, which is a valuable article of trade in the markets of Meshed and Nishapoor, the two largest towns of the province. The inhab. of the settled districts are Tadjiks or Persians, properly so called, and their number has been estimated at 1,200,000. The Ilyats, or nomads, comprise Turkmans, Djelers, and other Turkish tribes, and there are about 30,000 Kurds in the N. part of the province. The religion of all the inhab. is Mohammedan, and most of them belong to the sect of Ali. The prov. is divided into several little governments; but the authority of the King of Persia extends only over the cities of Meshed, Nishapoor, Turakish, and Tabas, with their dependencies. The S. parts belong to the Afghans, and the Uzbek Tartars and Turkmans wander over the N. and E., acknowledging only their native khans. These wild tribes carry on incessant hostilities, invading each other's territories with bodies of irregular horse, who, after ravaging the country and burning the villages, carry off the inhabitants into slavery. (*Fraser's Khorassan*, p. 240., and *Appendix*; *Kinncir's Persia*, p. 161., &c.)

KHOTAN, or ILITSI, a town of Chinese Turkestan, prov. Yarkund, on the high road between that city and Lassa, 260 m. E.S.E. the former: lat. $37^{\circ} 10' N.$, long. about $78^{\circ} E.$ It is principally occupied by Uzbeks; and is said to be celebrated for "its musk, and the beauty of its inhabs." Khotan, according to Abulfeda and other Mohammedan geographers, was formerly a town of great consequence: it is still a place of considerable size, enclosed by ramparts of earth, and, though ill built, has broad streets. It is the station of a Chinese governor and garrison; has manufactures of silk fabrics, leather, paper, &c., and a brisk trade in these and various other articles, including *yau*, the jasper of the ancients. (*Hellmersen, Ritter, Klaproth, &c.*)

KIACHTA, or KIAKHTA, a town of Asiatic Russia, gov. and prov. Irkutsk, being the centre of the trade and political intercourse between the Russian and Chinese empires. It stands immediately within the Siberian frontier, on a rivulet of the same name, a tributary of the Selenga, and upon a plateau elevated about 2,220 ft. above the sea, 55 m. S. by E. Selenginsk, and 180 m. S.E. Irkutsk: lat. $50^{\circ} 21' 5'' N.$, long. $106^{\circ} 28' 15'' E.$ (*Erman.*) Pop. between 4,000 and 5,000. It is divided into an upper and lower town: the former, or the fortress of *Troiskoi Sawsk*, was founded when the first commercial treaty took place between Russia and China, in 1728. The town within is regularly laid out, in the form of a square; in the centre of which is the bazaar, or market-place, a wooden building. Except a chapel of stone, and some of the public offices, built partly with brick, Kiachta is constructed wholly of wood. The church, government-house, barracks, and watch tower, are the chief public edifices within the town: the various courts and government offices, imperial rhubarb depôt, custom-house, &c., are in one of the suburbs. The lower town, a few versts distant, consists of only about 50 houses, inhabited by merchants, who conduct the trade with the Chinese, and some of whom are said to be very rich.

On the Chinese side of the boundary is the Mongolian village of *Mia-mia-tchin* (the place of trade), which, like the Russian town, is laid out in a square form, and surrounded by a palisade. It is ill built, and has only from 1,200 to 1,500 inhab., all males, no women being allowed to reside in it. All the merchantile transactions are conducted between this village and Lower Kiachta; and the merchants of the two places visit each other without let or hindrance. The goods bought by the Russians are immediately sent to Upper Kiachta, to be examined by the custom-house authorities. The Russians exchange furs, sheep and lamb skins, Russian and Silesian broad-cloths, Russian and morocco leather, coarse linens, cattle, and especially bullion, for tea, raw and manufactured silks, nankeens, porcelain, sugar candy, rhubarb, tobacco, musk, &c. At the Kiachta Dec. fair, the tea bought by the Russians is, at an average, said to amount to 60,000 chests, or 4,200,000 lbs., of fine pekoe: besides a large quantity of an inferior kind, much of which is consumed by the Siberians and nomadic Tartars. But, according to Klaproth, the accounts of the Russian commerce with China have been much exaggerated; the total amount of the trade seldom reaching 24 millions fr. a year, and frequently not a fourth part of that sum. In 1831, the Russian exports by way of Kiachta amounted to 4,655,536 fr., and the imports to 6,758,858 fr. Goods may be conveyed from Kiachta to European Russia either by land or water (by the Lake of Balkal, the Angarâ, Yenisei, &c.); in the former mode the journey occupies a year, and in the latter three years, or rather, three very short summers, the rivers being for a great part of the year frozen over. (*Erman, Reise um die Erde*; *Klaproth, Mémoires*, &c., i. 57—80.; *Ritter*; *Official Papers*, and *Priv. Inform.*)

KIDDERMINSTER, an important manufacturing and market town, parl. bor. and par. of England, co. Worcester, hund. Halfshire, on the Stour, an affluent of the Severn, 13 m. N. Worcester, 16 m. W. S.W. Birmingham, and 118 m. N.W. London. Area of the entire par., 11,160 acres: pop. of parl. bor. (which includes the old bor., and a small portion of the "foreign" district) in 1841, 15,427. The town, divided by the river, which is here crossed by a stone bridge, into two unequal parts, is irregularly built, but has several good streets, well paved, lighted with gas, and kept clean by an underground sewerage. In the centre of the market-place is the town-hall, a capacious brick structure, comprising, besides several other rooms, a large council-chamber for corporation meetings, quarter sessions, &c.; the lower part of the building is used as a butchers' market, and underneath is a cellar that has sometimes been used as a gaol. The church, which stands in a fine open space, on the brow of a hill, and close to the river, is a large Gothic edifice, richly adorned, and surmounted by a lofty pinnacled tower, the whole being in excellent repair. The interior has accommodation for 2,000 persons, and contains several fine old monuments. Connected with the church, at its E. end, is a Gothic chapel or chantry, now appro-

printed to the use of the grammar-school. On the E. side of the town is the fine district chapel of St. George, erected in 1822, at an expense of 16,181*l.*; the altar-piece is embellished with a representation of the descent from the cross, in carpet-work, executed with much taste and brilliancy of colouring: there are also places of worship for Independents, Baptists, Wesleyan Methodists, and Unitarians. The grammar school, chartered by Charles I., has estates attached to it worth about 600*l.* a year; but though all the inhab. are entitled to send their sons here to be educated, free of expense, it is of little practical utility, and is attended only by a few boys. A free school, founded in 1796, provides instruction for about 26 boys, chiefly dissenters. There are numerous Sunday schools, attended by about 3,000 children; and 3 National schools, and 3 Lancasterian schools, furnish instruction to above 1,100 children. The charitable institutions comprise several almshouses and a dispensary, with some clothing and benefit societies. Near the town is a chalybeate spring, the road to which is an agreeable and fashionable promenade, and in the suburbs are some elegant villas, inhabited by the wealthy manufacturers.

Kidderminster has been noted for its weaving industry since the time of Henry VIII., in whose reign it had a considerable trade in broad cloth. Linsey-woolseys were afterwards introduced, and were superseded, in their turn, by poplins, bombazines, and carpets. The fabrics now made are carpets, finger-rugs, bombazines, coverings for buttons, and waistcoat-pieces. The carpet manufacture, introduced in 1734, has long been the staple business of the town: there are no power-loomes, the carpets being all woven by the hand, and carpet-weaving is the principal trade; bombazines are not extensively made, and button-coverings have only been lately introduced. The carpet fabrics comprise Brussels or pile carpets, Kidderminster or *in-grain* carpets, and Venetian carpets: the proportion of each, in 1836, is seen from the following table. (*Hand-loom Weaver's Report*, part v. 239.)

Description of Fabrics.	No. of Manufacturers.	Looms.	Hands employed.
Brussels carpets	34	1,763	1,864 men
Kidderminster or Sewth	11	910	351 women
Venetian	7	43	1,780 children
Total	52	2,716	4,015

Skilful and industrious carpet-weavers earn 27*s.* a week; but the average wages do not, perhaps, exceed 1*d.*, the quantity woven averaging 34 yards a week. Button-makers and waistcoat-piece-makers earn about 1*s.* or 1*s.* 6*d.* a week: bombazine weavers earn only 7*s.* a week, but the work is light, and is principally performed by women and aged persons. There are 6 worsted mills, which employ 623 hands, and factory wages average from 3*s.* to 6*s.* a week for children and women, and from 1*s.* to 3*s.* for men. The moral condition of the weavers is said to have deteriorated of late years, chiefly in consequence of an obstinate strike in 1828, when wages were lowered 17 per cent., and when also the manufacture took root in other places. Since that period, the weavers are said to have been discontented and improvident, and, in fact, to have in a great measure changed their character. Riots are also said to have been considerably reduced. The manufactures and trade of the town are greatly facilitated by the Staffordshire and Worcestershire canal, which passes close to the town, and its communications have been further improved by the opening of the Birmingham and Gloucester railway.

Kidderminster is a bor. by prescription, and received its charter of incorporation in 13 Charles I. Since the Man. Reform Act it has been divided into three wards, the government being vested in a recorder, 6 aldermen, and 18 councillors. Quarter and petty sessions are held in the town-hall. It is also the seat of a county court, before which 1,800 pleasets were entered in 1838. Corp. revenues, in 1847-48, 1,546*l.* In the reign of Edward I., Kidderminster sent 2 mems to the H. of C., but the privilege being either lost or disused, it ceased to be represented; and this populous and industrious town had no voice in the legislature till the Reform Act conferred on it the privilege of sending 1 mem. to the H. of C. The electoral limits comprise the old man. bor., and a small portion of the "foreign" district. It had 470 reg. electors in 1849-50. Markets on Thursday: fairs, Holy Thursday, June 20., Sept. 4., and Nov. 24., for horses, cattle, linen and woollen cloth.

KIDWELLY, or CIDWELL, a bor., market-town, and par. of S. Wales, co. Carmarthen, and hund. of its own name, on the Gwenneth-Vorban, 9 m. S. Carmarthen, and 179 m. W. London. Pop., in 1841, 1,862, there being a decrease of 68 persons during the preceding 10 years. It is divided by the river into 2 townships, Old Kidwelly being on the W., and New Kidwelly on the E. or left bank. The former was once surrounded by walls

with 3 gates, one of which is yet standing; but the houses have fallen to decay, and consist at present of little more than hovels. New Kidwelly, which is joined to the other by a stone bridge, has several respectable houses and numerous cottages. On a rocky eminence overlooking the Old Town, stands the castle, said to have been built soon after the Norman Conquest, and now a large and imposing ruin in tolerable preservation, with many of its apartments and staircases still entire. The W. gateway is a noble specimen of architecture, and some of the towers at the angles retain their arched roofs of stone. The battlements command magnificent views of Carmarthen Bay and the country on both sides the Towy. The church, which is in the New Town, is an old cruciform structure, with a tower and spire 170 ft. high - the *steeple* is not

large, and of a fine breed. Horses small. Forests exten-

sive. In its N. parts there are considerable marshes.

Manufactures, exclusive of those carried on in the houses

of the peasantry, can hardly be said to exist. Commerce

trifling, and mostly in the hands of the Jews. Principal

town Kief.

KIEF, the cap. of the above government, and the former

residence of the grand dukes of Russia, on the Dniepr, a

little below the confluence of the Dneps with that river;

lat. 50° 28' 58" N., long. 30° 27' Pop. 20,000. This is a

very ancient city. It was the earliest seat of the Christian

religion in Russia, and was for a considerable period the

cap. of the empire. But it subsequently underwent many

vicissitudes; being sometimes subject to the Lithuanians,

the Tartars, and the Poles. In 1686, however, it was

finally ceded to Russia, and has ever since continued in

her possession. The town consists of three parts - the

old town, on an eminence elevated considerably above the

river; Picherek, or the citadel, more to the S., and on a

still higher eminence; and the lower town, or Podolsk,

on a plain along the river. The first or old town con-

tains the cathedral of St. Sophia, founded in 1037, and an

object of the greatest veneration on the part of the Rus-

sians. It is stated by Dr. Pinkerton, that the sum appro-

priated by the Russian government for the support of this

the most ancient cathedral in the empire, with its priests,

deacons, singers, &c., amounts to only 98*l.* a year!

(*Russia*, &c., p. 117.) The citadel is surrounded by a ram-

part. Within it is the arsenal, erected by Catherine II.

a large handsome building, containing an extensive

supply of arms. But the principal object of curiosity in

the citadel is the famous monastery of Picherek, with its

cathedral. It derives its name from *prichora*, a cavern,

because in the vaults beneath are preserved the bodies

of several Russian saints. The tower or belfry of the

cathedral, deemed by the Russians a master-piece of ar-

chitecture, rises to the height of 204 ft. The theologi-

cal academy of Kief, founded in 1661, in the Podolsk,

is one of the most celebrated in Russia. In 1820, it was

attended, according to Schnitzler, by 1,500 pupils; but

this, we suspect, must be an exaggeration, and we should

think that 300, or 400, would be nearer the mark. In

1833 a university was founded at Kief, intended to re-

place that of Wilna, suppressed after the late Polish re-

volution. It had, in 1846, 16 professors and assistants,

about 600 pupils, and a library with more than 35,000

vols. The university buildings are said to be at once

large and handsome. One of the most remarkable edifices

in the lower town is the exchange, a very large building,

the great hall of which can accommodate 3,000 persons.

The houses are, for the most part, of wood, and the streets narrow, crooked, and mostly unpaved. The town is principally dependent on the pilgrimages to the cathedral and the monastery, and on the academy. In 1798 a fair, formerly held at Dubno, was transferred thither. It takes place during January, and is attended by all the surrounding nobles, as well as by great numbers of merchants and other descriptions of people. They rendezvous in the exchange. Provisions of all kinds are abundant and exceedingly cheap. (*Schnitzler, La Russie, &c.*, p. 449—458.; *Pinkerton*; *Lyall's Travels*, i. 103., &c.)

KIEL, a town of Denmark, cap. Holstein, on the N. shore of the prov. at the bottom of a beautiful bay. lat. 54° 19' 43" N., long. 10° 8' 18" E. Pop. 13,572. It is handsome, well built, and thriving. The university, founded in 1665, has had many distinguished men among its professors: it has a valuable library, comprising 70,000 volumes, and is attended at present by about 200 students. There is also an excellent grammar school, with an orphan-house, a workhouse, &c. The Church of St. Nicholas is a fine old building; a handsome royal palace stands on a hill adjoining the town, and the public baths deserve notice.

Kiel is the seat of government, and, since 1834, of the supreme court of appeal for the duchies of Sleswick, Holstein, and Lauenburg. There is an extensive hat manufacture; and starch, tobacco, refined sugar, &c., are also produced. The harbour is safe and has water sufficient for large ships. A good deal of trade and ship-building is carried on. Packet boats sail regularly for Copenhagen; and the road from Hamburg to Kiel being equal to any in England, this route is much frequented by travellers visiting the Danish metropolis. The Holstein canal, forming a navigable communication between the Eyder and the Baltic, unites with the latter 2 m. from the town. There is a great annual fair in January.

KILDA (ST.), or HIRT, a small island belonging to Scotland, the most remote of the Hebrides or Western Islands, in the Atlantic Ocean, 60 m. W. from Uist; lat. 57° 50' N., long. 8° 32' 30" W. It is about 3 m. in length by 2 m. in breadth, and contains about 4,000 acres: having attached to it a few dependent and inferior islets. Except at the landing place on its S. side, and at a rocky bay on the N., the island is wholly fenced round with lofty inaccessible precipices. The landing place, now noticed, affords, except during southerly winds, good anchorage. St. Kilda is principally occupied by four hills; and though the soil be but thin and poor, it is, owing to the moisture and mildness of the climate, covered with luxuriant verdure, and affords pasture for some hundreds of sheep and a few cows. A small portion of the surface is in tillage, and produces the variety of barley called bear or big, and oats; but owing to the frequent and tremendous storms by which the island is visited the crops are exceedingly precarious, and are not unfrequently destroyed. The inhabs. consist of 22 families, of 5 or 6 individuals each, who live together in one poor hamlet. The island being resorted to by a vast number of sea fowl, the inhabs. are principally engaged in fowling and are mainly dependent on the eggs, flesh, and feathers of the birds. Fowling is here, as in all similar localities, an extremely perilous occupation, and one requiring great nerve and dexterity. (See Vol. I. p. 832.) Fishing is, also, a considerable resource. The people are filthy in their habits, destitute of most of the comforts of life, and apparently unhealthy and short-lived. The island belongs to a single proprietor, who lets it to a middleman, by whom it is let to the inhabs. The latter pay their rents in feathers and bear. The pop. has long been stationary.

Recently a considerable improvement has been effected in the condition of these remote islanders by the visits paid them in the course of summer by steamers from various parts of Great Britain. A few years ago they were extremely ignorant; but they are said to be, in this respect, a good deal improved through the residence amongst them of a worthy and most attentive clergyman. (*Martin's Voyage to St. Kilda*, 4th ed. Lond. 1753; *Fularton and Baird on the Highlands and Islands of Scotland*, p. 28, &c.)

KILDARE, an inland co. of Ireland, prov. Leinster, having N. Meath, E. Dublin and Wicklow, S. Carlow, and W. King's and Queen's Cos. It contains 392,435 acres, of which 66,447 are unimproved bog and waste, consisting principally of portions of the bog of Allen (which see). Surface mostly flat, or but slightly undulating; and, with the exception of the bog, the soil is mostly clayey and fertile. The famous common, called the *carragh* of Kildare, in the centre of the co., contains about 5,000 acres, and is said to be unmatched for the softness of its turf and the richness of its verdure. When Mr. Wakefield visited Ireland, agriculture in this co. was in the worst possible state (i. 419.); but, though still very far behind, it has been materially improved in the interval; and better implements, better stock, and improved processes have been pretty generally intro-

duced. There are some very large estates; but property is, notwithstanding, a good deal divided. Farms vary in size from 5 up to 200 and even 500 acres; and have, indeed, been less subdivided in this than in most Irish cos. Average rent of land, 18s. an acre. Minerals and manufactures unimportant. Principal rivers Barrow, Liffey, and Boyne; the last-mentioned river having its principal source in this co., near Carbury. It is also intersected by the Grand Canal, and by its branch leading to Monastereven and Athy. It has no considerable town, Athy being the most populous. Kildare contains 10 baronies, and 113 parishes; it returns 2 mems. to the H. of C., both for the co. Registered electors in 1849-50, 896. In 1841, it had 18,556 inhab. houses, 20,338 families, and 114,488 inhabs., of whom 58,030 were males, and 56,458 females.

KILIA, a small town of European Russia, in Bessarabia, on the N. bank of the Kilia, an arm of the Danube, about 8 m. from its mouth. It has some trade; but owing to the shallowness of the water over the bar at the mouth of this arm of the river, it is not likely ever to become a place of any importance.

KILKENNY, an inland co. of Ireland, prov. Leinster, having N. Queen's Co.; E. Carlow and Wexford, from which it is separated by the Barrow; S. Waterford, from which it is separated by the Suir; and W. the latter and Tipperary. Area, 513,686 acres; of which 96,569 are unimproved mountain and bog. Though in parts hilly, the surface is mostly either flat, or but slightly undulating. Soil of various qualities; but for the most part, it rests on a limestone bottom, and is light, loamy, and, in the valleys particularly fertile. The remarks made under the head of Kildare as to the improvements that have been made in agriculture, since 1813, apply equally to this co. In some districts the dairy husbandry is extensively carried on. Property mostly in very large estates. Farms of various sizes, but generally small. Partnership tenures are not uncommon; and farm-houses and cottages are in general very inferior. Average rent of land, 15s. 6d. an acre, being among the highest rented counties in Ireland. There are extensive beds of coal in this co., and collieries have been wrought at Castlecomer for more than a century; but owing to the excess of sulphur, the coal is but little used for domestic purposes, and is principally employed in malting, lime-burning, &c. The woollen manufactures formerly established in this co. are now nearly extinct (see next article); and, if we except the grinding of corn into meal and flour, and some breweries, distilleries, and tanneries, the manufactures now carried on in the co. are quite inconsiderable. Kilkenny is intersected by the Nore, and bounded on the E. by the Barrow, and on the S. by the Suir; so that it has peculiar facilities for the shipping of its produce, which may be conveyed either to Waterford by the Barrow and the Suir, or to Dublin by the Barrow and the Grand Canal. It contains 9 baronies and 127 par.; and sends 3 mems. to the H. of C., being 2 for the co., and 1 for the bor. of Kilkenny. Registered electors for the co. in 1849-50, 445. In 1841, Kilkenny had 32,147 inhab. houses, 34,805 families, and 202,420 inhabs.; of whom 98,114 were males, and 103,306 females.

KILKENNY, an inland city and parl. bor. of Ireland, prov. Leinster, cap. of the above co., on the Nore, which is here crossed by two handsome stone bridges, 72 m. S. W. Dublin, and 27 m. N. by W. Waterford.

Kilkenny, with its liberties, which are comprised in the parl. bor., extends over a space of 17,012 imp. acres, and forms a co. of itself; the portion on the E. side the river, called St. Cannice, or Irishtown, being on the estate of the bishop of Ossory. The city and liberties had, in 1821, 23,230; and in 1841, 23,625 inhab., of whom above 21,000 are R. Catholics. Mr. Inglis says, that Kilkenny is well built (excepting the suburbs), beautifully situated, and a very interesting town. The principal streets are parallel to the river, but there are many cross streets. Of 2,842 houses belonging to the town in 1831, 1,857 were thatched and 985 slated. The principal structures are the castle and cathedral. The former, which is of great antiquity, having been built by Strongbow, has been long the property and residence of the Ormonde family. It has recently been almost entirely rebuilt, and has been rendered a very commodious as well as a magnificent residence.

The church of St. Cannice, the cathedral of the see of Ossory, is a large venerable pile of Gothic architecture: it has several monuments, and near it is a round or pillar tower 108 ft. high: the bishop's palace and the deanery are also close by. The co. of the city comprises the parishes of St. Mary, St. Patrick, St. John, and St. Cannice. The church of St. Mary is an elegant modern building; that of St. John, which was the chapel of the monastery of the same name, has been restored, so as to preserve the character of its former singular style of architecture, in which the windows are replicated in such close succession, that the intervals are merely mullions, whence it is called the Lantern of Kilkenny. There is a Rom. Cath. chapel in each parish, that of St. Mary's

being looked upon as the bishop's cathedral. Chapels are also attached to the Presentation Convent, and to the Dominican and Capuchin friaries. The ruins of the Franciscan and of the Dominican, or Black Abbey, add greatly to the interest of the place.

A public grammar-school, endowed by one of the earls of Ormonde, and elevated to the rank of a royal college by James II., has accommodation for 80 resident pupils: the house, which stands in a retired situation, on the banks of the Nore, was rebuilt, at the public expense, towards the close of last century: the children of the inhab. of Kilkenny are admitted at half price. Here is also a charter school in which 24 boys are instructed in weaving, a seminary for candidates for the R. Catholic priesthood at Birchfield, a large female school, conducted in the best possible manner by the nuns of the Presentation Convent, a parochial school, and a female orphan house. There are about 1,500 pupils in the public, and 1,600 in the private schools.

The principal charitable institutions are the infirmary for the co., the fever hospital, and a lunatic asylum, wholly independent of the county district asylum. There are several almshouses, and two loan funds. The charitable society affords relief to sick tradesmen and to their widows: the benevolent society to the bedridden poor. The workhouse for the Kilkenny union, opened in 1842, is an extensive building, having accommodation for 2,000 inmates.

A public walk, called the Mall, extends upwards of a mile along the bank of an unfinished canal and of the Nore. Here, also, is a small library, a news' room, a mechanics' friends' society, and a horticultural society. Races are held in September.

A charter, granted to the city by William Earl Marshal, was repeatedly confirmed by successive sovereigns. Elizabeth combined the two boroughs into a single corporation. Under the Municipal Reform Act, the corporation consists of a mayor, 2 aldermen, and 18 councillors. Previously to the union, Kilkenny and Irishtown sent 4 mems. to the Irish H. of C.; and since then, they have sent 1 mem. to the Imperial H. of C. The right of voting was formerly in the freemen and freeholders of the co. of the city, the freedom of the city being obtained by birth, servitude, or by gift of the corporation. Registered electors in 1849-50, 217. The income of the corporation, amounting to about 2,400*l.* a year, is employed to defray the charges for lighting, paving, &c.

The assizes for the county and city are held here; as are the general and petty sessions of the peace, in a quarterly rotation with three other places. The court-house, built on the site of Grace's Old Castle, is a spacious and elegant building, with sufficient accommodation for the public business of the co. and city. The mayor holds a weekly court of conscience for the recovery of debts not exceeding 2*l.* Irish. The co. prison is at a small distance from the town: that of the city is ill constructed, and limited in its means of accommodation. The Bank of Ireland, Provincial, and National banks have branches here; and the savings bank had in Nov. 1848, 16,730*l.* deposits. Two weekly newspapers are published in the city.

The Ormonde family have laudably exerted themselves at different periods to introduce manufactures into Kilkenny. In this view, Pierce, the third earl, brought over a colony of Flemings skilled in the making of tapestry and carpets, but without success. The first marquis expended large sums in attempts to establish the linen manufacture. That of frieze, after being carried on for a considerable period, was eventually transferred to the neighbouring town of Carrick-on-Suir. Wool-combing was also introduced, and the manufacture of blankets was extensively carried on; but this also has all but entirely failed. Mr. Inglis represents the woollen manufacturers of Kilkenny as being, at the period of his visit, without employment, and in the greatest distress; and the *Railway Commissioners* state that the entire value of the woollen goods produced within the districts of Cork, Kilkenny, Moat, and Carrick-on-Suir, did not (in 1838) amount to 20,000*l.* a year! And we doubt whether it be now (1850) materially greater. Several flour and corn-mills have been erected in or near the city, and there are several distilleries, breweries, and tanneries, and a starch manufactory: but the principal dependence of the town is on its retail trade, of which it is an extensive centre. A great number of pigs are also killed in the city, and it has an extensive butter trade. Within about 1 m. from the city are some celebrated marble quarries and a sawing and polishing mill. The marble is extremely beautiful; it has a black ground variegated with madrepor, bivalve shells, and other organic matter; it takes a fine polish, and makes beautiful chimney-pieces, and such like articles. Kilkenny coal neither emits flame nor smoke; but its sulphureous exhalations unfit it for domestic purposes. Post-office revenue, in 1842, 876*l.*; in 1848, 1,503*l.* Markets on Wednesdays and Saturdays, in the covered area of the Tholsel or town-house. Fairs on the 28th of March, and Corpus Christi day, for cattle

and wool, are frequented by purchasers from all parts of the country.

Kilkenny derived its name from a church or cell dedicated to St. Cannice, or Kenny. It appears to have been a place of some importance before the arrival of the English: for Strongbow built a fortress here, which was enlarged and strengthened by William Earl Marshal, and subsequently by the earls of Ormonde, in whose possession it has continued for centuries. Parliaments were frequently held in this city; and a famous statute, passed in 1371, for regulating the intercourse between the English and the native Irish, is still quoted by the title of the Statute of Kilkenny. In the wars of 1641, the assembly of the confederated Catholics held its meetings here, in a building which is still, on that account, an object of curiosity to strangers. In 1650, it surrendered to Cromwell.

Kilkenny enjoys many advantages, independently of its locality as a central point of communication to all parts of the S. of Ireland. Its situation, equally picturesque and salubrious, the circumstance of its being the ancient and continued residence of one of the principal Anglo-Irish families, and of the bishop and dignitaries of the diocese, as well as of many highly respectable inhab., and the vicinity of numerous resident landholders of large property, have all contributed to increase its rank and respectability. The higher classes here may vie with those of the capital; but we regret to say, that the situation of the labouring classes is as bad as possible. Mr. Inglis says, "I found the working pop. in a miserable condition; hundreds subsisting on the chance contributions levied on the farmers round the country, and hundreds more subsisting at the very lowest point at which life can be sustained." And we understand that this paragraph may, with little modification, be applied to the state of the lower classes at this moment (1840). (*Inglis's Ireland*, i. 88.; *Boundary Municipal and Railway Reports*, &c.)

KILLARNEY (TOWN AND LAKE OF). The town of Killarney in Ireland, co. Kerry, so celebrated for the fine scenery in its vicinity, is situated about 1½ m. from the E. margin of the lake, 162 m. S. W. Dublin, and 44 m. E. by N. Cork. Pop. in 1821, 7,014: in 1841, 7,127. The town took its rise from iron and copper works in its neighbourhood, now discontinued from want of fuel; but, for a lengthened period, it has been principally indebted for its support and celebrity to the attractions of the surrounding scenery. It has three pretty good streets, with many bad alleys, and close filthy lanes and yards. Mr. Inglis says, that it has a large pauper population, and a vast number of idle persons; which, indeed, is a common characteristic of all places much resorted to by strangers. The great drawback, on a visit to Killarney, has hitherto been the number and importunity of the beggars by whom its streets and environs have been infested. It is to be hoped that something effectual may be done, through the agency of the Poor-law Commissioners, or otherwise, to rid the town of this nuisance.

The principal buildings are the par. church, built in 1803; a large, low, heavy, Rom. Cath. chapel, a Methodist meeting-house, a national school, a fever hospital with a dispensary, an almshouse for aged females, founded and endowed by Lady Kenmare, a market-house, theatre, court-house, and bridewell. In New Street is a convent for nuns of the order of the Presentation. Attached to their convent is a school, in which these benevolent and excellent ladies give gratis and very superior instruction to about 400 girls: Lord Kenmare contributes 100*l.* a year towards defraying the expense of the school, and also clothes 30 of the girls. General sessions are held four times a year; petty sessions on Tuesdays, and a manor court monthly: a party of the constabulary has a station here. It has several good inns, which, in the visiting season, are much frequented. The only manufactures, if we may so call them, carried on in the town, are those of toys and fancy articles, made of the wood of the arbutus, which is here very abundant. It has a considerable trade in corn, groceries, woollens, coarse linens, &c.; and it has some tanneries, two breweries, and a large flour-mill. Markets on Saturdays; fairs on 4th July, 8th Aug., 7th Oct., 11th and 28th Nov., and 28th Dec. Post-office revenue in 1830, 594*l.*; in 1836, 694*l.* Branches of the Agricultural and National banks were opened in 1835. The town is built on the estate of the Earl of Kenmare, whose house and grounds lie between it and the lakes.

The lake of Killarney, or Lough-Lane, consists properly of three lakes connected by a winding channel, through which vessels pass from the one to the other. It lies at the E. extremity of the extensive range of mountains called Macgillicuddy's Reeks, and has in its immediate vicinity, or rather, indeed, rising from its banks, the highest summits in Ireland. The largest division of the lake, or that portion called the lower lake, occupies an area of about 3,000 Irish acres; its W. shore is formed by the mountains of Tomies and Glenna, respectively, 2,150 and 2,090 ft. above the level of

the sea, having their precipitous sides well clothed with forest trees; on the opposite shore is the striking contrast of flat land in a high state of cultivation, ornamented by the fine demesne of Lord Kenmare. There are said to be no fewer than thirty-three islands, many of which are extremely picturesque, in the lower lake. One of these islands, Innisfallen, has been admired by every traveller. Arthur Young says that it is the most beautiful spot in the United Kingdom, and perhaps in Europe. It contains about 20 acres, is extremely well wooded, and has every variety of tranquil beauty and sylvan scenery. On the S. shore of this lake is the fine ruin of Muckross Abbey, the property of Mr. Herbert. This lake is, in some parts, very deep. Between Glenna Mountain and Ross Island, the largest in the lake, the soundings give 42 fathoms; and as the surface of the lake is about 50 ft. above the level of the sea, it follows that its bottom is 202 ft. below that level.

The middle lake occupies about 640 Irish acres; it lies immediately under the Fore or Turk Mountain, elevated about 1,900 ft. above the level of the sea. The strait which joins the middle and upper lake is about 3 m. in length, having, in many places, the appearance of a beautiful river. The upper lake contains about 720 Irish acres. It lies in a hollow, formed by some stupendous mountains, among which are Gurrán Tual, the highest in Ireland, rising 3,404 ft. above the level of the sea; so that its scenery is in the highest degree magnificent and sublime. "Here," says Mr. Wakenfield, "Nature assumes her roughest and most terrific attire to astonish the gazing spectator, who, lost amid wonder and surprise, thinks he treads enchanted ground; and while he scarcely knows to which side he shall direct his attention, can hardly believe that the scenes he sees around him are not the effects of delusion, or the airy phantoms of the brain, called into momentary existence by the creative powers of a fervid imagination. Here rocks piled upon rocks rise to a towering height; there one mountain rears its head in succession above another, and sometimes a gigantic range seems to overhang you, forming a scene that may be more easily conceived than described. Such sublime scenes cannot be beheld but with a mixed sensation of pleasure and awe, and on a contemplative mind they must make a deep and lasting impression" (Vol. I. p. 66.). In other places, however, especially on the E. shores of the lower and middle lakes, the scenery is of the softest and most agreeable kind, consisting of finely wooded promontories, ornamented with rivers and seats, verdant islands, &c.; and it is in the contrast between these and whatever is most wild and rugged, that we find the great charm of Killarney.

The lakes of Killarney receive the Fleak and several other streams, their reflux waters being carried off by the Lane. The latter issues from the N.W. extremity of the Lower Lake, and after pursuing a W.N.W. course for about 10 m., falls into Castlemaine Harbour, at the bottom of Dingle Bay. It is well stocked with salmon and white trout, and also with pearl oysters, whence pearls have been repeatedly taken. Were it desirable, it is said that the Lane might, at a small expense, be made navigable from the sea to the lake. (*Inglis's Ireland; Young's Ireland*, 4to ed.; *Windle's Cork*, &c., p. 294., &c.)

KILLIECRANKIE, a celebrated pass through the Grampian mountains in Scotland, co. Perth, about 15 m. above Dunkeld. It is about $\frac{1}{2}$ m. in length. The road is cut out of the side of one of the contiguous mountains; and below it at the foot of a high precipice, in the bottom of the ravine, the river Garry dashes along over rugged rocks, but so shaded with trees as hardly to be seen. At the N. extremity of this pass, the Revolutionary army under Mackay was defeated in 1689, by the troops of James II. under the famous Graham of Claverhouse, Viscount Dundee, who fell in the moment of victory.

KILMARNOCK, an eminent manufacturing town, parl. bor., bor. of barony, and par. of Scotland, district of Cunningham, co. Ayr, on level ground on the N. bank of the Irvine, and on the small stream Kilmarnock or Fenwick, a tributary of the former; 20 m. S. W. by S. Glasgow, and 12 m. N. N. E. Ayr. Pop. of the par. of Kilmarnock, in 1801, 8,079, in 1841, 19,956; but the pop. of the parl. bor., which includes the suburb of Riccarton, on the S. bank of the river, is at present, 1850, estimated at above 22,000.

The main street, forming part of the high road between Ayr and Glasgow, is upwards of 1 m. in length, and is regularly built. The houses, generally of freestone (which is found in great abundance in the immediate vicinity), are erected in a handsome substantial style. Similar remarks are applicable to all the modern portions of the town. Kilmarnock has recently been extended greatly towards the S. and E., and in these directions there are many handsome buildings. The older streets are narrow and irregular; but the magistrates having obtained an act for improving the town, about the beginning of the present century, judicious measures were adopted to carry

its objects into effect; and Kilmarnock is now, on the whole, one of the neatest and best built manufacturing towns in Scotland. The streets were lighted with gas in 1823.

Among the public buildings are the 2 parish churches, one of which, the High Church, after the plan of St. Martin's in London, is surmounted by a tower 80 ft. in height; the academy; and the town-hall, a neat modern building in the centre of the town, on an arch over the water of Kilmarnock. The merchants' society have built a spacious inn, which, in point of architecture, is an ornament to the town. There are five bridges over the Kilmarnock within the town, and two over the Irvine between Kilmarnock and Riccarton, all substantial structures.

In addition to the two parish churches, one of which is collegiate, there are 3 free churches, two chapels belonging to the U. Presbyterian Associate Synod; and the Relief, Cameronians, Independents, and Rom. Catholics have each a chapel. The Dissenters, including R. Catholics, who are almost all Irish, but ex. the adherents of the free church, comprise rather more than a third part of the whole community.

Kilmarnock is well furnished with the means of education. There are, in the country part of the parish, 3 schools, and 3 teachers; in the town there are above 20 schools; but of these only two are endowed; the remainder being private or voluntary. The academy erected in 1807 at the joint expense of the landowners and private contributors, and which is at once a parish school and a joint-stock establishment, is an efficient and useful institution, amply realizing the objects of its founders. The total number of pupils at all the schools in 1839, was upwards of 3,000 (*New Stat. Acc., ut supra*), or about a seventh part of the pop. This, too, was exclusive of 21 Sunday schools, attended by 1,288 scholars. Two of the above schools are free; one for boys, and one for girls. It has several public libraries, a philosophical institution, and other scientific and literary associations, various printing presses, a weekly newspaper, and an astronomical observatory. It may be worth mentioning that the first edition of *Burns's Poems* was printed here in 1786.

Poor-rates have been introduced. They amounted in 1847 to 2,100*l.*, and in 1850 to 3,200*l.*, assessed one half upon heritable property valued at 41,000*l.* a year, and the other half on personal property.

Kilmarnock is chiefly eminent as a place of trade and manufacture. It seems originally to have been distinguished for its manufacture of woollen bonnets, formerly worn by all the peasantry; and of striped night-caps. These articles, called "Kilmarnock" bonnets and caps, are still manufactured to a very considerable extent, as are forage caps for the army. The carpet manufacture was introduced more than a century ago; but the value produced, in 1791, was only 21,400*l.*; whereas in 1839, including Brussels, Venetian, Turkey, and Scotch carpets and rugs, its gross value was estimated at 150,000*l.* Five woollen mills in the town and neighbourhood engaged in spinning worsted or woollen yarns for the carpet factories and bonnet-makers, employed in 1838 about 200 hands (*Factory Returns*, 1839), and they still continue to employ about the same number. The manufacture of worsted printed shawls was a few years ago the most extensive business carried on in Kilmarnock. It was first begun in Scotland in 1824, at Greenholm, in this neighbourhood, by Mr. William Hall, an ingenious and enterprising calico-printer; and so rapidly did it extend, that, during the year ending 1st June, 1831, there were manufactured 1,128,814 shawls, the value of which might be about 200,000*l.* (*Bound Rep. ut supra*.) The business afforded employment in 1840 to about 1,400 persons, including weavers and printers. But the printing of shawls has since been greatly lessened, and the fabrics called De Laines have been, to a considerable extent, substituted in their stead, so that the number of persons employed in the printing trade has considerably diminished. There are extensive tanneries, and the boot and shoe trade is very considerable, both for home consumption and exportation. Machinery is also rather extensively produced, and there are a number of inferior manufactures. In the *Statistical Account* of the parish in 1791, the gross annual value of its different manufactures was estimated at 86,850*l.*; whereas in the *New Statistical Account* of the parish, published in 1840, the annual value of its leading manufactures is estimated at above 476,000*l.*; and, including inferior articles, the whole may (1850) probably amount to about 600,000*l.*! The weaving of cotton (by hand-loom), in connexion with the Glasgow market, is carried on to some extent in Kilmarnock, as in all the towns in the W. of Scotland. There are 4 branch banks in the town, and a savings' bank. Coal is abundant in the neighbourhood, and is extensively exported. Market days, Tuesday and Friday.

The port of Kilmarnock is at Troon, on the Ayrshire coast, with which it is connected by a railroad $\frac{9}{10}$ m. in length. This was the first public railway constructed in

Scotland, the act for its construction having passed in 1808, though it was not finished till 1812. Branches of the Glasgow, Paisley, Kilmarnock, and Ayr railway, communicate with Kilmarnock, and through it by Dumfries with England, so that it possesses the readiest means of intercourse with different sea-ports, and with all the most important towns not only in the W. of Scotland, but generally in the kingdom.

Kilmarnock was originally a mere appendage of the baronial manor of the Boyds, lords of Kilmarnock, attainted in 1745, who had their seat in the neighbourhood. Its first charter as a free bor. of barony was granted by James VI. in 1591; a second was granted in 1672. The Reform Bill erected Kilmarnock into a parl. bor., conferring on it, along with Renfrew, Port Glasgow, Dumbarton, and Rutherglen, the privilege of sending a mem. to the H. of C. Constituency of the burgh in 1849-50, 702, being more than equal to the aggregate constituency of the other burghs. Corp. rev. 1848-9, 5271. Under the Municipal Reform Act it is governed by a provost, 4 bailies, a treasurer, and 12 councillors.

KILRENNY, a royal and parl bor., sea-port, and par. of Scotland, co. Fife, on the N. E. shore of the Frith of Forth, near the mouth of that great estuary, 20 m. N. E. Edinburgh, and 9½ m. S. by W. St. Andrews. Its burghal privileges embrace Cellardykes, sometimes called Nether Kilrenny, distant ½ m. S. E. Pop. 1,719. Kilrenny is a place of no importance; but Cellardykes engages extensively in the herring and whale fishery, and is a thriving village. Kilrenny, which was created a royal bor. in 1707, unites with Cupar, St. Andrews, and three small adjacent bors., in sending a member to the H. of C. Registered electors in 1849-50, 43. Municipal revenue, 501.

KILRUSH, a sea-port town of Ireland, S. W. part of the co. Clare, on the innermost extremity of a creek on the N. side of the estuary of the Shannon, 37 m. W. Limerick, and 20 m. E. by N. from Loophead, at the mouth of the Shannon. Pop. in 1841, 5,070. It exports considerable quantities of corn, meal, and flour: the herring fishery is also carried on to some extent: and it has a pier, and a patent slip for the repair of vessels. It is a creek belonging to the port of Limerick. Its chief buildings are the par. church, R. Catholic chapel, Methodist meeting-house, market-house, custom-house, court-house, and bridewell. It has a school on the foundation of Erasmus Smith, and some other schools. A manor-court is held monthly; general sessions at Easter and Michaelmas, and petty sessions on Tuesdays. It is a coast-guard and constabulary station. Markets on Saturdays; fairs, May 10. and Oct. 12. Post-office revenue, in 1830, 2532; in 1836, 4021. Branches of the Agricultural and National Banks were opened in 1835. A mail car plies daily to Ennis. Turf for fuel is brought coastwards by boats in large quantities.

KILSYTH, a bor. of barony, market and manufacturing town of Scotland, co. Stirling, in a valley 10½ m. N. by E. Glasgow, and 16 m. S. W. by S. Stirling. Pop. (1841), 4,106. The town is irregularly built. The only public buildings are the parish church, with a lofty spire, and a chapel belonging to the Relief. The Independents have a small congregation, but no separate meeting-house. The inhabs. are chiefly employed as cotton-weavers in connexion with the manufacturers of Glasgow. In 1831, it had 424 weavers: it has now upwards of 600. About 20 persons are employed as sickle-makers. Iron stone and coals abound in the neighbourhood. The Forth and Clyde canal passes within ½ m. to the S., and contributes greatly to the prosperity of the district. Of the *præsidia*, or forts, erected by Agricola in his 4th campaign, several mouldering remains may yet be traced. (*Taciti Agricola*, cap. 23.) They were generally about 2 m. apart, and built nearly in the direction afterwards occupied by the wall of Antoninus. This wall, or *Græham's Dyke*, as it is vulgarly termed, built by the Emperor Antoninus Pius, about the year 140, as a protection against the Caledonians on the N., ran across the isthmus between the Forth and Clyde, and passed within five furlongs of Kilsyth on the S. Kilsyth gives its name to a great victory gained in its vicinity (15th Aug. 1645), by the Marquis of Montrose over the Covenanters, commanded by General Baillie. Sir James Livingston (a branch of the noble house of Linlithgow) was created Viscount Kilsyth (1661), on account of his loyalty during the civil wars: but the title was attainted, and the estates forfeited in the person of the 8d viscount, who joined the rebellion in 1715. "Religious revivals," as certain fanatical displays recently got up in various places throughout Scotland, in 1839, have been termed, originated at Kilsyth, but they seem for some years past to have entirely subsided, not merely here, but every where else. (*Nimmo's Hist. of Stirlingshire*, edit. 1817; *Chalmers's Caledonia*.)

KILWINNING, a market and manufacturing town and bor. of barony, Scotland, in the district of Cunninghame, co. Ayr, on a rising ground on the right bank of

the Garnock, 3 m. N. N. W. Irvine, and 21 m. S. W. Glasgow. Pop., including the contiguous village of Byres, in 1801, 1,843; in 1841, 2,971. The town consists chiefly of one street, but there are various narrow lanes. The modern additions to the town are substantial and elegant. The only public buildings are the parish church (with a spire) and two dissenting chapels. Eglington Castle, famous for the tournament held there in 1539, is in the immediate vicinity. The inhabs. are chiefly employed in the weaving of cottons, gauzes, &c. for the Paisley and Glasgow manufacturers. Number so employed about 800. Lime and coal abound in the district around. The Glasgow and Ayr railway passes close to Kilwinning.

Kilwinning is celebrated for its abbey, founded by Hugh de Moreville, constable of Scotland, in 1140, and dedicated to St. Winning. It was, at the Reformation, one of the richest in the kingdom. It is said that the foreign architect who built the abbey was the first to introduce the craft of Free Masonry into Scotland. The lodge of Kilwinning, as the mother lodge of the kingdom, was in the habit of granting charters to other lodges, all of which append the word Kilwinning to their name: but the institution of the Grand Lodge of Scotland at Edinburgh has nearly superseded the dignity of Kilwinning as a mother lodge. Kilwinning is the seat of a body of archers, which existed at least as early as 1499, and is still in a flourishing condition. (*Old Stat. Acc. of Scotland*, § *Kilwinning*; *Keith's Scot. Bishops*, p. 407.; *Chambers's Gazetteer*.)

KINCARDINESHIRE, or THE MEARNES, a marit. co. of Scotland, having N. the co. of Aberdeen, from which it is for the most part separated by the Dee and Avon, E. the German Ocean, by which it is bordered for above 20 m., and S. and W. Forfar. It is of a triangular shape. Area, 244,480 acres, of which 1,280 are water. The Grampian mountains occupy the western, central, and most of the northern parts of the county, extending from Battock-hill, 2,611 ft. high, on its W. confines, to Stonehaven on the E. coast. The arable land consists principally of the district denominated the *How of the Mearns*, being a portion of Strathmore, or a continuation of the *How of Angus*, extending from Strathcathro and Marykirk to within a few miles of Stonehaven. It comprises about 50,000 acres of comparatively low, fertile, and well cultivated land, with many thriving plantations. On the E., the *How* is divided by a range of low hills which separate it from what is called the *Coast* district, containing about 68,000 acres, about a half of which is in a high state of cultivation. There is also a narrow glen or district of arable land along the Dee. Property in a few hands. Arable farms of all sizes, many small; some from 400 to 500 acres, and the proportion of small farms decreasing. Hill pastures let in immense tracts. Improvements began in this county about the middle of last century, and have been carried on since the close of the American war, and especially during the last dozen years, with great spirit and extraordinary success. Commodious farm-houses have been erected, and new and level roads constructed in districts where formerly there were only wretched footpaths. The following statements, extracted from the notice of the parish of Fettercairn in this county, in the *New Statistical Account of Scotland*, comparing its present state with its state when the old statistical account was published about half a century ago, may, with little modification, be applied to the entire county. "The improvements in this parish, either begun or completed, since the last statistical account was published, have been of great extent. Much waste ground has been reclaimed, and converted into productive arable land. Extensive plantations have been formed, which are now, generally, in a thriving state, and adding to the shelter of the fields, the beauty of the landscape, the resources of the proprietors, and the benefit of the neighbourhood. Better accommodations in the dwelling-houses, farm-steadings, and enclosures, have been provided. By means of extensive and judicious draining, the salubrity of the atmosphere has been improved, the state of disease has been altered, and the health of the people promoted. By the introduction of thrashing-mills, and other useful inventions, agricultural labour has been greatly diminished. By the formation of so many new roads, internal communication and access to markets have been very much facilitated. Enlarged means of intellectual, moral, and religious improvement, have been called into operation; and it is to be hoped that the habits, manners, and enjoyments of the people have in some measure kept pace with the increase of these advantages." (P. 127.) Average rent of land in 1843, 10s. 11½d. an acre. Lime is the only mineral of any importance. The manufacture of the beautifully jointed and painted wooden snuff-boxes, now in very general demand, originated at Laurencekirk, in this co., about 1790; but Cumnock and Mauchline, in Ayrshire, have become the principal seats of the manufacture. Principal rivers, Dee, N. Esk, Bervie, Dye, &c., on some

of which are considerable salmon fisheries. It contains 19 parishes, and one royal bor., Inverbervie, which is quite inconsiderable. It sends 1 mem. to the H. of C. for the county, and Inverbervie joins with Montrose, Arbroath and other bors., in returning a mem. Registered electors for county, in 1849-50, 900. In 1841, Kincardine had 7,304 inhab. houses, and 33,075 individuals, of whom 15,829 were males, and 17,246 females. Valued rent, 74,912*l.* Scotch; annual value of real property in 1815, 94,816*l.*, do. in 1843, 134,341*l.*

KINCARDINE, a sea-port town of Scotland, in a detached part of the co. Perth, par. of Tulliallan, on the N. side of the Frith of Forth, 21 m. W. N. W. Edinburgh. Pop. of par., in 1841, 3,196; of town, 2,875. The streets are mostly narrow, irregular, and dirty; but the houses are good especially those in the newer parts of the town. It has a good quay and harbour, and a good roadstead, affording convenient anchorage for vessels of large burden. Ship-building is carried on to a considerable extent, and the town has an extensive coasting trade. The parish church is at Tulliallan, but there is a dissenting meeting-house in the town. The different parties in the town to whom vessels belong have formed themselves into a Kincardine Mutual Assurance Company, the value of the property so insured being estimated at about 80,000*l.* There are two branch banks in the town; and a regular ferry is established with the opposite side of the river.

KINGHORN, a royal and parl. bor., sea-port, and par. of Scotland, co. Fife, on an eminence, overhanging a small bay, on the N. banks of the Frith of Forth, 9 m. N. by E. Edinburgh, and 3 m. S. W. Kirkcaldy. Pop. of bor. in 1841, 1,542; of bor. and par., 2,935. The town was not long since one of the most irregularly built in Scotland; but it has of late undergone many improvements in this respect, and most of the older houses (which had two flats or stories, with outside stairs facing the street) have been superseded by more modern and better buildings. The only public edifices are the par. church, a dissenting chapel, a town-hall, gaol, and a handsome school-house erected by subscription. Fifty poor children are educated gratuitously on the bequest of the late Mr. Philp of Kirkcaldy, and are clothed, and provided with books and other school utensils. There are several subscription libraries. The chief branch of industry is flax-spinning; three flax mills, driven by steam, employing 250 hands. In addition to these, about 150 individuals are employed in the weaving of different linen fabrics. A few persons engage in fishing. The harbour is bad, and scarcely any shipping is ever seen in it. Pettycur, about a mile W., is a better harbour; but its chief business derived from its being one of the seats of the ferry across the Frith of Forth, is now all but wholly superseded.

Kinghorn lays claim to great antiquity; it is certain that it was created a royal bor. as early as the 13th century. It was originally a royal residence, but lost that dignity on the death of Alex. III., who was killed (1285) by falling over a rugged and lofty eminence about a mile W. of the town. Kinghorn unites with Burntisland, Dysart, and Kirkcaldy, in sending 1 mem. to the H. of C. Registered voters in 1849-50, 33. (*Bound. Returns; Factory Returns; Beauties of Scotland; Sibbald's Hist. of Fife.*)

KING'S COUNTY, an inland co. of Ireland, prov. Leinster, having N. Westmeath, E. Kildare, S. Tipperary and Queen's County, and W. Roscommon, Galway, and Tipperary. Area, 528,166 acres. A portion of the bog of Allen covers a very considerable tract in the more northerly parts of this co., while on the S. it is partially encumbered with ramifications of the Devil's Bit and Sillebbloom mountains. On the whole, the unimproved bog and mountain are supposed to occupy 133,349 acres, of which, however, the far greater portion belongs to the bog. Soil of an average degree of fertility. Estates mostly very large. Tillage farms small, but some of those devoted to grazing are very extensive. Subtenancy is less common here than in most parts of Ireland; but its rural economy is, notwithstanding, but little different from that of the surrounding cos. (*See KILDARE, MEATH, &c.*) Average rent of land 14*s.* 5*d.* an acre. Silver has been found at Edenderry, but, if we except limestone, it has no minerals of any real importance; manufactures can hardly be said to exist. Its chief town is Birt or Parsonstown. It is bounded on the W. by the Shannon, and on the S. by the Little Brosna, while it is intersected by the Greater Brosna and the Grand Canal. It is divided into 11 baronies and 52 pars., and returns 2 mems. to the H. of C., both for the co. Registered electors, in 1849-50, 497. In 1841 King's County had 24,534 inhab. houses, 26,683 families, and 146,857 inhab., of whom 72,651 were males, and 74,206 females.

KINGSTON-ON-THAMES, a bor., market town, and par. of England, co. Surrey, loc. sit. in hund. of its own name, but with separate jurisdiction, on the S. bank of the Thames near the S. Western railway, 12 m.

S. W. London. Pop. of the par. in 1841 (exc. Ham and Hook), 8,147; and with the hamlet of Hampton-wick (which is included within the new boundary of the mun. bor.), 9,761. "The town extends from N. to S. about $\frac{1}{2}$ m. along the Thames, crossed here by an elegant stone bridge of 5 arches opened in 1828, and rather more than a $\frac{1}{2}$ m. from E. to W. Nearly continuous lines of houses, however, diverge from the body of the town along the two principal high roads towards London, almost to the bottom of Kingston Hill, and on the road to Port-mouth as far as the par. boundary, $\frac{1}{4}$ m. from the town. On the opposite side of the river is Hampton-wick, which may be fairly considered to constitute a part of Kingston, though the communication has recently been much lessened by a toll levied on all passengers crossing the new bridge." (*Mun. Bound. Rep.*) The town is well paved and lighted with gas. The streets are narrow and irregular; but there is a spacious market-place, in which is the town-hall, erected in the reign of James I., containing some curious pictures and carvings of high antiquity. The lent assizes for the co., which were formerly held in it, have been for some years transferred to a neighbouring brick edifice built for the purpose; and attached to it is a small gaol. used for the temporary accommodation of prisoners. The church is large, but plain, with a low square tower, and appears to have been erected at different periods, commencing with the reign of Richard II.; the living is a vicarage, in patronage of King's College, Cambridge. There are places of worship for several denominations of Dissenters. It has a grammar school, founded in 1560, furnishing instruction to between 30 and 40 boys; a boys' and girls' national school, supported by subscriptions; an almshouse for 6 aged men and as many women; and a dispensary.

Kingston is not a place of much trade. Considerable business is done in malting, there being 15 malting-houses in or near the town; and there are also some flax and oil mills; but most of the townspeople are dependant on their retail dealings with the neighbouring gentry. A large and well-attended corn market is held every Saturday; and the fairs are on Thursday, Friday, and Saturday in Whitsun week, Aug. 2., 3., and 4., and Nov. 13., for horses, toys, pedlary, &c.

Kingston, first incorporated by King John in 1199, and chartered by many subsequent monarchs, has been governed since the passing of the Municipal Reform Act, by a recorder, 6 aldermen, and 18 councillors; the bor. being divided into 3 wards. Corp. rev. in 1847-48, 414*l.* Sum expended on the poor in 1847, 3,636*l.*, assessed upon property valued at 34,119*l.* a year. Members were sent by it to the H. of C. in the reigns of Edward I. and II.; but the burgesses were relieved from the burden on petition, and the franchise has not since been renewed. Roman coins, urns, and other antiquities, that have been dug up in considerable quantities, prove Kingston to have been inhabited by those early conquerors of Britain. It received its name, *King's-town* (its more ancient appellation being *Merc-ford*) from its having been the residence of our Saxon monarchs, eight of whom were crowned here, some in the market-place, and others in a very ancient chapel once attached to the church, but now destroyed. A general council was held here by Egbert in 838, and attended by the chief prelates and nobility of the realm. The town continued during several centuries to be a place of high consideration, and in royal favour. (*Lyson's Environs of London, art. Kingston; Mun. Bound. Report, &c.*)

KINGSTON, the largest and most commercial city of Jamaica, though not the cap. of the isl.; on its S. coast, on the N. side of a fine harbour, on the verge of an alluvial plain surrounded by an amphitheatre of mountains. Lat. 17° 56' 6" N., long. 76° 53' 15" W. Pop. loosely estimated at 30,000; but no accurate census has ever been taken, and this estimate is probably exaggerated. It is built on ground gently shelving to the verge of the sea, and was originally comprised in an oblong space, 1 m. in length, by $\frac{1}{2}$ m. in breadth, but it has of late years extended considerably beyond these limits.

The streets in Lower Kingston are long and straight, crossing each other at right angles, like those of the new town of Edinburgh; the houses in general are two stories high, with verandahs above and below. There are two churches, an English and a Presbyterian, both handsome structures, especially the former, which is built on an elevated spot overlooking the city. Kingston has several dissenting chapels, two synagogues, an hospital founded in 1776, numerous other charitable institutions, a free school established in 1729, with an endowment of 1,500*l.* a year, a workhouse and house of correction, commercial subscription rooms, an atheneum, a society of agriculture, arts, and sciences, a savings' bank, and a theatre.

The mountain chain forming the boundary of the plain on which Kingston stands, terminates to the E. in a narrow ridge, whence a long narrow tongue of land extends to Port Royal, forming the S. boundary of the Kingston harbour, a land-locked basin, in which ships of

consequently, in rather a depressed condition. But though the post-office revenue declined between 1880 and 1885, it rose from \$912 in 1842 to 4011 in 1848. There is a brewery in the town, and some flour-mills in the vicinity. The union workhouse, opened in 1841, has accommodation for 1,250 inmates.

The principal dependence of the town is on its fisheries, which supply Cork and the surrounding country. Every kind of fish is taken; and the sales of fresh fish are said occasionally to average 1000l. per week. The fishermen are esteemed the most skilful of any in Ireland, and, being well acquainted with the coast, they are good pilots, which obtained for them an exemption from improvement during the late war. They generally fish in good sea boats of from 16 to 20 tons, called hookers, and earn from 3s. to 12s. per week; several boats are also employed in the lobster fishery. Oysters of a large size were formerly abundant, but are said to be decreasing, from the want of a judicious and properly enforced code of fishery regulations. The Kinsale fishing district extends from Flathead to the east side of Inchy bridge, comprising 60 m. of coast; and had, in 1843, 688 registered vessels, employing 5,119 men and boys.

In the summer season Kinsale is resorted to by sun-bathers.

Kinsale is a place of some note in Irish history. It was taken in 1601 by a Spanish armament, but was retaken during the same year. James II. landed here in March, 1688; but it was taken by the troops of William III., under the Earl, afterwards Duke, of Marlborough, in the following year. It had formerly a royal dock-yard; and during the late war the harbour was a good deal resorted to by king's ships. (*Railway, Fishery, Boundary, &c. Reports; Thom's Almanack.*)

KINTORE, a royal and parl. bor. and market town of Scotland, co. Aberdeen, on the line of road from Aberdeen to Inverness, 11 m. N.W. Aberdeen, and 3 m. S.E. by S. Inverury. Pop., in 1841, 464. It is a place of no importance. The Aberdeenshire Canal passes it on the W. The bor. lays claim to great antiquity; its earliest extant charter is dated 1804, confirming others of older date.

KIRGHIS (STEPPE OF THE).

a mere flat and unvaried plain, but is intersected by numerous mountain ridges, and even in its more level parts is covered with round hillocks, causing considerable undulations on the surface. Offsets of the Oural range occupy a large amount of surface in the W. and N.W. parts of the steppe. The W. continuations of the Altai range run in very irregular ridges close to the Chinese frontier, and finally connect themselves about the 42d parallel with the W. part of the Muztagh, or Thian-shan range. It would be difficult to reduce the ridges in the centre of the steppe to any system; but the principal are all N. of the 44th deg. of N. lat. The Kara-tien mountains separate the Kirghis steppe southward from the khanate of Kokan. The geological constituents and mineral riches of these mountains are little understood, the central masses appear to consist of granite, gneiss, serpentine quartz, &c., on which are superimposed alluvium and clay-slate, blue limestone, coal strata, with various secondary and other rocks. Lead, copper, and iron, with a small quantity of silver, are found in these mountains, but the present state of the country makes mining wholly impossible.

The waters of the Kirghis steppe comprise, besides the two land-locked seas, the Caspian and the Aral (which sea), a considerable number of lakes and rivers. Among the former (most of which are salt), the largest are the Balkat (116 m. long), Isik (90 m. by 30 m.), in the S.E. angle of the steppe, the Kourdalgiana, Toms, Tenaghi, Oubagan Denghis, and Akshak-Berbi lakes, with many others of smaller extent. The chief rivers are, 1. the Sir-Daria (anc. *Jaxartes*) rising in the Muztagh, about lat. 40° N. and long. 75° E., having a course S.W. to Kokan, and thence N.W. through the sandy plains of Kish-Kents and Kara-kums into the sea of Aral, its entire length somewhat exceeding 300 m.; and, 2. the Irtysh, rising in Chinese Turkestan on the W. side of the Great Altai, entering the steppe in the 46th par., forming its E. boundary up to 40° N., and receiving on its W. banks the Ichin, the Tobol, and other tributaries, which intersect with their streams the entire N. half of the steppe. Numerous smaller rivers fall into the different lakes, and many others are almost unknown to Europeans.

The climate is remarkable for its extremes of heat and cold. In the middle and little hordes, that is, in the W. and N.W. parts of the steppe, the therm. often falls to 20°, and sometimes 30° below freezing point (Réaumur). The rivers and plains are covered with ice, and the hills with a thick coating of snow, while strong winds from the N.E. increase the intensity of the cold, and hurricanes, called *huramans*, often uproot forest trees, and carry away both man and beast, causing dreadful and often irremediable destruction. (*Lévesque*, p. 8.) In summer, on the contrary, the temp. often rises to 30° Réaumur (115° Fahr.) in the shade the oppressiveness of the heat is much increased also by the sandy nature of the soil, and the paucity of rivers and forests over so vast an extent of country. This great variability of temp., however, and the rapid transition from one extreme to the other, are said not to be so prejudicial to the health either of natives or travellers as might have been expected; agues, indeed, and fevers, are common in the marshy districts; but, generally speaking, the people are robust and long-lived. Rain is very rare, even on the mountain sides. dews refresh the soil in some parts, but by far the largest portion of the surface is dried up, and rendered useless, by the entire absence of atmospheric moisture. Trees and shrubs are only found on the banks of rivers, and at the foot of the mountains near the Russian frontier, where the soil is the most capable of cultivation. the principal are elms, poplars, willows, wild plum, juniper, and liquorice trees, (the latter very abundant, and their produce forming a principal article of trade), wormwood, alkanet, tragacanth, various kinds of euphorbia, eschomolus, chamomile, asparagus, garlic and onions, horse-radish, wild oats, rye, &c. Short coarse grass generally covers the plains, on which also the sub-sola plant grows in great perfection. Agriculture, as a branch of industry, cannot be said to exist. Some land about the rivers is roughly tilled, for the purpose of raising millet, rye, and barley, but the pursuit, except by the Karakalpak, S. of the Sir-Daria, is generally despised, being only followed by the poorest classes, and then chiefly by women. The wild animals of this region comprise the wolf, wild bear, fox, Cossack dog, wild goat, and hare, all of which roam in great numbers over every part of the steppe the bear, buffalo, antelope, wild horse, beaver, and water-rat, are plentiful in some districts; and there are likewise lizards, lynxes, and other varieties of the cat tribe, in the S. Among the birds may be mentioned the eagle, falcon, cormorant, pelican, stork, heron, goose, and pheasant, with many smaller

varieties in the English language. (*Marine Empire*, Suppl. III. liii. 399.) Markets on Wednesday; cattle and horse fairs, Whit-Wednesday and Sept. 18.

KIRGHIS (STEPPE OF THE), a country of W. Asia, in the N. part of Independent Turkestan, between the 44th and 55th parallels N. lat., and 55° and 85° E. long.; bounded N. by the Oul, a trib. of the Tobol, and a line of forts connecting Zveronogolovsk, Petropawlovsk, and Omak; E. by the Irtysh and the Chinese stations, extending S. as far as the 42d parallel; S. by the khanates of Kokan, Bokhara, and Khiva; and W. by the Oural and the Caspian sea. Length, about 1,400 m.; breadth, 1,100 m.; probable area, 1,533,000 sq. m. Pop. of the three hordes composing the Kirghis nation, 2,300,000. According to M. Alexis de Lévesque, from whose able work, *La Description des Hordes et des Steppes des Kirghis-Kazaks*, lately published, we are enabled to give many interesting details respecting this nomadic people, who till now have been comparatively unknown. The Kirghis steppe is not, as hitherto generally supposed,

birds. The lakes and rivers abound with seals, and with several kinds of fish, sturgeon, pike, perch, and carp, being the most common. The domestic animals of the Kirghis are the sheep, goat, horse, and camel, the rearing of which constitutes the chief employment of this nomad race. Larger flocks of sheep are, perhaps, no where to be found, some of the richer inhab. possessing upwards of 20,000 head. The animals are strong and large, weighing from 100 to 150 lbs., and they have long coarse wool, and enormous tails, sometimes 30 lbs. in weight. They endure with astonishing patience the long privations of food and drink to which they are subject, soon recovering in spring their plump and healthy appearance.

The advantages derived by the people from these animals are immense; their flesh and milk supply them with food, and the wool furnishes felt for covering the tents and other purposes, while at the same time they serve as a standard of value, and form a chief article of export; for, according to Hagemelster, 1,000,000 sheep are sent off every year and sold in Russia, Bucharla, and China. Goats, very similar to those of Thibet, are chiefly used as guides in leading the sheep from pasture to pasture, as the latter will not move without them; their flesh is eaten, and the down concealed under their red shaggy hair is an extremely valuable article of trade. The camels (most of which have two humps, the single-humped variety being too delicate for the climate) are here, as elsewhere in Asia, the chief beasts of burden. They are indispensable to a nomad people, like the Kirghis, for transporting their women and children, their property and trading stock; nor is it unusual for the rich to possess 300 or even 400 of these animals. Their hair is spun and made into garments, the milk and flesh are used as food, and the skins of the younger animals make warm pelisses. The camels are extremely docile, and carry burdens varying from 14 to 18 *poods* (from 5 to 6 cwt.), travelling during long journeys at the rate of 25 or 35 m. a day. Camel breeding is pursued to a considerable extent in the great (or S.) horde, and great numbers are sent to Persia and India. Horned cattle are very little bred, except in the middle horde; and they were not introduced into the country till about a hundred years ago. Horses are reared in immense numbers, particularly in the N. part of the steppe, where there is a grass called *kowl* admirably suited for horse pasture. A kirghis's wealth is usually reckoned by the number of his horses; and the richest among them have as many as 6,000 or 8,000. They are small, but strong, and extremely rapid in their movements; they can travel from 30 to 80 m. without stopping for days together, and, like the other domestic animals, are inured to great privations and long abstinence from food and water. Various expedients are adopted to procure pasturage for the cattle during winter, by making enclosures, raking away the snow, &c.; but still they feel most severely the absence of nourishing food, and great numbers, especially of sheep, are lost every year. (*Lévchine*, p. 408—415.)

The pop. of the Kirghis steppe, however different the origin of its several sections, has long become amalgamated; and they are now but one people, inhabiting the same kind of country, speaking the same language, professing the same religion, and characterised by nearly uniform habits and customs. The following table of the races and tribes of the three great hordes gives also some insight into the distribution of the pop.:

Hordes and Races.	No. of Tribes.	Tents.	Individuals.
1. <i>Little Horde</i> :—			
Aimonly	6	} 160,000	900,000
Balonly	12		
Djetir-sourang	7		
2. <i>Middle Horde</i> :—			
Arghina	17	} 165,000	960,000
Naimans	9		
Kiptotak	9		
Orwak-Ghirm	3		
3. <i>Great Horde</i> :—			
Oulatai	} 10	} 75,000	400,000
Toulatai			
Sargam			
Kodkrat	9		
Total	82	400,000	2,260,000

Hence it appears that the terms "great" and "little" are wholly misapplied. The little horde was still greater in the 14th century than at present; the great horde, however, is generally respected, as being the most ancient.

The Kirghis, physically considered, are closely allied to the Mongol Turkmans. Their faces are not so flat and broad as those of the Kalmuks; but their small black eyes, small mouths, prominent cheek-bones, and almost beardless chins, prove their similarity to the Mongols, which has been strengthened also in recent years by frequent marriages with Kalmuk and Mongol

women, whom they often bring away by force into their own country. The hair of the men is usually dark brown; but the women have black hair, fresh complexions, and brilliant animated eyes, which, however, are ill-contrasted with lean cheek-bones, coarse skins, and a shapeless slovenly person. Both sexes are strong and healthy, long-lived, and capable of enduring, to an extraordinary extent, both cold and hunger; in fact, if they were not thoroughly inured to every kind of privation, they could not live in this country. The men take the most violent exercise, being often almost wholly on horseback for days together; but in the height of summer, and during the winter, they spend their time in listless indolence, sleeping, drinking *koumis*, their favourite beverage, and listening either to stories or the rude music of their national instruments, a reed pipe and a rude kind of violin. Household labour and tillage are undertaken wholly by the women, who, as in other parts of Asia, are treated almost like slaves. The Kirghis language is a very corrupt dialect of the Turkish, so interlarded with local words, that it is almost unintelligible by the Turks of Kazan and Khiva. Few can read, still fewer are able to write, and he that knows enough of Arabic to read the Koran is reckoned a paragon of erudition! Their poetry, however, clearly shows them to be an imaginative people. The dwellings of the Kirghis, who are distinctly pastoral, having no fixed station except in winter, consist of rude tents composed of wooden trellis-work covered with felt, having an opening at top serving at once for window and chimney: their dimensions average about 30 ft. in diam. and 12 ft. in height; the ground (bare earth) is covered with felt, or carpeting; the inside is hung with straw mats, or red cloth; and the furniture consists only of a few boxes and warlike implements. The food of the people is very simple, consisting almost altogether of the flesh and milk of their flocks and herds. Bread is not known; but *balamisk*, or porridge made of millet, rye, or wheat, is in common use. Rice, being an object of import, is very dear, and is used only by the rich. Smoked horse-hams, colts' haunches, and camels' humps, are esteemed great delicacies. *Eremetshik*, a rich cheese made from mares' milk, is likewise highly valued; a thinner and inferior kind, called *kroute*, is much used by the lower orders, and constitutes almost the only article of food on those marauding expeditions, which give such zest to the life of a Kirghis. Fish are eaten only by the lowest orders, chiefly by those living on the banks of rivers; and game is little valued. The favourite drinks are the everlasting *koumis*, a whey made from mares' milk, and a spirit distilled from *koumis*, alleged to be both strong and palatable. Arak (made by distilling rice), and tea, are luxuries enjoyed only by the wealthy classes. The dress of this nomad people is long and full, little suited, according to our notions, for the horse exercise, in which they are chiefly engaged: two or more *ichapanes*, or loose gowns of velvet, silk, or cotton, according to rank; a leathern belt fastening the robe and securing a knife and tobacco-bag; a round cap surmounted by another, when abroad, of felt or other warm materials, conically shaped, and with broad flaps; very full and highly ornamented trousers are worn, by the men at least, over the gown, which is tucked underneath; and large pointed, high heeled boots, complete the costume. The heads of the men are usually kept shaved, with the exception of a forelock; but those of the women are adorned with long plaits running down the back. The female costume, in other respects, differs little from that of the males, except that the robe is close in front, and the bonnets are high, shaped like truncated cones, and surrounded by veils, which serve both for shade and warmth.

The employments of the men consist in an attendance on their flocks and herds, and in hunting antelopes, boars, and wild horses. Very generally, however, they join with the life of a huntsman that of the robber and man of violence, attacking and plundering caravans crossing their steppe, or seeking vengeance for some real or imagined insult from a neighbouring tribe. They are cowards in regular warfare, soon discouraged, and, when unhorsed in close conflict, wholly vanquished. Respecting their *barantas* or feuds, M. Lévchine says,—"Rien de plus affreux, de plus funeste, que l'esprit de vengeance dans les Kirghis, et les suites de ce préjugé, de cette disposition cruelle, qui leur tenant lieu de la satisfaction que les lois seules doivent accorder, pervertissent la véritable bravoure. Leurs vengeances sont toutes dirigées par la passion effrénée du pillage, qui les ruine, les démoralise complètement: ces *barantas* consistent dans des vols ou des raptus mutuels de bestiaux, d'où résultent souvent entre eux des combats sanglants. Aujourd'hui, tout homme offensé, volé, ou simplement mécontent, rassemble une bande de cavaliers, arrive chez son ennemi, attaque ses habitations, et lui enlève ses haras et ses bestiaux. Voilà l'héroïsme: voilà en quoi consiste la grandeur chez les Kirghis!" (*Desc. des Kirghis-Kazaks*, p. 351.) These *barantas* had become so frequent and ex-

tensive in 1812—1820, that the pop. of the hordes, especially the little horde, was much thinned; the trade in cattle was all but destroyed; and thousands of families, unable to support life in their own country, emigrated to the government of Orenburg, and other parts of Russia. The arms of the warrior Kirghis are the lance, sabre, bow and arrows, a long-handled axe, called *ichakane*, and a clumsy kind of gun; their defensive armour being a coat of mail, and sometimes a helmet. Among a people so disorderly, it is impossible that internal industry should flourish. Weaving is carried on for the supply of family wants, cordage is manufactured from horses' and goats' hair, a coarse soap is made of grease and vegetable ashes, and the skins of sheep and goats are converted into a rude kind of leather. Blacksmiths, and other workers in metal, make the ornaments attached to horse-furniture, belts, sword-blades, spears, &c.; but every article is of the coarsest quality and worst make. The trade now carried on by these people with other nations is much less considerable than it was half a century ago, in consequence of the loss of cattle and horses by the barantas. The Russians and Chinese have pretty large dealings with them, and a brisk trade is also carried on with Khiva, Khokan, and Little Bucharla. The trading posts of the Russians are at Orenburg (the most important of all), Troitsk, Petropavlovsk, Omsk, Semipalatinsk, and Ouralak, those of the Chinese being at Tchugutchak (Chin. *Talbazalai*) and Kuldsha (Chin. *Ili*).

The business, usually carried on in summer and autumn, is conducted wholly by barter, the Kirghis furnishing sheep, horses, horned cattle, camels, goats, goats' hair and wool, the skins of horses, sheep, and other animals, wild as well as domestic, and antelopes' horns; in return for which they receive from the Russians iron and copper implements, thimbles, needles, cutlery, padlocks, hatchets, velvets, brocades, silk-stuffs, linens, ribands, looking-glasses, snuff, &c.; from the Chinese, silver, silk goods, porcelain, japanned wares, and tea; and from the Khurians and Bokharians, cotton goods, quilted dresses, rice, swords, fire-arms, and powder. Independently of the trade they carry on at the outposts, considerable traffic takes place with the caravans crossing the steppe between Khiva, Khokan, and the Russian frontier. The Kirghis are usually employed as protectors and guides in the journey over these wilds; great delays often occur owing to the caprice of the guides, and the travellers, if they be not entirely plundered of their property, are in general heavily mulcted by the Khans, through whose pastures they are obliged to pass. In fact, says Lévcchine, the experience of more than a century shows the impossibility of success in overland trade in W. Asia, so long as these tribes maintain their instinctive love of war and brigandage. The chief caravan routes are, 1. from Kalmikof to Khiva, across the Oust-ourt plateau, between the Aral and Caspian Seas; 2. from Orenburg to Bokhara (64 days), over the Mogodjar mountains and across the Karakoum and Kizil-koum deserts; 3. from Petropavlovsk to Bokhara (90 days); and 4. from Semipalatinsk to Khokan (40 days). These roads, however, are so vaguely laid down, and so often varied, that distances cannot be computed with any accuracy.

The government to which these people are subject cannot be properly compared with any form common to civilised countries. Geographers have termed it patriarchal and despotic; but, in fact, there is no system of government, for even where a khan, or sovereign, is chosen, he is usually elected only by a few of the tribes, who obey only so long as they are pleased with their ruler, while the rest refuse all obedience, and probably take arms against him. He may issue orders, but he cannot enforce compliance; and even where there is an absolute infraction of the laws of the Koran, by which they profess to be guided, the delinquent's punishment is more frequently inflicted by private revenge than by the decision of a public judge. The punishments are founded on the *lex talionis*, and consist commonly of the bastinado, maiming, and strangling; but, if the offending party consent, almost all crimes may be atoned for by payments of sheep or horses. The khan must be elected from the highest class, known as the *white kost*, those, in fact, who can lay claim to noble descent: the rest of the people belong to the *black kost*, and these are the only remaining distinctions among a people who, a century ago, were, of all others, the nicest in establishing family preeminence.

With respect to religion, it is difficult to say whether the Kirghis have any particular form. They acknowledge a supreme creative intelligence; but some worship according to the dogmas of the Koran, and others mingle Islamism with an old kind of idolatry, while a third section of the pop. believe in the existence not only of a good deity, called *Koudai*, but also of a wicked spirit, *'hailane*, the author of all evil. In the existence of in-

ferior spirits, and in witchcraft and sorcery, the people have universally the most implicit faith; and the hadjis travelling through the steppe reap great pecuniary advantages by imposing on their credulity. The divinations, however, of the *Jaourowndchi*, and other self-styled prophets, are not, according to Lévcchine's account, a whit more absurd than the impositions anciently practised by the priests of Delphi (p. 332—338.). The exercises of religion meet with little attention; long and frequent prayers do not suit the Kirghis; they fast too often by compulsion to do so by choice; and they are not so friendly to cleanliness as to relish the ablutions enjoined by the Mohammedan religion. In fact, with the exception of extreme credulity, there is hardly a trace of religious sentiment among them.

The history of the *Kirghis-Kazaks* cannot be traced with much probability beyond the 16th century. Earlier historians, commencing even with Herodotus, inform us, that the steppe was inhabited by a people living in felt tents, and otherwise assimilated to the great Mongolian family; but these were *Nogais*, not Kirghis, being more civilised, and in all probability the builders of those temples and houses the ruins of which are still visible. (See *Herod.* iv. 24. 46.; *Heeren's Researches*, Asia, ii. 285—298.; and *Lévcchine*, p. 117—135.) The name of the Kirghis first appears in Russian history about the middle of the 16th century; but Ferdusi, in the 11th century, speaks of Kazaks characterised by the same habits as the Kirghis; though it does not appear that they then lived on the great steppe E. of the Aral. They first became nominally subject to Russia in 1740; but the rule of that country has never been felt but by the tribes adjoining the frontier. As to the native khans, so also to the Russian government, obedience is paid, only when it is convenient, a rapid journey into the interior soon carrying them out of reach, when it suits their purpose to plunder rather than trade. It remains to be proved whether the efforts now in progress at Orenburg, to introduce civilisation into the steppe by educating young Kirghis, will accomplish the professed object of making them, instead of a burden and nuisance, useful and obedient subjects of Russia. (*Lévcchine*, *Desc. des Hordes des Kirghis-Kazaks, traduite du Russe par Ferry de Piguy; Hagemester, sur l'Asie Occidentale; Klaproth's Asia Polyglotta*, &c.)

KIRKCALDY, a royal and parl. bor., sea-port, and manufacturing town of Scotland, co. Fife, on the N. shore of the Frith of Forth, 10 m. N. Leith. Pop. of parl. bor., which includes the greater part of the par. and the Link town of Abbotshall, about 8,650. The town consists principally of a single street, parallel to the shore, which, being measured from Bridgetown on the W. to East-burn on the E., is nearly 2 m. in length; and being united on the E. with Pathhead, Sinclairtown, &c., included in the bor. of Dysart (which see), the mass of town is about 4 m. in length. Having been originally laid out and built with no attention to any general plan, but according to the taste, convenience, and means of the parties, this street was formerly of the most irregular description, being narrow, crooked, and the houses frequently mean and poor. In 1811, however, an act was obtained for widening, paving, and lighting the streets, and otherwise improving the town; and since that period several new lines of houses have been constructed, and many important improvements effected. The houses in the main street are now mostly of a very respectable class, and the shops are good, and handsomely fitted up. There are several cross streets, some of which lead up the ascent of the hill to the N.; and there are several between the high street and the shore. The town is well supplied with water, paved, and lighted with gas. Among the public buildings are, the par. church, rebuilt in 1807, Abbotshall church, within the parl. bor.; 2 chapels belonging to the Free church; various dissenting chapels; and a handsome town-house, including a gaol, court-house, &c., with a spire erected in 1823. Besides the parochial schools, and a variety of private seminaries, some of which are said to be extremely well conducted, 2 charity schools have been opened in this town for the education of 200 children of both sexes, on an endowment by Mr. Philp, late merchant here, who bequeathed about 70,000*l.* for the foundation and maintenance of these and similar schools in Pathhead and Kinghorn. The education given in these schools is of the more common and ordinary description; and the children are supplied with books, are clothed, and receive a small sum on leaving school. Kirkcaldy has also a mechanics' library, and two or three subscription coffee-rooms and libraries.

The inhabitants of Kirkcaldy are honourably distinguished by their enterprise, both as manufacturers and traders. The staple manufacture of the town is that of coarse linen, including sheetings, ticks, dowlas, canvass, &c. It appears, from the *Factory Returns*, that in 1838 there were in Kirkcaldy 10 flax mills driven by steam, employing in all about 500 workpeople. It also appears that in 1839 there were 154 looms at work in the parishes

* These *kosts* are, in all probability, synonymous with the *Khodjas* among the Mongolians, mentioned by Timkovsky.

of Kirkcaldy and Abbotshall, exclusive of a few in power-loom factories. The average *net* weekly earnings of the weavers amount to at least 8s. 6d. a week; but superior hands make 10s. 6d., and some even as much as 12s. The wages of machine makers, masons, and other artisans, are higher, averaging from 16s. to 18s. a week. The moral and intellectual condition of the weavers is said to be very good: and there is very little apparent distress amongst them. There are no poor rates; the poor being supported by voluntary contributions.

Kirkcaldy has also a rope-walk, bleach-fields, two iron foundries, a distillery, a tile and brick work, a pottery, and two or three breweries. Branches of the bank of Scotland, the Commercial and National banks, and the Glasgow bank, are established here; and there is also a savings' bank. A chamber of commerce has been established for several years.

The harbour, near the E. end of the town, consists of an inner and outer basin. It is wholly artificial, being formed of three piers, and unfortunately dries at low water; but notwithstanding this drawback, the town possesses a good deal of shipping, and carries on a pretty extensive trade. There belonged to the port (ex. Anstruther), on the 1st Jan. 1850, 74 ships, of the aggregate burden of 9,976 tons: vessels from Kirkcaldy have been for a lengthened period engaged in the N. Sea whale fishery; but here as elsewhere, this business has been recently on the decline. Shipping companies carry on a regular intercourse, by means of smacks and steamers, with London and Leith; and there is a good deal of trade with the N. of Europe, whence hemp, flax, timber, tar, &c. are imported, and to which manufactured goods, coal, &c. are exported. Gross customs' revenue, in 1846, 9,985*l*. There is a weekly corn market, which is extremely well attended; and the town's markets for butcher's meat, fish, &c. are well supplied.

Kirkcaldy was made a royal bor. by Charles I. in 1644. It had attained about this period to considerable wealth and distinction; but it subsequently encountered severe losses, and about the middle of last century it had only two ferry-boats and one coasting vessel! But since 1763, and especially since the close of the American war, its manufactures, commerce, and population have steadily increased. It is now governed by a provost, 2 bailies, and 18 councillors. Corporation revenue, in 1848-49, 13,59*l*., principally the produce of the ferry between the town and Leith.

Kirkcaldy unites with Burntisland, Dysart, and Kinghorn, in sending 1 mem. to the H. of C. Registered electors in this bor., in 1849-50, 386.

Kirkcaldy has to boast of being the birth-place of Adam Smith, the author of the "Wealth of Nations," born here on the 5th of June, 1723. His father being comptroller of customs at this port, Smith received the rudiments of his education in the parish-school; and he afterwards resided here, with little interruption, from 1766 to 1776, occupied in the elaboration of his great work, which appeared in the last-mentioned year. Raith, the seat of the Ferguson family, is in the immediate vicinity of the town.

KIRKCUDBRIGHT, a marit. co. of Scotland, or, as it is more frequently termed, a stewartry, in the most southerly portion of that kingdom, comprising the E. half of the district known by the name of Galloway. It is bounded on the E., N., and W. by the counties of Dumfries, Ayr, and Wigtown, and on the S. by the Irish Sea and the Solway Frith. Area, 833,760 acres, of which from 1-4th to 1-3d part may be arable. Surface much diversified, but in general hilly, and in extensive districts mountainous. The highest part of the Kell's range has an elevation of 2,652 ft.; and Cairnmoor of Fleet, on the bay of Wigtown, rises to the height of 2,329 ft. The greater number of the hills are bleak and barren; but in parts, particularly on the confines of Ayrshire, they afford good sheep pasture. The arable lands lie principally to the S. of a line drawn from the middle of the par. of Irongray to Gatehouse; but Criffel, 1,831 ft. high, on the Solway Frith, and some other considerable hills, lie within this tract. Climate in the lower districts mild but moist; in the upper districts it is sometimes severe. Except along the Solway Frith, the soil even of the arable land of the stewartry has seldom a smooth, continuous surface: it is very often broken with gravelly knolls, but the hollows between these consist principally of a gravelly or hazelly loam, and are often extremely productive, and particularly well adapted for the turnip husbandry; and in wet summers the arable knolls are covered with luxuriant crops, while many of those that do not admit of cultivation yield excellent pasture. Principal crops barley and oats; but wheat is also raised. Within the last few years the turnip culture has made great progress. Arable husbandry has been greatly improved since the peace: furrow draining is now extensively practised, and latterly bone-dust has been successively employed in the raising of turnips. But the soil and climate are better suited for grazing

than cropping, and the principal attention of the farmer is given to the former. The breed of polled cattle, peculiar to this co. and that of Wigtown, is well known to be one of the best in the empire: they are principally sent up by land when half fat to the Norfolk fairs; but they are now, with sheep, sometimes fattened off on turnip and sent by steam to Liverpool. Farm buildings have been vastly improved, and the roads, which were formerly execrable, are now no wise inferior to those of any other co. in the empire. There are some very large estates; but property is, notwithstanding, more subdivided in this than in most other Scotch cos. Farms of medium size, and all let on 19 year leases. This co. and Wigtown are mostly subdivided by the dry stone walls known, from this district, by the name of "Galloway dykes," and which, when well built, make an excellent fence. Average rent of land, in 1843, 6*s*. 11*d*. an acre. Manufactures and minerals unimportant: lime, coal, and freestone, are all imported principally from Whitehaven, on the opposite side of the Solway Frith. The granite used in the construction of the Liverpool docks is mostly obtained from near Creetown, in this co. Principal rivers, Dee, Fleet, and Urr: the salmon fisheries on the first are valuable. Principal town, Kirkcudbright. This co. has 28 parishes, and sends 1 mem. to the H. of C., for the co., while the bor. of Kirkcudbright joins with Dumfries, Annan, and other bors. in returning a mem. Registered electors for the co., in 1849-50, 1,263. In 1841 Kirkcudbright had 8,162 inhab. houses; 41,119 inhab., of whom 18,856 were males, and 22,265 females. Valued rent, 114,127*l*. Scotch. Annual value of real property, in 1843, 193,801*l*.

KIRKCUDBRIGHT, a royal and parl. bor., and sea-port of Scotland, cap. of the above co., on the Dee, about 6 m. above its confluence with the Solway Frith, 24 m. S.W. Dumfries, and 83 S.S.W. Edinburgh. Pop. of bor., in 1841, 2,692. It is a finely situated, well built, respectable country town. The streets intersect each other at right angles, and the houses, which are mostly two stories high, have a respectable appearance. A large and handsome Gothic church, with a spire, (which, however, is not very well proportioned,) was erected in 1838, at an expense of 6,782*l*.; it has also a gaol erected in 1816; an excellent academy, with a room for the public subscription library; and the ruins of an old castle, once the property of the lords Kirkcudbright. Exclusive of the parish church, the Free Church, United Secession, and Rom. Catholics have places of worship. A school founded and liberally endowed by Mr. W. Johnston, a native of Kirkcudbright, and intended to furnish the children of the poorer classes with a good English education, was opened in 1848. It is a large, handsome, well situated building, and had, in 1850, about 270 pupils. A workhouse for the use of this and the adjoining parishes of Tongland, Twynholm, Borgue, and Rerwick has recently been erected at a little distance from the town. Sum raised by a rate for the relief of the poor of the par. in 1847, 1,006*l*. The harbour of Kirkcudbright is the best in the S. of Scotland. At low ebb in neap tides there is about 10 ft. water in the river; and as the tide then rises about 18 ft., there is at all times water to float the largest ships. The access to the Dee is much facilitated by the lighthouse erected in 1843, on the little Ross at its mouth. But, despite its fine harbour, Kirkcudbright, owing to its limited communication with the interior, and the thinness of the population in the vicinity, has very little trade. In 1850, 24 vessels of the burden of 994 tons belonged to the port. A branch of the bank of Scotland is established in the town. Ship-building is carried on to some extent; but it has no other manufacture worth notice. A regular steam communication is established with Liverpool, which has been of the greatest advantage to the town and district. There is no bridge over the Dee nearer than Tongland, about 2 m. farther up the river, and to which it is navigable; but passengers, with horses and carriages, are ferried over in a flat-bottomed boat, with but little inconvenience. The town is lighted with gas; and is supplied with water brought from a distance by pipes.

It was made a royal bor. by James II. in 1456. Under the Municipal Reform Act, it is governed by a provost, 2 bailies, and 14 councillors. It unites with Dumfries, Annan, Sanquhar, and Lochmaben, in sending 1 mem. to the H. of C. Registered electors, in 1849-50, 89. Corporation revenue in 1848-49, 1,249*l*. 5*s*. 6*d*.: its pecuniary affairs have been exceedingly well managed; and it has at this moment the whole property contained in the charter of James II. The town's revenues are employed to defray the expenses of the academy, and the charges on account of lighting the town, supplying it with water, &c., for which no assessment is imposed on the inhabitants.

The environs of the town are extremely beautiful. The rising grounds on each side the river, from Tongland to the sea, are embellished with plantations. St. Mary's Isle, the residence of the earls of Selkirk, adjoins the town on the S. Kirkcudbright appears to be a desirable place of residence for people of small fortune;

provisions of all sorts are abundant and cheap; house-rent is very low: a good education may be had for a mere trifle; the society is superior to that in most small towns; and there is a ready means of communicating with Edinburgh on the one hand, and with Liverpool and London on the other.

KIRKHAM, a manufacturing and market-town, and par. of England, co. Lancaster, hund. Amounderness, in the low district, called the Fylde, 7 m. W. by N. Preston, 37 m. N. Liverpool, and 230 m. N. N. W. London. Area of par., which contains 18 townships and chapelries, 41,850 acres: pop., in 1841, 11,604: do. of Kirkham township, 2,903. The town, though small, is handsome and well built. The church, a large modern structure, was erected, in 1822, at an expense of 5,000*l.*: the tower, however, is ancient, and its interior, which accommodates nearly 2,000 persons, is ornamented with several fine old monuments, carefully replaced in the new building. The living is a vicarage, in the patrimony of the Dean and Canons of Christchurch, Oxford, the chapelries in the out-townships being in the gift of the incumbent. Within the town, are places of worship for Wesleyan Methodists, Independents, Swedenborgians, and Rom. Catholics, with attached Sunday schools, attended by about 600 children; and connected with the church, is a national school for boys and girls. A grammar school, founded in 1670, enjoys a good reputation, and is attended by 80 or 100 boys: it is managed by a principal and two under-masters; the instruction given is purely classical: a charity school, established in 1760, for clothing and educating 40 girls, is alleged to be respectably conducted; and the Rom. Catholics have two large schools for the children of that religion, which has numerous adherents in and round the town. The industry of Kirkham, 20 years ago, was confined to the manufacture of sail-cloth, cordage, and coarse linens, of materials brought from the Baltic; but now, the cotton manufacture is extensively carried on, and gives employment, within the par., to several hundred hands. In 1836, there were two flax mills within the par., which employed 542 hands. The Lancaster Canal, the Lancaster and Preston railway (opened in 1840), and the Preston and Wyre railway, afford cheap and expeditious conveyance both for passengers and goods. Petty sessions are held once a fortnight, and a court of requests for debts under 40*s.*, sits monthly. A saving's bank is established here. Markets on Thursday: fairs, Feb. 4. and 5., April 29., and Oct. 18. (*Baines's Gaz. of Lancaster*, vol. ii., art. *Kirkham*.)

KIRKLESI, KIRK-EKLESI, or KIRK-KILISSA (meaning *the town of forty Churches*), a town of European Turkey, prov. Roumelia, cap. circ. of its own name, 30 m. E. Adrianople and 106 m. W. N. W. Constantinople; lat. 41° 50' N., long. 16° 55' E. Pop., according to Dr. Walsh, about 5,500 families, or 38,000 individuals (2-5ths being Greeks). It is a large, dirty, ruinous town, surrounded with old walls defended by a citadel, and has a bazaar, several mosques and hummums, but no Greek church, the public celebration of the rites belonging to that religion being here attended with heavy penalties. The neighbourhood produces an abundance of grapes, melons, and other fruits; and a good deal of wine is made. The Turkish inhab. are described as a rude, brutal, and ignorant rabble, treating all with contempt who speak any language in addition to their own. The Greeks, on the contrary, are described by Dr. Walsh as "a large and thriving community, who have established two good schools on the monitorial system for the instruction of their children, a degree of refinement to be met with in only one other town of Turkey." (*Walsh's Journey from Constantinople*, p. 127.)

KIRKWALL, a royal and parl. bor., market-town, and sea-port of Scotland, in Mainland, or Pomona, the largest of the Orkney Islands, of which it is the cap., on the N. E. side of the island, at the head of an open bay exposed to the N.; lat. 58° 59' 31" N., long. 3° 23' 6" W., 26 m. N. by E. John O'Groats, and 208 m. N. Edinburgh. Pop., in 1841, 2,046. The town consists chiefly of one narrow and inconvenient street, about 1 m. in length, parallel to the bay. The houses have generally their gables to the street, and most of them bear the marks of antiquity. But new and handsome houses are gradually being erected, both in the town and neighbourhood. Here most of the country gentry reside, at least during winter, and the society of this remote place is esteemed equal, if not superior, to that of any provincial town of its size in Scotland. The only public building of a modern date is the town hall, with piazzas in front, containing a gaol, assembly-rooms, court-room, &c. The principal building in Kirkwall is the cathedral, erected in the 12th century, and dedicated to Magnus, one of the Scandinavian earls of Orkney, who, having been assassinated in 1110, was canonised after his death. This venerable Gothic structure, which has been enlarged at different times, is, after the cathedral of Glasgow, the most entire in Scotland: it is in the form of a cross, its extreme length being 236 ft., its greatest width 56 ft., the height of

the roof 71 ft., and that of the spire 140 ft. But the original spire having been destroyed by lightning in 1671, the present spire is modern, and it is, also, unworthy of the building. About 100 yds. S. from the cathedral are the ruins of two ancient edifices, viz. the Earl's Palace, built by Patrick Stewart, Earl of Orkney, and the Bishop's Palace. In the latter, Haco, king of Norway, died on his return to Orkney, after the unsuccessful battle of Largs, in 1263, and James V., occupied it on his visit to the island in 1540. The remains of Kirkwall castle, on the W., are still visible. The cathedral formed the cemetery of many Scandinavian kings, nobles, and warriors. The par. church, consisting of the choir of the cathedral, is collegiate. There are also chapels belonging respectively to the Associate Synod, Original Seceders, and Independents. The town has numerous and well attended schools, several libraries, a museum, and a printing-press. The poor are supported by a poor-rate, which, in 1847, amounted to 197*l.*, and by the church collections, the usual parochial dues, and the produce (16*l.* 4*s.* 5*d.*) of a bequest for the purpose. Malcolm Laing, the historian of Scotland, was born in the vicinity of Kirkwall, and educated at the grammar-school of the bor.; and at his death, in 1818, his remains were interred in St. Magnus' cathedral.

Rye straw raised in Orkney having been found to be peculiarly suitable for the manufacture of straw plait for ladies' bonnets, the business is carried on in Kirkwall to a considerable extent, though not so much so as formerly. It has also 2 distilleries, and some weaving is carried on for domestic use.

The herring, cod, and lobster fishery is prosecuted to considerable extent. The town is the seat of the courts of law for the whole of Orkney. Kirkwall has a custom-house, which comprises all the harbours in the Orkneys: total number of vessels in 1850, 62; tonnage, 4,245: gross customs' revenue, in 1846, 962*l.* A steam-boat plies between Leith and Kirkwall weekly, touching at Aberdeen, Wick, and intermediate ports: in summer it goes as far as Lerwick, in Shetland. Kirkwall has an annual fair in the month of August, which lasts about two weeks; and the greater part of all the mercantile business of the Orkney Islands is negotiated at this fair. The town has 2 branch banks.

Kirkwall was made a royal bor. by James III. in 1486. It unites with Cromarty, Wick, Dingwall, Dornoch, and Tain in sending a member to the H. of C. Registered electors, in 1849-50, 109. (*Messrs. Anderson's Highlands and Islands of Scotland*, sect. ix.; *Barry's Hist. of Orkney*; *Keith's Scottish Bishops*, Russell's ed., 1824, 219-229.)

KIRRIEMUIR, a bor. of barony, market and manufacturing town and par. of Scotland, co. Forfar, in a pleasant situation, partly on a flat and partly on an inclined plain, along the N. brow of a picturesque glen, through which the streamlet Garry runs, 15 m. N. by W. Dundee, and 5 m. N. W. Forfar. The Grampians are within 3 m. of the town, on the N. The view from its upper part, about 400 ft. above the level of the sea, is most extensive and striking, having the Grampian range on the N., and the whole extent of the splendid valley o. Strathmore on the S. Pop. of par. in 1801, 2,321; in 1831, and in 1841, 7,085, of town, 3,067.

The form of the town has some analogy to an anchor. The streets are lighted with gas. The only public buildings are, the Trades' Hall, the property of 12 friendly societies of the town and parish; the parish church; and chapels belonging respectively to the Associate Synod, the Relief, the Original Seceders, and the Episcopalians. There are 16 schools in the par., of which 3 are endowed, 1 supported by subscriptions, and 12 unendowed. There are 2 bequests for education, the one educating about 80 boys, the other 20 boys and 50 girls. There are 2 libraries, and a news-room. About 50 years ago, only one newspaper came to the parish; the number is now about 200 a week. (*New Stat. Acc. of Scotland, & Forfarshire*, p. 188.) Dr. M'Crie, the biographer of John Knox, and Dr. Jamieson, the Scotch lexicographer, were once dissenting clergymen in Kirriemuir.

Though inland, and devoid of ready communication with the sea, Kirriemuir has attained to considerable eminence in the manufacture of the coarser kinds of linen fabrics, such as Osnaburghs, sail-cloth, bagging, imitation Russia sheeting, &c. This branch of business, which is carried on chiefly in connexion with the Dundee manufacturers, was introduced soon after the rebellion of 1745. During the year ending November, 1799, 1,814,874 yards were stamped. In 1833, 52,000 webs were woven, containing no fewer than 6,760,000 yards, or nearly quadruple the quantity produced at the beginning of the century. The quantity produced in 1841 was estimated at about 7,000,000 yards, and the number of persons, including apprentices, employed in the town and vicinity, at about 3,000. (*Stat. Acc., ut supra*.) "Although the yarns must be carried from the shore in carts, and along roads constructed on the common principles, and although the cloths, when manufactured, must be carried back by the

same rude conveyance, such is the ingenuity of the weavers, and such their industry, that we are not only able to come into competition with our rivals in the more favoured towns on the coast, but even to bear away from them the palm of victory. Hence it is, that several mill-spinners in Melrose and Dundee, towns possessing many natural advantages, to which we can lay no claim, have been accustomed to send their yarns to be woven in this distant quarter." (*Id.* p. 190.) But the communication has recently been much improved, at least with Dundee, inasmuch as the Dundee and Newtyle railroad extends to Glamis, 5 m. distant from Kirriemuir. There is also a railway between Arbroath and Forfar, the last place being also distant 5 m. The Kirriemuir weekly market is one of the best in the country. There are, besides, four annual fairs for cattle, horses, and sheep. There is a branch bank here: also a savings' bank. About 50 years ago, the revenue from the post-office amounted, in one year, after paying the necessary expense, to 8*sd.*: it now (1833) amounts to 260*l.* per annum. (*Id.* p. 185.)

Kirriemuir is governed by a bailie, nominated by the feudal superior (Lord Douglas). The peace is preserved by a body of constables, chosen annually.

KISHM (the *Oaracta* of an. Greek authors), the largest island in the Persian Gulph, and the chief of a group situated near its mouth, extending between lat. 55° and 56° 30' N., and long. 26° and 27° E., comprising Ormuz, Kenn, Anjar, Larak, and many smaller islands. Kishm is of an elongated shape, nearly 60 m. in length E. to W., and 12 m. in its greatest breadth. Pop. estimated at 5,000. It is separated from the main land by Clarence Straits, a narrow and intricate channel, navigable, however, for large ships, the soundings varying from 4 to 12 fathoms. A ridge of hills extends from one extremity to the other of the island on its S. side; the rest of the surface is mostly plain. Sandstone is the predominant formation. The surface is generally arid and barren, and is in parts extensively incrustated with saline efflorescence; but a few portions are remarkably productive. The N. part of the island is the most fertile and populous: the soil there consists of a black loam, on which wheat, barley, vegetables, melons, grapes, and dates in large quantities are produced. The island at present yields corn enough for home consumption. Boats from all parts of the Gulph come to Kishm for wood. Cattle and poultry are reared; the former are scarce, but goats are bred in considerable numbers, and thrive well. The greatest enemies of the goats are jackals, with which the island is much infested; antelopes of a superior breed, partridges, and rock pigeons, abound, and wild fowl in winter. The inhab. are chiefly Arabs; they employ themselves in fishing, agriculture, and the manufacture of cloth, and reside chiefly in villages and hamlets scattered along the coasts. Kishm is said to have once contained upwards of 300 towns and villages, but at present it has nothing like half that number. The chief towns are Kishm at its E., and Basidoh at its W. extremity, and Left on its N. side. Kishm, with about 2,000 inhab., seems to have been formerly of considerable commercial importance. It is surrounded by a high mud wall, flanked with towers, on which a few old guns are mounted. Streets narrow and dirty, houses flat roofed, and some of them large and neatly fitted up. The bazaar is plentifully supplied with many kinds of vegetables and fruits from Persia; and good wines, dried fruits, silk and cotton cloths, and carpets of the richest patterns, may be obtained. The town has a brisk trade and a bustling appearance, many native vessels calling for food and water, or to take pilots for the Kishm channel. It is the residence of the sheikh. A few coasting vessels are built here with timber from the Malabar coast. Basidoh, or Basadore, once belonged to the Portuguese, and the ruins of their town and fort may still be traced. It is admirably situated in most respects, and healthy, but ill supplied with water. Being the principal station in the Gulph for ships of the Indian navy, it has several European houses and public buildings, including an hospital, store and guard houses, a billiard-room, fives-court, &c.; and it is the residence of the commander of the Indian squadron. Its port is difficult to enter, but vessels have good anchorage in 6 or 7 fathoms $\frac{1}{2}$ m. from the shore. Left is at present a town of only 600 inhab.: it was bombarded by the English in 1909. Vessels may lie before it in $\frac{1}{4}$ fathoms water completely landlocked.

The island of Anjar, 3 m. S. of Kishm, is of volcanic origin, 5 or 6 m. in circuit, and uninhabited, though the remains of a town and reservoir be still visible on its N. side. It is covered with pits of salt and metallic ores; and between it and Kishm is an excellent anchorage. Larak, to the S.E., is also of volcanic origin, and inhabited only by a few fishermen. The Great and Little Tombs, about 25 m. S.W. Kishm, are low and uninhabited. The small islets between Kishm and the main land are verdant and covered with wood, a circumstance rare in the adjacent parts of Persia. Nearchus visited

and described this island group; and Arrian affirms that in his time was to be seen in Kishm the sepulchre of its first king Erythrae, from whom the Gulph was named *Mare Erythraeum*. These islands are now governed by a sheikh, tributary to the Imam of Muscat. (*Kempthorpe and Whitelock, in Geog. Journal*, v. 277—280., viii. 176—182.; *Kinnaird's Pers. Emp.*, pp. 14—16.)

KLATTAU, a town of Bohemia, cap. circ. of same name, on the Bradlenka, 70 m. S.W. Prague. Pop. 5,700. It is well built, and has a castle, some handsome churches, a council-house, with a tower 150 ft. in height, containing a bell weighing 90 *centners*, a gymnasium, high school, two hospitals, and manufactures of woollen cloth and stockings. It is said to have been founded in the 8th century.

KNARESBOROUGH, a parl. bor. market town, and par. of England, co. York, W. riding, wap. Claro, 16 $\frac{1}{2}$ m. W. by N. York, the same dist. N. Leeds, and 182 m. N. by W. London. Pop. of parl. bor. (which includes, besides the old bor., parts of Scriven and Knareborough townships), in 1831, 6,253. The town is beautifully situated on a slope, N.E. of the Nidd, "the stream of which is rapid, deep, and very serviceable for turning the wheels of mills and machinery connected with the linen trade!" (*Boond. Rep.*) Two stone bridges cross it, one above, and the other below the town; and on a beetling crag, close over the torrent stands a ruined castle, opposite to which, on the other side the river, is a curious dropping well, the water of which runs from a source 50 ft. above, and trickles through a porous limestone rock with sufficient rapidity to deliver about 20 gallons per minute. At no great distance is an oratory, carved out of the rock, and a mile lower down the stream are the ruins of a priory, founded by Richard, brother of Henry III., and a cavern known as St. Robert's Cave, where Eugene Aram, now so well known through Sir Lytton Bulwer's novel, committed the murder in 1745, of which he was convicted 15 years after. The streets of Knareborough are broad, regularly laid out, well-paved, and lighted with gas: the houses are almost wholly of stone, and many of them large and handsome. The market-place is extensive, and there is a good market-house. The court-house occupies the centre of the old castle, and another part of it is used as a prison for the liberty of the forest of Knareborough. The par. church is of considerable antiquity, but little beauty. The Independents, Wesleyan Methodists, and H. Catholics, have also places of worship, and the Sunday schools of the church and chapels are attended by upwards of 800 children. A charity school, 2 national schools, an infant school, a school of industry, and 2 other schools, furnish instruction to about 600 children, chiefly belonging to the working classes. The public institutions of the town comprise a public library, dispensary, lying-in charity, savings' bank, and Bible society.

The industry of Knareborough is chiefly confined to linen-weaving. The trade has been long established, and a large amount of capital is vested in mills, ware-houses, and machinery. Two flax-mills employed, in 1838, 142 hands, and about 400 looms are at work on various descriptions of linens. But during the ten years ending with 1841, the trade of the town was much depressed, and the pop. declined nearly 1,000. The diminution of the trade was attributed, partly, to the competition of Scotch and Irish goods, and, partly, to the scarcity and high price of coal; for, as there were no canals in the par., the latter had to be brought a distance of 18 m. by land carriage. But these drawbacks on the industry of the town have been to a great extent obviated by the construction of railways which open a direct communication with York, Leeds, and other towns, and bring Knareborough, in this respect, to a level with the best situated places. Knareborough has a great corn market, and from this place and Ripon the manufacturing districts of the W. riding are principally supplied. It is also the seat of a county court, before which 735 plaints were entered in 1848. The sum raised in the par. by assessment, and expended in the relief of the poor during 1846-47, amounted to 1,556*l.*

Knareborough is a bor. by prescription, governed by a bailiff. The parl. franchise was granted in 1 Mary (1553), since which the bor. has sent 2 mems. to the H. of C. The right of voting till 1832 was vested in the owners of 84 burgage tenures, all of which, excepting four, being the property of the Duke of Devonshire, the mems. were his nominees. The Boundary Act enlarged the limits of the bor. by including in it parts of the townships of Scriven and Knareborough: and, in 1831, there were 369 qualifying tenements. Registered electors, in 1849-50, 230. Markets on Wed., and on alternate Weds. for cattle. Sheep fairs, Wed. and Thurs. after Jan. 13., Wed. after March 12., May 6. and 7., Aug. 12. Statute fairs, Tuesd. and Wedn. after October 10., and Wedn. after Nov. 22.

KNIGHTON, a market town, parl. bor., and par. of N. Wales, co. Radnor, on the Teme, 28 m. S.S.W. Shrewsbury, and 130 m. W.N.W. London. Area of

parish, 252 acres: pop., in 1841, 1,404. Pop. of parl. bor. 1,183. The town comprises two chief streets, intersecting each other at right-angles, and the gentle acclivity on which it stands, not only gives it a picturesque appearance, but greatly contributes to its cleanliness. A small modern-built church, subordinate to that of Stowe, in Shropshire, and a chapel for Calvinist-Methodists, are the only places of worship; and the charities comprise a free-school and an almshouse.

Knighton is principally occupied by tradesmen, mechanics, malsters, &c.: it has no manufactures, the wool-dyeing and spinning business having ceased to exist. Wool-stapling is carried on to some extent, though much less than before 1811, when a large establishment failed. The market is very large and important: it is attended by dealers even from Birmingham and its neighbourhood, who come for meat, poultry, eggs, butter, cheese, &c.; and butcher's meat is sometimes sent to London. Petty sessions are held here monthly. The officers of the borough are a bailiff, burgeses and constables; but they have little or no authority, and the bailiff's only business is to collect the chief rents of the manor, which belongs to the Earl of Oxford. The boundaries of the parl. bor. were not changed by the Boundary Act of 1832, and in 1849-50 there were 487 registered electors in the bor. of New Radnor, to which Knighton is contributory.

Knighton is called by the Welsh *Tref-y-dydw*, or "the town on the dyke," from the circumstance of its position close to Offa's dyke, which enters the parish on the N., and running due S. about 2 m., may be traced through several parishes into the county of Hereford. (*Nicholson's Guide; Parl. Rep.*)

KNUTSFORD (corrupted from *Cnute's Ford*, so called because the Danish Canute crossed here with his army,) a market-town and par. of England, co. Chester, hund. Bucklow, 11½ m. W. by N. Macclesfield, 13½ m. S. by W. Manchester, and 154 m. N.N.W. London. Area of par., 4,800 acres. Pop., in 1841, 4,006; do. of Nether and Over Knutsford townships, 3,410. The town is divided into two parts, called Over and Nether Knutsford, by the brook Birken, an affluent of the Bodlin, which rises about ¼ m. S. In Nether Knutsford are the market-place, sessions-house, and county-gaol, the last of which is said to be spacious and well conducted. The church, a modern structure of brick and stone, with a square tower, was built in 1741, when this par. was separated from that of Rostherne: the living is a vicarage in private patronage. Another church, at Over Knutsford, is in the patronage of Lord de Tabley. The other places of worship are for Wesleyan Methodists, Independents, and Unitarians; and Sunday-schools are connected with the two former, as well as the churches. The charities of the town comprise a free-school, founded in the reign of Edward VI., and well endowed by an ancestor of the Legh family, a school of industry for 100 girls, supported by the Egerton family (who support also another school at Rostherne), and a parochial school for 70 boys. The manufactures of shag, cotton velvet, sewing thread, worsted, and leather, employ many hands; but the supply of the wants of the opulent gentry in the neighbourhood is a chief source of support to the tradespeople. Races are held annually in July, and are well attended. Knutsford is the election town for the N. division of Cheshire, and sessions are held in July and Oct. Markets on Sat. Cloth and cattle fairs, Whit-Tues., July 10. and Nov. 8.

KOMORN. See COMORN.

KONIEH (an. *Iconium*), a town of Asiatic Turkey, prov. Karamania, cap. of a pach. and sandjak of its own name, 37 m. E. by S. Smyrna, and 132 m. S. Angora; lat. 37° 54' N., long. 32° 30' E. Pop. about 30,000, chiefly Turks. It extends over the plain E. and S. far beyond the walls, which are about 2 m. in circ. Snow-covered mountains surround the level country on every side except the E., where a dreary plain extends to the horizon. The walls were built by the Seljuk sultans, of materials taken from more ancient edifices; and the figures in *alto relievo* which ornament the gates are alleged by Kinneir to be amongst the finest in Turkey. In the middle of the town a small eminence is covered with the remains of a fortified palace, once inhabited by the Seljuk princes. The present public buildings comprise 12 large and numerous smaller mosques (that of Sultan Selim having been built on the model of St. Sophia at Constantinople), several madressas or colleges (only one of which, the Capan madressa, is now inhabited), 3 Armenian churches, 4 public baths, and 7 khans for the accommodation of merchants. The importance of Konieh belongs to the past; for it has now dwindled into insignificance, and exhibits every mark of desolation and decay. A few carpets and some morocco leather are manufactured here; but trade is in a very languishing state, and far the greater portion of the adjacent territory is permitted to lie waste.

Iconium, the cap. of Lycaonia, mentioned by Herodotus and Xenophon as being on the great post road be-

tween Sardis and Susa, is reported by Strabo to have been a well-built town, situated in a fine country, and is celebrated in gospel history as having been the scene of St. Paul's persecution by the unbelieving inhab. (See Acts, xiv. 1-7.) After the taking of Nicæa by the crusaders in 1099, it became the residence of the Seljuk sultans of Roum, by whom it was much embellished and enlarged. Frederick Barbarossa expelled them in 1189; but after his death, they re-entered their capital, and lived in splendour till the irruption of Jenghis-Khan, and his son Holukow, who broke the power of the Seljuks. Konieh has been included in the dominions of the Grand Seigneur since the time of Bajazet, who finally extirpated the Ameeris of Karamania. (*Kinneir's Asia Minor*, p. 217-222; *Leake's Tour*, p. 48.)

KONIGGRATZ (Boh. *Kralow-Hradec*), a town of Bohemia, cap. circ. of same name, on the Elbe, 63 m. E.N.E. Prague. Pop. (1838) 8,024. It is fortified; and has 3 suburbs, some large barracks, a fine cathedral, Jesuits' college, episcopal seminary, gymnasium, high school, and a celebrated orphan asylum. Woollen cloth weaving is the chief employment of the inhab. It was taken several times by the Prussians during the last century. (*Oesterr. Nat. Encyc.; Berghaus, &c.*)

KONIGSBERG, a large city of the Prussian states, now the cap. of the prov. of Prussia Proper, and of a reg. and circ. of the same name, as it formerly was of the monarchy, on the Pregel, near where it falls into the Frische Haff, lat. 54° 42' 11" N., long. 20° 30' E. Pop. (1846), 75,234. A bar at the mouth of the Pregel prevents vessels drawing more than 5 or 6 ft. water ascending the river to Königsberg, so that its port is properly at Pillau, at the junction of the Frische Haff with the Baltic. A part of Königsberg is built on an island formed by the Pregel, the houses being founded on piles, as at Venice and Amsterdam. Opposite to this island, and on the N. bank of the river, stands the rest of the city, consisting of the old town, and a quarter to the E. called Lobenicht. The circ. of these 3 quarters, which properly form the city, hardly exceeds 2 m.; but the suburbs are very widely spread, and the wall that encloses the whole is no less than 9 m. in circ.; but a large portion of the included space consists of gardens and open fields. According to Dr. Granville, the "streets are long, narrow, dirty, ill-paved, and very offensive, lined by lofty old-fashioned houses, the basement stories of which project far out in the shape of terraces, with their flights of steps guarded by antiquated brass railings, which are not only very inconvenient for the passage of carriages, but render that of pedestrians a work of real danger. Every where, in fact, houses and inhab. are as old fashioned as if the court of the old dukes of Brandenburg were still held here." (*Travels to Petersburg, &c.*, i. 347.)

The old town contains the town-house, rebuilt in 1774; an anatomical theatre, an hospital for the widows and orphans of citizens, and many large warehouses. The quarter to the E. of the old town contains a large hospital on the river side, a mint, theatre, an orphan-house. Here also is the old royal palace or castle, now the government-house. The insulated part of the town contains the council-house, exchange, and university buildings. Its orphan-house is also a conspicuous edifice; but none of these rival the cathedral, which, besides its architecture and ornaments, is remarkable for its organ, erected in 1721, containing 5,000 pipes, and for several monuments of the old dukes of Brandenburg, the founders of the monarchy. There are seven bridges over the arms of the Pregel.

Königsberg is the seat of the government of the prov., and of a court of appeal and a tribunal of commerce. Its university, founded in 1544, had Kant, who died here in 1804, for one of its professors, and is attended by about 350 students. The city has besides three gymnasiums, two seminaries for preachers, with numerous schools, a royal literary society, a celebrated observatory, and various other literary establishments, a blind asylum, &c. There are manufactures of woollens, cottons, leather, gloves, lace, wax, soap, refined sugar, &c., with breweries and distilleries on a large scale. The great articles of export consist of wheat, rye, barley, oats, peas, tares, flax and hemp, timber, linseed, ashes, bristles, &c.; the imports being colonial products, cotton, and cotton-twist, wine, dye stuffs, spices, oil, coals, &c. For an account of the shipping entered and cleared out at Königsberg, see PILLAU.

KOOM, a city of Persia, prov. Irak-Adjemi, district of its own name, 186 m. N. by W. Isfahan, and 60 m. S. by W. Teheran; lat. 34° 45' N., long. 50° 29' E. Pop., according to Ouseley, about 8,000; but Morier regards this statement as exaggerated. It stands in an extensive plain, and on the banks of a small river rising at no great distance, and lost eastward in the great salt desert. On approaching the city, the remains of habitations, gardens, and tombs become so numerous as to evince that this district was formerly very populous. Among the sepulchral ruins are upwards of 100 tombs of *imâm sadaks* (descendants of imâms), distinguished by their tiled

cupolas; and there is a very beautiful college, with a celebrated mosque and mausoleum dedicated to the memory of Fatima, the daughter of Imâm Reza, and containing the tombs also of Sefi I. and Shah-Abbas II. The dome is lofty, and, with the interior, was, a few years ago, covered with gilt plates, by the mother of the late shah, Futtas Ali. Koom, though formerly a place of some trade in fruit, silk, soap, sword-blades, and white earthenware, has sunk into utter insignificance: the bazaars hardly contain 40 shops, and the only employment of the inhab. is the cultivation of a little corn and rice. In fact, the place is little more than a mass of ruins, and at least two-thirds of the buildings have been untenanted for half a century. Its sanctity, however, as a place of refuge and pilgrimage is generally celebrated throughout Persia, and devotees still order their bones to be brought here for sepulture.

Koom is conjectured by D'Anville to stand on the site of the ancient *Choana*, visited by Alexander. In the Shah Nameh it is named as an ancient city, and its foundation assigned to Kai-Kobad. More dependence, however, may be placed on the statement of D'Herbelot, that it was either founded or rebuilt by the Saracens, about the beginning of the ninth century. Timur-Leng destroyed it; but it regained its importance under the Sefi dynasty. In Chardin's time there were 15,000 houses, 20 large mosques, extensive bazaars, and a handsome bridge over the river; but in 1722, when the Affghans invaded Persia, they pillaged and all but destroyed the city: repeated earthquakes have also much damaged the remaining buildings, and Koom is now only a melancholy ruin. (*Kinacir's Persia*, 116.; *Ouseley*, iii. 99—106.; *Ritter's Asia*, vol. vi. part 2. p. 30—32.)

KOONDOOZ, an indep. khanat of Central Asia, between the 36th and 38th deg. N. lat., and the 66th and 72d E. long., at present comprising, as tributary states, Budukshan, and many other small chiefships N. of the Hindoo Koosh. It has N. the territ. of Hissar, Durwas, &c.; E., the Bolor-Tagh mountains, separating it from the Chinese dom.; S., Caufiristan, and the Hindoo Koosh, which divides it from Caubul; and W., a part of Affghanistan, and the territ. of Balkh. The central part of this dom., or Koondooz Proper, seems to be situated on a lower level than the surrounding provs. It is of limited dimensions, is enclosed by ranges of low hills, and watered by two of the principal tributaries of the Oxus, in the upper part of its course. It is in many parts so marshy, that the roads are obliged to be constructed on piles of wood, fixed among noxious and rank vegetation. The climate is most pestiferous: snow lies for three months in winter, but the heat in summer is often excessive. The soil is, however, very fertile; and produces abundant crops of grain. In the marshy grounds rice is the chief product, and in the drier grounds wheat and barley. The revenues of the chief are derived, as in the other E. states, from the land: they are paid principally in kind, and are said to amount to a third part of the produce of the soil. Apricots, plums, cherries, &c., are plentiful, as are most necessities of life; a good deal of silk, also, is produced on the banks of the Oxus. Since the conquest of Budukshan, that fine prov. has been in a great measure depopulated, its inhab. being carried off to cultivate the lands of Koondooz, where they die rapidly, from the effects of the climate. The surrounding provs. have mostly both a rich soil and a good climate. The inhab. of Koondooz are mostly Tadjiks. (*See Bokhara*, l. 297.) The khan or *meer* is, however, an Uzbek, Koondooz appearing to be the most southerly region into which the Uzbeks ever penetrated, and afterwards succeeded in establishing their dominion. The army, comprising about 20,000 cavalry, with six pieces of artillery, consists chiefly of Uzbeks; but most of the civil employments under the state remain in the hands of the native pop. By adopting this line of policy, and governing his subjects in general with justice, and (for an Eastern despot) considerable mildness, the present sovereign of Koondooz has consolidated his power: he is supposed to be rich; and his army, at least, is a match for any one likely to oppose it. The khan frequently makes "*chupawals*" (chupaws), or predatory incursions into the neighbouring territ. of Balkh, the Hassaureh country, &c., for prisoners, whom he sells for slaves; and the chief of Chitral pays his tribute in human beings, who, being also sold by the khan, form a principal article of export from Koondooz. His encouragement of this nefarious traffic, and his behaviour to the unfortunate pop. of Budukshan, are the principal blemishes in the character of the khan: he has the merit of protecting commerce, and traders in his dom. are secure from exactions or molestation. There is a considerable trade between Koondooz and the Chinese prov. of Yarkund, and sometimes an exchange of presents. Tea is an important article of consumption. European and other foreign luxuries are derived from Bokhara, in exchange for slaves and cattle sent to its markets. At present, of all the Uzbek states, Koondooz is the most adverse to British influence.

KOONDOOZ, the nominal cap., is in a wide valley, near the confluence of two rivers, about lat. 36° 30' N., and long. 69° 10' E. It has formerly been a large town, but its pop. does not now exceed 1,500. It has a mud fort, surrounded by a ditch, and the winter residence of the chief. The largest town in the khan's dom. is Khooloom (which see.) (*Burnes' Trav.*, ii. 179—198.; vol. iii. 175, 176. 275—281.; *Ritter, Erdkunde, von Asien*, v. 810—815.)

KOROTCHA, or KAROTCHA, a town of Russia in Europe, gov. Kursk, cap. circ., on the river of the same name, and on the road from Voroneje to Kharkoff, 100 m. S.W. the former city. Pop. nearly 10,000. It is well built, and surrounded by numerous gardens; and has several churches, nearly all, however, constructed of timber, a circle high school, hospital, and a saltpetre manufactory; with an extensive trade in apples, for which its vicinity is famous. Korotcha was founded by Michael Fedorovitch in 1658, as a barrier against the incursions of the Crim-Tartars. (*Schnitzler, La Russie; Possart, Das Russland*.)

KOSTENDIL, or GHIUSTENDIL (*Justiniana secunda*), a town of European Turkey, prov. Roumelia, and cap. sandjak of its own name, 107 m. N. Salonica, and 192 m. W. N.W. Adrianople. Pop., according to Stein, 8,000. It stands on the N. declivity of the Karasu mountains, at a short distance from the right bank of the Strouma (the an. *Strymon*), and is defended by a crenelated wall flanked with square towers. A bazaar, governor's palace, and several sulphur baths, are the only public establishments. Employment is given to a portion of the pop. by the silver and iron mines of the neighbouring mountains.

KOSTROMA, a gov. of Russia in Europe, between 56° 45' and 59° 12' N. lat. and 40° 27' and 48° E. long., having N. the gov. of Vologda, W. Jaroslavl, S. Wladimir and Nijegorod, and E. Viatka. Area, 30,400 sq. m. Pop., in 1846, 1,054,600. Surface flat, with some undulations. It is indifferently fertile, being marshy in the N., while in the S. it is sandy and clayey. Climate severe, but healthy. It is watered by the Wolga, and by its important tributaries the Ounja and Vetloug. Principal corn crop rye; but the quantity grown is insufficient for the consumption. Flax and hemp are largely produced. Cattle few, and but little attended to. This, however, is not the case with the forests, which are extensive, valuable, and better taken care of than those of most other governments. The rivers and lakes furnish abundance of fish. The inhab. particularly excel in the preparation of Russia leather, and there are various fabrics of cloth and linen. Many of the peasants are masons, carpenters, &c., who seek for employment in the summer season in the contiguous governments; and many are employed at home, in the making of charcoal, pitch and tar, mats, of which there is an immense consumption, boats, rafts, &c. (*Schnitzler, La Russie, &c.*, p. 121., &c.)

KOSTROMA, the cap. of the above gov., on the Wolga, at the confluence of the Kostroma with that river. Pop. nearly 14,000. Situation elevated and agreeable; houses mostly of stone; the rampart of earth by which it was formerly surrounded has been converted into a promenade. It has a handsome cathedral, two large convents, a great number of churches, and a large stone building, or bazaar, for the security, exhibition, and sale of merchandise. There are several tanneries, with manufactures of linen, Prussian blue, soap, and tallow, a bell-foundry. Various fairs, and a considerable commerce.

KOTAH, a town of Hindostan, prov. Rajpootana, the cap. of a subsidiary state of the same name, with an area of about 4,400 sq. m. (*Sutherland*.) The town, on the Chumbul, 195 m. S.W. Agra, is large and populous, with some good and well stocked bazaars, and a great number of temples and substantial private houses. The entrances to Kotah are through double gateways, and its walls are surrounded by a fosse hewn in the solid rock. Its chief public edifice is the palace of the rajah, rendered conspicuous by its lofty white turrets, and enclosed by a separate line of works. Kotah has manufactures of cloth and other articles of native consumption. Its territory is among the most flourishing of India, and about 20 years ago its gross revenue was estimated at 47 lacks of rupees, and its armed force at 25,000 men. (*Hamilton's E. I. Gaz.; Parl. Reports*.)

KOTOCH, a rajahship of N.W. Hindostan, subject to the maharajah of the Punjab; about lat. 32° N., and between long. 76° and 77° E., having W. and S. the territory of the Punjab, and N. and E. the rajahships Chamba, Kulu, and Mundi, separating it from the great range of the Himalayas. It comprises a portion of the upper valley of the Beas (*Hyphasis*), and is about 60 m. in length N. to S. by from 25 to 40 m. in breadth. Its natural products are few, but they might be much improved under an enlightened government. Opium is largely cultivated on the Kulu frontier, and cotton is raised, and furnishes the material from which the finer cloths of Hoshyarpur are manufactured. When this place was visited by Moorcroft, these cloths were sent in large

quantities to W. Asia; agents from very remote places attended at Hoshyarpur, made advances to the weavers, and took the cloth in the rough from the loom, bleaching, washing, and packing it each in his own fashion to suit the market of his country. We have not learned whether any change has been effected in the interval in this trade. Superior wheat and rice are raised. Firs of large size grow in some tracts along the Beas; and in one part is an extensive bamboo forest. Rhubarb and the mulberry-tree are abundant; and iron is found, but the ore is not wrought. Shujanpoor, about lat. $31^{\circ} 49'$, and long. $76^{\circ} 32' E.$, is the cap. (*Moorcroft's Travels*, i. 139—142.)

KOURSK, a government in the S. part of European Russia, having that of Orloff on the N., Voronetz on the E., Kharkoff on the S., and Tchernigoff on the W. Area 17,382 sq. m. The accounts of the pop. differ very widely; but Schnitzler and Kœppen agree in estimating it at about 1,600,000. Surface flat, or slightly undulating; soil very fertile; forests not very extensive, and in some parts there is a scarcity of wood. There are no navigable rivers, the want of which is one of the greatest drawbacks on the government. The climate is mild and healthy. Notwithstanding the backward state of agriculture, Hassel says that wheat and rye yield 9 for 1; but this is most probably exaggerated. Corn is kept in silos, or caves, sometimes for 6 or 10 years together, and there is always a large surplus for exportation. Hemp and flax, tobacco, hops, &c., are also produced. The pastures, which are excellent, afford ample provision for large herds of oxen, with horses, sheep, &c. There are in this government above 300,000 free peasants. Manufactures considerable and improving, consisting of coarse cloth for the army and the peasantry, leather, soap, salt-petre, spirits, earthenware, &c. Public instruction has made no considerable progress. There were, in 1831, in the government, 35 educational establishments, attended by 4,095 pupils, being only 1 pupil for every 390 individuals!

Koursk, a town of European Russia, cap. of the above gov., lat. $51^{\circ} 43' 41'' N.$, long. $36^{\circ} 29' 15'' E.$ Pop. (in 1846) 27,000. It had a citadel and ramparts; but the former is in ruins, and the latter have been converted into public walks. Situation elevated; houses principally of wood, but many of stone; streets narrow, crooked, and ill paved. There are two convents, numerous churches, with a gymnasium, a normal school, an hospital, a foundling hospital, &c. It is a thriving, industrious town, having numerous tanneries, tile and earthenware works, wax and tallow foundries, &c. It carries on an extensive commerce with Petersburg, Moscow, and Odessa, sending to them cattle and horses, tallow, leather, wax and honey, hemp and furs.

Korennala Poustyn, a convent in the vicinity of Koursk, is celebrated for a miraculous image of the Virgin, and for a great fair held annually on the 9th Friday after Easter, resorted to equally by merchants and pilgrims. The value of the horses, cattle, and other articles exposed to sale at this fair, in 1829, amounted, according to the official accounts, to about 30,000,000 roubles. But if this be not exaggerated, it is, at all events, greatly above the average. (*Schnitzler, La Russie*, &c., p. 359; *Malte Brun*, &c.)

KRASNOJARSK, or KRASNOYERSK, a town of Asiatic Russia, gov. Yeniseisk, of which it is the cap., in a plain of great beauty and fertility, on the Yenisei, and on the high road between Tobolsk and Irkutsk, 290 m. E. by S. Tomsk, lat. $56^{\circ} 1' N.$, long. $92^{\circ} 57' 10'' E.$ Pop. about 7,000. Though small, this is a town of some importance, being the emporium of a wide extent of country. It is pretty well built; its two principal streets are broad, and its houses, which are mostly faced with planks, are painted in bright colours. Its chief public buildings are, several churches; an edifice, partly of stone, occupied by the government offices; and a large factory, devoted to several branches of industry, especially coach-building, and the manufacture of Russia leather. The district subordinate to this town is the most productive in the whole prov. Irkutsk, of grain, cattle, horses, &c. "Flour is sold at Krasnojarsk generally at from 15 to 30 kopecks the poud, according to the goodness of the crops; excellent beef for $1\frac{1}{2}$ to 2 roubles, and other things in proportion. Fish and game are also in abundance; and the neighbourhood is famous for wild goats, the flesh of which is not inferior to venison." (*Dobell's Travels in Siberia*, ii. 98.) Within the last twenty years this town has been rising considerably in importance; and it has now a brisk traffic in Chinese and agricultural produce. Erman, who visited it in 1829, found it supplied with Madeira and other European wines, and speaks in high terms of a literary club, which he says may rank with those of a superior order in Europe. (*Erman, Reise um die Erde*, i. 28—50; *Dobell's Travels*, &c.)

KREMNIITZ (Hung. *Kormóc-Banya*), a royal town of Hungary, co. Bacs, and one of the principal mining and coining towns of the kingdom; in a deep valley 10 m.

W. Neusohl, and 88 m. E. N. E. Presburg. Pop. about 5,000. The walled town comprises a castle, and about 40 houses, one of which is the mint, ranged round an open space in which the market is held. In the suburbs are nearly 600 dwelling houses, and many mining offices; and about $\frac{1}{2}$ m. distant are the smelting furnaces.

Kremnitz is ill paved, dirty, and disagreeable. It has 5 churches; one with a lofty gilt and coppered steeple and very gaudy internal ornaments, 3 chapels, a Protestant meeting-house, 2 hospitals, a royal infirmary for miners, a gymnasium, normal and girls' schools, a Lutheran grammar school, &c.; and it is the seat of municipal and mining tribunals, and of a mint, and councils of mines and forests.

The Kremnitz mines have 11 or 12 principal shafts, attached to which are 18 or 20 washing works (*pockwerken*). The best mines belong to private companies; but the richest veins of Kremnitz are now for the most part exhausted, and a considerable portion of the former workings is under water. The mines at present yield about 15,000 marcs of silver, and 250 do. of gold a year. These metals, however, are rarely found pure, but much intermixed with copper, lead, arsenic, &c. Quartz is the matrix of the ore, which is first reduced by the hammer, to small pieces about the size of the stones used for Macadamising roads: the ore is next exposed to the stamping-mill, by which it is pulverised; it is then washed over slanting frames; sometimes roasted, to drive off the sulphur, arsenic, &c.; and is finally smelted. "The object of this process, which lasts four and twenty hours, is to separate the noble from the ignoble metals, which is effected by the oxydation of the latter. At the moment the oxydation is complete, a bright bluish-white metallic lustre spreads itself over the whole surface of the liquid metal. The impure metals are then allowed to run off, a stream of warm water is passed over the gold and silver to cool them; the solid mass is taken out, cut up into bars, weighed, and sent off to the mint, where the gold and silver are separated, and coined. The smelting-houses of Kremnitz are the best in Hungary: instead of the common bellows, they have the double-cylinder bellows worked by water, which maintains a constant blast; and the loss of lead, instead of being 20 lbs. to the marc, is reduced to 12." (*Pages's Hungary*, i. 396, 397.)

All the gold and silver produced in Hungary, whether by private individuals or by the government, should be coined at Kremnitz. Delliis stated, in 1773, that between 1740 and that year nearly 100,000,000 *guldens* of gold and silver had been obtained from the mines of Schemnitz and Kremnitz, and coined at the latter town; and that 3,000,000 *guldens* a year still came from Schemnitz, Kremnitz, and Transylvania. (*See Bright's Travels in Lower Hungary*, pp. 177, 178.) "The amount of gold and silver coined at Kremnitz is now about 250,000*l.* a year (2,500,000 flor. c. m.); but it is probable that this is considerably less than the amount produced, as it is known that a good deal finds its way to Vienna in bars. The silver is mostly coined into pieces of 20 kreutzers (*zwanzigers*), and the gold into ducats and half ducats." (*Page*, i. 394, 395.) Kremnitz has also a royal vitriol factory, 2 paper-mills, and manufactures of earthenware and vermilion. It is abundantly supplied with excellent water by a water-course carried by a former archbishop of Gran, at his own expense, from the Thurocz to Kremnitz, a distance of 50 m. (*Pages's Hungary*, i. 390—397; *Bright's Travels*, 167—183; *Oester. Nat. Encyc.*; *Berghaus*.)

KRISHNA, or KISTNAH (the name of a supposed incarnation of Vishnu), a river of Hindostan, and one which bounds an important division of that country; the S. part of the peninsula being entitled "India S. of the Krishna." It rises in the W. ghauts, near lat. $18^{\circ} N.$, and long. 74° , not far from Sattarah; and runs with a very tortuous course E. for about 700 m., through the provs. Bejapoor, Beeder, and Hyderabad, and between the British distr. of Masulipatam and Guntoor; falling into the ocean on the Coromandel coast by several mouths near lat. 16° , long. 81° . Its course lies mostly through a mountainous country, greatly elevated above the sea; its channel is of very irregular depth, much broken by rocks and rapids; and it is altogether ill adapted for navigation, except in the N. Circars, where it is available for large boats. In the highlands, the craft usually employed on it are round bamboo wicker baskets, covered with half-tanned hides, and directed with paddles. Its chief tributaries are the Joongabudra, Gutpurba, and Malpurba, from the S.; and the Seema, Mussy, &c., from the N. Sattarah is the principal city on its banks. It is said to be much more productive of gems, &c., than the Godavery, diamonds, chalcedonies, onyx, and other precious stones, and some gold, being found in its sediment in the dry season. (*Hamilton's E. I. Gaz.*)

KULDSHA, GULDSCHA, or ILI, a city of Chinese Turkestan, cap. prov. Ili or Elè, in lat. $42^{\circ} 46' N.$, long. $82^{\circ} 48' 15''$, about 450 m. N. E. Yarkund. It is said to be

18 Chinese *li* (about 5 m.) in circuit, surrounded by mud walls and wet ditches, and entered by six gates. The town, according to Helmersen, is much better built than either Kotan or Bokhara: the houses are either of stone or wood, seldom of earth, and the streets are traversed by running streams. The inhab. are mostly Chinese; there are, however, about 1,500 Toorkee families, who profess Mohammedanism, but whose dress, customs, &c. resemble those of the rest of the pop. The inhab. of Kulusha are very industrious, and devoted to commerce. Almost every house has a shop, frequently filled with expensive merchandise; besides which, the streets abound with moveable stalls, and hawkers going about to sell their wares, Kulusha being the entrepôt of an extensive region, peopled by nomadic Kalmuck tribes. It is the residence of a Chinese governor. (*Helmersen, Ritter, Asien, Erdkunde*, i. 402-404.)

KULU, a rajahship of N.W. Hindostan, tributary to the maharajah of the Punjab, about lat. 32° N., and long. 77° E., having E. the great range of the Himalaya, N. Lahoul, W. Chamba and Kotoch, and S. Mundi. Length, N. to S., about 40 m. Area and pop. uncertain. Wheat, barley, and buckwheat, but only a little rice, are raised. No kitchen vegetables are grown. Tobacco, though cultivated in most of the gardens, does not thrive very well, and a narcotic preparation from hemp is used as a substitute. The climate being much colder than in the adjacent rajahships of Kotoch and Mundi, woollen instead of cotton fabrics are used for clothing. Kulu, or Sultampoor, the cap., about lat. 31° 57' N., and long. 77° 10' E., is of no great extent or pop.: it stands at the confluence of the Beas and Serhar. The part next the river, forming the southern or lower town, is occupied by the buildings in which the rajah resides with his family and attendants. The upper part of the town consists of the houses of shop keepers and artificers, and is separated from the lower division by a small bazaar. A few coarse chintzes, blankets, and cotton cloths, with opium and musk, are the chief articles of traffic; the three former are brought from the plains, and paid for with the two latter. The principal traders are Hindoo pilgrims, of whom a vast number assemble here on their way to holy places in the mountains. (*Moorcroft*, i. 171., &c.)

KUMAON, or KBMAON, a prov. of N. Hindostan, under the British presid. of Bengal, comprising, with Kumaon Proper, that portion of Gherwal S.E. of the Alcananda river; chiefly between lat. 29° and 31° N., and long. 78° and 81° E., having N.W. Independent Gherwal, N.E. the great range of the Himalaya, separating it from Thibet, S.E. Nepal, and S.W. the prov. Delhi. Area estimated at nearly 11,000 sq. m. The whole country is overspread by mountains successively ascending from S.W. to N.E., till they reach the height of 25,000 ft. The Ganges in the upper part of its course, the Kallee, and a few of their tributaries, are the chief rivers: there are no lakes of any consequence. The lower portion of the prov. is covered with jungle interspersed with groups of saul, salsoo, and other timber trees, and tracts of high reedy grass. The central hilly region is an almost uninterrupted forest: above the elevation of 2,500 ft. the vegetation of the tropics gives place to the pine, oak, rhododendron, &c. The fruits and vegetables of Europe are common, and thrive well. Wheat, *mandas*, and other dry grains are those principally grown, but rice also is cultivated alternately with the foregoing, a regular rotation of crops being pursued. Hemp is raised in large quantities, and grows luxuriantly to the height of 12 or 14 ft.; little cotton is raised, though it is of excellent quality. The sovereign has the entire property of the soil; and the great functionaries under the native gov. were always paid by grants of land, or by perquisites arising from the soil. The operations of tillage, except ploughing and harrowing, are chiefly performed by women. The implements and operations of husbandry are similar to those in the plains of Hindostan. Irrigation is frequently effected by aqueducts carried a considerable distance, and water-mills, scarce in Hindostan, are here common. The breeds of horned cattle are small, but yield very good milk; there are domestic camels, but they are small, and goats and sheep are principally used for the transport of goods. Elephants, tigers, leopards, and various kinds of deer abound. Copper, iron, and lead mines are wrought to some extent; and garnets, rock crystal, and bitumen are met with. Manufactures very few; they include blankets, coarse camlets, hempen cloths, coarse cottons, bamboo mats and baskets, wooden vessels, &c. Artisans are sufficiently numerous in the towns, but their work exhibits little neatness. It is singular that, though the saw, plane, and turning-lathe be unknown to joiners, the goldsmiths are acquainted with the use of the spirit blow-pipe. The inhab. at large are more inclined to commerce than agriculture. They carry iron, copper, ginger, turmeric, and other hill drugs and roots into the plain of N. Hindostan, where they exchange them for coarse chintz, cotton

cloths, sugar, tobacco, coloured glass, beads, and hardware; and they frequently travel to execute mercantile commissions as far as Furruckabad and Lucknow. The traders of more capital send the products of India across the mountains into Thibet, where they are exchanged for hawks, musk, coarse camlets, wax, incense, and other drugs and roots, the produce of that country; and borax, salt, and gold-dust from Tartary. In the marts of Kumaon, the chief of which are Mandi, Kasipoor, Chilika, Afzelghur, and Najibabad, sugar-candy, spices, European broad cloths, coral, &c. from the S., are exchanged for shawl wool, coarse shawls, China silks, saffron, hides, &c. Large periodical fairs are held at the above places, whence necessities are procured, there being no village markets in Kumaon. The country is thinly peopled; the inhab. are of two distinct races, the dominant being the Hindoo; and the supposed aborigines a race apparently of Tartar origin, many of whom, called *doms*, appear to have been reduced to a state of slavery by their Hindoo conquerors. The native government was despotic in an oppressive degree till the British took possession of the country in 1815; since which, the condition of Kumaon and its inhab. has been progressively ameliorated. Total public revenue (1822-23), 186,126 rup., of which the land-tax furnished 176,664; public expenditure, 21,264 rup. Kumaon, like many other parts of N. Hindostan, contains numerous places of Hindoo pilgrimage, and many Hindoo temples. Almora is the cap., which see. (*Asiatic Researches*, xvi.; *Hamilton's E. I. Gaz.*)

KUR (an. *Cyrus*), a river of western Asia, in Georgia, having its rise within the Turkish dominions, not far from Kara, on a S. offset of the Caucasian range, dividing the tributaries of the Caspian from those of the Black Sea, in lat. 41° N., and long. 42° 30' E. It assumes its name near the town of Akiskar, whence it flows about 80 m. E.N.E. to Gori. Its course thenceforward is S.E., by Tiflis, through the plain of Kara, and afterwards through a lower plain abounding with salt marshes, and in which are several mud volcanoes and petroleum springs. The latter of these plains is frequently overflowed by the river. The total length of the Kur, as measured along its windings, somewhat exceeds 520 m. Its chief affluents are, 1. the Alazan, from the main Caucasian ridge, joining the main stream in lat. 40° 56' N., and long. 46° 51' E.; and, 2d, the Aras (an. *Araxes*), which rises near Erzeroum, curves northward round Mount Ararat, and thence runs S.E., and afterwards N.E., to its juncture with the Kur, at Djwat. The Kur at this point is 140 yards broad, and may be navigated by large boats to its mouth on the W. side of the Caspian Sea, a distance of about 100 m. Fishing villages are established on its lower banks, and great wealth is accumulated from the proceeds of these fisheries. A delta at the mouth projects considerably into the Caspian Sea.

KURACHEE, or KARACHEE, the principal seaport of Sind, N.W. Hindostan, on the E. side of an inlet of the Indian Ocean, 80 m. S.W. Hyderabad, and about 18 m. from the W. arm of the Indus: lat. 24° 56' N., long. 67° 19' E. It is built on a low, barren, sandy shore, and is walled. In 1813 there were 3,250 houses within the walls, but the pop. did not reach 13,000. The town is irregularly laid out, and the streets are so narrow that two people can scarcely walk abreast. The houses are chiefly of mud and sandstone, obtained in great abundance from the coast.

Kurachee has a considerable trade with Cutch, Bombay, and the principal ports on the Malabar coast. Its harbour is commodious, perfectly safe in all winds, and, though not deep, is capable of sheltering vessels of 200 or 300 tons; so that it is of greater commercial importance than any of the ports on the Indus, which can only be reached from the sea by flat-bottomed boats. Nearly all the Malwa opium exported seaward is shipped at Kurachee. In 1837, about 60 fishing boats, of from 10 to 15 tons, belonged to this port; and most of the men engaged in the fisheries of Sind are from Kurachee, and are superior in intelligence and appearance to the other inhab. of the coast. Kurachee was bombarded and taken in a few hours by a small British force, on the 2d of Feb., 1839. (*Geog. Journal*, v. 263.; *Asiatic Journal*, 1839.)

KURDISTAN, an extensive country of W. Asia, comprised chiefly within the basin of the Tigris, and belonging partly to Turkey and partly also to Persia; being bounded N. by Armenia, E. by Azerbaijan and Irak-Adjimi, S. by Khuzistan and the pach. of Bagdad, and W. by Diarbekir and Algezira. Area roughly estimated at 520,000 sq. m. Pop. 800,000, Kurds only, not including other races. Its surface generally is very unequal; but the mountains are much loftier and more frequent in its N. part, the plains in the latter being also considerably more elevated than in S. Kurdistan; and hence there is a great difference of climate in the two sections into which the country is divided. The principal ranges are the Djebel-tagb and Nimrod; the culminating summit being the snow-covered Mount Bisutum, rising 7,500 ft.

above the surrounding plain, and about 12,000 ft. above the sea. The geological constitution of these mountains consist of serpentine hornblende, and other primary rocks, covered, except in the highest parts, by transition limestone, old red sandstone, and various saliferous formations with other rocks, ascending even, in some parts, to the London clay. (*Ainsworth's Assyria*, &c., pp. 237—266.) The principal rivers are the Tigris, Diala, Great and Little Zab, Kerah, and Kabur. Extensive and rich pasture grounds support great numbers of sheep and goats, the rearing of which constitutes the chief employment of the pop., and their produce almost the whole wealth of the country. Hence, in the Kurd dialect (which is a patois, composed chiefly, though not entirely, of Arabic and Persian,) the word *mâhl*, which means wealth generally, applies in a primary and more particular sense to flocks of sheep. Jaubert says that 1,500,000 sheep and goats are annually supplied to Constantinople from Kurdistan. Each flock comprises from 1,500 to 2,000 animals, and the time required to take them to their destination is somewhat more than 17 months: we believe, however, that the number is not half so great as M. Jaubert has represented. The consumption of London is under 1,500,000 sheep a year; and that of Constantinople, we venture to say, is not a third part so great. As respects the produce of the soil, the N. part produces the grains and fruits of middle Europe, while in the S. the plains and valleys produce, in addition, rice, cotton, tobacco, with a great variety of fruits: excellent timber is found in the forests, and nut-galls form a large article of export at Iskenderoon and Smyrna. Good cultivation, indeed, prevails in the vicinity of the towns, and more especially between Mosul and Bagdad, where the country, at the time of Kinneir's visit, seemed to be in a much more improved state than any other district he had visited in this part of the world. (*Persian Empire*, p. 295.) The agriculture of Kurdistan may elsewhere, however, be regarded as in the most primitive condition; and the implements of husbandry are less effective, even, than those of the neighbouring provinces, which owe almost every thing to nature and very little to industry.

The Kurds, who inhabit this country, and give to it its distinctive appellation, are commonly considered as a mixed breed of Mongols and Uzbek Tartars; though this is doubtful. They are Mohammedans, of the sect of Omar: their dress much resembles that of the Turks, but it is lighter, and they do not wear the turbans or the long beard. A red bonnet is their usual head-dress, and the outer garment is a cloak of black goat-skin. They are excellent horsemen, and the exercise of the lance, with other military amusements, are points in which they particularly excel. Improvisation is commonly, and, on the whole, not unsuccessfully practised; and their music, though rude, proves that they have a tolerable acquaintance with the art. There are two castes of Kurds, characterised by very different habits. Those of Turkish Kurdistan have fixed habitations, are acquainted with the working of metals, weaving, and other arts, and live subject to their native princes, and governed by their own laws. The nomad Kurds are chiefly found in Persian Kurdistan and in the pachaliks of Diarbekr and Mosul; often roaming over the desert in search of plunder to the neighbourhood even of Damascus and Aleppo. The love of theft and brigandage is a marked feature in the whole race, without exception; and this accounts for their usual carelessness and improvidence about property, for which there is no security. At the same time, all writers agree, that when visited by travellers they exercise the most generous hospitality, and often force handsome presents on their departing guests. (*Jaubert*, p. 86.) The tents of the wandering tribes are low, hastily put together, constructed of coarse black cloth, and generally divided into two parts for the men and women. A defence of reed hurdles surrounds the enclosure in which the tents are pitched, and the horses ready saddled are tied to stakes close to the encampment. Females meet with better treatment among them than in the rest of Asia; neither sex can marry without the permission of relatives, and the constancy of the contracting parties is commonly tried during a long engagement previously to marriage, which with them is considered a sacred and indissoluble tie. Hence the women are considered more as companions than slaves; they are treated with respect, and there is a freedom and openness in their character not to be found in other women of Turkey or Persia.

Turkish Kurdistan comprises the pachaliks of Mosul and Chehrezour, with small parts of the pachaliks of Van and Bagdad. Persian Kurdistan is divided into four districts, Ardelan, Kermanshab, and Kinghavor; Kermanshab being the cap and the residence of a beglerbeg. Neither the sultan, however, nor the king of Persia, has any substantial power, their utmost authority being limited to the exaction of tribute, the payment of which they cannot always enforce. (*Kinneir's Persia*, p. 296—

312; *Jaubert, Voyage en Perse*, p. 75—89.; *Ritter, Asien*, ix. 605., &c.)

KURILE ISLANDS, a chain of small islands connecting the peninsula of Kamtschatka with the large islands forming the empire of Japan: they are chiefly dependent on Russia, but the three farthest S. belong to Japan. They extend between lat. 43° 40' and 51° N., and long. 143° 50' and 156° 20' E., and occupy a length of more than 700 m. Pop. unknown, but very small. The surface is very irregular, some of the heights rising nearly 6,000 ft. above the ocean, while in other parts deep and narrow valleys are almost on a level with the sea. Volcanic eruptions and earthquakes are of common occurrence; and the geological constituents of the islands, examined by Lutké and others, being wholly of igneous origin, indubitably show their connection with the great volcanic band passing S.S.W. from Kamtschatka to the island of Formosa, through more than 30 deg. of lat. The shores are abrupt and difficult of approach; the coast currents are very violent, especially on the E. or ocean side; and continual fogs hovering over the islands, render access extremely difficult. The animals and plants differ little from those found in Kamtschatka; and the minerals consist chiefly of iron, copper, and sulphur. The inhab. mostly engage in hunting and fishing: the former supplying them not only with meat, but also with furs, which serve as money for the Russian Americans, Japanese, and Dutch; while the latter furnishes oil, whalebone, and spermaceti. Agriculture is confined to the islands belonging to Japan. The inhab. of the N. islands resemble the Kamtschatdales in honesty, openness of character, hospitality, and shyness to strangers. Those in the S. islands are Ainos, a race similar to the Japanese. These islands were discovered between 1713 and 1720; but it must be acknowledged that they are very little known, even after the lapse of more than a century, and the labours of Broughton, Krusenstern, and other travellers. (*Lutké's Voyages*, tome iii.; *Dict. Géog.*)

KURNOUL, a town of British India, presid. Madras, cap. of a subdivision of the Balaghaut ceded districts, which formerly composed an independent Patan principality. It stands on the Toombuddra, 90 m. N.E. Bellary, defended on two sides by that river and its tributary the Hundry, and on the W. strongly fortified, three of its bastions being 50 ft. high, and covered to the parapets of the curtain by a steep glacis. S. of the fort, is the *pettah*, or open town, of considerable extent and pop. Kurnoul was considered impregnable by the natives, and neither Hyder nor Tippoo ever attempted its capture; but it was taken by the British, in 1815, after a siege and bombardment of a single day. (*Hamilton's E. I. Gaz.*)

KUTAH (an. *Cotyæum*), a town of Asiatic Turkey, cap. of the prov. Anatoli and of a Sanjak, 180 m. E.N.E. Smyrna, and 134 m. W. by S. Angora; lat. 39° 25' N., long. 36° 15' 15" E. Pop., according to Kinneir, about 55,000 (of whom 10,000 are Armenians, and 5,000 Greeks). The city stands at the foot of a cluster of mountains called the Pursak-Dagh, in which rises the Pursak (an. *Thymbrus*), flowing N. to the Black Sea. The streets, though steep and narrow, contain many handsome and well-supplied fountains, and many of the private houses are large and well furnished. Besides 50 mosques, 20 of which have stone minarets, 1 Greek, and 4 Armenian churches, there are 30 *hammams* or public baths, and 20 khans. The house architecture is very similar to that of Constantinople; and good gardens attached to many of the private residences take off much of the sombre appearance common to Turkish towns. The surrounding country is well watered, and extremely productive: grain, cotton, nut-galls, and different fruits, are raised in large quantities for exportation; and goats and sheep are pastured for their hair and wool, which fetch high prices in the markets of Smyrna and Constantinople. (*Kinneir's Asia Minor*, p. 296.; *Olivier, Voyage*, &c., tom. vi. 409.)

KUTCH, or CUTCH, a small state of N.W. Hindostan, subsidiary to the British, between lat. 23° 45' and 23° 45' N., and long. 68° 35' and 71° 5' E., having N. and E. the Runn, separating it from Sindh Rajpootana and Gujrat, S. the Gulph of Kutch, and W. the ocean, and an arm of the Indus, which divides it from Sindh. Its shape is elongated; greatest length, E. to W., 160 m.; average breadth, 45 m. Area, nearly 7,400 sq. m. Pop. uncertain. It is in general arid and barren; but its scenery is bold, forming a great contrast to that of the adjacent provs. on the W. and N. A chain of rocky hills runs through it in its whole length, dividing it into two nearly equal parts. This chain is of no great height, but its peaks rise in wild and volcanic cones of primary formation. It unites at its W. end with another mountain chain, running nearly parallel to it on the N. side; and from both many ramifications are given off. The streams of the prov. are mere torrents, dry when the rains have ceased; there is no navigable river. The scarcity of water is, in fact, one of the greatest drawbacks on the country; and the streams

Sowing N. of the mountains are all so brackish that in the hot season they are not drunk even by the cattle. Good water is, however, usually found 30 ft. below ground. The surface is mostly sandy, the sand resting on strata of clay; but near the hills the country is covered with volcanic matters, which in India are of rare occurrence. Coal and iron of good quality, bituminous and ligneous petrifications, and fossil animals of a late geological period, are found; and there are some mineral springs yielding alum and other salts in large quantities. The country is generally bare of wood; date trees are pretty common, and the neem, peepul, and babool, are met with round the villages, but the tamarind, banyan, and mango, are rare, and the cocoa nut is reared with difficulty even on the sea coast. The arable land is chiefly in the narrow valleys between the mountain ranges towards the S. shore, which latter is the best watered portion of Kutch. Less corn is grown than is necessary for home consumption; and it is imported from Gujrat, Malabar, and Sind, in return for cotton, &c. The Kutch horse is of a good breed; but other domestic animals, except goats, are generally very inferior.

That singular tract, the Runn of Kutch, is thus described by Burnes:—"It extends from the Indus to the W. confines of Gujrat, a distance of about 200 Eng. m. In breadth it is about 25 m.; but there are, besides, various belts and ramifications, which give it an extent of about 7,800 sq. m. It has no herbage, and vegetable life is only discernible in the shape of a stunted tamarisk bush, which thrives by the suction of the rain water that falls near it. It differs as widely from the sandy desert as it does from the cultivated plain; neither does it resemble the steppes of Russia; but may justly be considered of a nature peculiar to itself. It has none of the characteristics of a marsh; it is not covered or saturated with water, but at certain periods; it has neither weeds nor grass in its bed, which, instead of being slimy, is hard, dry, and sandy, of such a consistency as never to become clayey, unless from a long continuance of water on an individual spot; nor is it otherwise fenny or swampy. It is a vast expanse of flat, hardened sand, encrusted with salt sometimes an inch deep (the water having been evaporated by the sun), and at others, beautifully crystallised in large lumps. So much is the whole surrounding country imbued with this mineral, that all the wells dug on a level with the Runn become salt." (Burnes, l. 317, 318.) Fresh water is, in fact, obtained only on what may be called the peninsulas and islands of the Runn, tracts of land elevated above the rest of that region, covered with verdure, and moderately peopled by a pastoral race. The Runn has every appearance of having been an inland sea; and indeed the natives of Kutch have a tradition that it was such about 3 centuries ago, and that Nerona, Bitaro, and other places on its limits, were formerly sea ports. This is apparently confirmed by ship nails, and stones shaped like those still used as anchors; being frequently met with; and in one instance the hull of a vessel of some size was found imbedded in the soil. (See Burnes; Macmurdo, in *Bomb. Trans.* ii., &c.) During the S.W. monsoon the sea overflows a large part of the Runn; and it is also sometimes partially inundated by the Loonee, Bunas, Sundrawuttee, and other rivers which lose their waters in it.

The *mirage* is here continually presented in wonderful perfection; and the wild ass, the only inhab. of this desolate region, appears often to the traveller at a distance as large as an elephant.

Kutch has undergone many political vicissitudes which have been singularly connected with natural phenomena. In 1762, the ruler of Sind, unable to conquer this prov., threw a *bund* or dam across the Phurraun, the E. arm of the Indus, and converted the N.W. portion of Kutch from a fruitful rice district into a sandy waste. In 1819, a violent earthquake shook every fortress throughout Kutch; destroyed Bhooj and Anjar; submerged Sindree; and upheaved the *Ullah bund* (mound of God) across the former course of the Phunnaur, a tract of soft clay and shells, 50 m. long, perhaps 16 broad, and many feet in height. In 1826, the Indus burst through the *Ullah bund*, and, after an interval of 65 years, resumed its former channel, with a depth at Sindree of 3 fathoms; a circumstance which may perhaps restore to Kutch a portion of its former commercial importance. (See Burnes; Lyell's *Geology*, &c.)

The chief towns of this prov. are Bhooj, the cap., Mandavee, the principal port, Luckput, Moondra, Anjar, and Kotara. The exports are chiefly cotton, glue, and oil, which are transported in coasting vessels of from 25 to 230 tons. The natives excel in naval architecture, and are noted for their skill and daring as seamen and pilots. "Among the timid navigators of the East," says Burnes, "the mariner of Kutch is truly adventurous; he voyages to Arabia, the Red Sea, and Zanguebar, bravely stretching out on the ocean after quitting his native shore. For a trifling reward he will put to sea in the rainy season,

and his adventurous spirit is encouraged by the Hindoo merchants of Mandavee, an enterprising and speculating body of men." (l. 6, 7.) The government is analogous to that which prevailed in many countries of Europe, in the middle ages. The rao is the head of a kind of feudal aristocracy, each member of which is absolute within his own domains. The rao can summon them all to his standard, with their followers, but he must pay them; the number of chieftains is about 200, their annual revenue varying from 100 to 20,000 rupees each. The state revenue of Kutch does not exceed 16 lacks of rupees a year, of which rather more than a half belongs to the rao, and the rest to members of his family. The Jharejaha, to which sect the rao and his chieftains belong, are of Sindian origin, and are a degraded, ignorant, and sensual race, who pass their lives in indolence and drunkenness. They uniformly marry Rajpoot women; and their pride is so great, that, lest their daughters should disgrace them by marrying into inferior ranks, they are said sometimes to destroy them in infancy. The abolition of female infanticide has formed the subject of an express stipulation between the British government and the rao; but there is reason to believe that it still prevails. The religion of the pop. is a mixture of the Hindoo and Mohammedan, and it is difficult to say which predominates. Our first subsidiary connection with Kutch took place in 1819. The rao furnishes 1 battalion of infantry to our subsidiary force. The British resident is stationed at Bhooj. (Burnes; Lyell's *Geology*; Mod. Trav.; Hamilton's *E. I. Gaz.*; *Asiat. Journ.*)

KUTTENBERG (Boh. *Kettneberg*), a town of Bohemia, and, after Prague, Reichenberg, and Eger, the most populous in the kingdom, circle Czaaslau, 28 m. E.S.E. Prague. Pop. (1838), with its four suburbs, 9,545; and it had double that number of inhab. before the failure of the veins of silver in the mines near it. The latter, however, still furnish copper, lead, arsenic, and zinc; and mining industry is the principal dependence of the inhab. The town has several public edifices, the principal being the church of St. Barbara, a fine Gothic building. It has also a high school, a military school, an Ursuline convent, an hospital, and factories for printing cottons and spinning cotton yarn. A good deal of starch is made for exportation to Silesia. The first silver grochens were struck here in 1300. (Berghaus; *Oesterr. Nat. Encyc.*, &c.)

KUZISTAN (an. *Susiana*), a prov. of Persia, sit. between lat. 30° and 33° N., and long. 47° and 51° 30' E., being bounded N.W. by the pachalik of Bagdad, N. by Louristan, E. by Farsistan, and S. by the Persian Gulph. Length about 240 m., breadth 130 m.: supposed area, 9,600 sq. m. The country is divided, according to Kinnelr, between the territories of the Chab-Sheikh, and those forming the government of Shuster. The Chab territories extend from the Chab to the confluence of the Karoon (an. *Choaspes*?) and Abzal, and from the shore of the Caspian sea to the range of hills skirting the valley of Ram-Hormuz; this part of the country consists principally of sandy plains and morasses, wholly destitute of vegetation. Eastward, also, intersected by the river Tab, on the banks of which are a few cultivated spots, is a desert about 30 fursungs long, and varying in breadth from 10 to 16 fursungs. The most fertile spots in this part of Kuzistan are near Dorak, the capital of the Chab territories, and in the delta of the Euphrates: in the latter, dates and rice are produced in great abundance on well-irrigated lands, the rice harvest taking place in August and September. The grain-harvest is in April and May; but the produce is insufficient for the consumption of the district. The N. and W. parts of the country afford tolerable pasturage; and here the wandering tribes, comprising the greater part of the pop., pitch their tents. The chief towns of the Chab territory are Dorak (the capital, with a population of 8,000, and a manufacture of Arabian cloaks, largely exported), Ahwas, Endlan and Mashoor. The territories attached to the government of Shuster comprise the fairest part of Kuzistan: four noble rivers, with their tributaries, irrigate the plain in every direction. Its riches in Strabo's time consisted of cotton, rice, sugar, and grain, yielding a hundred-fold; but it is at present, owing to the rapacity of the government, little better than a forsaken waste, the only signs of cultivation being near Bundekeel and Haweeza. Indeed nothing can be more lamentable, than the misrule, robbery, and utter absence of industry, which characterise this part of Persia. (See SHUSTER, and Kinnelr's *Persia*, pp. 85—97.)

L.

LABRADOR, an immense peninsula of British N. America, opposite the island of Newfoundland, from which it is separated by the strait of Belleisle, extending between the 50th and 64th parallels of N. lat.,

and between long. 56° and 78° W.; being bounded S. by Canada and the Gulph of St. Lawrence, E. by the Atlantic Ocean, N. by Hudson's Straits, and W. by Hudson's Bay. Fixed pop. estimated at only 4,000. It is generally described as one of the most dreary and naked regions of the globe, exhibiting scarcely any thing except rocks destitute of vegetation. But, though this be its appearance when seen from off the coast, on penetrating a little into its interior, the surface is found to be thickly clothed with pines, birches and poplars; and with a profusion of delicate berries. It is every where most copiously irrigated by brooks, streams, ponds, and lakes. A chain of high mountains appears inland; but their height is not correctly known. Mount Thoresby, near the coast, is 2,730 ft. high. The well-known Labrador felspar is found chiefly in the vicinity of Nain. The prevailing rock is gneiss, overlaid by a bed of sandstone, alternately red and white, and strongly marked with iron near the surface: above this again are varieties of secondary limestone, arranged in parallel strata, and full of shells. A few miles from the shore, the secondary formations disappear, leaving gneiss and mica-slate on the surface. (*Geog. Journ.* vol. iv. p. 208.) The climate is extremely severe, the thermometer occasionally falling below zero of Fahr.; the summers are of short duration, with an average day temperature of 58°. The prevailing winds, on the E. coast, are from W.S.W. to N.W.: there is less fog than on the neighbouring island of Newfoundland, and the straits of Belleisle are never frozen over. Corn will not ripen; but potatoes, cabbages, spinach, and turnips answer pretty well. The wealth of the country, however, consists chiefly in the abundance of fish on its coasts. Whales, cod, salmon, and herrings, are extremely plentiful. The Labrador fishery is nearly confined to the S.E. tract, opposite Newfoundland: within a few years it has increased six fold, and it now rivals that of Newfoundland. During the fishing season, about 300 schooners come from the latter to the fishing stations of Labrador, and about half the produce is sent to St. John's, the remainder being exported to England, Lisbon, and the Mediterranean, by English and Jersey houses unconnected with Newfoundland. The American fishing vessels average about 400, principally sloops and schooners, manned by crews varying from 9 to 13 hands, making a total of about 6,000 men. Each man catches, at an average, about 100 quintals of fish during the season; and the oil is in the proportion of 1 ton to 200 quintals. They frequent chiefly the N. part of the coast, clean their fish on board, and leave Labrador early in September. About 10 ships from Quebec, and 120 from Nova Scotia and New Brunswick, carry away fish and furs to the value of about 60,000*l.* a year; the French, also, send a few vessels, but they are not successful fishermen. From 16,000 to 18,000 seals are taken in the spring and autumn, producing about 350 tons oil; and the export of furs of wolves, bears, foxes, and beavers caught in the interior, was valued, in 1832, at 3,150*l.* The total value of the produce of Labrador, during the same year, amounted to 302,050*l.*, exclusively of the articles sent to London by the Moravians settled at Nain.

The native pop. of Labrador are Esquimaux; and of all the tribes settled on the shores of America, these are the most filthy, disgusting, and miserable. They form an exception to all others in their appearance, stature, and manner of living; and are at once hated and despised by the other Indian tribes. They are of small stature, and in their language, persons, and manners, bear a near resemblance to the Greenlanders. Their food consists chiefly of the flesh of seal, rein-deer, and fish; and their dress is entirely of skins. Their houses in winter resemble caverns sunk in the earth, and consist only of one apartment, which, though not very large, generally contains several brothers, or other relatives, with their wives and children. In summer, they dwell in tents of a circular form, constructed of poles, and covered with skins sewed together, which they are continually moving from place to place. They have always a great number of dogs about their camp; which, besides serving to guard the habitation, and to draw the sledges, are occasionally used as food, and their skins made into clothing. The European residents are English, Irish, or Jersey servants, left in charge of the property in the fishing-rooms, and who also employ themselves in catching seals. Their principal settlements are at Bradore Bay, l'Anse-le-blanc, and Forteau Bay, the last being by far the most considerable. The Moravians formed their first settlement in 1752. Their habits, and quiet unobtrusive life, render them comparatively unknown. They trade with the Esquimaux, bartering coarse cloths, powder, shot, guns, and edge-tools, for furs, oils, &c. Their influence is alleged to have been very beneficial to the natives, not only in changing their religious belief, but in improving both their moral and physical condition. Murder, and acts of violence, are much less frequent than formerly; and mutual enmities have been removed.

Their boats, houses, and fishing implements are better constructed, and many of them have begun to exercise foresight and economy. The Moravian settlements are at Nain, Okkak, Hopedale, and Hebron, all on the E. coast.

The coast of Labrador was first discovered by Sebastian Cabot, in 1496; but it was not visited till 1501, when Corte Real called it *Terra Labrador* (cultivable land), to distinguish it from Greenland, which he named *Terra verde*. The name is now applied not only to the E. coast, but to the whole peninsula, including that part on Hudson's Bay called the E. Main.

LABUAN. See Supplement.

LACCADIVE ISLANDS, (*Laksha-Dwipa*, "a lac of isles,") a group in the Indian Ocean, lying chiefly between lat. 10° and 12° N., and long. 72° and 74° E., about 75 m. from the Malabar coast. There are 19 principal isles, but the largest is not more than 6 sq. m. in extent. Most of them are surrounded by rocks and coral reefs: the water near them, however, is deep, and they are separated by several wide channels, frequented by ships passing from India to Persia and Arabia. They are inhabited by a race of Mohammedans called Moplays. They do not yield grain, but produce an infinite quantity of cocoa-nuts, from the husks of which the inhab. form *coir* cables, which are more elastic and durable than hemp, as the sea-water, instead of rotting, preserves them. These islands are well supplied with fish, and export the small shells called cowries, which pass as coin all over India. Jagery, a little betel nut, plantains, a few eggs and poultry, and coral for conversion into lime, are their remaining exports; but they are of little importance, and the inhab. are wretchedly poor. Vasco de Gama discovered these islands in 1499: they were dependent on Cananore till ceded by Tippoo, in 1792; and came into our possession with the rest of that sovereign's dominions. (*Hamilton's E. I. Gaz.*)

LADAKH, an independent country of W. Thibet, between the 32d and 36th degs. of N. lat., and the 76th and 79th degs. of E. long.; bounded on the N. and N.E. by the Karakorum mountains, which divide it from the Chinese provinces of Yarkund and Khoten, E. by Chanthan, Rodokh, and Gardokh; S. and S.E. by the Himalaya, separating it from Cashmere, and the territories of Bissahar, Kulu, and Chambu; and W. by Baltea, or Little Thibet. Length, N. to S., rather more than 200 m.; average breadth, 150 m. Area, according to Moorcroft, about 30,000 sq. m., who also estimates the pop. at from 150,000 to 180,000, chiefly of the Thibetan race. The country is divided into 4 districts; Ladakh Proper in the centre, Nobra to the N., Zanskar S.W., and Piti S.E. It is an inhospitable land, its surface being, for the most part, a succession of lateral mountain ranges belonging to the Himalaya, the lowest range rising nearly to the limit of perpetual snow. Lé, the cap., is more than 11,000 ft. above the level of the sea, and some parts of the prov. Nobra are 2,000 ft. higher. The passes that lead into Ladakh from the S., are above 16,000 ft. high, and many summits in the central part of the country are much more lofty. Narrow and deep valleys, of great length, watered by considerable rivers, intervene between the mountain ranges, and comprise nearly all the cultivable land of the country. The chief of these valleys is that of the Upper Indus, here called the Singh-kha-bab. This extends S.E. and N.W., through the greatest part of the country. The Indus, while within Ladakh, receives the Zanskar, Zakat, and Dras rivers; the Shakut, its chief affluent N. of the Himalaya, flows principally through Ladakh, but does not join the main stream till it has passed into Little Thibet. Nearly all the rivers of Ladakh are tributary to the Indus; in the S., however, are several which join the Sutlege, of which the Piti is the chief. There are some considerable lakes. The country is subject to extremes of temperature. Frost, snow, and sleet commence early in Sept., and continue, with little intermission, till the beginning of May. From the middle of Dec. to the beginning of Feb., Moorcroft found the thermometer out of doors at night seldom above 15° Fah. But during the summer the sun shines with great power; and at Lé, in July, the thermometer has been found, at noon, to stand, in the sun, at 134° Fah., and between Lé and Piti, at 10 degs. higher. The atmosphere is, in general, dry and clear: what little rain occurs falls chiefly during the summer months. The mountains being of primitive formation, the soil consists almost entirely of disintegrated rocks washed into the bottoms by the action of thaws and torrents. The decomposed granite and felspar clothes these portions of the surface with a coating of clay, sand, gravel, and pebbles, which skill and industry can only render productive. Both climate and soil being thus hostile to vegetable life, the general aspect of the country, where not cultivated, is of extreme sterility: a few willows and poplars are the only timber trees, and the chief verdure consists of the Tartaric furze, with a few tufts of wormwood, hyssop, dog-rose, and other plants of the desert.

Notwithstanding these unpromising circumstances, the

harvests of Ladakh are by no means niggard; and year after year equally abundant crops are raised from the same land, without its ever being suffered to lie fallow, and without any attempt at an alternation of produce. The mountain sides are formed into a succession of terraces, supported by stone breast-works, down which stone channels conduct a plentiful supply of water, and the *debris* from the rock. The stone dykes are not only disposed to form terraces near the towns and villages, but in spots remote from human habitations, where they are constructed by the peasantry, and suffered to remain undisturbed for many years, perhaps for some generations, till a quantity of earth is collected.

The field thus gained from the mountain has next to be supplied with manure. As wood is very scarce, the faeces of cattle are mostly used as fuel. But Moorcroft says, that the floors of the houses are strewn with a coating of gravel, three or four inches thick, which is removed from time to time, and this, with the ashes of the burnt fuel, forms almost the only manure that sustains the nutritive properties of the soil. Wheat, barley, and buckwheat, are the chief grains cultivated. The wheat is of three, the barley of two varieties: one of the latter, the *akrokh*, or naked barley, is a superior kind, especially for malting, but it degenerates in a lower level, as in the adjacent plains of Hindostan. Wheat and barley are usually sown in May, and reaped in September, the great heat of the sun in summer fully compensating for the shortness of that season. At Pituk, near Lé, more than 10,000 ft. above the sea, barley is said by Moorcroft to be ready for the sickle in two months from the time of sowing. The plough is entirely of wood, generally willow, except the point, which is formed of a small piece of iron. The furrow is not more than four or five inches deep; but the earth is well broken, and the seed is afterwards carefully covered over. Ploughing is performed by a pair of shos (a hybrid male between the yak, *bos grunniens*, and common cow), or zebus, driven without reins, but, with the utmost precision, by the voice, or by a wand. The ground is ploughed twice; the grain is sown broad cast in the furrow, or planted by the dibble. Corn is frequently reaped while green, and laid on the ground in flat bundles to ripen more completely. In very dry soils the grain is pulled up by the roots, the straw being valuable for fodder; in moist soils, it is cut close to the ground by a curved, short-bladed sickle, which is perhaps quite as well adapted for the purpose as that of Europe. There is no great variety of kitchen vegetables; but onions, carrots, turnips, and cabbages, are raised in some places, and carraway, mustard, and tobacco, are grown in a few gardens. Plenty of apricots and apples are raised every where; but few other kinds of fruits. Pears, grapes, and melons are imported from the neighbouring countries. Lucerne grows with great luxuriance in some parts, and a species of saintfoin is met with in the mountains; but the most valuable source of fodder is, perhaps, the prangos (*Prang. patularia*, Lindley). This plant, which is a perennial delighting in a poor sterile soil, but growing in every variety of site, except actual swamp, is common in the W. of Ladakh, and varies in size, from a cluster of leaves and flowers, to from 12 to 18 ft. in circ. In August or September, the plants are cut to within two or three inches from the ground, on which they are laid in bundles to dry, and afterwards piled like other kinds of fodder, on the house tops. The prangos require no shelter. In the winter, about 1 cwt. for 24 hours is considered sufficient for 20 sheep, or 30 lambs. Healthy sheep fed upon it are said to become fat in 20 days: it is also excellent food for cattle and horses, though perhaps less so than for sheep. Rhubarb is an abundant indigenous product; and Moorcroft supposes the facilities for obtaining a supply of it to be so great, that our E. Indian dealers in the article might easily undersell the merchants of Russia or Turkey in the European market.

The yak-mule or zho is principally used for the transport of burdens; horses are few and small, though active and hardy. The native breeds of sheep, though mostly larger than those of India, are much smaller than the sheep of Chan-than. One species, the Purik sheep, is very diminutive; but it gives 3 lambs in 12 months, about 3 lbs. of wool a year, at two shearings, and its mutton is excellent. Being domesticated like the dog, it is maintained at a very small cost. The shawl-wool goat is the common breed in this and the neighbouring countries; the fleece is finer in Ladakh than elsewhere. The latter is cut once a year; the wool, picked out, is sent to Cashmere, and the hair made into ropes, coarse sacking, and blankets, for home consumption. The wild animals are not numerous: the ibex, wild sheep, *ovis ammon*, and a kind of wild horse, are the principal. The leopard, jaguar, ounce, bear, and lynx, are rare. Fish are very plentiful, but the prevailing religion prevents their being used as food.

Sulphur is found in some places, and soda in great plenty on the Indus, and in the N., lead, iron, and cop-

per are said to exist; and gold in the sands of the Shayuk, but the government, from politic or superstitious motives, has prohibited the search for this metal.

The native trade of Ladakh is of no great amount; but its transit trade is important from the country being the great thoroughfare for the commercial intercourse between Thibet, Turkestan, China, and even Russia, on one hand, and Cashmere, the Punjab, and the plains of Hindostan, on the other. Ladakh is the entrepôt for the goats' wool, of which the Cashmere shawls are made, and which is partly supplied from this country, but chiefly from Rodokh and Chan-than. About 800 camel loads are annually exported to Cashmere, to which country, by ancient custom and engagements, the export is exclusively confined, all attempts to convey it elsewhere being punished by confiscation. In like manner, it is considered illegal in Rodokh and Chan-than to allow a trade in shawl-wool except through Ladakh; and in the latter, impediments are opposed to any import from Yarkund, though the wool of that province be of superior quality and cheaper. The fleece of the wild goat is exported in smaller quantities to Cashmere, and wrought into shawls, soft cloth, and Hnings for shawl-wool stockings; this material is softer and warmer than the ordinary shawl wool, but is much less used for shawls. Sheep's wool is wrought into cloths exported to Kotoch, Kulu, &c.; and many Chan-than sheep are exported to the mountain-states, where they are extensively used as beasts of burden, carrying from 25 lbs. to 30 lbs. weight. Tea comes from China through Lassa and Yarkund, and is exported in considerable quantities to Cashmere and the Punjab: inferior kinds of the same shrub are imported from the British territories of Bissahar, and used by the lower classes in Ladakh. According to Moorcroft, 100 maunds of black tea, from Bissahar, are imported annually into Lé, where it sells at 15 Mohammed Shahi rupees a maund. Borax and salt from Thibet; silks, silver ingots, and various manufactured articles from China; felts, camlets, dried sheepskins, steel, boots, Russia leather, brocades, velvets, and broad cloths, horses, and drugs from Yarkund; cooking vessels, water-pots, and about 300 maunds of dried apricots, &c. yearly from Baltee; shawls, chintzes, copper-tinned vessels, and other domestic utensils, and grain, from Cashmere and the Punjab; ghee, honey, raisins, and grain, from Hindostan; and iron and hardware manufactures, wooden tea-cups in large numbers, &c., from Bissahar, are the remaining principal imports into Ladakh. The imports from Yarkund, of Russian goods, &c., are mostly intended for the Punjab. The dried fruits from Baltee are exchanged for foreign wool, and the goods from Cashmere and the Punjab are partly re-exported into the Thibet provinces.

The government, as regards the people, is despotic; but the rajah has very little real power, being controlled by the *lamas*, or priesthood, by whom he is occasionally deposed. The business of the state is carried on by the khalun, or prime minister, the deputy khalun, the lom-pa, or chief military officer, the treasurer, who is a lama, and the master of the horse. The towns and districts are governed by inferior khaluns; and the magistracy is discharged by officers called nar-pas, and by the head men of villages. Most of these are paid by assignments of land, and by claims on the people for contributions or articles of daily use. The rajah, khalun, and lom-pa divide among them the produce of the imports on merchandise in transit, and carry on a trade in shawl wool and tea, from which most of their income is derived.

The revenue of the state is roughly estimated at about 5 lacs of rupees a year.

In spiritual affairs Ladakh is subordinate to the authority of the supreme pontiff of the Buddhists, the grand lama of Thibet, who appoints the chief lamas of this country. The lamas are very numerous, every family in which there is more than one son furnishing one, who is a family priest, attached to a monastic institution or college, though living ordinarily among the people, and conducting the rites of their daily worship. All profess poverty and celibacy, though a man who has been married is admissible into their order. The lamas do not confine themselves to strictly religious duties, but cultivate the land, rear sheep and goats, and take an active share in the fiscal and political administration. There are many conventual establishments for females.

Mohammedanism has of late made great progress in the S. and W., but the mass of the pop. are still Buddhists. "Their religious belief and practice seems to be a strange mixture of metaphysics, mysticism, morality, fortune-telling, juggling, and idolatry. The doctrine of the metempsychosis is curiously blended with tenets and precepts very similar to those of Christianity, and with the worship of grotesque divinities. The lamas recognise a sort of trinity, or a triad consisting of a paramount deity, a prophet, and a book; and the people are exhorted to truth, chastity, resignation, mutual forbearance, and good-will. The religious service performed daily at the temples attached to monasteries consists chiefly of prayers

and chanting, in which the mystic sentence, "*Oom mane pace me oom*," is frequently repeated, and the whole is accompanied with the music of wind instruments, chiefly harmonising with tabrets and drums." (*Moorcroft's Trav.* i. 340, 341, 344.)

The military force consists of a peasant militia, very ill equipped and inefficient; and there is little to prevent Ladakh falling permanently under the dominion of some one of its more powerful neighbours.

There is little wealth in the country, but what exists is equally diffused, and the great body of the people are in easy circumstances. They pay no money taxes to the state; but are bound, to suit and service, both domestic and military, and furnish contributions in kind for the support of the rajah and the governors of districts. The people are in general mild and timid, frank, honest, and moral, when not corrupted by communication with the dissolute Cashmerians; but they are indolent, exceedingly dirty, and addicted to intoxication. Their food is nourishing, and consists chiefly of rice, meal porridge, bread, vegetables, tea, wheaten cakes, and once a day the flesh of sheep, goats, or yaks. The wealthy drink grape juice and water or sherbet, the poorer classes a kind of beer, called chang, made of fermented barley. All orders and both sexes dress chiefly in woollens; to which the men add mantles of flowered chints, and brocade or velvet caps, and the women cloaks of cotton, China satin, or Benares brocade lined with sheep skin, the wool inwards, and numerous ornaments. Both sexes wear leather boots, in which they take great pride. Some curious domestic customs prevail: among others, polyandry is common, the younger sons of a family being subordinate husbands to the wife of the elder brother; and when the latter dies, his property, authority, and widow, devolve upon the next brother.

History.—Ladakh originally formed one of the provs. of the kingdom of Tibet; but when the Chinese conquered that country, they did not extend their sway to Ladakh, which seems to have retained its own princes. About 170 years ago, the Kalmuck Tatars invaded Ladakh, and the rajah fled to the governor of Cashmere, who, with the permission of Aurungzebe, reconquered the country for the rajah. From that time a small annual present was made to the emperor of Delhi through the governor of Cashmere. Runjeet Singh took possession of Ladakh, and exacted a tribute; but since his death, there is reason to believe that the country has recovered its former independence. A small annual tribute or present is, however, said to be sent to the authorities of Gardokh, on behalf of the government of Lassa. (*Moorcroft's and Treveck's Travels*, i. 258—259.; *Lloyd's and Gerard's Tour in the Himalaya*; *Trans. of the Asiat. Soc.*, i. 49—58.; *Asiatic Journal*, vol. xviii., &c.)

• LADAKH, or LĀ, the cap. of the above country. (*See* LĀ.)

LADOGA (LAKE), a lake of Russia in Europe, surrounded by the governments of Petersburg, Olonetz, and Wyborg in Finland, and extending from lat. 59° 58' to 61° 46', and from long. 29° 50' to 32° 55' E. Though the largest collection of fresh water in Europe, there is but little accessible information respecting it. Its length, N.W. to S.E., is about 125 m.; greatest breadth about 70 m. Area estimated at from 6,200 to 6,300 sq. m. Its depth is very unequal. It receives about 60 rivers, the chief of which are the Vuox, connecting it with the Salma Lake in Finland; the Svir, by which the surplus waters of the Lake Onega are poured into it; the Volkhov, by which it communicates with Lake Ilmen; and the Siass, like the latter, from the S. It discharges its surplus waters by the Neva into the Gulph of Finland. Its shores are generally low; on its N.W. and S. banks are situated Serdobal, Kronsborg, Keksholm, Schlussemburg, and New Ladoga. It has several islands, chiefly towards its N. extremity: and is so full of rocks and quicksands, and subject to storms, that, to avoid it, Peter the Great began, in 1718, the Ladoga Canal, from New Ladoga, on the Volkhov, to Schlussemburg, on the Neva, along the S. shore of the lake, a distance of about 70 m. This work was finished under the Empress Anne, in 1732: it is 74 ft. broad, and, according to the season, from 4 to 8 or 9 ft. deep., and has 20 large, besides many smaller sluices. It is annually navigated by an immense number of boats, chiefly with merchandise for Petersburg. The canals of Siass and Svir form, with that of Ladoga, a continuous chain of communication round the S. and S.E. shores of the lake; and the canal of Tikhvine (Novgorod) places it in direct connection with the Wolga. (*Schnitzler, La Russie*; *Possart, &c.*, passim; *Dict. Géog.*)

LADRONES, or MARIANNE ISLANDS, a group of islands in the N. Pacific Ocean, belonging to Spain, between the 13th and 21st deg. of N. lat., and the 144th and 146th of E. long. There are about twenty of them; but five only are inhabited, and these lie near the S. extremity of the cluster. They are so close together, and are also so broken, as well as irregular in their form and position, as to appear like fragments, dis-

jointed from each other, at remote periods, by some sudden convulsion of nature. Those fragments have now a very barren and unpromising aspect. In particular spots, indeed, there are scattered patches of verdure; but, in general, little better than naked rocks appear; and scarcely a tree or shrub is visible among them. The coast of the islands consists mostly of black or dark brown rocks, honeycombed in many parts by the action of the waves. Their geological constitution is almost wholly volcanic, and some volcanoes have been in action in modern times. The climate is generally serene and temperate, the tropical heats being much diminished by the regular sea-breezes. During the months of July and Aug., however, the weather is intolerably hot; and at the season of the W. monsoons, between June and Oct., the most tremendous hurricanes are experienced at the full and change of the moon. The surface of the interior is much broken, and rises into high hills and even mountains; but the soil in the valleys is of great fertility, and if properly cultivated would produce abundantly most of the intertropical plants. Anson visited the Ladrões in 1742, and describes Tinian as abounding with every thing necessary to human subsistence and comfort; and being withal of a most pleasant and delightful appearance, diversified by a happy intermixture of valleys and gently rising hills; the woods consisting of tall and well spread trees, with fine lawns interspersed. The same island being, however, visited by subsequent navigators, among others by Byron, was found to have become an uninhabitable wilderness, overgrown with impenetrable thickets. The reason of this change was, that the Spaniards, by whom these islands had been conquered, had, for what reason it seems difficult to conjecture, removed the inhab. from Tinian to another island, and after their departure it soon degenerated into a state of nature, and, when last visited, was nothing better than a wild and savage wilderness. This statement, however, does not apply to the whole group: for Kotzebue informs us that cotton, indigo, rice, Indian corn, sugar, and the plantain, thrive in other islands, and produce abundant supplies for the pop. Cattle, horses, mules, and asses are numerous, and the lama has been introduced with success from Peru. Wild hogs also are found in great numbers, many of them of a large size, weighing 200 lbs., particularly on the island of Saypan. They are very fierce, and when hunted by dogs make a formidable resistance. The fish that are found on the coast are very unwholesome, and produced pernicious effects on the crews of the ships both of Anson and Byron. The tripang, or holothuria, is caught by the natives, and sold to the Chinese. The country is infested with musquitoes, and with endless varieties of loathsome insects. The natives are tall, robust, and active; the men wear scarcely any covering, and the women only a petticoat of mat. Both sexes stain their teeth black, and many tattoo their bodies. Their huts are formed of wood from the palm tree, and divided by mats into several apartments devoted to distinct uses. They are good swimmers, and extremely clever in managing their canoes, in which, with a good wind, they will sail at the rate of 20 m. an hour. Their number, in the middle of the 17th century, is supposed to have amounted to 150,000; though this is probably far beyond the mark; but the race has been so much thinned by the cruelties practised on them by the Spaniards, that the present Indian pop. scarcely exceeds 4,000. Gualan, the largest island, contained in 1816 only one Indian family, its inhab. (5,390) consisting of settlers from Mexico and the Philippine Islands. The cap is San Ygnacia de Agana, which in 1816 had 3,120 inhab., and was the seat of the Spanish governor. The number of Spaniards is very small.

The Ladrone Islands were originally discovered by Magellan, who called them *Las Islas de las Ladrões*, or *The Islands of Thieves*; because the Indians stole every thing made of iron within their reach. At the latter end of the 17th century they obtained the name of the Mariana, or Marianne Islands, from the queen of Spain, Mary Ann of Austria, mother of Charles II., at whose expense missionaries were sent thither to propagate the Christian faith.

LAGO-NEGRO, or LAGONERO, a town of the kingdom of Naples, prov. Basilicata, on the high road from Naples to Calabria, 12 m. N.E. Policastro. Pop. about 5,000. (*Rampoldi*.) It is well built, and has an old castle, an hospital, and several other charitable institutions, with manufactures of woollen cloth and caps, and a large weekly market.

LAGOS, a fortified sea-port town of Portugal, prov. Algarve, cap. of a comarca of its own name, 18 m. E. by N. Cape St. Vincent, and 114 m. S. by E. Lisbon, lat. 37° 6' N., long. 8° 40' W. Pop. 6,798. It is built on the shore of a large bay sheltered N. and W. by hills covered with vines and fruit trees. The streets are narrow, and the houses generally small; but there are several handsome and regularly-built public edifices, among which are 2 parish churches, a military asylum, town hospital, and 3 convents, two of which are in the

suburbs. The neighbourhood abounds in wine, figs, and other fruits, with pulse of different kinds; but, as in the rest of Algarve, there is a great scarcity of corn, which is imported from Alemtejo and the parts of Spain. The fishery of tunnies, anchovies, &c., is very considerable, and the produce, after being salted, is sent by sea to other parts of the kingdom. (*Milano*.)

LAGUNA. See TENERIFFE.

LAHORE, an independent kingdom of Hindostan. (See PUNJAB.)

LABORE, a city of the Punjab, Hindostan, and in Runjeet Singh's time, the cap. of his dominions, on the Ravee (*Hydracotes*), 230 m. N.E. Delhi; lat. $31^{\circ} 23' N.$, long. $74^{\circ} 26' E.$ "Labore is surrounded by a brick wall about 20 ft. high, which extends for about 7 m., and is continuous with the fort. The latter, in which the rajah resides, is surrounded by a wall of no great strength, with loop-holes for musketry; a branch of the Ravee washes the foot of its N. face, but it has no moat on either of the remaining sides. The palace within this enclosure is of many stories, and entirely faced with a kind of porcelain enamel, on which processions and combats of men and animals are depicted. Many of these are as perfect as when first placed in the wall. Several of the old buildings are in ruins; others are entire, and throw into shade the meaner structures of more recent date. Runjeet Singh cleared away some of the rubbish, and repaired or refitted some of the ruined buildings of Jehangire and Shah Jehan; but his alterations were not always made with good feeling or taste. The great square and buildings of the principal mosques were converted into a place of exercise for his Sipahi infantry, and he stripped the dome of the mausoleum of Asaf Jah of its white marbles to apply them to the erection of some insignificant apartments in the garden-court of the mosque. The *diwan-e-am*, or general hall of audience, is a long apartment supported by many pillars. The *diwan-e-khas*, or private audience-hall, is a suite of small chambers, offering nothing remarkable." (*Moorcroft*, l. 104, 106.)

Labore is said to have been formerly 12 coss (about 19 m.) in circ. Burnes says that the ancient cap. extended E. to W. for 5 m., and had an average breadth of 3 m., as may be learned by the ruins. Whatever, indeed, may have been its actual extent, it is clear, from the remains of buildings beyond the walls, that it was once much more extensive than at present. The modern city occupies the W. angle of the ancient cap., and the portion of it within the walls is apparently very populous. Moorcroft, who visited Labore in 1819, says,—"The streets were crowded to an extent beyond any thing I ever witnessed in an Indian city. The houses were in general of brick, and 5 stories high, but many were in a very crazy condition. The chief bazaar follows the direction of the city wall, and is not far distant from it. The street is narrow, and this inconvenience is aggravated by platforms in front of the shops, on which the goods are displayed under projecting pent-houses of straw to protect them from the sun and rain. Through the centre of the remaining contracted space runs a deep and dirty drain, the smell from which was very offensive. The pop. consists of Mohammedans, Hindoos, and Sikhs, the former in the greatest number." (l. 105, 106.) Moorcroft states that he saw only one mosque of any size or magnificence; but Burnes, a later traveller, says there are two or three: the principal, or king's mosque, a large building of red sandstone brought by Aurungzebe from near Delhi, had, however, been desecrated into a powder magazine.

Across the Ravee, about 2 m. N. Labore, is the "Shah Dura," or mausoleum of the emperor Jehangire, a monument of great beauty. "It is a quadrangular building, with a minaret at each corner rising to the height of 70 ft. It is built chiefly of marble and red stone, which are alternately interlaid in all parts of the building. The sepulchre is of most chaste workmanship, with its inscriptions and ornaments arranged in beautiful mosaic; the shading of some roses and other flowers is even preserved by the different colours of the stone. Two lines of black letters, on a ground of white marble, announce the name and title of the 'Conqueror of the World,' Jehangire; and about a hundred different words in Arabic and Persian, with the single signification of God, are distributed on different parts of the sepulchre. The floor of the building is also mosaic. It is probable that this beautiful monument will soon be washed into the Ravee, which is capricious in its course near Labore, and has lately overwhelmed a portion of the garden wall that environs the tomb." (*Burnes' Bokhara*, &c., l. 137.) The Shalimar, or garden of Shah Jehan, is another magnificent remnant of Mogul grandeur. It is about $\frac{1}{2}$ m. in length, and has 3 terraces, each rising above the other. A canal, brought from a great distance, intersects it, and throws up numerous fountains to cool the atmosphere. Runjeet Singh removed some of its marble houses, and replaced them by others of stone.

The bazaars of Labore do not exhibit much appearance of wealth: the commerce of the Punjab is centred at Umritsir. Labore was captured by Sultan Baber in

1520, and was for some time the seat of the Mogul government in India. It was for a while in the possession of the Afghans, and was repeatedly sacked by Shah Zemaun, ex-king of Caubul. (*Hamilton's E. I. Gaz.*; *Moorcroft*; *Burnes*, &c.)

LALAND or LAALAND, an island of the Danish archipelago, in the Baltic, between lat. $54^{\circ} 38'$ and $54^{\circ} 55' N.$, and long. $11^{\circ} 53' E.$; forming, with Falster, from which it is separated by the narrow but now navigable channel of Guldborg, a prov. of the kingdom. Length, E. to W., 35 m.; average breadth about 13 m. Area, 460 sq. m. Pop. 47,000. It is low, and is in parts liable to inundations; its shores are much indented by the sea, and it has some considerable bays. In its centre is the lake of Mariebøe, 5 m. in length by 2 in breadth. The climate is said to be unhealthy; but the soil is very fertile, and it is looked upon as the most productive of the Danish islands. Principal crops, wheat, rye, barley, and oats. Hemp and hops are also produced, and great quantities of apples. Oak, and other kinds of timber abound. Mineral products and manufactures few and insignificant. Laland has an active trade in agricultural produce; the chief seat of which is Nakshow, the cap., a town of 2,200 inhab., on the W. coast.

LALITA-PATAN, a considerable town of Nepaul, N. Hindostan, about $\frac{1}{2}$ m. S. Catmandoo, stated to have had, in 1803, a pop. of 24,000. It is said to be a handsomer town than Catmandoo, and to possess some fine public edifices.

LAMBALLE, a town of France, dép. Côtes-du-Nord cap. cant., on the declivity of a hill, beneath which runs the high road from Paris to Brest, 12 m. E.S.E. St. Briec. Pop. (1836), 4,396. It is well built, has an industrious and thriving pop., is surrounded by old walls, and has two suburbs, a communal college, public library, with manufactures of woollens, linens, parchment, leather, &c.; and a considerable trade in agricultural produce. (*Dict. Géog.*, &c.)

LANEGO, a city of Portugal, prov. Beira, and cap. of a comarca of its own name, near the left bank of the Douro, 44 m. E. Oporto, and 192 m. N.N.E. Lisbon; lat. $41^{\circ} 4' N.$, long. $7^{\circ} 40' W.$ Pop. 9,000. It stands at the foot of the Sierra de Penide (an offset of the Sierra Estrella), on the little river Balsamone, just before its junction with the Douro, and is divided into three quarters, two of which are occupied by the cathedral and bishop's palace, gardens, &c., while the third comprises the square, and a long street crossed by others of smaller size. A cathedral of Gothic architecture, built by order of Don Henrique, the father of the first king of Portugal, 4 convents, and an hospital, are the chief public establishments. The marshy lands, near the town, are very rich, producing an abundance of fine wines and delicious fruits; but these advantages are more than counterbalanced by the badness of the roads, which makes communication with Oporto and other places all but impossible. (*Milano*.)

LAMPEDUSA, LAMPION, and LINOSA; three islands in the Mediterranean, collectively called the Pelagian Isles, belonging to the kingd. of Naples, and lying between lat. $35^{\circ} 30'$ and $36^{\circ} N.$, and long. 12° and $13^{\circ} E.$, about midway between Malta and the shore of Tunis. Lampedusa, the an. *Lopadusa*, by far the largest, is about $13\frac{1}{2}$ m. in circuit. Its shores are precipitous, but it has a tolerable harbour on its S. side. Its surface is level; the E. extremity has been cultivated by an English speculator; the W. end of the isl. is covered with dwarf olive trees and other wood, much of which is cut for fuel, and sent to Malta and Tripoli. Both Lampion and Linosa are uninhabited, except by rabbits and goats; the former island has, however, some interesting traces of ancient buildings; the latter presents distinct marks of volcanic origin. (*Smyth's Sicily*, pp. 284—289, &c.)

LANARKSHIRE, or CLYDESDALE, an inland co. of Scotland, having N. the cos. of Dumbarton and Stirling; E. West Lothian, Mid Lothian, and Peebles; S. Dumfries; and W. Ayr and Renfrew. It extends from Queensberry Hill, on the borders of Dumfries-shire, to near Renfrew, a distance of 55 m., comprising nearly the whole country drained by the Clyde (which see) and its tributaries, the Douglass, Avon, N. and S. Calder, &c. Area, 604,800 acres, of which from a third to a half are supposed to be arable. It is divided into three wards, each of which is characterised by peculiarities of surface, soil, and climate. The *upper ward*, of which Lanark is the principal town, includes nearly two thirds of the co., comprising the district bounded by Peebles on the E., Dumfries on the S., and Ayr on the W. This district consists for the most part of mountains, hills, and wide dreary moors; the only cultivable land lying along the banks of the Clyde and Douglass. Some of the mountains in this ward have an elevation of above 2,300 ft. The *middle ward*, having Hamilton in its centre, has a comparatively level surface, the low grounds along the Clyde extending to a much greater distance, and the hills by which they are bounded on either side being of

very inferior altitude. The lower ward, though of small dimensions as compared with either of the others, is the finest fertile and best cultivated, and, having the city of Glasgow within its limits, it is by far the most populous, important, and wealthy of the three. The climate in the upper ward is often very severe in the middle and lower ward it is comparatively mild and humid, especially in the latter. The soil of the middle and lower wards is particularly a retentive clay but in parts it is sandy, and greatly fits Agriculture though formerly both ward has of late been greatly improved drainage which is here quite essential. It is now prosecuted with the greatest vigour, and horse dung is extensively employed in the raising of carriage. The draught horses of this co. have long enjoyed the highest reputation of any in Scotland. Ayrshire cows are generally introduced, and a good deal of cheese is made in imitation of Dutch. There are several valuable orchards in what is called the trough of the Clyde, between the mouth of the S. Calder and the lowest waterfall. Farm houses and offices rank with those in the best improved districts. Property mostly in very large estates. Farms of all sizes, and let generally on leases for 19 years. Average rent of land in 1843, 11s 3d an acre. The minerals of this co., particularly its iron and coal, are of the highest importance. The continued cheap and abundant supplies of the latter has been the principal cause of the extraordinary progress made by Glasgow in manufacturing industry, and more recently the command of coal, added to the discovery of the peculiarly valuable carboniferous iron stone (previously hard band), have made Lanarkshire one of the principal seats of the British iron trade. In 1834 about 65,000 tons of iron were produced by the different iron works in this co., and no manufacturing has been the subsequent progress of the trade, that in 1840 about 107,000 tons of iron were produced in this co., and various new furnaces were then, also, in the course of being erected. The principal iron works are those of Corbushrie, Dundyven, Monkland, Summerhall, and Calder. (See Vol. I. 209.) Lead is also rather extensively produced at Leadhills in this co. With respect to manufactures and commerce it is sufficient to say that they are of the highest importance, and to refer for details to the article Glasgow where they are principally enumerated. Each of the three wards into which this co. is divided has a sheriff-substitute to superintend its judicial affairs. The Forth and Clyde canal is partly, and the Monkland canal wholly, in this co. and it has also several railways. It is divided

one story or two stories are common, every crowded with
brown, black, or grey, and exhibiting strong marks of
poverty or decay, but the older buildings are gradually
being superseded by new and better edifices. The only
public buildings are the County Hall, including a court,
the par. church, a free church, two chapels belonging
to the Relief and one to the American Board. Several
handsome private mansions are in the near vicinity.

Various aims have been hitherto, at different times, for the promotion of education. Twenty-eight boys are supported at the grammar school; and, in addition to the school fees being paid each gets an annual stipend, varying from £1 to £11. There is besides, a charity school for 60 children. The total number of schools in the par is about thirty three amounted to 5 and the pupils to 650 there is a subscription library and reading room in the town. (*New Hist. Acc. of Scotland. 3. Leith-chiro, pp. 10, 11*.) William Lithgow the traveller and Gavin Hamilton, the historical painter were natives of the bur. and General Roy, the celebrated engineer, and author of "The Military Antiquities of the Romans in Britain," was educated at the grammar school. Copy no. 1245.2.1224.

Slave-labor working, in connection with the Glasgow manufacturers, is extensively carried on, there being, to the best of our knowledge, no law against it. They work at an average of about 14 hours a day. In order to do so the children possess of the dignity, the wiles of the married man engaged in winning the wage on terms, and so to perpetuate this poverty-stricken business, the children, both males and

LANCASHIRE

females, are usually employed in the work from an early age. About 130 females are employed in embroidery here. Bows and shoes are made to a small extent for export. There are three branch banks in the town.

Lathark and its vicinity have many remains of antiquity. The Castle Hill on the S of the town, was once the site of a royal residence, but every trace of it has disappeared. The old church, the date of which is unknown, and St Nicholas's chapel, have both allowed to go to ruins. There are in the neighbourhood, distinct vestiges of two Roman camps, supposed by General Roy, to have been the work of Agricola: one of them measures 400 yds. in length, and 250 in breadth.

This bar seems to have been more important to nobles than in modern times. In 1776, Kenneth II held it as a property of the estate of the realm. It was a royal bar as early as the 13th century. Leuwerk was the ancestor of the first military captain of Sir William Wallace. During his residence here, after his marriage with the mistress of Lammington, he killed, in 1296, Harcourt, the English sheriff and expelled his soldiers from the town. This bar formerly had the custody of the standard weights of Scotland (they are still preserved) but the act of 1696, introducing the Imperial standard, has superseded their use.

Linnæus' estate with Fellish, Lintigow, Alder, and Hermitage, is sending a man to the H of C. Registered returns, to 1940-49, 200. The Falls of Clyde are to the east vicinity of the town; Binnington Linn, 120 ft.; Corra Linn, 120 ft.; and Bannockburn, 64 ft.; the two former are to the E., the latter to the W. of the town. Another remarkable object is the Carrick Crag, a deep chasm, formed by the stream, a small tributary of the Clyde, over which a bridge of three arches has been thrown (1825), whose two piers are each 145 ft. in height, about equal to the lower E. of the bridge. (Chalmers' Caledonia.
Structure.)

LEONAR (New), a manufacturing village of Sumland, on Lathar, on the bank of the Clyde, close to the river and bounded on the W by steep and beautifully wooded hills, 1 m S. of the bay of Lathar. Pop. 1,201. The village consists of a series of cotton mills, and of two streets, in which the work people live, and so little space intervenes between the river and the hills, that there is room for only two lines of cottages. No person is allowed to reside here, unless he be connected with the factories.

The mills were founded, in 1786, by Mr David Dale; and Arkwright, the father of the cotton manufacture, was for a while a partner in them (*Dale's life of the Cotton Manufacture*, p. 138.) Mr Dale was afterwards succeeded by his son-in-law Robert Owen, whom attempts (first made at New Lanark) to reform to promote his observed projects for the reformation of society, are well known. But Owen ceased, in 1825 to have any interest in the business. The mills give employment to above 1000 individuals, of whom nearly 400 are under 16 years of age (*Factory Reports*, p. 504.) The hours of labour are limited to 10 a day throughout the year, and the people are peculiarly respectable (*New Hist Account of Scotland*, & *Lanarkshire*, p. 32.) A school is established in the works, for the education of the children, and is attended by about 600 pupils (*ib. ib.*) It may be mentioned, that something by objects, and what is called [how justly we shall not stop to inquire] the domestic system of education, was originally practiced at the mills of New Lanark, about the beginning of the century. There are 100 funeral societies, from which, on the death of a member or his wife, the family receive £1, on that of a child 5s. The sum is collected as annuities require, the society not accumulating any funds.

LANCASHIRE, or LANCASTER, a north co. of England, on the W coast, having N Cumberland and Westmoreland, E Yorkshire & Derbyshire and Cheshire, and W the Irish Sea, by which it is in various parts deeply indented. Its most northerly portion, consisting of the hundred of Furness, is separated from the main body of the co. by the intervention of Morecambe Bay and a small portion of Westmoreland Area, 120,000 acres, of which about 500,000 are supposed to be arable, meadow and pasture. The hundred of Furness is generally rugged and mountainous, and the E parts of the co. along the Yorkshire border are occupied by portions of, or alluvial from, the great central or lower range of English mountains, but with these exceptions, the country is generally flat, and in the E part of the co. an extensive plain stretches from Furness Point and Liverpool on the W. to Oldham on the E. Sandy heath and sand are the prevailing soils in the lower districts, in which however there are several extensive moors; put out growth in the moors. The climate is cold and unobtrusive, but more humid, perhaps than any other in England. This co. is chiefly indebted to manufacturing and commerce for its own population, wealth, and importance. So, as respects agriculture, it is, though considerably increased, one of the most backward in the

empire. There is a great want of drainage. Few thrashing machines have been introduced; and agricultural implements are generally very imperfect. Potatoes are more extensively cultivated in this than in any other English co.; and this, no doubt, is one cause why few turnips are raised. Grazing is more attended to than tillage husbandry; large quantities of hay are produced, and there is a good deal of dairying. Lancashire is believed to be the original seat of the long-horned breed of cattle; but they are now so crossed and intermixed with others, as to be seldom found pure. There are some large estates; but property is, notwithstanding, a good deal subdivided. Tillage farms for the most part rather small, and usually held on seven years leases, a tenure too short to admit of the occupiers undertaking any very expensive improvements. Farm buildings generally good. Average rent of land, in 1843, 28s. 11½d. an acre. Exclusive of other minerals, this co. has vast beds of coal, and to that, more perhaps than any thing else, its extraordinary progress in manufactures is to be ascribed. It is the grand seat of the cotton manufacture, which has grown up with a rapidity wholly unexampled in the history of industry. Manchester, Preston, Bolton, Oldham, Blackburn, Ashton, Bury, Chorley, Wigan, and other towns, where the manufacture is principally carried on, and Liverpool, the grand emporium of the trade of the co., have increased with equal rapidity. Manchester is now, beyond all dispute, the first manufacturing town in the world; and the trade and navigation of Liverpool are inferior only to those of London. Besides that of cotton, the woollen manufacture is extensively carried on at Rochdale and other places in this co., as is that of silk, flax, paper, hats, &c. The extension of manufactures and trade has been at once a cause and a consequence of the extension of the facilities for conveyance, by means of canals, railways, &c., which traverse this co. in every direction, and bring it, as it were, into immediate communication with almost every other part of the empire. Lancashire was, indeed, the first co. to construct a navigable canal (the Duke of Bridgewater's); and the opening of the Manchester and Liverpool railway, with locomotive engines, in 1825, forms a new and most important era in the history of internal communication. It is to be regretted that, notwithstanding the great extent of sea-coast belonging to this co., it does not possess a single good harbour. Liverpool is the best, but the access to it is much embarrassed by sand-banks. Lancashire is a co. palatine, and contains 7 hundreds, 4 boroughs, and 70 parishes, many of which are very extensive. It sends 26 mems. to the H. of C., being 4 for the co., 2 each for the hors. of Manchester, Liverpool, Oldham, Bolton, Preston, Lancaster, Wigan, and Blackburn, and 1 each for Rochdale, Bury, Clitheroe, Ashton, Salford, and Warrington. Registered electors for co. in 1849-50, 32,766, being 11,116 for the N., and 21,650 for the S. division. In 1841, Lancashire had 289,184 inhab. houses, and 1,667,054 inhab., of whom 814,847 were males, and 852,207 females. Sum paid for the relief of the poor in 1847-48, 344,819½. Annual value of real property in 1815, 3,139,043½; do. in 1843, 7,756,228½.

LANCASTER, a mun. and parl. bor., and sea-port town and par. of England, cap. of the above co., locally situated in hunds. Amounderness and Lonsdale, but with separate jurisdiction, on the S. bank of the Lune, 46 m. N. by E. Liverpool, and 90½ m. N. by W. London; lat. 54° 4' N., long. 2° 48' W. Area of par. (comprising 17 townships), 66,100 acres: pop. of ditto, in 1841, 24,149. Pop. of parl. bor. (which includes parts of Skerton and Bulk townships), in 1841, 14,389. The town stands on a gentle slope facing the Lune, which is crossed here by a handsome stone bridge of 5 arches; and the summit of the hill is crowned by the bastions of its fine old castle, and the lofty tower of the par. church. Nearly the whole town is built of freestone, from quarries in the neighbourhood: the houses are generally well constructed, and many are large and handsome. The streets, however, with one or two exceptions, are inconveniently narrow, and badly paved. Lancaster is lighted with gas, under an act passed in 1824, and is well supplied with water from springs and wells. The principal public building is the castle, once a magnificent structure, originally built in the 11th century, but renovated by John of Gaunt, Duke of Lancaster, during the reign of Edward III.: it was repaired at the end of the 16th century, and much enlarged in 1788, when it was converted, at an expense of 140,000*l.*, into assize and county courts, gaol, female penitentiary, &c. The walls enclose an area of 10,525 sq. yards. The prison is conducted on the system of classification, and silent labour: above 160 debtors and 200 criminals have been confined in it at an average of the last few years. Among the other public buildings, exclusive of the churches, are the town-hall, erected in 1781, the custom-house, on St. George's Quay, having a portico and pediment supported by 4 Ionic columns, the assize-house, the assembly-room, the theatre,

the public baths, and the market-houses. The county lunatic asylum, on Lancaster Moor, is a quadrangular building, with a handsome Doric front, occupying, with its grounds, about 5 acres: it accommodates 550 patients, and is said to be humanely and judiciously conducted. The par. church, which stands on the "green and shapely knoll" of Castle-hill, is of the same date as the castle, and consists of a central and two side aisles of equal length, terminated by a well-proportioned and lofty tower at its W. end: it was all but rebuilt in 1759. Its richly-carved stalls, and other curious carvings in the chancel, and its fine monuments, are universally admired. The living is a vicarage, of the clear annual value of 1,700*l.*; and the incumbent nominates the ministers of St. John's and St. Ann's, the two district churches, as well as those of all the chapelries within the par. There are also places of worship for R. Catholics, Presbyterians, Independents, Wesleyan and Association Methodists, to each of which, as well as to the churches, Sunday schools are attached, furnishing religious instruction to about 1,900 children. There is a meeting-house for the Society of Friends. The school-charities comprise an ancient grammar school under two masters, greatly modified in 1824, and now furnishing a good classical and general education to about 60 boys; a boys' national school, united with an old blue-coat charity, attended by 360 boys (30 of whom are clothed), a girls' national school established in 1820, and attended by 130 girls, a charity school for clothing and instructing 60 girls, a Catholic charity school, attended by 90 children of both sexes, and a Lancastrian school with 200 children. Among the other public charities may be mentioned Penny's Hospital, endowed with land worth 240*l.* a year, and affording a residence, clothing, and small stipend to 12 poor men, Gillison's Hospital, for the reception of 8 unmarried women, each of whom has a stipend of 4*l.* a year; Gardner's Almshouses for 4 old men, a dispensary, and house of recovery; a lying-in charity, and a benevolent society. (*Charity Comm.* 15th Rep., pp. 262-273.) Bible, church missionary, and tract societies, are also respectably supported. The chief literary establishments are "the Amicable" book society, the mechanics' library, and 3 news-rooms. A newspaper, called the "Lancaster Gazette," is published every Saturday. A savings' bank was established in 1823; which had on the 28th Nov., 1848, 88,926*l.* of deposits. It has, also, a joint-stock bank, entitled the Lancaster Banking Company, with about 128 partners.

Lancaster had formerly a considerable share in the trade with the W. Indies; for it appears that in 1799, 57 vessels of the burden of 12,890 tons came to it from the W. Indies only. In consequence, however, of the superior facilities enjoyed by Liverpool, this branch of commerce is now nearly extinct. A few vessels are engaged in the trade with N. America and the Baltic, but the great bulk of the shipping belonging to the port consists of coasters, and its amount has sensibly fallen off during the last 10 years. In 1850, there belonged to Lancaster and its dependent creeks, 90 vessels, of the burden of 5,101 tons. The navigation of the Lune being obstructed by shallows, vessels of above 200 tons load and unload in Glasson dock, constructed in 1787, about 5 m. below the town, to and from which their cargoes are conveyed by means of lighters. Gross customs' revenue, in 1846, 30,778*l.* The manufactures of Lancaster comprise cotton fabrics, silk thread, linen thread, and sail-cloth. The cotton-trade, introduced in 1806, is in a thriving condition; and there were, within the par., in 1839, 8 cotton mills, with 1,372 hands: there are also 3 silk-throwing mills, with 200 hands, and a small flax-mill. The sail-cloth business has declined. Cabinet-work and upholstery are made in considerable quantities for exportation; and there are candle and soap establishments, and two extensive ship-yards. On the whole, Lancaster, notwithstanding its distance from the great coal-field of S. Lancashire, may be said to be in a thriving condition; and the accelerated increase of the pop. since 1821, may be probably attributed to the increasing demand for factory labour. The Lancaster canal skirts the town, and about ½ m. to the N. E. it crosses the Lune by a noble aqueduct bridge of 5 arches, erected by Rennell at a cost of 48,000*l.* The Lancaster and Preston junction-railway, forming a portion of the Great North-Western line, stretching from London to Carlisle, Glasgow, and Edinburgh, intersects the town.

The sum raised by a rate and expended for the relief of the poor in 1847, amounted to 3,097*l.* assessed upon property of the value of 40,802*l.* a year.

Lancaster is one of the most ancient of the English bors.; its first charter having been granted by King John, and confirmed by subsequent monarchs. The present mun. bor. is divided into 3 wards, and governed by 6 aldermen (one of whom is mayor) and 18 councillors: it has a commission of the peace under a recorder. Corporation revenue, in 1847-48, 5,259*l.* Assizes are held in

Lord, and common; and the greater masses on Feb. 4, April 8, June 22, and Oct. 16. A bar about the every fourth Thursday for the recovery of debts to any amount incurred within the borough, and it is the seat of a circuit court, where about 314 pleas are entered in 1855. The right to send representatives to parliament was first exercised in 1290 by Edward I., but it ceased in 1399 and was not resumed till 1607, when Lancaster has regularly sent 2 members to the H. of C. Previously to the Reform Act, the right of election was vested in the freemen and burgesses. The limits of the old part have been extended by the Boundary Act, so as to include parts of the townships of Wharfedale and South. Registered electors in 1846 are 1,375. Lancaster has 3 weekly markets on Wednesday and Saturday but chiefly on the latter and these are held on May 15th July, and 10th October for cattle and cheese.

Lancaster is supposed to have been a Roman station. Urns, shaws, and other antiquities have been discovered, and the site appears given by the Romans, even to this day the fact. The Romans found the town in a state of decay, the ancient city reduced to a village, and the Roman empire here rather than a ruin. It was given by William the Conqueror to Roger de Poitou, who built a castle on the site of the ruined castrum, a flourishing town soon gathered round the burgh of Lancaster acquired extensive privileges from Henry I. and continued to increase in importance. King John confirmed "the burgh of Lancaster" on his favourite Gilbert Fitz Baldwin, and gave it a charter. The first Earl of Lancaster was created in 1267, and in 1295 Henry Earl of Derby was appointed, by special charter, to the title and dignity of Duke of Lancaster, with power to have a chamber to the county, and "to enjoy all other liberties and regality pertaining to John of Gaunt, he married Blanche the Duke's only daughter, succeeded in the Duchy of Lancaster, first Earl of Derby of Hereford, became Duke of York in 1399 and finally King which done to the present day with the royal dignity. Lancaster came during the parliamentary war, and was seized by the Lancastrian troops in the confusion of 1715 and 1746. (Hulton's Lancashire, vol. II, Part and its History, Private History.)

Lancaster, a town of the U. States of N. America, Pennsylvania, one of its own names near Conestoga Creek, a tributary of the Susquehanna, 40 m. W. by S. Philadelphia. Pop. (1840) 2,417. It is pleasantly situated, and flourishing to a fertile and highly cultivated valley. Its streets are regular, the houses are chiefly of brick and stone and many are spacious and elegant. There are numerous places of public worship, 5 of which are for Germans, a Methodist, and 2 for the Episcopal Church, and religious societies, as well as for the English language, a school of spiritual instruction, and several other schools. The pop. is mostly of German descent, and some of the newspapers are in the German language. Lancaster has been long famous for its manufactures of ribe mousters, and the quantities of the same exported yearly to it. Lately several large cotton factories have been erected in it, and the town is described as having quite a share in manufacturing. It would, also, seem that they have a share in navigation, at least such can hardly fail to be the case, if it be true that there are no fewer than 70 wharves in the town. Manufacture of cotton is also characteristic of millinery, hats, girls hand organs, and other trade, &c., and many breweries, distilleries, breweries, and putteries. The general trade is extensive. It is connected with Philadelphia and Harrisburg by railroads, and with the Susquehanna below Columbia by a canal. It is the seat of the district judicial court for the 5 districts of the co. (Hulton's Lancashire, vol. II, Part and its History, Private History, Lancaster 9 April 1855.)

LANCIANO, a town of the Papal States, Umbria, near Assisi, 10 m. S. W. of Assisi, and 10 m. S. of Perugia. Pop. (1840) 1,000. It is built on the summit of a steep hill, in a healthy and pleasant situation, and has a cathedral, several churches and convents, an archbishop's palace, a diocesan university and other schools, a tribunal of primary jurisdiction, &c. This is a very ancient city, and in the middle ages it was distinguished by its pre-eminence in manufacturing, and by the count of the numerous castles on its hills; but these have both greatly declined. (Hulton's Umbria, vol. II, Part and its History, Private History, Lanciano 9 April 1855.)

LANDAFF or LLANDAFF, (Llan-Faf, church of the Fish), a town and par. of S. Wales, co. Glamorgan, 10 m. S. W. of Cardiff, and 10 m. S. W. of Swansea. Pop. (1841) 1,000. (including the hamlets of Canton, St. Mary, Fairweather and Gwladys, &c.) The town is of present little more than an antiquarian site, with about a

few respectable residences, and several cottages, one would fit to worth nothing, except from its being a bishop's see, and containing a handsome cathedral. This ancient edifice was built early in the 12th century on the site of one still more ancient, but in W. end, with its fine front, and rich Norman doorways, and elegant plastered towers, has been allowed to fall into decay. The cathedral now comprises a choir, short nave and transept, its total length, from E. to W. including the Lady-chapel behind the altar is 200 ft. breadth of the body 40 ft. and height, from the floor to the centre of the roof 110 ft. Very extensive repairs, last in very bad state, were effected in 1761 at an expense of £400. The nave front, built about 120 ft. within the original Norman W. end, has a 4 window window, large pillars, and flower, and are on the parapet, and all lately the fine Gothic style was restored within a Gothic porch. The chapter-house, S. of the church, is in the decorated English style, with a central pillar, but it is fast falling into the same ruinous condition as the nave, and the episcopal palace, which was ancient and all has been destroyed by Owen Glendower. The church services have been changed for some years, and the building is now employed as a parish church, the services being occasionally in the Welsh language. The one of Landaff, created in the 13th century, comprises all the county in which it is situated, and Montgomeryshire, except 7 par. It was the portion of all the English bishoprics, the ancient bishopric, including Montgomeryshire, as an average of the 3 years ending with 1831, being only 100, and it has consequently, been hitherto had in connection with the bishopric of St. Paul's, London, and the bishopric of Bath and Wells. The last residence of the see, however, the year of 1840, has been paid out of the episcopal augmentation fund, to raise the income to £1,000 and a further augmentation of £100, to be made till the residence is restored. The parsonage of the see comprises the episcopal apartments with 6 rooms, and the chapter collection 11 dignities, besides the bishop's house, there are also 1 church-chapel. Landaff has no market, and is wholly dependent on its supplies on Cardiff, except for vegetables, which it sends to considerable quantities to that market. Cattle fairs, Feb. 9 and Wed. Monday well attended. (Hulton's Lancashire, vol. II, Part and its History, Private History, Landaff 9 April 1855.)

LANDAU, a strongly fortified town belonging to the German confederation, in Rhodanish Bavaria, on the German frontier of the Rhine, 40 m. S. by W. Bingen, and 40 m. S. by S. Bingen. Pop. according to Berghaus, 4,000, exclusive of the Russian garrison of 4,000 men. This fortress is considered a chief source of Russian, who celebrated the construction of its walls in 1800. It is an octagon, with seven bastions, a strong ditch, bastions, and several other works. Its ditches are filled from the Rhine. The bastions and magazines are bomb-proof. The town was almost entirely consumed by fire in 1800, since which it has been regularly laid out, and has some good public edifices, including the principal church with a lofty tower 100 m. high, the town hall, court of justice, and a civil and military hospital. In the centre of the town is a spacious parade ground. Some extensive vineyard districts have been established here within the last few years. The gates are closed at an early hour, after which, neither troops nor citizens are permitted.

The history of Landau is little else than that of a succession of sieges, sackings, captures, and other military events. It was founded by the Emperor Rudolph, of Hapsburg, and made a free town of the empire in the 14th century. During the 30 years war it was repeatedly taken and retaken by the Swedes, Imperials, French, &c. and in the 18th century it was many times taken or besieged by the French and Germans. It was generally held by the French from the year of 1793, to 1800, when it was restored to Germany by the general treaty of Paris. (Hulton's, vol. II, Part and its History, Private History, Landau 9 April 1855.)

LANDAU, a town and river port of France, dep. Rhodan, on the Rhine, 10 m. S. by S. Bingen. Pop. (1841) 2,000. It is built on a hill, and is very good, and its port chiefly consists of boats 200 to 300 tons. It has a large and fine marine hospital, property of the French government, and considerable magazines of French cloth and leather.

LANDAU, a dep. of France, and one of the largest, though the poorest, in the kingdom, dep. S. W. chiefly between 45° 30' and 44° 30' N. and long. 6° 30' and 1° 30' W. having N. Germany, S. Lot-et-Garonne and Gers, S. Haute Pyrenees, and W. the Bay of Biscay. Length and greatest breadth about 70 m. each. Area, 941,000 ha. Pop. (1841) 200,000. This dep. derives its name from an extensive tract of marsh, meadow, and other waste land, with a large sandy soil, about 200 ft. above the level of the sea, toward the "Landau" which comprises 70,000 ha. or nearly 1/3 of the total surface, besides a considerable portion of the adjacent dep. of the Gironde. This extensive and almost desert plain is for the most part a dead sea, intersected with

patches of pasture or cultivated land, clumps of pines, scattered habitations of a miserable kind, and a few wretched hamlets; and bounded towards the sea by a chain of dunes or sandy downs, inside which is a succession of lagoons frequently communicating with each other, and occasionally with the sea by openings between the dunes. The dunes extend along the shore nearly from the mouth of the Gironde to the Pyrenees, forming a chain from 140 to 150 m. in length, by about 5 m. in width and from 100 to 150 ft. in height. They consist of loose shifting sand thrown up by the sea. They are continually changing in form and position, according to the prevalent winds; but have a general tendency to move easterly, in which direction they are said to advance about 25 yards a year; and in process of time they would infallibly overspread the whole country, unless arrested and fixed by planting them with pines or other trees, as is done in Holland. Occasionally immense masses of sand have shifted their position through the agency of tempests, as in the African and Arabian deserts. The church and a considerable part of the village of Mismizan was overwhelmed by an inundation of this sort. The increase of the dunes having prevented the egress into the sea of many small rivulets, the lagoons have been formed, the largest of which is 7 m. in length and about as many in width. These also continue to extend, since the shifting sands have been gradually shallowing the channels by which they communicate with the sea. The surface of the "Landes" is usually parched and arid, except for about four months of the year, when the rains form extensive pools in its depressed portions, varying to the depth of several feet. These are often covered with sand carried over them by the wind, when they are called *blouses*, and are exceedingly dangerous to strangers. To avoid such dangers, and to travel more speedily through the loose soil, the inhab. use long staffs having notches for the feet 1, 2, or 3 ft. above their lower extremity; so that a person of ordinary stature, when in walking order, has at a distance the appearance of a giant 8 ft. high. The inhab. are very expert at the use of these singular helps to locomotion. The Adour, and its tributary the Midouse, bound the "Landes" to the S.E., and form the N. limit of the fertile portion of this dep. The soil is there light, but productive. Maize, millet, wheat, rye, saffron, hemp, flax, &c., are grown: in the arrond. St. Sever, about 250,000 kilog. of linseed-oil are produced annually, and about 320,000 hectol. of wine, certain kinds of which, termed the *vins de sables*, rival some of the growths of the Gironde. The culture of the mulberry is on the increase. Agriculture is exceedingly backward. The "Landes" are mostly appropriated to the rearing of sheep, of which, in 1830, the dep. had 400,000. The lower classes in the "Landes" appear to be very wretched. Shut out from communication with the more civilised parts of the kingdom by the absence of great roads, they live in a half-savage state, clothed chiefly in sheep-skins, on which or on straw they usually lie at night. Their food is principally maize or rye bread, with pilchards, which are prized in proportion to their rancidity; maize or millet porridge, and pea-soup with sour lard and some spice, to which they occasionally add garlic or a little fried bacon. They are grossly ignorant, and degraded both physically and mentally. In 1835, of 40,446 properties subject to the *contribution foncière*, 14,870 were assessed at less than 5 fr., 5,978 at from 5 to 10 fr., and 6,166 at from 10 to 20 fr. Goats, hogs, and poultry are frequently kept by the peasantry, and bees are numerous. The pine forests furnish abundance of deals, pitch, tar, rosin, &c.; and coal, iron ore, potters' clay, &c. are met with. Manufactures unimportant; some smelting furnaces and forges, employing about 500 hands, and some tanneries, oil-mills, and glass and earthenware factories, comprise almost all the manufacturing establishments. The trade of the dep. is chiefly in cattle, wines, timber, and agricultural produce. Landes is divided into 3 arronds., and sends 3 mems. to the Cham. of Dep. Number of electors (1838-39) 1,145. Chief towns, Mont-de-Marsan, the cap., St. Sever, and Dax. Total public revenue (1831) 2,585,980 fr.; expenditure, 2,576,700 fr.: leaving a surplus of more than 1,000,400 fr.—a large sum, considering the poverty of the dep. (*Hugo, art. Landes; French Official Tables, &c.*)

LANDSBERG, a town of the Prussian dom., prov. Brandenburg, gov. Frankfort, cap. circ., on the Warta, a tributary of the Nets, here crossed by an excellent bridge, 38 m. N.E. Frankfort on the Oder. Pop., in 1838, according to Berghaus, 9,970; but it is stated by Von Zedlitz (*Der Preussische Staat*, II. 218.) to be nearly 12,000, among whom are many Jews. Landsberg is divided into the Old and New Town, and has several suburbs. It is walled, and is one of the best built towns in the prov. It has several churches, a house of correction, the inmates of which are made to support themselves by the manufacture of woollen cloths, an hospital, an orphan asylum, a high school, &c. It is a principal mart for corn and wool, the greater part of the produce of

Pomerania, the Neumark, and W. Prussia being brought thither for export by the Oder. The town has also brisk manufactures of woollen goods, leather, and paper, and numerous breweries and distilleries. Landsberg is the seat of a circle assembly, a circle and town tribunal of the first class, boards of taxation, forest economy, and agriculture, and the superintendency of the drainage of the vale of the Warta. (*Dreissaußmannschaft für das Wartebück.*) The town was repeatedly taken and retaken by the Swedes and the Imperialists in the 30 years' war. (*Von Zedlitz; Berghaus, &c.*)

LANDSCRONA, a fortified sea-port town of Sweden, prov. Malmø, on a tongue of land projecting into the Sound, 16 m. N.E. Copenhagen; lat. 55° 51' 28" N.; long. 12° 49' 47" E. Pop. 3,870. It has strong walls, a citadel, and other works; is well laid out, and has a safe and well sheltered harbour, with 20 ft. water.

LAND'S END, a headland at the W. extremity of the co. Cornwall, celebrated as being the most westerly land in England; lat. 50° 4' 8" N., long. 5° 41' 31" W. It is formed of granite cliffs, which rise about 60 ft. above the level of the sea. These assume, in some places, the appearance of shafts, and are as regular as if they had been cut by the chisel. About 1 m. W. from the Land's End, are the rocks called the Longships, on the largest of which is a light-house, with a fixed light, having the lantern elevated 88 ft. above high water mark.

LANDSHUT, a town of Bavaria, circ. Lower Bavaria, on the Isar, 38 m. N.E. Munich. Pop. 8,000. It is divided into an old and a new town, has a suburb on an island in the Isar, with which it is united by two bridges, and is partly surrounded by old walls and ditches. It consists of two principal and many smaller streets; the houses, which are of brick, are mostly environed by gardens. The town has a very picturesque appearance, from the antique architecture of its buildings, and the number of its towers and spires; that of St. Martin's church being one of the loftiest in Germany. It has an old castle, the residence of the dukes of Bavaria in the 13th century; a Cistercian abbey, in which they were buried; a royal palace, an old town-hall, an hospital for decayed citizens, 2 other hospitals, 3 convents, a lyceum, gymnasium, chirurgical and ecclesiastical seminaries, and various other schools. In 1800, the university of Ingolstadt was removed thither; but in 1826 it was transferred to Munich, since which Landshut has declined. It still, however, has manufactures of woollen cloths, stockings, tobacco, paper, cards, &c., with numerous distilleries and breweries, and some trade in corn, cattle, and wool. (*Berghaus; Stein, &c.*)

LANE-END. See PORTFARMS.

LANGELAND, an island of the Danish archipelago, in the Baltic, between Laland and Funen, extending from lat. 54° 43' to 55° 20' N., and between long. 10° 40' and 11° E. Length N.N.E. to S.S.W. 32 m.; average breadth 2½ m. Area about 80 sq. m. Pop. about 17,000. Its shores are generally uniform, except on the W., where they are broken by numerous inlets. Its surface is more elevated than that of the adjacent islands, but it is generally quite flat. Climate healthy. Chief products, corn, potatoes, fruits, and flax. A good many cattle are reared, and the fisheries are productive. Rudkiöbing, on the W. coast, with 1,580 inhab., is the chief town, and centre of the trade, which is tolerably active. (*Dict. Gög., &c.*)

LANGENSALZA, a town of Prussian Saxony, gov. Erfurt, cap. circ. of its own name, on the Salza, 19½ m. N.W. Erfurt. Pop. (1838) 7,142. It is well built, walled, and further defended by a castle; and has 4 churches, 4 hospitals, a lazaretto, an orphan asylum, a high school, a public library, and a theatre. It is the seat of a district council, a board of taxation, judicial courts for the town and circle, the Thuringian Agronomical Society, &c. It has manufactures of various descriptions of woollen, linen, and cotton fabrics, a saltpetre factory, with dyeing houses, breweries, distilleries, and paper mills. (*Von Zedlitz, Der Preussische Staat; Berghaus; Horackmann, Stein, &c.*)

LANGHOLM, a bor. of barony and market-town of Scotland, co. Dumfries, in the bosom of a wooded valley on the Esk, and on the line of the road between Edinburgh and Carlisle, 21½ m. N. by W. the latter and 59 m. S. by E. the former. Pop. of town, in 1841, 2,362; of town and parish 2,820. It is intersected by the Esk, New Langholm (founded in 1778) being on the W. side of the river. The latter is regularly built, of a triangular form. The old town consists chiefly of one street on the line of the road. In it are the town-hall and gaol, ornamented with a spire, and the par. church. There are, also, chapels belonging respectively to the Associate Synod and Relief. The communication between the different parts of the bor. is maintained by a fine bridge.

There are sundry schools in the parish, of which two are endowed; average attendance, about 1-10th pop. There are two subscription libraries, to one of which the late Thomas Telford, the celebrated engineer, a native of the district, bequeathed 1,000l. William Julius Mickle,

the translator of the *Lusiad*, was a native of the bor.; and Sir John and Sir Pultney Malcolm were born in the neighbourhood.

The poor are supported partly by church collections and partly by assessment; the latter having amounted, in 1847, to 455*l*.

A cotton-mill, driven by water, was erected in 1789. There are in the town a considerable number of weavers, who are partly employed in the stocking trade; there are also two small woollen mills, with a distillery, brewery, and two branch banks.

Langholm was created a burgh of barony in 1610. Gilnockie Tower, the residence of "Johnie Armstrong," the famous border freebooter in the time of James V., is in the neighbourhood, but has long been in ruins. Langholm Lodge, a seat of the Duke of Buccleugh, is also in the neighbourhood.

LANGRES (an. *Andematunum*, and *Civitas Lingonensium*), a town of France, dép. Haute-Marne, being the largest and most populous town in the dep., though not its cap.; it is, however, the capital of an arrond., and occupies, next to Briançon, the highest elevation of any town in the kingdom, 18 m. S.S.E. Chaumont, and 39 m. N.N.E. Dijon. Pop. in 1846 (ex. com.), 7,636. It is surrounded with walls, flanked by towers, and is well-built, its streets being regular, wide, and clean. The principal public edifice of Langres, its ancient cathedral, has a choir, the peristyle of which, of the Corinthian order, is supposed to have formed part of a Roman temple: the edifice itself, though of uncertain date, is very ancient, excepting the grand entrance, constructed in the 18th century. The bishopric of Langres was founded as early as the 3d century. Langres has a handsome town-hall, a theatre, a public library with 3,000 vols., a school of drawing, several hospitals, and a fine public promenade. It is distinguished by its cutlery, which is its chief branch of industry.

The *Lingones* are noticed by Cæsar as being attached to the Romans (*De Bello Gallico*, lib. 1. § 26. 40); they afterwards became *federati*, or allies of the Romans; and their city is characterised by Frontinus as *opulentissima*. (Lib. iv. cap. 3.) Among the remains of antiquity of which it has still to boast, are several triumphal arches; one of which, now included in the town-walls, supposed to have been erected in honour of the two Gordians, *circa anno* 240, has a frieze on its entablature, indicating a high state of the arts. It suffered numerous disasters in the dark ages; being taken and burnt by Attila, and again destroyed by the Vandals, in 407. Louis VII. annexed it to the French crown. Diderot was a native of Langres, where he first saw the light, in 1712. (*Hugo*, art. *Haute Marne*, &c.; *D'Anville*, *Notice de l'Ancienne Gaule*, p. 417.)

LANGUEDOC, one of the old provs. of France, in the S. part of the kingdom, now distributed among the depa. of Ardèche, Aude, Gard, Haute Garonne, Hérault, Haute-Loire, Lozère, and Tarn.

LANNION, a town and river port of France, dép. Côtes-du-Nord, cap. arrond., on the Guer, 35 m. W.N.W. St. Brieuc. Pop. (1846) 5,401. It is ill-built and *triste*; its port on the river is bordered by a spacious quay, but within the last 40 years vessels of 250 tons have been unable to come up to the latter. It has a church erected in the 12th century, two hospitals, barracks, and a communal college; it is the seat of a sub-prefecture, and a court of primary jurisdiction, and has manufactures of linen fabrics, and an active trade in agricultural produce.

LANZEROTA, one of the Canary Islands, which see.

LAODICEA AD LYCUM, an ancient city of Phrygia, in Asia Minor, chiefly interesting as being the site of one of the seven primitive Christian churches, on the Lycus, a tributary of the Meander, 120 m. E.S.E. Smyrna, lat. 37° 56' N., long. 29° 15' N. The site of this town, once ranking as the second in Phrygia, is marked only by the deserted ruins of public buildings; and hence the neighbouring hamlet, inhabited only by a few squalid Turks, has received the name of *Eski-kissar*, "old castle." (*Elliott's Travels*, ii. 97.) The remains are very extensive; and the whole surface within the walls is strewn with pedestals and fragments, indicating by their size and workmanship the former luxury and magnificence of the city. The largest ruin is that of an oblong amphitheatre, having an area of 1,000 sq. ft. Many of the seats are still in tolerable preservation, and at the W. end is a vaulted passage about 140 ft. long, and designed for the horses and chariots entering the arena. A Greek inscription on the mouldings informs us that it was completed in the reign of the emperor Vespasian, A.D. 82, after having occupied twelve years in building. There are remains also of an odeum, two theatres, and a fabric which Chandler supposed had been a senate-house and exchange. The soil in and about the city is hard, dry, and porous, bearing many indications of an igneous origin; and Laodicea has at many different times suffered greatly from earthquakes.

Laodicea, so called from the wife of its founder, Antiochus II., was long an inconsiderable place, not-

withstanding the beneficence of Hiero, Zeno the philosopher, and his son Polemo. After its sufferings, however, in a siege by Mithridates, the Romans strengthened and enlarged it, so that at length, about the Christian era, it became, next to Apamea Cihotos, the largest city of Phrygia, and vied in importance with the cities on the coast. There can be little doubt that it was visited by St. Paul in the course of his missionary tour through Asia Minor, and perhaps the Christian converts of Laodicea, as well as those of Colossa and Hierapolis (*Pamabont*), both neighbouring towns, were the results of the apostle's preaching. In the epistle to the Colossians (iv. 16.) mention is made of an epistle to the Laodiceans; and though some critics have maintained that it is identical with that to the Ephesians, the more probable conjecture is that it has not come down to us. The persecution which raged in Asia Minor during the latter part of the first century tended somewhat to abate the zeal of the Laodicean Christians, and hence the rebuke in the Revelations. Of the subsequent history of this city for several centuries we know little: it was generally in a prosperous condition under the Roman emperors, and was flourishing even in 1190, when Frederic Barbarossa visited it on his way to the third crusade. Soon afterwards, however, it was repeatedly attacked and ravaged by the Turks, and finally came into their hands in the beginning of the 14th century, since which it has been a mere ruin, "wretched, and miserable, and poor and naked." (Rev. iii. 14—22.)

Laodicea *ad Lycum* must not be confounded with Laodicea *combusta* (now *Ladik*), 19 m. N.W. Konieh, also a considerable city, of which there are extensive ruins. (*Chandler*, i. 269.; *Elliott*, ii. 97.)

LAODICEA AD MARE, in Syria. (See LATAKIA.)

LAON (Lat. *Landunum*), a town of France, dép. Aisne, of which it is the cap., on the summit of a steep hill, 52 m. W.S.W. Mezieres, and 74 m. N.E. Paris. Lat. 49° 33' 54" N., long. 3° 37' 27" E. Pop. in 1846 (ex. com.), 8,054. The town is about 1 m. in length, narrow in the centre, expanded at either extremity, and surrounded by old walls, flanked with numerous small towers. Except its main street, it is ill built and *triste*; but it has pleasant promenades, a healthy situation, and fertile neighbourhood. It has a large Gothic cathedral, with 4 towers, rebuilt in 1114; a large old abbey, now occupied by the prefecture; a public library, comprising 17,000 vols.; extensive barracks, a remarkable leaning tower, 2 hospitals, a town hall, communal college, theatre, *dépôt de mendicité*, &c. It is the seat of a tribunal of original jurisdiction; and has manufactures of nails, leather, copperas, earthenware, &c. Coarse woollens, and some other articles, are made in the *dépôt de mendicité*.

Laon has been sometimes supposed, but on no good grounds, to occupy the site of the *Bibrar* mentioned by Cæsar. (See AUTUN, Vol. I. 255.) In the middle ages it was distinguished by its industry and wealth: its bishopric was one of the most lucrative in the kingdom; and the position and importance of the town made it be regarded as a kind of second capital. It was, however, far more distinguished by the spirit which animated its inhabitants, and by their persevering efforts to emancipate themselves from the feudal tyranny of their bishops, and to establish a municipal government and the regular administration of justice under magistrates of their own selection. They succeeded in establishing a government of this sort so early as the year 1110; and maintained it, at the cost of many great sacrifices, for above two centuries, or till 1331, when it was finally abolished by royal ordonnance. (For an account of the *commune* of Laon, see the interesting and instructive work of M. Thierry, *Lettres sur l'Histoire de France*, Nos. 16—18.)

Laon was, in 1814, the scene of some severe fighting between the French and the allies. The Prussians under Blücher having occupied the town, their position was unsuccessfully attacked on the 9th of March, by the French, under Napoleon: and the Prussians having cut to pieces and dispersed the corps of Marmont during the night, Napoleon was obliged to withdraw from before the town on the 11th. (*Hugo*, art. *Aisne*.)

LAOS, or the SHAN COUNTRY, a country of India beyond the Brahmaputra, which may be roughly estimated to extend between lat. 15° and 24° N., and long. 98° and 106° E.; having N. the Chinese prov. Yun-nan; W. the Burmese Empire, from which it is separated by the Than-lweng river; S. the Tenasserim provs., Siam and Camboja; and E. Tonquin and Cochín China, from which a lofty mountain chain divides it. Our knowledge of this extensive region is extremely limited; and what little we do know relates almost exclusively to N. Laos, or the portion bordering on the Burmese and Chinese empires. The country appears to be comprised in the basins of two large rivers, the Menam, which afterwards waters Siam, and the Menam-kong, or river of Camboja, in the middle portion of its course. The Laos territories formerly comprised 8 or 9 larger and several smaller distinct states; but of late the Siamese have conquered most of these, and the rest are

principally tributary to the surrounding nations, especially the Birmese and Chinese. The Laos pop. in the Siamese dom. is estimated by Mr. Crawford at 840,000; to which we may perhaps add nearly 200,000 for the pop. of N. Laos, &c.; making a total of somewhat more than a million. The country is fertile; but all accounts agree that it is in general very poorly cultivated and thinly inhabited. The smaller villages are mere collections of huts; and a great part of the pop. consists of small migratory herds, who have no permanent habitation. The labour of cultivation is thrown principally on the women. The fields are ploughed about the beginning of the rains in August, and the crop is reaped in February. The *Oryza glaberrima* is the only variety of rice that is raised; and, as there is no market for surplus grain, it sells in plentiful years at an extremely low price. The implements of husbandry are, rude ploughs, drawn by two oxen or buffaloes, harrows, spades, and hoes. The hire of a labourer averages a quarter of a rupee a day; but hired labourers are few, and the cultivators assist each other by turns in their various operations. The grain is cut with the common sickle, and thrashed by treading out with oxen. Tobacco, with sugar-canes and mulberries, are generally raised; and the country yields pepper, cardamoms, different sorts of indigo, benzoin, stick lac, and other gums, betel, numerous fruits, an abundance of teak and sapan wood, a species of sandal-wood, &c. It abounds with elephants, which are exported in considerable numbers; and with buffaloes, oxen, and other animals found in the adjacent countries. There are, however, no sheep. Asses are used as beasts of burden: but waggons are frequently employed in the conveyance of goods. Gold is found in parts of N. Laos; but in such trifling quantities as hardly to afford the ordinary low rate of wages of the country to those engaged in sifting and washing the sand in which it is found. Tin ore is abundant; and iron, lead, copper, antimony, and silver are met with. Some of these metals are smelted and wrought; but the ores are principally sent in a rough state to Birmah. Silk and cotton fabrics, paper made from the bark of a creeping plant, leather, date-sugar, and gunpowder, are the chief manufactures. There are, however, gold, silver, and iron smiths, mat-makers, potters, embroiderers, and a variety of petty artisans. Spinning and weaving are usually performed by women, who, as in Birmah, conduct a good deal of the retail trade. Some commerce is carried on with the immediately adjacent countries. The inhab. exchange their lac, sapan-wood, and other dyes, parquet skins, ivory, rhinoceros' horns, wax, tin, lead, &c., with the Tonquinese for sulphur, cinnabar, gamboge, orpiment, borax, musk, silks, gold thread, embroidery, steel, cutlery, paper crockery, &c. About 50 merchants come annually from Tonquin, each with 20 or 30 horse-loads of merchandise. Large quantities of salt, with spices, woollen cloths, &c., are imported from Rangoon, to which the Laos merchants take jaghery, drugs, dyes, silks, cottons, lacquered wares, gold, silver, copper, and other metals, partly native produce, and partly obtained from China. The intercourse with the Tenasserim provs. is increasing; and some British cotton and woollen goods, salt, &c., are bought by the Shans at Martaban. In N. Laos, however, the people are not dependent on the coast for salt, a good deal, though of inferior quality, being there collected in the plains. A caravan occasionally comes from Siam.

The government is what is commonly, though incorrectly, called an hereditary despotism. The king is assisted by 4 councillors. The laws, derived from the Institutes of Menu, are administered by the councillors, under whom are 8 inferior judges. Their general tenor is the same as that of the Siamese laws, but they are not generally enforced with so much rigour. Unlike most E. countries, the people have a right of property in the soil, and may dispose of it at pleasure: waste land may be occupied by any one, and if he cultivate it, he establishes a right to its exclusive possession. In N. Laos, a small military force is kept up. The Shans are said by Kempfer to resemble the southern Chinese; but Captain Low thinks them more analogous to the Birmese; to whose dress, habits, customs, &c. their own are very similar. Various books have been written in the Shan language, which is little different from the Pali: it is written in a character similar to the Birmese.

Some of the most striking and venerated Buddhist temples are said to exist in this country. The most noted is that of Nang-rung, N.W. of Zimnal, the cap. of N. Laos. The chief city of S. Laos, Lanchang, is reported to be both populous and comparatively well built. The inhab. assert that they are the stock whence the Siamese sprung, and this the latter do not hesitate to acknowledge. The emigration of the Siamese southward from Laos is conjectured by Captain Low to have been about the year 638. (*Low's Hist. of Tenasserim, in Journ. of Royal Asiatic Soc.* v. 245—263.; *Crawford's Embassy to Siam*; *Hamilton's E. I. Gaz.*, &c.)

LAPLAND, the most northerly country of Europe;

belonging partly to Russia, and partly to Sweden, between lat. 64° and 71° N., and long. 10° and 42° E.; bounded N. by the Arctic Ocean, E. by the White Sea, S. by Sweden and Finland, and W. by the Atlantic Ocean. Area 150,000 sq. m., about 2-3ds of which belong to Russia. Pop. vaguely estimated at 60,000, of whom only 9,000 are Laplanders, the rest being Swedes, Norwegians, and Russians. That part of Lapland which lies along the N. shore of the Gulph of Bothnia, is an extensive plain, abounding in immense forests of spruce and Scotch fir; but at the distance of 80 m. from the sea, the ground becomes gradually elevated, and is at last full of lofty mountains, composed chiefly of primitive and transition rocks, very rich in copper, and other metallic ores. These, between the lat. of 67° and 68° 30', rise to a height of from 5,500 to 6,200 ft., which, in this hyperborean region, is 2,700 ft. above the line of perpetual congelation. These central mountains are the highest in Lapland. The ranges continue all the way to the N. Cape, but decline gradually in height. The principal rivers of Lapland are the Torneo, which, taking its rise in the highest mountains, near lat. 68° 20', holds a course first S.E., and afterwards nearly S., receiving tributary streams from the right and left, till it reaches the N. extremity of the Gulph of Bothnia, at the town of Torneo. The Kemi, a river almost equally large, rises in the N.E., flows S., and falls into the Gulph of Bothnia, not far from the Torneo. The Lulea and Pitea both rise in the mountains of the N.W., in about lat. 68°, and flow S.E., nearly parallel to each other, till they also reach the Gulph of Bothnia. In N. Lapland, above lat. 68° 30', the slope of the ground is N. The Tana, which is the principal river in the N.E., and the Alton, the largest in the N.W., both run into the Arctic Ocean. All these, like the rivers of Switzerland, are comparatively small in winter, and become mighty streams in summer, on the melting of the snows. Lapland abounds in lakes: that, called Enare, or Indlager, in Russian Lapland, in lat. 68°, is of great size. Several of the others are likewise extensive, and are traversed by considerable rivers.

The climate of Lapland is celebrated for extreme coldness; but, in fact, it is milder than that of any other region under the same parallel. The coasts of Norwegian Lapland and Finmark are free from ice early in May, whereas the sea of Siberia is never open till the end of July. The climate of one part of the country, also, differs very much from that of another. In the maritime districts, the temperature is pretty uniform: the winters are not severe, but the summers are raw and foggy; while, in the interior, the winter is intensely cold, but the heat of summer is steady and fructifying. The mean annual temperature at the N. Cape (lat. 71° 11' 30") is 6° higher than at Enontekis in the interior (in lat. 68° 30'). Yet, at the latter, the thermometer rises in July to 64°, while at the Cape it seldom reaches 50°. In both, the summer begins in May and ends in September; but in the valleys, among the mountains, corn ripens in the short space of three months. The sun being so many hours above the horizon, the heat is then intense, and the clouds of insects are exceedingly troublesome. The cold of winter, on the contrary, is frequently so intense as to freeze brandy, or spirits of wine; and the rivers in the interior are covered with ice to the depth of several feet. Towards the N., the sun remains for many weeks below the horizon in winter, and in summer is as long without setting. During the long night of winter, however, the darkness is relieved by the brightness of the moon and stars, and the vivid coruscations of the aurora borealis. The twilight is also such that, during several hours each day, it is possible to read without a lamp or candle.

The vegetable productions of the maritime and mountainous district differ as widely as the climate. In the low country, particularly near the shores of the Gulph of Bothnia, are large forests of spruce, Scotch fir, and other resinous trees; potatoes, turnips, and other vegetables, are cultivated; and roses, carnations, &c. deck the gardens during the brief months of summer. In a colder region the spruce disappears, the Scotch fir being the only tree of that class that braves its severity. It, in its turn, declines in vigour, till it totally disappears; and its place is supplied by the birch, which again yields to the *Salix glauca*, a plant unknown in Britain, and peculiar to cold climates. The *Rubus Chamamorus*, *Rubus arcticus*, and other berry-bearing plants, are here numerous, and support even an additional degree of cold; but we arrive soon after at a climate where nothing is to be seen but a few of the hardiest plants, such as the dwarf birch, with the *Salix lapponica*, *Orchis hyperborea*, and other trees and shrubs peculiar to the country. A few mosses still keep their ground; but before reaching the point of perpetual congelation, there is here, as in other countries quite destitute of every species of vegetation, neither plant nor animal to be seen. The rein-deer's lichen is of a bright yellow colour, which, as the plant withers, becomes snow-white; it thrives better near the fir forests

than in the loftier regions of birches, and a plain covered with this moss forms a Lapland meadow. It is the winter food of the cattle, and, when ground, is used as flour by the inhab. Rich pastures also are furnished by the bear's moss (*Muscus polytricha*), which, on account of its softness and elasticity, is made into beds and mattresses, alleged by travellers to be superior to any in Europe. The root of the *Angelica*, and the stem of the *Fonchus*, are used as food, and of all the grains barley is that which thrives best; but the potato yields a surer harvest, and, if generally cultivated, might afford sufficient sustenance for the inhab. The turnip and cabbage, introduced by the Russians, succeed well on the low lands. The best agriculturists are the Finnish colonists, who have raised corn at Alten, in lat. 70°, which may safely be pronounced the N. limit of husbandry; but tillage, generally, is in a very backward state.

Among the animals of Lapland, the rein-deer is the most valuable. It serves as the principal beast of burden; its milk is highly valued; its flesh supplies the chief nourishment of the people during a part of the year; its sinews are made into thread; its horns into spoons, and other domestic utensils; and its skin furnishes a great part of their dress. The rein-deer bears a great resemblance to the stag, but is much smaller, being in general only four feet in height from the foot to the top of the back, and but two feet long in the body. It is remarkable equally for the elegance of its shape, the beauty of its palmated horns, and the ease with which it supports itself during a long winter of nine months. In summer it feeds on grass, and is extremely fond of the herb called the great water-horse tail; but in winter it refuses hay, and obtains its whole nourishment from the rein-deer moss. It thrives best in the cold dry regions of central Lapland, where numerous herds roam at large the whole year round, under the care of shepherds assisted by dogs. The rein-deer, indeed, form the chief wealth of the natives. The poorer classes have from 50 to 200; the middle classes from 300 to 700; and the affluent often above 1,000 head. The females are driven home morning and evening to be milked, and yield about as much milk as the goat. Horses, oxen, goats, and sheep are common; and in the forests are bears, gluttons, wolves, elks, hares, martens, squirrels, and lemming-rats. Birds of passage arrive in flocks every summer; capercaillies, grouse, partridges, and aquatic fowl, are very plentiful near the coast, and lammergeyers and eagles soar nearly to the line of perpetual snow. The rivers are stored with salmon, herring, and other fish; and in July and Aug. insects abound in such enormous quantities, that Wahlberg has supposed that their dead bodies serve as an excellent manure for the soil.

The Laplanders, who call themselves *Same*, are most probably a tribe of Tschoude or Finns, though difference of situation has, in the course of ages, produced a fundamental difference of character. The Finns, an industrious though unpolished race, were encouraged to form colonies in Lapland about a century ago; and their number has since increased rapidly, while that of the Laplanders has been stationary, perhaps on the decline. Of the 27,000 inhabitants of Norwegian Lapland, there are not, it is thought, above 6,000 Laplanders. They have swarthy complexions, black short hair, wide mouths, hollow cheeks, and long and pointed chins. They are strong, active, and hardy; but they suffer much from disease, and few live beyond fifty. Dishonesty is general among them, and dram-drinking is often carried to a fatal excess. They were not converted to Christianity till the 17th century. Those of the Russian province are professedly of the Greek church, while those subject to Sweden are Lutherans. But notwithstanding the efforts of the missionaries, they are still very ignorant both of the doctrines and duties of Christianity, and retain many heathen superstitions.

The rein-deer Laplanders live either wholly or principally on the produce of their herds, building their rude huts during summer in the moss pastures of the elevated country, and in winter on the level tracts inhabited by other nations; but the fishing Laplanders confine themselves to the banks of lakes and rivers, and catch fish and beavers, which, as well as skins and venison, they exchange with the Russians and Swedes for spirituous liquors, meal, salt, and tobacco.

The clothing of these half-civilized tribes is abundantly coarse, consisting of a woollen cap, a coat commonly of sheep skin, with the wool inwards, and a great coat, either of kersey, or of rein-deer skin, with the hair outwards. They have no stockings, but a kind of pantaloons of coarse cloth, or tanned leather, fitted close to the legs; their shoes are made of rein-deer's skin, the sole being taken from the forehead, and the upper leather from the legs. The women dress nearly in the same manner, but with the addition of some rude ornaments; and, in the case of the more affluent, of mantles and aprons of Russia linen or cotton. These, and leather for the boots of the men, are obtained in the petty traffic of the Laplanders with the Swedes. When tra-

velling, and exposed to the winter blast, it is customary for the natives to cast a hood over the head, neck, and shoulders, leaving only a small opening, through which they see and breathe.

The language of the Laplanders is a Finnish dialect; but it contains so many obsolete and foreign words, that they are not intelligible by the inhabitants of Finland, nor indeed can the tribes in one part understand the language spoken by those of another. The Laponic has been mixed more than the other Finnish tongues with the German and Scandinavian, and hence its principal roots and derivations bear much less affinity with those in the languages of Upper Asia. (*Malte-Brun, Géog. Univ.*; *Schnitzler, La Russie*, p. 606, &c.)

LAR, a town of Persia, cap. of the prov. of Laristan, 130 m. W.N.W. Gombroon, and 182 m. S.E. Shiraz; lat. 27° 30' N., long. 52° 45' E. Pop. 12,000. It stands at the foot of a range of hills in an extensive plain, covered with palm trees. The houses generally are commodious and neatly furnished, and there are several handsome public buildings. The governor's house, in the middle of the city, is surrounded by a strong wall, flanked with towers. The bazaar, which is in good repair, is alleged to be the best structure of the kind in Persia: it is very ancient, and built on a similar plan to that of Shiraz, but on a much greater scale, with loftier arches, greater length and breadth, and superior workmanship. The castle, on the top of a hill, overlooking the town, is now in ruins. Rain-water being the only water to be found in this parched and arid country, is collected during the wet season in large cisterns, similar to those in the island of Ormuz.

Lar was formerly the capital of an Arabic kingdom destroyed by Shah Abbas II. It is at present in a state of decay; but it still manufactures fire-arms, gunpowder, and cotton fabrics, exchanged at Shiraz and Gombroon for coffee, sugar, Indian silks, and European merchandise. (*Kinney*, p. 83.)

LARGS, a bor. of barony, and sea-port of Scotland, co. Ayr, beautifully situated on a bay of the same name, and overhung on the land side by richly-wooded hills, 22 m., dir. dist. by land, W. by S. Glasgow, and 40 m. by water. Stationary pop. 1,200; but in summer, there are sometimes 1,000 visitors at sea-bathing. It has an elegant suite of public baths, with a reading-room and library, and various circulating libraries. Though not built on any regular plan, it contains many excellent and substantial houses. The par. church, with its spire and clock, is eminently conspicuous. Many gentlemen's seats are in the neighbourhood.

Largs is celebrated in history as the scene of a great battle, fought in 1263, between Haco, king of Norway, and the troops of Alexander II., in which the former was signally defeated. The cairns and tumuli, erected by permission of the conquerors, by the Norwegians over their slain, are still visible on the S. side of the village.

LARISSA (Turk. *Yenischer*), a town of European Turkey, prov. Trikala, 25 m. N.W. Volo, and 70 m. E.S.E. Yanina; lat. 39° 52' N., long. 22° 40' 15" E. Pop., according to Holland, 20,000, though but little stress can be laid on this statement. It is a walled town, and is situated on the Selembria (an. *Peneius*), crossed here by a bridge of 10 arches. This river approaches it through a tract of woodland, almost concealing it from view, and then flows close at the foot of a convent of Dervishes, two large Turkish mosques, and several groups of lofty buildings, soon after disappearing among the woods. The winter floods, which come down from the mountains with great force, frequently occasion great damage to the clay-built houses in the lower part of the town. Internally, Larissa is mean and irregular; near its centre is an open space, having some good bazaars; but the streets are generally ill built, narrow, and filthy; and both houses and people seem to be in the most abject condition. Besides the mosques, there is a Greek metropolitan church; and these, with some baths and a khan, constitute all the public buildings of the place. There is very little trade, and the bazaars are ill supplied with manufactured goods. The plains surrounding Larissa consist of a fine alluvial soil, and are extremely fertile. They produce large crops of Indian corn, wheat, and tobacco; and northward are rich sheep pastures. In fact, there wants nothing but good government and good laws to render Larissa and its vicinity industrious, rich, and populous; but no improvement of any kind need be expected under the worn out, imbecile despotism of Turkey.

If Holland and Dodwell be correct in their opinion, that the modern Larissa occupies the site of the ancient city of the same name, it is of very high antiquity, claiming, in competition with Phthia, the honour of being the birth-place of Achilles, hence called *Larissæan*, and being probably identical with the *Ἰσάριον Ἄγρον* mentioned by Homer in his catalogue of the Greek forces. (*H. S.* 691.) At a subsequent period it acquired some celebrity from its adoption of the democratical form of government, and from its zealous support

of the Athenian expedition during the Peloponnesian war (Comp. *Archaol. Pol.* 4, with Plut. *L.* 28.) It afterwards fell into the hands of Philip of Macedonia and his successors, under whom it remained till the subversion of their empire by the Romans. It appears to have declined under the early Roman emperors from its ancient importance. Learn says of it —

"A very fine Larion point —" (Lar. 4, in 1815.)

The town and neighbourhood were subject to violent fires in the same violent and sudden inundations which now cause such extensive mischief. (*Holland's Travels*, pp. 248—250; *Danford's Travels*, 1. 108; *Cramer's Greece*, 1. 264.)

LARISTAN, a small part of Pevlos, part of the an. Carionian, extending along the N. shore of the gulph of that name, between 36° and 36° 15' lat., and 25° and 25° 15' long., bounded N.W. by Pevlos, and N.E. by Larion. Area, 14,000 sq. m. Pop. uncertain. It is the poorest and least productive part of Pevlos, diversified indeed with plains and mountains, overlooking to the sea, but so arid and so destitute of wholesome water, that, were it not for the perpetual rains, which fill the channels of the natives, and enable them to cultivate the date tree, with small quantities of wheat and barley it would be of no use. The soil is in the possession of all under their respective shares, in case paying only a trifling tribute directly paid by production, and most have enclosures along the edge of them are *Caryon*, but *Nabata*, opposite the island of which has one of the most secure. The interior of the country has a rugged. Lar is the cap. which.

LARION, a sea-port town of Ireland, an. Antistia, on a point of the lake of the an. called *Larion Lough*, 10 m. N. by E. Belfast. Pop. in 1841, 2,244. It consists of an old and a new town, and has a parish, the parish church, a R. Catholic chapel, 3 Presbyterian, and 1 Methodist meeting-house, and a national school. A market is held every six weeks, and petty sessions every fortnight. It is a manufacturing and coast-guard station. It formerly carried on a brisk trade in salt, but its trade is now chiefly confined to the export of linen, grain, and provisions. There amounted, in 1855, to the value of £1,200, of which linen was estimated to make £60,000. Considerable quantities of linen are also exported. Coal is the principal article of importation. The harbour is first-class, and is an admirable one for the smaller class of vessels, which enter and depart at all times of the tide. Markets on Tuesdays, Thurs, on July 21, Dec. 1 and on the first Monday of every month. Post-office revenue, in 1855, £121, in 1856, £116. A branch of the Belfast bank was opened in 1855. Fish is abundant, particularly mackerel, hake, cod, and mullus, salmon is taken near the entrance of the bay. The fish are sold to the fishing but are a go to sea only when there is a price.

LARIONA (an. Larion) a cap. of Cyprus, on the S.E. shore of the Salamis. 35 m. S.E. Nicosia, lat. 35° 45' N. long. 33° 45' E. Pop. estimated by consists of an upper and a lower town. The lower town, built along the sea, is the more inland, and on higher with the exception of a few belonging to the French mar-chants are built of mud bricks dried in the sun, and are much in the extreme, they have mostly however very fine gardens, but these being inclosed by high walls, contribute little or nothing to the beauty of the town, as seen from the streets. It is the seat of a Greek bishopric, and in the Upper Town is the cathedral and convent of St. Barbara and the Lower has a mosque, a convent, the chapel of St. Lazarus, and the remains of a castle constructed by the prince of the House of Lusignan. Being situated on the verge of a marshy plain, overgrown by high mountains from the cooling influence of the N. winds, and having near it extensive lagoons, which in summer produce large quantities of salt. Larion is hot, and, at certain seasons, unhealthy. It has no good water except what is brought to it by an aqueduct constructed, in 1767 by a Turkish emir. There is no harbour, but the bay which opens to the S.E., and derives its name from the salt lagoons, affords good anchorage in deep water at no great distance off shore.

Such has been the influence of that reputation and its consequent depopulation under which this ancient town has long groined (see *Verger*), that Larion, though no more and decayed, is now the second city, theemporium of its commerce, and the principal residence of the foreign consuls. The exports consist of wheat, several cargoes of which are exported to Spain and Portugal, with barley, cotton, silk, wine, and drugs, the imports are rice and sugar from Egypt, and cloth, hardware, and various goods, from Malta and Smyrna. When Kismet visited

the island, this traffic was carried on in Levantine ships, under English colours, and much, probably, is still the case (*Annals of Asia Minor*, 2d. ed. 108; *Drommond's Travels* 140.)

Drommond, Pausanias, and the Abbé Martini, among the opinion that Larion occupies the site of the ancient Larion, while Kismet and others suppose the latter to have been near a cape, still called Chita, a few miles S.W. from Larion, where there are numerous tombs and remains of ruins. The probability however, seems to be in favour of the supposition that the site of Larion and Larion are really identical. (*Drommond*, p. 264; *Cherub* 10, 26, 27, 28.)

Larion was founded by the Phoenicians at a very remote period, and will be for ever memorable to the birth place of Zeno the founder of the stoical system of philosophy. Perhaps we may be excused for saying that, notwithstanding his error in supposing pleasure and pain to be absolutely indifferent, no system of philosophy has ever been proposed so well suited as that of Zeno, to induce its votaries with the purest principles of benevolence, and the most heroic magnanimity.

"There has always existed, however, among the Larionians, a spirit, perhaps a prejudice, against the sea, and all matters connected with it." (*Larion*, 2. 1. 1815.)

Cimon, the great Athenian commander, either died at one of the capes or immediately after he had taken it. The epoch of the destruction of the city is unknown.

LARSA, or H'LABBA (Land of the Distant Subtil-ty), a city of the Chinese empire and the cap. of Tschet, prov. Ouh, 200 m. S. by N. Kaimanien, the cap. of Hopen lat. 35° 30' N. long. 107° 45' E. Pop. uncertain, but supposed to be about 24,000. It is situated on the Gialien, a tributary of the Yangtze about 20 m. from its mouth with that river, is an extensive and fertile plain about 20 m. long and 20 m. broad, surrounded by lofty mountains. It is not walled, but its streets and houses, towers, houses, and handsome detached residences, indicate its importance comparatively at least, with other towns of the kingdom. The houses are built of a brown stone, are two or three stories high with intricately carved roofs, and though somewhat grotesque, give the town a wealth and respectability. The great temple of Buddha, which is likewise the residence of the Dalai Lama, the pontiff of all the Tibetans, stands on the hill S.W. of the city, in the W. part of the city, and consists of an extensive range of square-shaped buildings crowded in the centre with a gilded dome and occupying altogether an area of about 40 hectares. It comprises, according to the Chinese geographers, 10,000 apartments, varying in size and grandeur according to the supposed dignity of the monks which they respectively contain. Contiguous to the temple on its four sides, are the four celebrated monasteries of Shengsheng, Sheng, Chaidan, and Samy, alleged to be inhabited by upwards of 4,000 monks, and much resorted to by the Chinese and Mongols as centres of philosophy and Buddhism. In and near the city are five other temples built on the same general plan, but very inferior in size and splendour to that just described. Larion, besides being the resort of various Buddhists from all parts of China, Tartary, Nepal &c. is a place of considerable trade in silk, wool and goats hair, woollen cloths and cashmeres, velvets, linens, and various kinds of fruit, silver, gold, and precious stones chiefly with N. Hindostan, Nepal, Siam, Great Burmah, and China, and in the markets, where the goods are exposed for sale on mats, regularly appointed market-inspectors fix the prices, from which no deviation is allowed. Manufacture is much followed, and with great success, and the lapidaries, workers in metal and engravers are not inferior to the Chinese. (*Reise Entdeckungs von Asien*, 2. p. 237—238; *Reise von Hindostan*, p. 266; *Henderson's Gen.*)

LATAKIA, or LADIKIEN (an. Lathraia of ancy), a town of Syria, in the port of Aleppo, 20 m. S.W. Aleppo, and 70 m. S. by E. Iskenderi, lat. 35° 30' N. long. 35° 45' E. Pop., according to Mr. Consul Moore 5,000, but, according to Mr. Barber, 10,000. (*Barber's Report on Syria*, p. 114.) The town comprises an upper and a lower part, separated by gardens and plantations. The lower portion called the *hama*, consists of a double street, running parallel to the shore and another leading down to it from the upper town, having minarets, and places of resort for the poorer people. The port is a small shallow basin with a narrow entrance, and well sheltered except westward, on its N. side is a ruined castle standing on a rock surrounded by urban with the main land, and at the E. end are the custom-house, landing-place and several large warehouses. The upper town, which is a very elegant,

"The reader who wishes to know the distance between the cap. of the town, will do well to go to the *Reise von Hindostan*, p. 266, 267, 268, 269, 270, 271, and to the *Reise von Asien*, 2. p. 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000.

dated state, in consequence of the damage occasioned by frequent earthquakes, consists of several narrow and irregular streets: the houses are constructed of cut stone, flat-roofed, usually two stories high, with an inner court. The greatest ornament of the place is a triumphal gate, between 30 ft. and 40 ft. in height, encircled near its summit by a handsome entablature: its four arches are in the Roman style of architecture, and, as the general appearance of the building denotes great antiquity, it was probably erected in honour of Julius Cæsar, or, perhaps, Germanicus. (*Kinnear*.) The corners are adorned with handsome Corinthian pilasters; and one of its fronts exhibits a basso-relievo, with arms and martial instruments.

At no great distance is a mosque, built from the ruins of another ancient edifice, with Corinthian columns; and amidst the rocks and crags N. of the town is a large necropolis, containing numerous square sarcophagi, similar to those seen in the island of Milo. There are 3 other mosques and 2 Greek churches. The bazaars are poor and insignificant; and the only considerable article of trade is tobacco, raised near the town in large quantities, and highly prized all over the Levant, and at Constantinople. It pays a duty on being reaped of 34 piastres per cantar, and of 3 piastres per cantar on exportation.

The produce of cotton, in the Latakia district, is not usually more than sufficient for the consumption of the country; but when it exceeds it, the excess is exported to the French and Italian ports, the average price being 1,200 piastres per cantar. Bees-wax, scammony, and sponge, are the other chief articles of export. The imports comprise sugar, coffee, spices, cotton twist, and printed goods, woollen cloths, shawls, and tin. The trade of Latakia, however, is much restricted by the badness of its port, which is so choked up with mud and sand as to be inaccessible to vessels of more than 100 tons burden. Subjoined is an account of the number and tonnage of the vessels, and the value of their cargoes, that entered and left the port of Latakia in 1835, 1836, and 1837.

Years.	Arrived.			Departed.		
	Ships.	Tonnage.	Value.	Ships.	Tonnage.	Value.
1835	102	11,157	105,360	96	10,440	55,578
1836	106	12,332	121,347	102	11,647	29,715
1837	92	10,216	92,925	93	10,447	39,732

Latakia is the representative of the ancient Laodicea, so named by its founder, Seleucus Nicator, in honour of his mother, and was a town of considerable importance before the conquest of Syria by the Romans. It was visited by Julius Cæsar when on his way from Egypt to Pontus, and is styled Juliopolis on some of its medals. During the civil wars, Dolabella, with his fleet and army, was shut up in it by Cassius, and obliged to surrender. It became a bishop's see early in the Christian era, and was held by the Christians when the crusaders invaded Syria. It was afterwards included in the empire of Saladin, and was finally added to the Turkish dominions by Selim I., in 1517. The ruins of the ancient city fully attest its size and grandeur, and offer ready building materials to the modern inhab. The acropolis stood on a tabular summit S.E. of the town; but nothing remains of it beyond a few wells and cisterns. (*Kinnear's Asia Minor*, p. 163—169.; *Olivier, Voyage en Syrie*, &c., iv. 133.; *Bourning's Report*.)

LAUBEN, or LUBEN, a town of Prussian Silesia, gov. Liegnitz, cap. circ. of its own name, on the Queis, 40 m. W.S.W. Liegnitz. Pop. 5,640. It is surrounded with old walls, and garrisoned by invalids. It is the seat of judicial courts for the town and circle; has a Rom. Cath. and three Protestant churches, a gymnasium, an orphan asylum, two hospitals, a school for teaching the art of spinning woollen yarn, and some trade in woollen and linen fabrics. (*Von Zedlitz*; *Berghaus*.)

LAUDER, a royal and parl. bor. and market-town of Scotland, co. Berwick, distr. of Lauderdale, of which it is the cap., near the Lauder, a tributary of the Tweed, on the line of road between Edinburgh and Coldstream, 24 m. S.E. of the former, and 23 m. N.W. by W. of the latter. Pop. (which has long been stationary), 1,148. The only public buildings are the par. church, a dissenting chapel, the town-house, and gaol. Thiristane Castle, the ancient residence of the noble family of Lauderdale, is within $\frac{1}{2}$ m. of the town. It has a branch bank, various schools, and subscription libraries. A common, comprising 1,695 acres, is divided among the burgesses. In 1482, Cochrane and other minions of James III. were hanged by order of the Earl of Arran, and other noblemen, over the parapet of a bridge in the vicinity of this town. Lauder unites with Haddington, Dunbar, Jedburgh, and N. Berwick, in sending one mem. to the H. of C. Registered electors, in 1849-50, 56.

LAUENBURG, a town of the Danish dom., cap. of

the duchy of same name, on the Elbe, 28 m. S.E. Hamburg. Pop. about 3,400. It has the ruins of a castle formerly occupied by the dukes of Saxe Lauenburg, a church, an hospital, and a large market-place. A brisk transit trade is carried on between the Elbe and Lubeck through this town, which is also a station for collecting tolls on the Elbe, amounting to between 40,000 and 50,000 rix-dollars a year. (*Horschelmans's Stein*, i. 524.; *Berghaus*.)

LAUNCESTON, a parl. and mun. bor., market town, and par. of England, co. Cornwall, in the N. division of hund. East, on the Attery, a tributary of the Tamar, 19 m. E.N.E. Bodmin, 20 m. N.N.W. Plymouth, and 200 m. W. by S. London. Pop. of parl. bor. (which comprises, besides the old bor., the parishes of St. Stephen, St. Thomas, Lawhitton, and S. Petherwin), in 1841, 6,070. The town consists of two chief avenues on the London and Tavistock roads, intersecting each other almost at right angles, crossed by several narrow and mean-looking streets. It was formerly surrounded by walls, parts of which, with 2 gates, are yet standing. The ruins of an ancient castle cover a large extent of ground, and attest its former strength and importance. A part of its keep was once used as a county gaol; but the prisoners are now sent to Bodmin, which has been the assize town since 1838. A small guildhall is the only public building devoted to civil purposes. The church, a handsome Gothic structure built of granite blocks, enriched with curiously carved ornaments, has a lofty tower at its W. end: the living is a curacy of the yearly value of 116*l*. There are places of worship also for Wesleyans and Baptists, with attached Sunday schools. A grammar school, founded by Queen Elizabeth, has, according to the charity commissioners, fallen into a state of decay, there having been no master since 1821. Baron's charity school is in nearly as useless a condition, and the only place of instruction for the poor is the national school, attended by about 260 children. Numerous money charities are chiefly distributed by the corporation. This is neither a manufacturing nor a commercial town. Serge-weaving and wool-spinning formerly employed a considerable number of hands; but the trade has wholly disappeared. The removal of the assizes and quarter sessions has, also, deprived the town of much of its activity, and it now depends chiefly on its retail trade and on its markets, which are large and well attended. Market-day, Saturday. Cattle fairs, first Thursday in March, third ditto in April, Whit-Monday, July 6., Nov. and Dec. 6.

Launceston, otherwise called *Dunkered*, received its first charter from Richard, Earl of Cornwall, in the 13th century, and its privileges were confirmed by Richard II., and many subsequent sovereigns. It is governed under the Mun. Reform Act by 4 aldermen and 12 councillors; but it has no commission of the peace. Corp. revenue, in 1847-48, 1301*l*. Launceston returned 2 mems. to the H. of C. from the 23d Edward I. down to the passing of the Reform Act, which deprived it of one member. Previously to this act, the mems., though formally elected by the corporation, were, in fact, mere nominees of the proprietor, the Duke of Northumberland. Besides depriving it of 1 mem., the Reform Act enlarged the limits of the bor., as stated above. Reg. electors in 1849-50, 267.

LAURENCE, or LAWRENCE (St.), the principal river of N. America, and, when considered, as it should be, in connection with the chain of lakes or inland seas of which it is the outlet, it is one of the largest rivers in the world, extending from W. to E., through about 27° of long., and about 8° of lat. Regarding then the St. Laurence, in this point of view, or as a general name for the connecting line of that great river or water system that unites with the Atlantic in the Gulph of St. Laurence, its remotest source will probably be found to be the St. Louis, an affluent of Lake Superior, rising in the table land of the Huron country, near the sources of the Mississippi, flowing S., and of the Red River, flowing N. It receives different names in different parts of its course, being, as already seen, at first the St. Louis; between Lake Superior and Lake Huron, the St. Mary; between Lakes Huron and Erie, the St. Clair and Detroit; between Lakes Erie and Ontario, the Niagara; and from Ontario to Montreal it is sometimes called the Cataract or Iroquois, its course from Montreal to the sea being the St. Laurence, properly so called, but it is now usually called the St. Laurence from Lake Ontario to the sea. Considered in this point of view, its entire course, from its source to its mouth in the Gulph of St. Laurence, in about long. 64° 30' W., may be estimated at upwards of 2,000 m. Besides traversing Lake Superior, Huron, Erie, and Ontario, the Lake St. Clair, and some similar sheets of water, are mere enlargements of its bed. Lake Michigan also is included in its basin, which is roughly estimated by Darby to comprise an area of upwards of 500,000 sq. m., including the largest collection of fresh water to be found on the surface of the globe. (*Darby's Geogr. View*,

deg. of N. lat., and the 57th and 65th of W. long., bounded N. by Lower Canada and Labrador, E. by Newfoundland, S. by Nova Scotia and Cape Breton, and W. by New Brunswick and the peninsula of Gaspé (Lower Canada). At its N.W. extremity it receives the river St. Lawrence; and it communicates with the ocean on the N.E. by the Strait of Belle-Isle, between Labrador and Newfoundland, on the S.E. by its principal outlet, the channel called St. Paul's, between Newfoundland and Cape Breton, and on the S. by the Gut of Canso, between Cape Breton and Nova Scotia. It contains the large islands of Anticosti and Prince Edward; and the Magdalen Islands, a group about lat. 47° 30', and between long. 61° 27' and 62° W., inhabited by perhaps 1,000 Canadian, French, English, and Irish settlers, who carry on a profitable fishery. The shores of the gulph are generally precipitous, barren, and inhospitable; and dense fogs are very prevalent. A powerful current sets continually from Hudson's Strait into the gulph, through the Strait of Belle-Isle, and meeting the stream from the estuary of the St. Lawrence forms a dangerous race off the S. coast of Newfoundland. (*Purdy's Memoir of the Atlantic*, pp. 105. 144; *Encyc. Amer.*)

LAUSANNE, a city of Switzerland, cap. canton of Vaud, at the termination of a spur from the chain of the Jura, being, according to Ebel, 480 ft. above the level of the Lake of Geneva, from the N. shore of which it is about 1 m. distant, and 30 m. N.E. Geneva: lat. 46° 31' N., long. 6° 47' 22" E. Pop. 14,126. It is finely situated on three eminences, and their intervening valleys; but, from being on uneven ground, its streets are steep and irregular; they are also generally narrow and ill paved, and the interior of Lausanne by no means corresponds with its exterior appearance. It is divided into 6 quarters, the city and 5 suburbs, and is now an open town, but on its S. side are some remains of ancient walls. At the highest point of the city is the castle, a massive square building of stone, flanked at its angles by four brick towers. It was originally the residence of the bishops of Lausanne, but is now the council-house of the canton: its terrace, and that of the cathedral, commands magnificent views of the vicinity, the lake, and, far beyond, the stupendous mountains of Savoy. The church, formerly the cathedral, a vast Gothic building, founded about 1000, but not finished till the 13th century, is certainly the finest religious edifice in Switzerland. It has two large towers, one supporting an elegant spire, the summit of which is 240 ft. above the ground, and a fine round window of stained glass, 30 ft. in diameter: in its interior are some singular specimens of architecture; and amongst others the tomb of Amadeus VIII., duke of Savoy. This personage, after abdicating the dukedom, which he had greatly enlarged, and governed with singular ability, was elected pope, by the title of Felix V., under which name he is best known in history. But another pope having been elected, about the same time, by a different party in the church, Felix, to terminate the schism, resigned the tiara in 1449. He died within two years of this event. (See *Biographie Universelle*, art. *Savoie*, *Amé VIII.*) The church of St. Francis; the cantonal college, with a library and museum, comprising collections of antiquities and minerals found in the neighbourhood; the bishop's palace, now appropriated to a school of mutual instruction and the district prison; the cantonal hospital, a fine edifice in the Tuscan order; the lunatic asylum of Champ d'Air; the new penitentiary, established in 1822, and organised like that of Philadelphia; the barracks, theatre, charity schools, and post-office, are the other chief public buildings.

Lausanne will be ever famous in literary history, from its having been the residence of Haller, Tissot, Voltaire, and Gibbon. The house occupied by the latter, and in which he wrote the last half of his immortal work, is still in good preservation, and is the grand object of attraction to all travellers to Lausanne. "It was here," to borrow the beautiful passage in which Gibbon has perpetuated the memory of the event, "it was here, on the day or rather night of the 27th of June, 1787, between the hours of 11 and 12, that I wrote the last lines of the last page, in a summer-house in my garden. After laying down my pen, I took several turns in a *berceau*, or covered walk of acacias, which commands a prospect of the country, the lake, and the mountains. The air was temperate, the sky was serene, the silver orb of the moon was reflected from the waters, and all nature was silent. I will not dissemble the first emotions of joy on recovery of my freedom, and, perhaps, the establishment of my fame. But my pride was soon humbled, and a sober melancholy was spread over my mind, by the idea that I had taken an everlasting leave of an old and agreeable companion, and that whatsoever might be the future date of my history, the life of the historian must be short and precarious." When Inglis visited Lausanne a few years ago, the library of the historian is said to have been complete, but it has, we believe, been dispersed in the interval. Voltaire, pre-

viously to his settling at Ferney (which see), lived at Monrepos, a little distance from Lausanne, on the Bern road; and Byron wrote his "Prisoner of Chillon" at Ouchy, the port of Lausanne, on the Lake.

Lausanne is now, as in the days of Gibbon, distinguished by its good society, and is in all respects a desirable place of residence for those who are neither anxious to be rich, nor ambitious of political distinction. "I noticed," says Inglis, "many new houses erecting, and very few old houses to let. The inhab., too, are steadily on the increase; and the number of resident strangers is also greater every year. There are some cheaper places of residence than Lausanne; but no one, perhaps, where education is cheaper or better. House rent is decidedly lower in the neighbourhood of most English provincial towns than here; but the prices of provisions are lower than in England. The inns are extremely good, and not excessively expensive; and at the principal *tables d'hôte* the traveller will find an excellent and even elegant repast. There are, besides, several good coffee-rooms, where the best French and Swiss papers are regularly received." (*Switzerland*, &c., p. 170.) There are, also, several public baths and libraries, and a chapel, in which the English as well as the Lutheran and Rom. Cath. service is performed. A steamer sails daily from Ouchy to Geneva, and the E. end of the lake.

Lausanne is the seat of the superior courts of justice, and authorities of the canton of Vaud, of the councils of health and public instruction, the inspector of militia, and military commandant of the canton, &c. It has an academy, with 14 professors, founded in 1537, a college for the French language, with schools of military science, horsemanship, and drawing, and numerous literary societies. Its manufactures are of little importance. Woollen cloths, paper, leather, and a few other articles, are made, but in small quantities. The celebrated actor, John Kemble, is buried in the cemetery of St. Pierre, about 2 m. from Lausanne, where a monument is erected to his memory.

Lausanne derived its name from the an. *Lausannum*, which stood a little to the W., in the plain of Vidy. Various Roman remains have been discovered there and elsewhere in the vicinity. Before the Reformation, Lausanne was a rich bishopric. It was taken in 1536, by the Bernese, and governed by an officer from Bern till 1798, when it fell into the hands of the French, who made it the cap. of the dep. of the *Leman*. (*Ebel, Manuel Suisse*, pp. 339—345; *Inglis's Switzerland*; *Cose's Switzerland*, ii. 84.)

LAVAL, a town of France, dép. Mayenne, of which it is the cap. on the Mayenne, and on the high road from Paris to Brest, 150 m. W. S.W. the former city, and 42 m. E. Rennes. Pop. (1846) 15,484. The town-proper is on a steep declivity on the W. bank of the river, across which it communicates with a suburb of about half its own size by 2 stone bridges, one built within the last 16 years. *Laval n'offre en général qu'un amas confus de vieilles maisons, séparées par des rues noires, escarpées, étroites, et tortueuses.* (*Dict Géog.*) But though ill built, Hugo says it is well paved. It is surrounded with old walls, parts of which are in good repair; and contains many antiquated buildings, among which is the *château*, formerly the residence of the dukes of Laval, with a ponderous round tower, now serving for a prison. Many of the private houses have stood for centuries, and are curious specimens of Gothic architecture, though chiefly built of timber. The church of the Trinity, on the site of a former temple of Jupiter, those of *des Cordeliers* and St. Venerand, and the new linen hall, are handsome edifices; but the prefecture, town-hall, theatre, and most of the other public buildings, are of a very ordinary description. It is the seat of tribunals of original jurisdiction and commerce, and has two hospitals, a communal college, a public library with 10,000 vols., and a Trappist convent. It has considerable manufactures of linen stuffs and thread, with fabrics of cotton handkerchiefs, calicoes, flannel, &c., numerous bleaching grounds, tanneries, and marble works. It is also the entrepôt for the linen fabrics and yarn made in the adjacent cantons; markets being held in it every Saturday for such goods, and for wines, brandy, timber, iron, wool, &c., in which it has a considerable traffic. Laval was founded by Charles-le-Chauve, in the 9th century, to arrest the incursions of the Bretons. It was taken by Earl Talbot in 1466, but retaken by the French in the succeeding year. It suffered greatly in the Vendean war at the close of last century. (*Hugo*, art. *Mayenne*; *Guide du Voyageur*, &c.)

LAVAUUR, a town of France, dép. Tarn, cap. arrond. on the Agout, here crossed by a stone bridge, 32 m. S.W. Alby. Pop. in 1836 (ex. com.), 4,622. It is divided into an old and a new town, both of which are ill built. It has a communal college, a public library, with 3,500 vols., with manufactures of silk stuffs, chiefly for furniture; and is the entrepôt for the silk goods of Upper Languedoc. In the 13th century, it was a stronghold of the Albigenses; but, after a lengthened and vigorous resist-

ance, it was taken in 1211 by Simon de Montfort, by whom it was treated with the utmost barbarity. (*Hugo, art. Tern.*)

LAVENHAM, or LANHAM, a market town and par. of England, co. Suffolk, hund. Babergh, 15 m. W.N.W. Ipswich, and 57 m. N.E. London. Area of par., 2,900 acres. Pop., in 1831, 2,107. The town, on a branch of the river Bret, in a valley encompassed by hills on all sides except the S., comprises several small streets, with a spacious market-place, having a stone cross in its centre. The church, which has a steeple 143 ft. high, is a handsome structure, partly of freestone, but partly, also, of curious inlaid flint-work: the porch is of highly ornamental architecture, and the timber ceiling and several pews in the interior are exquisitely carved, somewhat in the style of Henry VII.'s chapel in Westminster Abbey: the living is a rectory in the patronage of Calus College, Cambridge. There are also places of worship for Wesleyan Methodists and Independents, with attached Sunday schools. The charities comprise a free school, founded in 1647, and endowed with about 217. a year, some almshouses, and minor bequests for the poor. Lavenham had formerly a considerable business in the weaving of blue cloths, serges, and other woollen stuffs; but this has fallen to decay, and has been replaced of late years by the manufacture of hempen cloth, which here, as well as at Haverhill, employs a considerable number of hands. Lavenham is a bor. by prescription; and land within the manor descends to the youngest son, according to the custom of borough-English. It is one of the polling places for the co. Markets small and ill-attended, on Tuesday. Fairs for butter and cheese, Shrove-Tuesday and Oct. 10.

LAVORO (TERRA DI), a prov. of S. Italy, in the kingdom of NAPLES, which see.

LAYBACH (Germ. *Laiabach*, Illyr. *Lubiana*, an. *Æmona*), a city of the Austrian dom., cap. Illyria, and of the circ. of the same name, comprising the duchies of Carinthia and Carniola, in which latter Laybach is situated, on the navigable river of the same name, a tributary of the Save, 80 m. S.W. Gratz, 72 m. E.S.E. Agram, and 54 m. N.E. Trieste. Lat. 46° 1' 49" N.; long. 14° 46' 40" E. Pop., in 1838, 13,079 (*Berghaus*), comprising Germans, Italians, Illyrians, and Greeks. Laybach consists of the town-proper, 5 suburbs, and 3 adjacent hamlets. The town is situated on uneven ground, and has narrow and irregular streets, several of which, however, are well paved, and have foot-paths, while most of them are kept clean by running streams. Though ill laid out, Laybach is tolerably well built; and has several handsome public edifices, among which are the cathedral, St. James's church, and that of the Ursuline nuns, the Gothic town hall, the lyceum, to which an agricultural garden is attached; the theatre, masquerade-hall, barracks, military school, Auersperg palace, &c. The town is grouped round the castle hill: the castle being now converted into a house of correction, and state prison. Laybach has, in all, 10 churches, 2 hospitals, 2 convents, a gymnasium, a female school, a normal school, an ecclesiastical seminary, and orphan, lunatic, and other asylums. It is the see of a bishop, and the seat of the government of the circ., and of criminal, commercial, and mining tribunals for the prov., town, and district judicial courts, the board of tolls, salt duties, and customs for the kingd. of Illyria, the agricultural society of Carniola, the museum for the duchy, a philharmonic society, &c. It has 2 large sugar-refineries, and fabrics of linen stuffs, porcelain, paper, leather, &c.: its silk and woollen manufactures have fallen into decay. A considerable transit trade is carried on between Laybach and Trieste, Croatia and S. Germany. Within the last dozen years some extensive marshes in its vicinity have been in a great measure drained, which has rendered the town much more healthy. *Æmona* was destroyed by Attila in 452, but having been restored, is said to have been enlarged and fortified by Narses. It is celebrated in diplomatic history for the congress held here in 1821. (*Oesterr. Nat. Encyc.*; *Berghaus*; *Stein*; *Turnbull's Austria*.)

LE', or LEH, improperly called LADAKH, a city of Central Asia, and the cap. of the principality of Ladakh, in Thibet; in the valley of the Upper Indus, at the foot and on the slope of some low hills on the N. side of the river, from which it is separated by a sandy plain about 2 m. broad, 150 m. S.E. Iskardo, and 930 m. N.W. by W. Lassa. Lat. 34° 10' N.; long. 77° 45' E. It is enclosed by a wall, furnished at intervals with conical and square towers, and extending on either side to the summit of the hills. The streets are disposed without any order, and form a most intricate labyrinth; and the houses are built contiguously, and run into each other so strangely, that from without it is difficult to determine the extent of each. The number of houses is said, by the natives, to be about 1,000; but Moorcroft supposed they could scarcely exceed 800. They usually vary from 1 to 2 or 3 stories in height, and are furnished with light wooden balconies. The walls are sometimes wholly or

in part of stone, but in general of large unburnt bricks, whitened outside with lime. The roofs are flat, and like the ceilings, formed of small trunks of poplar trees, above which a layer of willow shoots is laid, covered by a coating of straw, and that again by a bed of earth. They constitute a very insufficient defence against the weather, as during rain the water soon softens the earth, and pours down into the apartment. The rooms, though frequently of good size, are rarely above 7 or 8 ft. high, and unprovided with chimneys, though in the kitchen there is sometimes a square hole, which acts as an imperfect ventilator. The doors are made of planks of poplar mortised together: iron nails are rarely used, as they are too costly, the iron ore of the country being little wrought for want of fuel. A few felts and sheepskins, and a bench or two with a large box, constitute the principal articles of furniture. The temples are built of the same materials as the houses, and pillars of timber, like those in private dwellings, support the beams, being little more, in fact, than the stems of the poplar or willow, stripped of their bark and painted. The most considerable building in Lé is the palace of the rajah, which has a front of 250 ft., and is several stories in height. The pop. is chiefly of the Tibetan stock, but numerous Cashmerians have settled in Lé, and intermixed with the natives. Lé is the seat of an active commerce in shawl-wool, brought thither from the surrounding territory, from Lassa, Chinese Turkestan, &c., to be transported to Cashmere; and a silver coin is struck at this city, from bars of silver imported from China, which is in general circulation throughout the whole of Western Thibet. (*Moorcroft's Trav.*, i. 315—320; *Hamilton's E. I. Gaz.*)

LEADHILLS, a mining village of Scotland, co. Lanark, in an alpine region, in an irregular valley 1,200 ft. above the level of the sea, and surrounded by wild heathy hills rising to the height of 2,450 ft. Pop. 1,188. The mining village of Wanlockhead, though only 1 m. distant, is in the co. of Dumfries. Both villages are inhabited solely by persons connected with the mines; which, however, belong to different proprietors, and are wrought by different companies. With regard to Leadhills, the mineral district comprises a space about 3 m. in length by 2½ in breadth, and is principally composed of greywacke, and greywacke slate, which range from S.W. to N.E. These strata are associated with transition clay-slate, called edge matter, from its vertical position, through which the metalliferous veins pass. The principal lead veins run S.E. and N.W., with a dip to the E. of 1 foot in 3. The common and compact galeua, or lead glance, are the principal ores, and furnish all the lead used in the arts. The vein stones are quartz, calcareous spar, brown spar, sparry ironstone, heavy spar, &c. Silver is contained in the lead, but in too small quantity to repay its extraction. The Leadhills mines are rented by the Scotch Mining Company from the proprietor, who receives every 6th bar of lead, as seigniorage. The produce varies much in different years. It has lately been above 700 tons a year; but it has sometimes been more than double that amount. The mines have been wrought from a very remote period. Gold is found in all the neighbouring streams, disseminated in minute particles among the clay more immediately covering the rocks, and also occasionally interspersed in quartz. The search for this precious metal was formerly conducted on a pretty large scale, under royal authority; but never with much success: and all attempts of the kind, except by the curious, have long since ceased.

Leadhills has a chapel belonging to the established church, a school, and an excellent library founded in 1741. Allan Ramsay, the Scotch poet, was a native of this place. The miners of Leadhills are regarded as more than usually intelligent, moral, and respectable. (*Jameson's Mineralogy of the County of Dumfries; New Stat. Acc. of Scotland, & Lanarkshire*, pp. 335—337; and *Dumfries-shire*, pp. 229—305.)

LEAMINGTON PRIORS, a town, par., and watering-place of England, co. Warwick, in Kenilworth, div. of hund. Knightlow, on the Leam, a trib. of the Avon, 2 m. E. Warwick, and 97½ m. N.W. London. Area of par., 1,720 acres. Pop., in 1811, 543; in 1821, 2,183; in 1841, 12,864; and in 1851, supposed to be upwards of 15,000! an unparalleled increase, occasioned by the growing celebrity of its mineral waters, and its many attractions as a place of fashionable resort. This town, which, 30 years ago, was an inconsiderable village, has now many noble and opulent residents; and the elegance of its squares, streets, crescents, and terraces, and of its numerous public and private edifices, justly entitle it to a place among the handsomest and best built towns in the kingdom. It formerly stood only on the S. of the river; but within the last few years it has been extended to the opposite side, with which it is connected by two handsome stone bridges: one of these, widened and beautified in 1840, has received the name of "Victoria Bridge;" the other, about a ½ m. lower down the Leam, on the

wine, corn, tobacco, and cotton. Dr. Bowring describes them as "an active and laborious race, who turn to good account such parts of the soil as are suited to tillage; and in no part of Syria," says he, "is there so obvious an activity, in none are the inhabitants so prosperous or so happy. The agricultural implements are rude: the plough is occasionally seen; but spade husbandry is much more used; and the steepness of the hill sides requires a succession of terraces for cultivation. Almost every male inhabitant is a small proprietor of land; and some of the emirs are large owners, either cultivating their estates themselves, or letting them out to tenants.

Some of the convents produce a wine called *I'mo d'Ora*, of good quality, both red and white; but it is often spoiled by the practice of boiling, and the use of skins. The tobacco of Mount Lebanon ranks also as the best in Syria. The quantity of raw silk produced in the district, exclusive of Tripoli, amounts annually to 240,000 oke, the price, in 1838, being from 120 to 125 piastres per oke: of this quantity 2-3rds are exported, and the rest consumed in the country. The weaving industry of Mount Lebanon, however, is perhaps superior to its agriculture; for Mr. Consul Moore reports, that of about 1,200 looms employed in this district, 300 were engaged in producing silk and cotton stuffs of the better qualities, 300 in weaving the *abbas*, or coarse woollen garment of the peasantry, and 600 in making coarse cotton shirting. The manufacture and weaving of silk thread is likewise pursued to a considerable extent; and the annual consumption of gold for this trade averages about 50,000 drachms. Exorbitant taxes are, however, a great hindrance to industry; and it is only matter for surprise that, notwithstanding they are mulcted of nearly half their earnings, these people maintain their "proud bearing and independent character." (*Bowring's Report on Syria*; *Elliott's Travels*, vol. II.; *Robinson's Syria*, vol. II.; *Riclandi, Pal. cap. xlviii. p. 311, &c.*)

LEBRIJA (an. *Nebrija*), a town of Spain, prov. Cadiz, in the *fat* of the Guadalquivir, 29 m. S. by W. Seville, and 23 m. N. Cadiz. Pop., according to Mifano, 6,716. A par. church, built of the materials of an old mosque, 4 convents, an hospital, and a well-endowed classical college, are the chief public buildings; and there is also a ruined castle of considerable extent. Being situated in the midst of an extensive and marshy *fat*, Lebrija is extremely unhealthy, especially during the heats of summer; but the circumjacent alluvial soil is highly productive. The town has fabrics of glass, earthenware, blankets and sacking, soap, bricks, tiles, and mortar. (*Mifano.*)

LECCE (an. *Sybaris* and *Lupia*), a city of the Neapolitan dom., prov. Otranto, cap. distr. and canton, on the road from Brindisi to Otranto, about 22 m. S.S.E. the former city, and the same distance N.W. the latter; lat. 40° 21' 14" N., long. 18° 10' 7" E. Pop. 14,000. "The circ. of the present city at least equals that of Foggia; its houses are infinitely larger; and it is even supposed that it would commodiously admit a pop. of 30,000. The city is fortified by a wall and towers, in bad condition, above a deep ditch; and possesses, moreover, a castle or citadel. It comprises the usual appendages of a provincial cap., a seminary, tribunal, and theatre; and adds to these a large manufactory of tobacco, the produce of which, as snuff, is highly esteemed throughout the kingdom. The principal gate of entrance to Lecce is very magnificent, though in a strange overloaded style of architecture. The facility with which the stone of the country is wrought*, has proved of great advantage to the architectural embellishments of Lecce; but it has also afforded a fatal facility of propagating the extravagant and almost incredibly bad taste exemplified in every building of consequence. Their magnitude alone is imposing to the spectator, while their innumerable absurdities disgust him. Among these edifices the churches are pre-eminent: they exhibit all the grotesque barbarity of the Gothic, without any of its spiry lightness; and their interior decorations, though by no means in the same style, are not likely to make up for these defects. The inside of the cathedral, dedicated to St. Oronzio, the patron of the city, is simple and unoffending. A few inlaid marbles, and some indifferent paintings, constitute its only ornaments. The ceiling is of brown carved wood, richly gilt; and it has, though perhaps not strictly adapted to a place of public worship, a handsome effect. In the principal square is an antique column brought from Brindisi: it supports the statue of the protecting saint, and near its base is a fountain without water, adorned by a small equestrian statue of one of the sovereigns of Naples. The inhabs. of Lecce are mostly in easy circumstances, and renowned for their courteous polished manners. The climate is oppressively hot

* "The stone of the country is of a fine white, so soft when taken out of the quarry that it may be moulded like wax, and will receive any form the slightest strokes of the chisel impress it with; yet, by remaining exposed to the air, it very soon acquires a proper degree of consistency. (*Swimburne's Travels*, I. 380.)

during the summer, and the porous quality of the material of which the town is built is supposed to absorb the damp in the morning, only to emit it again at sunset, to the great prejudice of the health of the natives. The common disorder of the country, to which strangers are more particularly subject, is an intense catarrh, known by the name of *costipo*, which is frequently attended by serious fever, and often turns to internal inflammation." (*Craven's Tour, &c.*, p. 134—137.) The surrounding distr. is one of great fertility; but bears all the marks of bad government, and backward cultivation. It supplies, however, silk, wool, flax, cotton, oil, wine, &c., of good quality, in which the city is said to have an active trade. Lecce has also manufactures of lace, linen thread, woollen cloth, and cotton and silk fabrics. The centre of the city is somewhat busy, being occupied by the artisans; but the other parts of the town are so very deserted, that Craven says he has frequently found himself the only person walking in one of the most considerable streets. The produce of Lecce is mostly exported from Otranto, or from San Cataldo on the Adriatic.

Sybaris, or Lupia, on the site of Lecce, was very ancient. Augustus remained in it for some days after his return to Italy on hearing of the death of Cæsar. In the middle ages it was called *Lycium*. It was made the *sed* of an earl soon after the establishment of the Normans; and Tancred, one of its earls, succeeded to the crown of Naples in 1189. The novelist Ammirato, and the anatomist Baglivi, were natives of Lecce. (*Craven's Naples*, I. 134—138.; *Swimburne's Two Sicilies*, I. 379, 380., &c.; *Craven's Ancient Italy*, II. 307.)

LECHLADE, a market town and par. of England, co. Gloucester, hund. Brightwell's Barrow, at the confluence of the Lech with the Isis, 13 m. E. Cirencester, and 68 m. W. by N. London. Area of par., 3,980 acres. Pop., in 1841, 1,300. The town consists chiefly of a single, long, wide, and well-built street; and the river (which is navigable up to this place, a distance, by water, of 146 m. from London,) is crossed by a good stone bridge. The church, a handsome stone structure, built in the reign of Henry VII., has a tower and spire at its W. end. There are also places of worship for Wesleyan Methodists and Baptists: and two Sunday-schools. The principal importance of Lechlade is derived from its site at the junction of the Thames navigation with the Thames and Severn Canal, which makes it the seat of an extensive transit trade in butter, cheese, corn, malt, &c.; but this will probably suffer a material diminution when the Great Western Railway is completed. Markets on Tuesday; fairs, Aug. 5. and 12. and Sept. 9., for cattle and cheese.

LECTOURE (an. *Lactora*, and *Civitas Lactoratensis*), a town of France, *dép.* Gers, cap. *arrond.*, on the summit of a steep isolated rock, 19 m. N. Auch. Pop. in 1846 (ex com.), 2,107. It was formerly surrounded with a triple range of strong walls, the remains of which still exist. It is traversed by a wide, regularly built, and clean street, at one end of which is an hospital occupying the site of an ancient castle, and at the other a handsome Gothic church, built by the English. Nearly all the other streets are *fort triste et fort irrégulières*. Near the above church is the old episcopal palace, now the town-hall, sub-prefecture, and court of primary jurisdiction. In the town-hall are portraits of Marshal Lannes, Duc de Montebello, and other distinguished individuals, natives of the town; a marble statue of the marshal is also erected on the public esplanade. Lectoure has manufactures of serge and coarse woollen cloths, and a considerable trade in cattle, wines, brandy, and agricultural produce.

Lectoure, though not mentioned by the ancient geographers, has several Roman antiquities; the chief is a votive altar, in good preservation, which dates from the time of Gratian. At the foot of the hill on which the town is built is a fountain of excellent water; its modern name is *Hondelia*, derived, as is said, from its ancient name, *Fons Delie*; having been consecrated to Diana, who had a temple in the vicinity.

Lectoure belonged, for a lengthened period, to the counts of Armagnac. The last of that family having been besieged in it in 1473, by the troops of Louis XI., commanded by the Cardinal of Alby, surrendered on terms which the cardinal offered and swore to observe. No sooner, however, had the blood-thirsty perfidious ecclesiastic got the count into his power, than he ordered him to be assassinated, and gave up the town to military execution. (*L'Art de vérifier les Dates*, part II. tom. ix. 320. 8vo. ed.; *Hugo*, art. *Gers*, &c.)

LEDBURY, a market town and par. of England, co. Hereford, hund. Radlow, near the Leden, a trib. of the Severn, 13 m. E. Hereford, 14 m. S.W. Worcester, and 105 m. W.N.W. London. Area of par., 8,630 acres. Pop., in 1841, 4,591. The town, situated on the slope of a hill at the E. angle of the co., at the extremity of the Malvern hills, comprises two principal intersecting streets, with others of inferior character. Many of the houses are handsome, and built of stone quarried in the neighbour-

land. The church, which is of Norman architecture, with many recent alterations and additions, comprises a nave, aisle and chancel, with a chapel, and the tower which is detached from the rest of the building, is surmounted by a five spire 60 ft. high, the living is a ring apt, in private mortgage. There are, also, places of worship for Independents, Baptists and Wesleyan Methodists with well attended Sunday schools attached to each, a national school for both sexes, partly supported by the produce of two or three old charities and a school of industry for girls. The free school, founded in the 14th century, formerly had the reputation of being a good classical school, but the curriculum is very trifling, and the instruction is now confined to reading, writing and arithmetic. St. Catherine's hospital, for poor men and women, founded by Hugh Folgot, Bishop of Hereford in 1281, comprises a master, chaplain, 7 brethren and 3 sisters, each of whom, in addition to a comfortable dwelling and some petty allowances, receives a stipend of £5 a week. The hospital lately rebuilt, is a handsome structure with two wings, and a chapel and hall to the centre, and it is proposed, as the inmates are increasing in value, to raise the number of inmates to 50. The poor is extremely rich in charity charities, distributed chiefly by the clergy and churchwardens. (See *Char. Comm. in Sup. p. 1*) Lord Barry was estimated during the reigns of Elizabeth and James I. for an extensive manufacture of broad cloth and silk, but they are now quite extinct. Weaving, spinning, and the weaving of woollen, employ a considerable number of hands, but the primary importance of the town is derived from its being the chief market of a district producing large quantities of beer, cyder and perry. Hops and marids are gathered in the neighbourhood, and the latter is sent to various parts for distillery purposes, &c.

Leeds was originally a port town, and in the reign of Edward I. some returned thence to the H. of C.; but the privilege was not preserved.

LEEDS is a port and town bar par and extended manufacturing town of England, being the great centre of the woollen cloth trade, on York, W. riding, locally situated in wap. Wharfedale, on both sides the navigation river Aire, 10 m. W. of York, 10 m. N. of Bradford, and 170 m. N. of London, lat. 53° 47' 30" N. and long. 1° 10' W. Area of par and of port and town bar (which are all co-extensive), 11,400 acres: pop. of port bar in 1841, 154,374; pop. of town, at same period, 55,701.

We subjoin an account of the town, par., &c. of the different parts of the bar, drawn up from the census of 1841 and other official returns:—

Parishes.	Area to Acres.	Pop. in 1831.	Pop. in 1841.
St. George's	2,000	71,500	82,741
St. Andrew's	1,200	6,140	6,000

armacy, and a public dispensary. There are likewise several endowed charities for the aged poor, and other benevolent institutions, the gross revenues of which exceed 4,000*l.* a year. Party politics run pretty high in Leeds. It has three weekly newspapers; one of which, the "*Leeds Mercury*," is one of the ablest and most widely circulated of the provincial papers.

Leeds owes its great and long-continued eminence as a manufacturing town, partly to its advantageous situation, and partly to the industry and ingenuity of its inhabs. It stands in a fertile country intersected with rivers, and possessing rich and all but inexhaustible beds of coal. The natural facilities afforded by its position for procuring raw materials, and for disposing of its manufactured produce, have been vastly extended by artificial means. On the one hand, it communicates with the Humber, and, consequently, with the German Ocean, by means of the Aire and Calder Navigation, which allows vessels of 120 tons to come up to the town; and on the other hand, it communicates with the Mersey and Liverpool by the Leeds and Liverpool Canal. Railways have also been opened in every direction, — to York, Hull, Manchester, Thirsk, Skipton, Lancaster, &c., and two by Derby and Lincoln to London.

The staple manufacture is the production of woollen cloths; but the spinning of flax and worsted is also an important branch of industry. We subjoin the following official return, obligingly furnished for this work, of the description and number of mills engaged in the principal departments of industry carried on in the bor. of Leeds in October, 1850, with the amount of the power in operation, and of the hands employed in the same.

Description of Mills.	No. of Mills.	Horse-power.	Hands employed.
Woollen : : :	102	2,354	10,360
Worsted : : :	7	146	971
Flax : : :	35	1,861	9,256
And to these have to be added 1 cotton and 3 silk mills.			

The woollen manufacture of Leeds and its neighbourhood is carried on in two ways—on the domestic system, and by means of factories. According to the former plan, the business is conducted by a number of small masters, generally possessed of very limited capitals, who have in their houses from two to four looms, and employ, besides themselves and their families, from three to seven journeymen. Formerly, they used to carry the wool by hand-labour through all the stages of its manufacture, till it was made into undressed cloth; but for several years past they have availed themselves, in the performance of various processes, of the *public mills* that have been erected, mostly on a joint-stock principle, in all the villages within the district where this system prevails. By this means, the domestic cloths are produced as good and cheap as those made in factories. The wages of hand-loom weavers in and about Leeds vary from 12*s.* to 18*s.* a week. The factory system owes its existence to the improvements of machinery subsequent to 1790; and, though strongly opposed by the domestic clothiers, has greatly improved the manufacture, and raised Leeds to its present eminence as a mart for superfine broad cloths. The master manufacturers, who necessarily either possess or have the command of large capitals, employ a greater or less number of workmen, in one or more large factories, under their own inspection, or that of their superintendents. In these factories the whole processes are carried forward, from the breaking of the wool to the finishing of the cloth for the consumer. Powerlooms, however, have hitherto been but little employed in the weaving of fine cloths, not 1-3rd part of those produced being now (1850) woven by their agency. The woollen fabrics manufactured at Leeds comprise broad cloths, ladies' cloths, kerseys, swansdowns, and beavers. The goods sold to the merchants in a rough or undressed state are finished in dyehouses and dressing-shops, which of themselves give employment to upwards of 3,000 persons. The sale of cloths is partly effected in the different cloth-halls, on the mornings of Tuesday and Saturday, between 11 and 12; but of late years, or since the manufacturers began wholly to finish their goods, the cloth halls have lost a good deal of their importance, and a full half of the business that used to be entirely carried on in them is now transacted in private counting-houses. Shaloons, stuffs, and camlets, are made to some extent; and immense quantities of unfinished stuffs are brought here to be finished from Bradford and Halifax. Some of the flax-mills are superb establishments; large quantities of linen yarn are sent to Barnsley to be manufactured into linens, and large quantities are also sent to Ireland and France: canvass, sacking, and linens, are also made to some extent in the town. The average wages of linen weavers per week vary from 8*s.* to 10*s.* nett, when in full work, which is seldom the case. The weavers were characterised by the hand-loom commissioners as intelligent, sober, and steady, but in extreme poverty. The manufacture of machinery employs a great number

of hands; and there are likewise extensive chemical works, large glass-houses, potteries making goods almost exclusively for exportation, extensive tobacco-mills, and soap-works, which produced, in 1848, 1,121,888 lbs. hard, and 938,150 lbs. soft soap. The greatest portion of the manufacturing operations of the town are carried on by means of steam-engines, of which some hundreds are at work within the par. A branch of the Bank of England is established at Leeds, and there are five joint stock banking companies, besides two private banking establishments, and a savings' bank, which had, on the 30th Nov. 1849, 253,473*l.* of deposits.

Leeds was first incorporated as a mun. bor. in the reign of Charles I., and received its charter in the 13th of Charles II. Under the Municipal Reform Act, it is divided into 12 wards, and the government is vested in a recorder, mayor, 16 aldermen, and 48 councillors: corp. revenue in 1847-48, 21,341*l.* An efficient body of police has been organised, similar to that of the metropolis. It is the seat of a county court, before which 6,174 plaints were entered in 1849. Notwithstanding its importance, as the first clothing town of the British empire, Leeds was not represented in parliament till 1832, when the Reform Act conferred on it the important privilege of sending 2 mems. to the H. of C. Reg. electors, in 1849-50, 6,151. Markets on Tuesday and Saturday; cattle fairs on alternate Wednesdays; and for horses and hardware, July 10, 11, Oct. 8., and Nov. 9.

Leeds is mentioned by Bede, and in the Domesday survey. Leland, early in the 16th century, describes it as a market town, subsisting chiefly by clothing, reasonably well built, and as large as Bradford, but considerably less than Wakefield. The clothing trade had been introduced about 60 years before Leland's time, and the town has since gradually risen, by the industry of its inhabs., till it has become the third manufacturing town of the first manufacturing nation of the world. (*Baines's Gazetteer of Yorkshire*; *Parsons' Annals of Leeds*, passim.; *Parl. Rep.*; and *Priv. Inform.*)

LEEK, a manufacturing market-town, and par. of England, co. Stafford, hund. Totmonslow, on the Churnet, a tributary of the Trent, 12 m. S. Macclesfield, and 134 m. N. by W. London. Area of par. (comprising 10 townships), 34,370 acres. Pop. in 1841, 11,738. Pop. of Leek-and-Lowe township, 7,233. It is situated in the mountainous part of the co. called the Moorlands, on the road between London and Manchester, and consists of a principal street lined with some good modern houses, and crossed by several narrow and irregular avenues. The church is an old Gothic structure, with a square tower: in the churchyard are the remains of a Danish cross, 10 ft. high: the living is a vicarage in the gift of Earl Mansfield. There are places of worship for Independents, Wesleyan and New-connexion Methodists, and the Society of Friends. Except a small endowed school there is no public day-school, and nearly all the instruction which the children receive is given in the Sunday-schools attached to the different places of worship. In the Wesleyan school there are upwards of 1,000 children. A mechanics' institute confers important benefits on the manufacturing population. An almshouse for 8 widows, and some other charities, have endowments amounting to 180*l.* a year.

Leek has long been the seat of a manufacture of broad silks and plain ribands, many of the latter being woven by power-looms. The silk-mills, of which there were 7 in 1838, employing 784 hands, embrace not only the weaving of ribands by power-looms, but the throwing and spinning of silk, and its twisting into sewing-silk, braid, &c. The hand-loom weavers are chiefly employed on checked or figured silk neckerchiefs, and a few gros-de-naples and figured gown-pieces, the best black ribands, and silk serges of superior quality. These goods are prepared chiefly for the London market; but the sewing-silks, twist, and ribands, are mostly for exportation. The hand-loom work is given out warped and wound to *undertakers*, who possess a varying number of looms, and employ journeymen and apprentices, to the former of whom they pay the warehouse price, after deducting for loom-rent, &c. There are numerous undertakers in the broad trade, and they appear to be superior both in habits and condition to the same class in most other places, many of them possessing convenient and substantial dwelling-houses, the highest stories of which are used as workshops. The journeymen are an inferior class, living in *M.* cottages; but though their houses be poor and mean, they are clean, as are also the persons and dress of the weavers and their families: the wives are commonly piecers and doublers, or overlookers in the factories, or else, if at home, wind silk; the children easily get employment in the factories at wages varying from 1*s.* to 2*s.* 6*d.* a week. The weekly earnings of the broad-loom weavers vary from 7*s.* 6*d.* to 9*s.* nett. The weekly nett wages of the power-loom weavers average 16*s.*, and the women working in the mills usually earn from 5*s.* to 5*s.* 6*d.* From these rates there has been little variation; and the

trade of Leek generally appears to be of a steadier character than that of other towns engaged in the same manufacture. The cotton trade, which has extended itself thither from Lancashire, is not extensive: one small mill employs 60 hands. Coal is procured from the neighbouring Blue hills, in quantities amply sufficient for the wants both of the manufacturers and the pop. generally. (*Hand-loom Weavers' Report*, part iv. p. 344.)

Leek is one of the polling places for the N. division of Staffordshire. Courts leet and baron are held annually by the lord of the manor (Earl Mansfield), who elects a constable for the civil government of the town. Markets on Wednesday: fairs for cattle and pedlary, Feb. 7., Easter-Wednesday, May 18., Whit-Wednesday, July 8. and 28., Oct. 10., and Nov. 13.

LEEUWARDEN, a town of Holland, prov. Friesland, of which it is the cap., on the Ee, 31 m. W. Groningen. lat. $53^{\circ} 18' 14''$ N., long. $5^{\circ} 47' 33''$ E. Pop. about 22,000. It is surrounded by an earth rampart and ditch, and intersected by numerous canals, the banks of which, like the ramparts, are planted with trees. It is well built; its streets are wide and regular; and it has several handsome public edifices, including the palace of the Prince of Orange, the town-hall, arsenal, exchange, and house of correction. It has twelve churches, in one of which the princes of Orange are buried, a synagogue, a Latin school, a branch of the Society of Public Good, a printing establishment, and considerable manufactures of linen fabrics, paper, Friesland-green, &c., and a large general trade. It is the seat of tribunals of primary jurisdiction and commerce, and the residence of a provincial commandant, a military governor, a provincial head of police, and a receiver of taxes for the prov. It sends 4 mems. to the provincial assembly. (*De Clart*, &c.)

LEGHORN (Ital. *Livorno*, Fr. *Livourne*), a city and sea-port, being the principal emporium of Italy, in the grand duchy of Tuscany, prov. Pisa, on the Mediterranean, 62 m. W. S. W. Florence, lat. $43^{\circ} 33' 5''$ N., long. $10^{\circ} 16' 45''$ E. Pop., with its suburbs, in 1845, 80,195; of whom, about 5,000 are supposed to be Jews and Greeks, and 3,000 other foreigners. It is of a square form, and about $2\frac{1}{2}$ m. in circ., surrounded with new walls, and entered by five gates. It is a neat, clean, and well-built city, and its general air of animation, activity, and business, is singularly opposed to the listless idleness of the inland towns of Italy. Its streets are in general wide and well paved, especially that which runs in a direct line from the gate of Pisa to the harbour, enlarging near its centre into a spacious square. The N. part of the city, called *Venezia Nova*, is intersected by canals, and comprises numerous wharfs, warehouses, and other buildings adapted to commerce. Leghorn has an outer and inner harbour, and a good roadstead. The outer harbour is protected by a fine mole, built by Cosmo II., which runs N. N. W. upwards of $\frac{1}{2}$ m. into the sea. The port is apt to become encumbered with mud, and the water within is rather shallow, varying from 8 ft. in the inner basin to 18 or 19 ft. at the end of the mole. The outer harbour is, therefore, unfit for ships of more than 400 tons; and the inner harbour, called the *Darsena dei navicelli*, is only used for repairing ships, and for the reception of galleys and other small craft. A lighthouse, the lantern of which is 170 ft. above the sea, is built on a rock a little S. W. from the mole. The roadstead lies W. N. W. from the harbour, between it and the Melora bank. The latter is a sand, 4 m. in length by 2 in breadth, lying N. and S. about 4 m. from shore. It has mostly from 3 to $\frac{1}{2}$ fathoms water over it; but towards its S. extremity, on some rocky points which project above the water, the Melora tower has been constructed to serve as a sea-mark. During S. winds there is sometimes a heavy sea in the roads; but the holding ground is good, and with sufficient anchors and cables, and ordinary precaution, there is no danger. The lazaretto, said to be one of the best in Europe, lies on a little island to the S., about 1 m. from the tower.

The public and private buildings of Leghorn do not require any very particular notice. They are generally well adapted to their purposes, without being magnificent. The chief public edifices are the ducal palace, the

arsenal, the *duomo* or cathedral, a Gothic building, designed by Vasari, six other par. churches, two Greek churches, chapels belonging to the English factory, and the Dutch and German Protestants, an Armenian, and a Maronite-Arab church, a synagogue, the largest and finest in Europe after that of Amsterdam, a mosque, 3 hospitals, the female charity school of St. Peter and St. Paul, the theatre, and the public baths. Leghorn has also a citadel, an old castle, constructed in 1595 by Ferdinand I., 2 lazarets, besides that before mentioned, 2 *monti-di-pietà*, a workhouse, a house of refuge, a savings' bank, a large public school, established 1746, and which has about 350 pupils, schools of navigation and artillery, architecture, painting, mutual instruction, &c., and an academy of sciences, letters, and arts, with a library of 6,000 vols. open to the public. The city possesses few works of art, except a fine marble statue of the grand duke Ferdinand I., supported by four kneeling figures in bronze: it stands on the quay of the inner harbour, and is said to have been executed by John of Bologna. In the cemeteries beyond the walls, however, are some good specimens of sculpture. The English burial-ground, or *Campo Inglese*, contains the remains of Smollett, and of several other distinguished Englishmen.

From being in a marshy situation, Leghorn is not quite salubrious, though during the reign of the present grand duke, great improvements in draining, &c., have been effected, by which the public health has been much benefited. There are no good wells in the city; and water is brought by an aqueduct from Colognole, 12 m. distant; one of the most remarkable monuments in the town is the *Cisterna*, belonging to this aqueduct, whence water is distributed through the town.

Leghorn has a considerable coral fishery; but the greater portion of its inhab. are engaged in manufactures and commerce: it produces woollen caps, straw hats, glass, paper, soap, starch, cream of tartar, &c.; and it has numerous coral and alabaster factories; and rope walks, building docks for merchant vessels, tanneries, &c. It was made a free port by Cosmo I., about the middle of the 16th century; and the comparative security and freedom which foreigners have long enjoyed in Tuscany, still more than its advantageous situation, have rendered Leghorn one of the first commercial cities of Italy. Its exports are similar to those from the other Italian ports, consisting principally of raw and manufactured silks, straw hats, straw plaiting, and straw for plaiting, all excellent; oil, fruits, wines, wool, boracic acid (recently become a very important article), rags, cheese, marble, argol, paper, anchovies, coral, manna, hemp, lamb-skins, timber, with wheat and other species of corn from the Black Sea, Egypt, and Barbary; cotton from Egypt, brimstone from Sicily, &c. The export at second hand of produce from the Euxine and the Levant has, however, rather declined of late years; the English, Americans, and other nations, now generally importing such produce direct from Odessa, Smyrna, Alexandria, &c. The imports comprise most sorts of commodities, with the exception of some of those produced in Italy, as sugar, coffee, and all sorts of colonial produce; raw cotton, cotton and woollen stuffs, cotton twist, and other manufactured goods; salted fish, indigo, and other dye-stuffs, rice, hardware, earthenware, and metals; hides, &c. Ships, with corn on board, may unload within the limits of the lazaretto, without being detained to perform quarantine, a circumstance which has contributed to make Leghorn one of the principal *dépôts* for the wheat of the Black Sea.

The old complicated system of currency has been abolished, and accounts are now kept in new lire, which are in all respects equal to French francs. Accounts may be converted from old into new lire at the rate of 6 old to 5 new lire.

We regret that there are no detailed statements of the export trade of Leghorn; but it is believed to amount in all to from 1,600,000*l.* to 2,000,000*l.* a year. We subjoin an account of the quantities of some of the principal articles of foreign produce imported into Leghorn during each of the six years ending with 1840, with the stocks on hand on the 1st of January, 1841.

The quintal (100 lbs.) of Leghorn is about equal to 77 lbs. avoird. The cantara varies from 88 to 160 lbs.; the rotolo = 3 lbs. Port charges are the same on native and foreign ships. The anchorage dues on a vessel of 300

tons amount to 112 old lire, or to 3*l.* 14*s.* sterling; besides which, she must have a bill of health, which costs 7*s.* 2*d.* sterling. These, if she clear out in ballast, are the only charges to which she is subject; but if she clear

out loaded, the bill of health will cost about 9s sterling, and there is besides a charge of about 3d. for each bill of lading.

There are no other port charges whatever. Good water may be had at about 11d. a tun; and beef, bread, and fuel are all reasonably cheap. There are companies for the insurance of ships, though not of lives or houses. Leghorn is the residence of consuls from all the principal states of Europe. This part is supposed to be the anc. *Portus Herculis* or *Labronis*; but it has no remains of antiquity. In the 15th century, it was a mere village surrounded by swamps, and it owes all its eminence and prosperity to the munificence of the Medici family, and the liberality of the present rulers of Tuscany. (*Rapetti, Dizionario Geog. Della Toscana*; *Rampoldi Corografia*; *Corder's Italy*, 51—55.; *Comm. Dict.* &c.)

LEGNAGO, a fortified town of Austrian Italy, deleg. of Verona, 22 m. S.E. the city of that name, on the Adige, here crossed by a wooden bridge, with 2 draw-bridges, and on the high road from Mantua to Padua. Pop. 5,790. (*Oraterr. Nat. Encyc.*) Its situation is said to be unhealthy; but it has several churches, convents, and barracks; a powder magazine, a theatre, an hospital, a royal gymnasium, a manufacture of dyed leather, and some trade in corn, rice, and silk. Legnago is supposed to have been founded towards the latter period of the Lombard monarchy. It was fortified in the 16th century; and taken by the French, in 1796, after a 3 days' siege. (*Dict. Géog.* &c.)

LEICESTER, an inland co. of England, nearly in its centre, having N. the cos. of Derby and Nottingham, E. Lincoln and Rutland, S. Northampton and Warwick, and W. Stafford and Derby. It is of an oblong form; greatest length, about 48 m.; greatest breadth, about 26 m. Area, 515,840 acres, of which about 480,000 are supposed to be arable, meadow, and pasture. Surface, varied and uneven; but except in the district of Charnwood Forest, to the S. of Loughborough, the hills do not attain to any considerable elevation, and are susceptible of the highest cultivation. The soil consists mostly of clayey and sandy loams; and in some parts, especially along the Soar, there are very rich and extensive meadows. The pastures are generally excellent; and this is much more a grazing than an agricultural co. It is famous for its breeds of cattle, sheep, and horses; all of which were much improved through the skill and long-continued exertions of the celebrated Mr. Robert Bakewell, of Dishley, in this co. It is, however, true, that the Dishley breed of long-horned cattle, so famous a few years ago, are every where losing ground; and that even in this, their native co., they are now very generally superseded by the short-horns, and other breeds. The fine rich cheese called Stilton is principally made in this co., in the farms round Melton-Mowbray. The Leicester sheep, though of different varieties, all yield long combing wool. Horses are reared in considerable numbers. Barley is the principal corn crop; but wheat and oats are also extensively cultivated. Property mostly in large estates: farms of all sizes, and mostly held at will. Average rent of land, in 1843, 34s. 10½d. an acre. Coal is wrought at Ashby-de-la-Zouch, Whitwick, and other places; and iron and lead, with lime, and slates, are also products of this co. Leicestershire is the grand seat of the manufacture of woollen stockings and shirts, gloves, and fancy hosiery; the business being principally carried on in the towns of Leicester, Loughborough, and Hinckley: but it is also widely diffused throughout the co. Hats are made at Loughborough and other places; and this is one of the principal malting counties. Owing to the openness of the country, the number of resident gentry, and other recommendations, Leicester has been long famous as a hunting co. Melton-Mowbray, in the centre of the sporting district, has accommodations for a vast number of horses; and during the season is crowded with visitors, foreign as well as domestic. Principal river Soar; and the co. is intersected by several canals and railways. Leicester is divided into 6 hundreds and 216 parishes. It sends 6 mems. to the H. of C., being 4 for the co. and 2 for the borough of Leicester. Registered electors for the co., in 1839-40, 9,191, being 4,029 for the N., and 5,162 for the S. division of the co. In 1841, there were in this co. 44,774 inhabited houses, and 215,867 inhab., of whom 105,616 were males, and 110,251 females. Sum paid for the relief of the poor in 1847-48, 83,527l. Annual value of real property in 1815, 961,908l.; do. in 1843, 1,376,284l.

LEICESTER, a parl. and mun. bor., and an important manufacturing town of England, cap. co. same name, hund. W. Goscote, on the E. bank of the Soar (crossed here by six bridges, two of which belong to the railways that touch the town), 26 m. S.S.R. Derby, 34 m. E. by N. Birmingham, and 87 m. N. by W. London. Area of mun. and parl. bor. (which are co-extensive, and include the old bor. and its liberties, with the part called the Castle-view), 3,960 acres. Pop. in 1841, 50,365, and now (1850) estimated at 60,000. Assessed rental, in 1849, 118,253l. The town, though irregularly built, has a re-

spectable appearance, the streets being clean, and the houses in the principal thoroughfares substantial and neat. The main street, is joined near its centre by several other handsome streets: at the corner of one of these stands the news-room, a square building of Ionic architecture, forming one of the chief ornaments of the place; and in it also is the New Hall, built in 1831, having apartments for concerts, and the Mechanics' Institute. The paving, lighting, and general economy of the town are well conducted, and have been greatly improved within the last few years: provision is, also, about to be made for a more effective system of drainage and sewerage. Water is at present obtained from pumps and wells; but the supply being inadequate to the wants of the pop., water-works are about to be constructed by a company, by which a supply of pure water, sufficient for 100,000 persons, and for flushing the sewers, &c., is to be brought from Thornton, a distance of 9 m. The public buildings devoted to civil purposes comprise, among others, the Guildhall, an old and unpretending building, in which is a library of ancient printed books and a few MSS., one of which, the "*Codex Leicestrensis*," is of considerable value; the Assembly-rooms, with a commodious adjoining theatre; and a Town-Museum, recently established by the corporation, under the Museums' Act: the greater part of the objects in the latter were presented to it by the Literary and Philosophical Society, who have commodious rooms in the building; among its rarities is the celebrated Roman *milliare*, or milestone, inscribed to the Emperor Hadrian, found in the neighbourhood in 1771, and valuable as deciding the previously disputed point whether Leicester was the *Rata* or *Ragus* of the Romans. (*Gough's Camden's Britannia*, ii. 314.) A market-house is in the course of being erected in the market-place, which has lately been considerably enlarged. The bor. gaol is too small for the proper classification of the prisoners; this, however, is effected in the co. gaol, a massive structure, enclosing an area of 4 acres, built in 1824 at a cost of 75,000l., and lately enlarged at a farther cost of 25,000l. An infirmary and fever hospital were erected in 1771; and a co. lunatic asylum, a spacious and imposing building, with extensive grounds, erected in 1837, and since greatly enlarged at a total cost of 45,000l., affords accommodation for 227 patients. There are also public baths, partly supported by the corporation. Among the ecclesiastical edifices are 8 parish or district churches, and 24 places of worship for dissenters. St. Nicholas, the oldest church, is a structure of Norman architecture, supposed to have been built of the materials of the adjoining Roman wall; it has a square W. tower between the nave and chancel. St. Mary's, in the Saxon and early English style, has a lofty tower and steeple. St. Martin's, the largest church in the town, is a cruciform structure, erected at different periods between the 12th and 16th centuries, and surmounted by a plain spire. St. Margaret's, in the early English and later styles, occupies the site of the Saxon cathedral and bishop's palace; it is remarkable for its handsome and lofty tower. All these churches have recently been restored. The other churches, three of which are modern, are commodious. The old Baptist chapel, in Harvey Lane, (now used as a school-room,) deserves notice, as being the scene of the pastoral labours of Robert Hall, one of the most able and eloquent divines of his day. A public cemetery, established by the corporation, was opened in the course of this year (1850). It has chapels in the decorated style connected by extensive cloisters, and cost above 12,000l., exclusive of the land. Connected with the various places of worship are numerous Sunday schools, furnishing religious instruction to nearly 4,000 children; besides which, 1 national, 2 Lancastrian, and 3 infant schools are attended by about 1,300 scholars, and 2 parochial schools by 220 boys, who are clothed as well as educated. A collegiate school, established in 1826, for members of the Church of England, has about 100 pupils. The Female Asylum clothes, maintains, and educates 16 girls, between the ages of 13 and 16, and afterwards provides them with situations of domestic service. Four weekly newspapers are published in the town.

Leicester possesses many valuable charities, some of which are in the trust of the corporation, and of the trustees of general and church charities, others connected with particular parishes. The grammar school, founded by Queen Elizabeth in 1564, has been closed for some time past. The endowment is only 42l. a year, and previously to its being shut it was attended by only 3 or 4 boys. It is surprising that the corporation do not take measures for reorganising this school, and re-opening it on an efficient plan. It might be made a most valuable institution. Newton's Charity possesses funds amounting to 750l. a year, and supports, either wholly or in part, 12 schools in Leicester and other towns mentioned by the testator. The school at Leicester is a substantial brick building, near St. Nicholas's church, with a house adjoining, in which the master lives rent-free. He has a salary of 100l. a year,

besides coal and candle, and the use of a large garden. There are 100 boys in the school, sons of poor inhab. belonging to the established church, who are clothed as well as instructed. Trinity Hospital is an extensive establishment, comprising a chapel, and range of apartments for 80 old men and women, who receive each 2s. a week, with other advantages. In the chapel is the tomb of the Countess of Derby, first wife of Henry IV. The revenue of this charity amounted, in 1685, to 430*l.*, and in 1849 to 1300*l.* Wigston's Hospital is a structure of perpendicular architecture in St. Martin's Churchyard, erected in 1521, and endowed with estates, the rental of which exceeds 500*l.* a year, but which, it is affirmed, if let like the estates of private individuals, would produce upwards of 5,000*l.* a year. The present master, the Rev. E. T. Vaughan, vicar of St. Martin's, has been appointed at a fixed salary by the chancellor of the duchy of Lancaster; and it is hoped that some, at least, of the abuses of the charity will now be corrected, application having been made to the Court of Chancery for that purpose. Each of the 24 inmates has an apartment and garden, with 4*s.* a week, and the chaplain or confrater has a stipend of 57*l.* a year, with a house and garden. It may be worth mentioning that both Chillingworth and the learned Dr. Samuel Clarke filled this situation. Some smaller almshouses, loan funds, and bequests to a considerable amount, assist in relieving the distress of the poor of the town and neighbourhood.

In addition to the endowments and voluntary contributions for the support of the poor, the sum raised by rates, and expended for the same object in 1847-48, amounted to 20,264*l.* assessed upon property of the estimated value of 167,286*l.* a year.

Leicester is a principal seat of the manufacture of woollen hosiery, including stockings, sh. fancy hosiery, and of woollen, Berlin, and gloves, having, according to the official r 4,142 persons engaged in the various depa businesses, and now (1850) probably 6,000, en engaged in the subordinate departments of ing, wool combing, dyeing, &c. There w in 1836, according to the returns of the Fac 25 worsted mills, employing 1,418 hands, winding mills. The business of the forme is the yarn used by the manufacturers. The wages of framework knitters vary from 8*s.* to 15*s.*; of glove-makers from 16*s.* to 26*s.*, of "fancy hands" about the same; those of dyers from 1*s.* to 2*s.*, of wool-combers from 1*s.* to 2*s.*, and of machine makers from 2*s.* to 3*s.* a week. Manufacturing opel itated by a plentiful supply of e Solihull, and Derbyshire coal-fie. Leicester is a bor. by preser King John, and governed till 1834 Ellis. The old corporation was a irresponsible body; and was lo political exclusiveness and intoler under the Mun. Reform Act are aldermen, and 42 councillors, the 7 wards. Corporat. revenue in 11 9,826*l.* was derived from bor. and Assizes and quarter sessions are i county court before which 1,837 1848. The bor. has sent 2 mems. reign of Edward I.; the franchi being vested in the freemen (by b and the inhab. paying scot and the present parl. bor. include, as the old bor., the liberties (whic pars. of St. Mary and St. Marg; Newarke) and the extra-parochia view. Registered electors, in 184 Wednesday and Saturday; horse Saturday before and after Easter, and Oct. 10.

Leicester occupies the site o Roman station mentioned in A ruin called the Jewry wall has no good grounds, to be the remai Near it a fine Roman pavement Before the Norman conquest, i by the Earls of Mercia, which Henry II. in 1175, was restored Earl of Leicester. It afterwards

sidence of the Earls and Dukes of Lancaster. Several parliaments were held in the great hall in the latter end of the 14th and the commencement of the 15th centuries. The castle having ceased to be a royal residence after the elevation of Henry IV. to the throne, was allowed to fall into decay, and in the reign of Charles I. it was pulled down, with the exception of the great hall, which, being new fronted, is now used for the assizes. Two of the gateways also remain, one a fine specimen of the period. During the great civil war, the town was successively occupied by the king and the parliamentary troops. In a meadow near the town are some remains of a monastery of Black Canons, founded in 1142, the revenues of which amounted at its dissolution to 1,062*l.* Cardinal Wolsey expired in this abbey on the 29th Nov. 1530, having been compelled, by sickness, to take refuge here when on his way to London, to be tried for high treason. The stocking-frame was introduced into Leicester about the close of the 17th century, since which time it has been steadily rising in manufacturing importance. (*Char. and Mun. Commission Report; Throsby's and Thompson's Hist. of Leicester; Private Information.*)

LEIGH, a manufacturing market-town, and par. of England, co. Lancaster, hund. W. Derby, 12 m. W. Manchester, and 21 m. E. N. E. Liverpool. Area of par. (comprising the townships of West Leigh, Astley, Atherton, Bedford, Pennington, and Tildesley), 11,820 acres: pop., in 1841, 22,229. Pop. of West Leigh and Pennington townships, comprising the town of Leigh, 6,838. The town, consisting of two chief, and other subordinate streets, has a few well-built houses, mixed with others of an inferior character. The church is a lofty stone structure, but low and decayed on the N. side: the living is a vicarage in the gift of Lord Liltford. Chapels of ease have also been erected in the townships of Astley, Chowbent, and Tildesley; the patronage of which is vested in the incumbent of Leigh. There are places of worship for R. Catholics, Independents, Wesleyan and New-connexion Methodists, and Swedenborgians, exclusive of others in the out townships; and upwards of 4,000 children are taught in the Sunday schools connected with the churches and chapels. The charities of the par. comprise the grammar-school, founded in 1556, but poorly endowed, and attended in 1836 by about 50 boys, 40 of whom were pay-scholars; and the free schools of Pennington and Astley, with some apprenticeship-funds, and minor bequests. (*Char. Comm., 19th Rep.*)

are only entitled to a seat at the public table. "The university is rich in endowments for stipends to scholars; but with respect to such funds as are applicable to its maintenance and to scientific purposes, it is one of the poorest in Germany. An inventory of its property, which has been lately made public, states its means towards these latter objects to amount to 8,539 dollars per annum only, not more than 800*l*. It appears, from a statement of its yearly disbursements, that Saxony does not expend as much on this, its sole university, as the Prussian treasury expends upon the least of its provincial universities. The disbursements in question amount to 16,815 dolls. (about 8,000*l*), not including scholars' stipends, nor support of the poor (*armen-care*), and the proportion of that sum which is derived from the national revenue is but 28,486 dolls., or about 2,630*l*. The property of the university is valued at 1,500,000 dolls. (about 155,000*l*.); and out of this capital, which consists chiefly of house property, besides a small portion of meadow and arable land, some wood, and a few shares of mines, the yearly interest on 680,000 dolls. is applicable to benevolent purposes; the interest on the remainder, about 460,000 dolls., is therefore all that is available for the current expenses of the university." (*Journal of Education*, No. xv. 151, 152.)

The *Augusteum* contains a library of 100,000 vols. (*Herschmann*), and the university has also a museum of natural history, a botanic garden, anatomical theatre, laboratory, clinical and lying-in establishments, &c. Leipzig has, besides, a civic school, and attached to it a school of general knowledge, opened in 1834, several other superior and free schools, primary schools, &c.,

dyeing and woollen spinning industries; and a large wool market is held annually in May.

But the distinguishing characteristic of the commerce of Leipzig, is its book trade. Leipzig is, in fact, the grandemporium of the literature of Germany; a distinction of great importance, seeing that the number of readers and writers is greater in that than in any other country of Europe. The literary deluge which commenced in Germany immediately after the peace of 1814, continues to increase. Instead of 2,000 works, which were then about the annual complement, there are now 4,000. In 1837, the catalogue of the Easter fair announced 4,353 new works, and that of the Michaelmas fair 3,587; making a total of 7,940 in the year, or an increase of 363 over the number in 1836. Of this number France contributed 2,169, and Saxony (kingd. of), 1,343 publications. In the German book-trade, it is the custom for almost every house, either in the country or abroad, which publishes or sells German books, to have its agent at Leipzig, who receives and distributes its publications in the same way that the London booksellers receive and distribute English publications. The great sale of new works takes place at the Easter fair, when 600 booksellers sometimes assemble to settle their annual accounts. "The German author will submit to any degree of exertion, that his work may be ready for publication by that important season, when the whole brotherhood is in labour from the Rhine to the Vistula. Whatever the period of gestation may be, the time when he shall come to the birth is fixed by the almanack. If the auspicious moment pass away, he willingly bears his burden 12 months longer, or till the next advent of the Bibliopolical Lucia." (*Russell's Tour in Germany*, i. 331, 332.)

The fairs of Leipzig are the most celebrated in Germany. They are held at the new year, at Easter, and at Michaelmas. The last two are the most important. Above 20,000 dealers are said to have been present at the Easter fair in 1833, and above 12,000 at that of Michaelmas. They should close in 8 days, but they generally last 3 weeks; and while they continue, Leipzig is the

* *Allg. Leducer*, &c. (1836) iv. 178. According to the statement by the *Handbuch für Kaufleute*, art. *Leipzig*, there were, in 1836, 164 booksellers, 30 printing offices, with 150 presses, including 3 printing machines impelled by steam; 5 type and 1 ornament foundries; and several lithographic and copper plate engraving establishments; and 40,000,000 sheets of letter-press, &c., were estimated to be annually printed at Leipzig.

these, the *Reichs-arme*, the allied sovereigns met to congratulate each other after the battle of Leipzig (see post). The *Königsbau*, formerly a residence of the electors and kings of Saxony, was occupied by Napoleon in 1813. The Auerbach cellar, at no great distance, is noted as that in which Goethe has laid the celebrated carousal scene in *Faust*; and tradition says that *Faust* himself used to frequent it. At the S.E. part of the town is the castle of Pleissenburg, which withstood the attacks of Tilly in the 30 years' war, long after the town had surrendered. Its lower part is now a wool magazine, and its upper part an observatory 238 ft. high, from the summit of which a commanding view is obtained of Leipzig and its plain. The ramparts of the town have been laid out as public walks; and its gates have been recently removed. The church of St. Nicholas is a handsome square edifice, and of a species of Corinthian architecture; its interior is ornamented with numerous paintings by Oeser, a celebrated Saxon artist of the last century. The other most remarkable public buildings are the *Augusteum*, *Paulinum*, &c., belonging to the university, the cloth hall, booksellers' exchange, and new post-office. There are many good hotels.

The university is the only one in Saxony; and ranks as one of the first, as well as most ancient, in Germany. It was founded in 1409 by some professors and students from the university of Prague. It is divided into 4 nations, the Saxon, Misnian, Franconian, and Silesian; and has faculties of theology, law, medicine, and philosophy. It had, in 1834, 34 ordinary professors, 6 in the faculty of theology, 5 in that of law, 10 in that of medicine, and 12 in that of philosophy. The total amount of their salaries was 32,410 dolls. (about 4,724*l*.), independently of certain small fees and minor emoluments. There are, besides, many extraordinary professors teaching modern languages, &c., who do not belong to the *Senatus Academicus*. Leipzig university, though still well attended, has at present fewer students than usual: at the beginning of 1840 the total number was 926.

The greater number of lecture-rooms are here, as in Heidelberg, within the university buildings. Most of the students live within the walls of the Old Paulinum, without reference to their particular department of study, the only qualification necessary to entitle them to the bursary enjoyed there, being an examination as to their proficiency in learning. Some students are allowed both board and lodging in the Paulinum; others

great mart of central Europe for all kinds of merchandise. According to the author of *Germany and the Germans in 1835-36*, who visited Leipzig at one of its fairs:—"The whole appearance of the town was unique; the streets, markets, and promenades were crowded, not only with the natives of every part of Europe, but even with those of Asia, Africa, and America; every house, yard, and porch, was converted into a bazaar for the display of merchandise, cottons, woollens, and silks of all shades; and, from every loom in Europe, were streaming like flags from the windows of the lofty houses; and although the Prussian tariff was in full force, yet I was informed by a merchant that the market was inundated with smuggled English manufactures." The statement respecting the attendance of Asiatics and Americans is, at least, no hyperbole: exclusive of Turks, Greeks and Wallachians, Georgians, Armenians, and even Persians, are present; and from 300 to 400 guests sit down daily at the *tables d'hôte* of some of the principal inns. It is estimated that the produce of the sale of books at the Easter fair amounts to 3,000,000 dolls.

The establishment of the Prussian Customs' Union (commercial league) led many intelligent persons to apprehend that, however advantageous the new system might be for the commercial interests of Germany at large, it would exercise a most prejudicial influence over the trade of Leipzig, by materially injuring, if not annihilating, its fairs. The result, however, seems to show that the customs' union has had a directly contrary effect; and that, so far from being ruinous to the Leipzig fairs, it is the very thing which is most likely to arrest, or rather, perhaps, to retard their fall; as by giving an immense impulse to the internal communications within the German States, it has in some degree compensated Leipzig for the gradual falling off in its commerce with foreign nations. The Leipzig fairs were long the great mart whence Russia, even to the borders of China, Poland, the provs. of the Danube, and many of the Turkish provinces, were supplied with manufactures. At the Michaelmas fair of 1839, however (the latest of which we have any detailed report), the falling off in the numbers of foreign purchasers was particularly remarkable. Of these, Greeks from Wallachia and Moldavia were the most numerous, their principal purchases being German broad cloths, ordinary English and German cotton goods, and French silks; about 7,000 centners of manufactured goods of all kinds being then entered for those principalities. The number of Russians was small; but a great many Jews, from Galicia, Prussian Poland, and Cracow, as usual, attended: whose chief object seemed to be that of introducing, in spite of every obstacle, manufactured goods of all descriptions into Russia. Few buyers went from Austria, Switzerland, or Italy, Trieste and Frankfurt being much more convenient marts for them: France and England, also, sent fewer than usual. Still, at the Michaelmas fair of 1839, the number of buyers and sellers, as well as the amount of business done, was as great, if not greater, than on former occasions.

Broad cloths, made within a circle of from 10 to 40 German miles round Leipzig, are among the most important articles brought to the fairs, and from 90,000 to 100,000 pieces were sold on the above occasion, mostly for consumption in the States of the Union. Other woollen goods, both English and German, were sold in considerable quantities, but at very low prices. British printed calicoes form an important item; but the heavier and coarser descriptions of cotton goods are said to be in a great measure driven out of the Leipzig market by German manufactures. French and Swiss silks are rapidly increasing in demand, their use having greatly increased of late among the middle classes in Germany. Hides and leather, lace and embroidery, linens, hosiery, hardware and cutlery, clocks, jewellery, French china, quilts, furs, isinglass, &c. are among the other goods that are most extensively met with at the Leipzig fairs. (*Bowring's Report on the Prussian Commercial Union; Appendix. xxv. 259-265.*)

The Leipzig and other German booksellers have, since 1834, erected an exchange for their exclusive use. The building as originally planned was to be three stories high, 112 ft. in length, and 48 ft. in depth; and the estimated cost of its erection was from 4,500*l.* to 5,000*l.* Among the other establishments in aid of commerce, are a fire and a life assurance office, each with a capital of 1,000,000 doll.; a company for insurance against *hail*; a discount bank, with a capital of 250,000 doll., &c. The Elbe-American Company, established in 1825, has its seat in this town, which has also a savings' bank, and a *mont-de-piété*. A railroad has been completed between Leipzig and Dresden; and another to Magdeburg would, it was expected, be completed by the end of the present year (1840). These works have not yet (as was anticipated) diminished the price of necessaries in Leipzig, provisions, fuel, house-rent, &c. being higher in it than in most capitals. The dollar of Leipzig is equal to 3*s.* 4*d.* sterling; 100 cils = 61*·*83 Eng. yards; 100 Leipzig lbs. = 103 avoird.

Leipzig is the cap. of the prov. and district of same

name, and the seat of the judicial courts, &c. At the end of the 10th century it was only a little Slavonian village; but during the 12th it was fortified, and its 2 principal fairs established. Its new year's fair commenced in 1456, and its book trade originated in 1545.

The vicinity of Leipzig, and, indeed, the town itself, was, in October, 1813, the scene of a most tremendous conflict. Napoleon having concentrated at this point such of his forces as he had been able to collect from the different parts of Germany, to the amount of about 135,000 men, was attacked on the 16th by the allied army, under prince Schwartzemberg, Blucher, and other generals, accompanied by the emperors of Russia and Austria, the king of Prussia, &c. The allied forces amounted to at least 250,000 men. The struggle, which was fierce, obstinate, and bloody in the extreme, terminated at night-fall without any decided advantage to either party. It was renewed on the 18th, when a Saxon brigade went over, during the heat of the action, from the French to the allies, which, combined with their superior force, gave the latter an advantage that all the genius of Napoleon, seconded by the valour and devotion of the French, could not counteract. Though the French maintained their ground during the day, a retreat became indispensable; and owing to the accidental blowing up of a bridge, a part of the French army was cut off; so that Napoleon lost 25,000 men, who fell into the hands of the allies as prisoners, exclusive of the far greater number who fell in the previous battles. Prince Poniatowski, who may emphatically be said to have been the last of the Poles, after displaying prodigies of valour, lost his life in the retreat on the 19th, having been drowned in attempting to cross the Elster. This great victory completely emancipated Germany from the yoke of the French, and opened the road to Paris to the allies. (*Berghaus; Horschelmann; Stein; Handb. für Kaufleute, and Comm. Dict.; Conversations' Lexicon; Strang, Russel; Bowring's Rep. on the Prussian Com. Union, &c.*)

LEIRIA, a city of Portugal, prov. Estremadura, on the small river Lis, 42 m. S.S.W. Coimbra, and 72 m. N. N.E. Lisbon, lat. 39° 30' N., long. 8° 52' W. Pop. 2,500. The town, which, though in a fine country, is small, sombre, and wretched-looking, has no fewer than 19 parish churches (one of which is likewise a cathedral), and 3 convents! A considerable fair is held here on the 25th of March.

LEITH, a sea-port and parl. bor. of Scotland, co. Mid Lothian, on both sides of a small river of the same name, at its confluence with the Frith of Forth, on a flat sandy shore, 2 m. N. by E. of the centre of Edinburgh, of which city it is the port. Pop., in 1753, 7,280 (*Maitland's History of Edinburgh*, p. 500.); in 1811, 20,363; in 1841, 25,984; inhabited houses, 3,580, giving rather more than 7 persons to a house. Parts of Leith, like Edinburgh, have houses of considerable height, several families living under the same roof in different *flats* or stories, each having access by a "common stair," which communicates with every story of the tenement.

The river divides the town into two portions, called N. and S. Leith, of which the latter (the original bor.) contained, in 1841, 14,357, and the former 6,389, the residue of the pop. being comprised in Newhaven, and some adjoining hamlets. They are connected by two drawbridges, and by an elegant stone bridge at the W. extremity of the town. Leith is united to Edinburgh by a road (partly paved, and partly macadamised), called Leith Walk, but it is so filled up with buildings that it may be regarded rather as a street than a road. Part of the town of Edinburgh on the W. stretches into the parish of S. Leith. The buildings in the older parts of Leith are huddled together without order or regularity, and the streets and lanes are, for the most part, narrow, crooked, and filthy. The new streets to the S. and E., however, form striking exceptions, being not much inferior to the best in Edinburgh. In S. Leith, the only two leading streets (Constitution Street and the Kirkgate) branch off from the N. termination of Leith Walk in the form of an acute angle. The street called the shore, fronting the harbour on the S., is lofty and substantial. On the S.E. of S. Leith are Leith Links, or downs, a common belonging to the bor., $\frac{1}{2}$ m. in length by nearly $\frac{1}{2}$ m. in breadth. The best buildings are erected on its skirts, chiefly on its N. and W. sides. A project for a new town, as an extension of N. Leith on the W., on a regular plan, was fixed on upwards of twenty years ago, and has been partially carried into effect; but building, both in this quarter and throughout the town generally, has been nearly suspended for about a dozen years. Both N. and S. Leith are lighted with gas, and supplied with water by the Edinburgh Water Company. The length of the bor., from E. to W., is $1\frac{1}{4}$ m., the mean breadth $\frac{1}{2}$ m. The mean and dirty village of Newhaven, $\frac{1}{2}$ m. to the W., is inhabited almost exclusively by fishermen, who chiefly supply Leith and Edinburgh with fish.

The public buildings in Leith are numerous. The Trinity-house, of Grecian architecture, on the W. side of

the Kirkgate, was founded in 1555, and rebuilt in 1817. The par. church of S. Leith, opposite the Trinity-house, built in the 16th century, has recently been much improved both internally and externally. The parish church was at Restalrig, 1 m. E. of the bor., till the Reformation, when it fell a sacrifice to the destructive zeal of the Presbyterians; since which the present building, originally a chapel dedicated to St. Mary, has served that purpose. The Free church of St. John in Constitution Street, originally erected as a *quoad sacra* church, is a spacious Gothic edifice: it has a lofty octagonal spire, with two schools attached to it, and forms altogether one of the most imposing objects in the bor. The present parish church of N. Leith is a modern structure of Grecian architecture, on an elevated situation, with a spire 158 ft. high. A handsome place of worship, in connection with the establishment, was erected in 1841 in S. Leith, and endowed by Sir John Gladstone, of Fasque, a native of the bor.; it has attached to it a school and an hospital for females labouring under incurable diseases. The buildings, which are in the Gothic style, form three sides of a square, and cost about 21,000*l.*, exclusive of the endowment. Among the other public buildings may be mentioned the gaol, a new edifice of Saxon architecture; the town-hall, in Constitution Street, erected in 1828, perhaps the most chaste and elegant specimen of modern architecture in the town; the Exchange Buildings, a large Grecian structure, extending to 180 ft. in front, and comprising an hotel, assembly rooms, and a reading room; the Leith bank; the Custom-house, close to the harbour on the N.; the High-school, at the S. corner of Leith Links; Dr. Bell's school; various dissenting chapels, particularly an episcopal one; and the Seafield baths, erected by a joint-stock company in 1812, at the E. extremity of the town, at an expense of 8,000*l.*

In regard to religious instruction, in addition to the two parish churches, and Sir John Gladstone's chapel, 5 places of worship belong to the Free church, four to the Associate Synod, and one respectively to the Relief, Independents, Methodists, R. Catholics, and Episcopals. The living of N. Leith is, Greenock perhaps excepted, the highest in the Scottish church, being about 800*l.* a year, arising principally from the tithe of fish landed at Newhaven, and from the rent of the glebe, which is *fermed*, or let on building leases. The church of S. Leith is collegiate, or is served by two ministers.

Literature and education cannot be said to have received, at least till of late, much encouragement in Leith. With the exception of the High-School, an efficient seminary, built by subscription in 1806, little else has been done in furtherance of either. The proportion of young persons at school is said to amount to one tenth of the pop. There are several schools for the instruction of the poorer classes, inc. a school, attended by about 700 children, founded by Dr. Bell of Madras, who left a bequest of 10,000*l.* for that purpose. There are several subscription libraries; and a philharmonic society for the cultivation of music, both vocal and instrumental. But there are no literary or scientific associations; and no newspaper is published in Leith. The near vicinity of Edinburgh may account for these and similar facts. Dr. Henry Hunter, translator of Lavater's "Physiognomy," and John Logan, author of "Sermons and Poems," were successively ministers of S. Leith; and John Home, author of "Douglas," and Hugo Arnot, the historian of Edinburgh, were natives of the bor.

With the exception of the Trinity-house, Bell's bequest, and Gladstone's hospital and school, Leith has no important charities. The Trinity-house, the funds of which are devoted to the relief of decayed sailors or their widows, supports, by monthly or quarterly payments, from 170 to 180 pensioners of various classes (but the number is necessarily variable); besides assisting sailors who have been shipwrecked, or are otherwise in distress. The recipients of the charity formerly lived in the house, but now they are all out-pensioners. There was a charity called King James's Hospital, for the support of old women; but the building has disappeared, though the funds, which are trifling, are still devoted to their original object. The other charitable institutions are the humane society, dispensary, and casualty hospital; the society for the relief of the destitute sick, and Leith boys' charity school. There are various friendly societies.

Poor-rates were introduced into S. Leith in 1817; into N. Leith in 1822. Aggregate numbers of permanent and occasional paupers, in 1849, 1,850. Sum raised for the relief of the poor in that year 8,912*l.*, assessed upon property of the estimated annual value of 114,384*l.* A work-house has recently been erected at a cost of 7,500*l.*

Leith labours under all but incurable disadvantages in respect to its port. At low water, the tide recedes above a mile from the shore; and the stream of the rivulet by which the town is bisected is so tiny, that it is even insufficient to clear away the mud from the harbour. Various efforts have been made to overcome these natural difficulties; but hitherto with no very marked success.

In 1720, a dock was formed on the E. side of the river, and that portion of the present pier which is of stone was erected; and in 1777 a small quay, called the custom-house quay, was built. But the increasing commerce of Leith soon rendered these trifling improvements quite inadequate to the demands of the port; and accordingly, in 1799, the magistrates of Edinburgh, who had the uncontrolled management of all public matters connected with the town and port of Leith, obtained an act of parliament, authorizing them to borrow 180,000*l.*, for the construction of wet-docks. In consequence, 2 docks were constructed on the N. side of the harbour, between 1800 and 1817, each measuring 250 yards in length, by 100 in breadth, and comprising together about 10½ imp. acres. Attached to them are three graving-docks, each 126 ft. long by 45 ft. wide at bottom; and 150 ft. long by 73 ft. wide at the top; with an entrance 36 ft. wide. At average spring tides, the depth of water in the docks is 16 ft. 9 inches; and at neap tides, 4 ft. less. The total expense was 285,000*l.*, of which 265,000*l.* was borrowed by the city from government, at 5 per cent.; of which 2 per cent. was to be paid annually, and 3 per cent. to be accumulated as a sinking fund for the liquidation of the debt. The city gave as security a mortgage over all their Leith property, and a concurrent claim, with other creditors, over the entire municipal property of Edinburgh, besides ceding certain effects to the admiralty.

In addition to these great works, others were undertaken in 1831-33; viz. an addition to the E. pier, of the extent of 500 yards; and the formation of a covering bulwark on the opposite side, 1,500 ft. in extent. The expense of the former (20,000*l.*) was borne by the city of Edinburgh; the latter (12,000*l.*), by government. The object of these works was to deepen the water in the channel; which was effected to the extent of about 2 ft. But after this had been done, the harbour was all but dry at low water, and there were only 17 ft. water over the bar, at its mouth, at high water spring tides, and but 14 ft. at neap tides. In fact, no vessel of above 400 tons burden could approach the harbour at the highest tides; and sometimes not even vessels of that burden. Under these circumstances it was determined to make still further improvements. And a statute having been passed in 1839, vesting the management of the harbour and docks in parliamentary trustees, and authorizing the expenditure of certain sums on their improvement, various extensive works have since been undertaken and are now (1850) in progress. These works, which are to be completed in the course of next year, comprise, 1st, a farther addition of 2,000 feet to the E. pier, and of 2,100 ft. to the W. do.; and 2d, the construction of a new wet dock of nearly 5 acres in extent, fitted to accommodate the largest class of steam ships. The object of carrying out the piers to so great a distance is to secure such a depth of water that they may be accessible at all times of the tide. And it is said that at their termination there is now 8 feet water at low ebb, which may be increased to 14 ft. by dredging. At their extremities the piers approach to within about 250 ft. of each other. The W. pier has a railway which communicates with the Edinburgh, Perth, and other railways; so that vessels may, by using it, either discharge the whole of their cargoes, or be lightened so that they may come up to the inner port.

But it is very doubtful whether even these additional works will effect the object in view—that is, whether they will secure a harbour always accessible: and supposing them to have the desired effect, the distance from the shore to the extremity of the piers will be as great as the distance from the W. end of the docks to Granton pier or greater, and there a deep-water harbour has been already constructed; so that it would seem that the expenditure upon the works now in hand will be little better than useless.

The harbour of Edinburgh should, in fact, have been constructed more to the W., at Trinity or Granton. Indeed, after much opposition on the part of Leith and Edinburgh, a bill was carried through parliament in 1857, for the construction of a low-water pier at Trinity, ½ m. W. of the harbour of Leith; but hitherto no effort has been made to carry that measure into effect. Luckily, however, the Duke of Buccleugh has been, for some years, engaged in the construction of a low-water pier on his estate of Granton, 1 m. W. of Leith; an undertaking of great national importance, and worthy an individual of great wealth and public spirit. This splendid work, now nearly completed, and by far the greatest of its kind attempted in Scotland, will secure for Edinburgh all the advantages of a deep-water harbour, accessible at all times. The pier, which is constructed in the most approved manner, projects into the sea about 1,700 ft., shaped like a T, with its head to the N., having harbours and landing places on both sides. It has been partially open for some years, but its business has hitherto been principally confined to the accommodation of steamers. The duke is now, also, constructing a breakwater which will add immensely to the accommodation for and security of

shipping. He has farther erected a large hotel with warehouses, and other buildings. Granton communicates by an excellent road and by railway with Edinburgh; and it is the point of departure for the steamers for Burntisland.

The commerce of Leith, from its being the port of Edinburgh, is very considerable, and has been slowly but steadily improving. It carries on a considerable trade with Australia, the E. and W. Indies, China, the Mediterranean, Canada, and the United States; but its principal foreign trade is with Holland and the N. of Europe. With regard to its domestic trade, there are various companies which employ steam and other vessels in trading to London, Hull, Newcastle, Liverpool, Greenock, Glasgow, Aberdeen, Wick, Helmsdale, Orkney, Shetland, Dundee, Stirling, and other British ports, and to Hamburg and other continental ports.

The gross amount of customs' dues collected at Leith amounted, in 1845, to 520,124*l.*, and in 1849 to 545,685*l.*

There belonged to Leith in January, 1850, 185 sailing vessels, of the aggregate burden of 20,625 tons, ex. 21 steamers; some of the latter being large and handsomely fitted up.

An attempt was made some time ago by a joint-stock company to introduce flax-spinning, and the manufacture of the coarser linen fabrics, into the town; but it was found impossible, as in most similar cases, artificially to raise up a manufacturing population, or successfully to come into competition with places, such as Kirkcaldy and Dundee, where the business had been gradually formed, and long established. A glass and bottle work has existed for a century, but out of seven furnaces only two are now at work. A pottery has been commenced. Ship-building has long been carried on to a considerable extent, and employs more capital than any other business in Leith. There are various extensive rope and sail works, distilleries, breweries, and iron foundries; a sugar refinery; a soap manufactory, which produced, in 1849, 2,646,520 lbs. of hard, and 32,570 lbs. of soft soap; a small linen manufactory, &c. There are 9 incorporated trades; an incorporation of maltmen; a merchant company; a chamber of commerce; six banks, and a savings' bank. A branch of the Edinburgh and Dalkeith railway terminates at the quay, opening an easy communication with the extensive collieries in the E. of Mid Lothian.

Leith existed as a town as early as the 12th century. The old church of N. Leith, long disused as a place of worship, was founded in 1493. It is now in ruins; but its cemetery is still used as a burial ground. A bridge over the river, built, in 1493, by Robert Bellenden, abbot of Holyrood-house, was used till 1788, when the first draw-bridge was erected. Leith is of no small note in the history of Scotland, having been the scene of more military service than perhaps any other town in the kingdom. It was once walled on the land side, but all traces of its fortifications have disappeared. Leith was taken possession of by Cromwell, who laid a heavy assessment on the inhabitants, and erected a citadel, of which some portions still remain. It formerly had races, which took place at ebb-tide, on the sands E. of the town; but they were transferred to Musselburgh Links in 1816. A martello tower on the sands, at some distance from the pier-head, was built, at an expense of 17,000*l.*, for the defence of the port, during the late war: the port is farther defended, by a battery of nine guns, a little to the W. of Cromwell's fort.

Leith was long dependent on Edinburgh. So early as the 14th century, the latter obtained a grant from King Robert Bruce, of its harbour and mill; a right which was confirmed or extended by subsequent grants either from the crown, or Logan of Restalrig, the baronial superior of the place. The municipal government of the burgh was, as already stated, substantially vested in the town-council of Edinburgh, who had the entire management of the port. But the Scottish Bor. Reform Bill, which came into operation in November, 1833, totally changed this state of things, and conferred on the inhab. of Leith what they had long struggled to obtain, the uncontrolled direction of their own municipal affairs; vesting them in a provost, 4 bailies, and 10 councillors, chosen by popular election. This act did not, however, affect the rights of Edinburgh over the harbour and docks, or the revenue arising therefrom. But the Edinburgh and Leith Agreement Bill (July, 1838) made each town, in every respect, independent of the other. By this statute, the affairs of the harbour and docks are vested in 11 commissioners, (of whom 5 are nominated by Her Majesty's Treasury, and 3 by the town-councils of Edinburgh and Leith respectively), whose proceedings, however, require the sanction of the Treasury. The debt on the docks due to government, at the date of the passing of the act, was 228,374*l.*; and the commissioners were empowered to borrow a sum not exceeding 125,000*l.* (the government postponing the security granted to it *pro tanto*), for the improvement of the port, provided the whole particulars and estimates receive the authority of the Treasury. Government also postponed

its claims to such annual sums as might be required for maintaining or extending the efficiency of the port.

Previously to the passing of the Reform Bill in 1832, Leith had no parliamentary representative. But that act conferred on it, with Portobello and Musselburgh, the right to send 1 mem. to the H. of C. Registered voters in 1849-50, 1,323; being more than two-thirds of the entire constituency. (*Boundary Reports; Campbell's Hist. of Leith; and Private Information.*)

LEITMERITZ, a fortified town of Bohemia, cap. circ. of its own name, on the Elbe, here crossed by a bridge about 800 ft. in length, built partly of stone and partly of wood, 33½ m. N. N. E. Prague. Pop. (1846), 4,350. It is well built, and has a handsome cathedral and other churches, a gymnasium, a theological seminary, a high school and girls' school, with manufactures of straw hats and chicory, and a considerable traffic in agricultural produce, and fish caught in the Elbe. The wines of its circle are the best of any in Bohemia, which, however, is no very high recommendation. It is a bishop's see, and the seat of a circle council. (*Oesterr. Nat. Encyc., &c.*)

LEITRIM, a marit. co. of Ireland, prov. Connaught, having N. Donegal Bay, E. Fermanagh and Cavan, S. Longford, and W. Roscommon and Sligo. It is long and narrow, stretching N. N. W. and S. S. E. nearly 50 m. Area 420,375 acres, of which 128,167 are mountain and bog, and 25,568 water, including Lough Allen, near the source of the Shannon, which is also in this co. Leitrim is wild, and generally mountainous; but in the vallies and low grounds the soil, which is incumbent on limestone, is mostly very fertile. Property in very large estates. Tillage farms small and not unfrequently let on partnership leases. Agriculture perhaps improving, but in an excessively backward and depressed state. There is no rotation: corn follows corn as long as the soil will bear any thing; or if the series be interrupted, it is only to make way for potatoes or flax; and when the land is exhausted its recovery is left to the *vis medicatrix nature*; clover and turnips are nearly unknown; and here, as in most other districts of Ireland, the potato is the all but sole dependence of the bulk of the pop. The habitations of the occupiers are mostly miserable huts; and, except in a few instances, office-houses, in the proper sense of the term, can hardly be said to exist. Average rent of land, 10*s.* 8*d.* an acre. Some coarse linen is made for home consumption. Leitrim contains 5 baronies, and 17 pars. It sends 2 mems. to the H. of C., both for the co. Registered electors, 1849-50, 554. In 1841, Leitrim had 25,912 inhab. houses, 27,192 families, and 155,297 inhab., of whom 77,501 were males, and 77,796 females.

LEMBERG (Polish, *Lwow*, Latin, *Leopolis*), a city of the Austrian dominions, cap. Galicia, on the Peltew, a tributary of the Bug, 185 m. E. by S. Cracow, and nearly 370 m. N. E. Vienna. Lat. 49° 51' 40" N.; long. 24° 2' 45" E. Pop., inclusive of the garrison and strangers, in 1845, 75,000, of whom above 20,000 were Jews. Lemberg was formerly an important fortress; but the demolition of its fortifications was begun early in the last century, and completed under Joseph II., when its ramparts were planted with trees, and laid out in public walks. It has still, however, 2 castles, one within the town, and the other, the ruined castle of Lowenburg, on an adjacent eminence to the N. The city proper is small, but it has 4 suburbs, each equalling it in extent; and comprising the handsomest buildings. The lofty towers and cupolas of the cathedral and other churches, and the massiveness of its public structures, give Lemberg an air of grandeur, particularly when viewed from a distance. The city has narrow dirty streets and old houses; but the suburbs are generally well built, and have several wide, straight, and tolerably well paved streets, and some spacious squares. The houses are mostly of freestone, two or three stories high, but roofed only with shingles. The chief public edifices are the palace of the Armenian archbishop in the Cracow suburb; the Dominican church, which has a fine monument by Thorwaldsen; one of the 2 synagogues, the old Jesuits' college, the new council-house, the governor's residence, the general hospital, and the large barracks in the Zolkiew suburb. Lemberg has upwards of 20 churches, including a Greek and an Armenian cathedral, 9 Rom. Cath. par. churches, and Lutheran and Calvinist meeting-houses; a Greek, an Armenian, and 6 Rom. Cath. convents, 5 hospitals, and a theatre. Its university, established in 1784, and remodelled in 1817, had, in 1833, 1,311, and in 1845, 1,400 students; of which, in the former year, 485 studied divinity, 399 philosophy, 242 law, and 185 medicine. It has also an imperial academy, a Rom. Cath. and a Greek ecclesiastical seminary, 2 gymnasia, 2 high schools, a school of arts and sciences, a normal school, a Jewish female and many elementary schools; a provincial museum, chiefly for the natural and other products of Galicia, and a valuable public library, said to be rich in works in Polish literature. It is the seat of the provincial government; of the courts for the city and circle, a court of appeal for the prov., &c. &

and has Rom. Cath., united Greek, and Armenian archbishops, and Lutheran and Calvinist superintendents.

Lemberg has manufactures of cotton and woollen stuffs, with dye works, distilleries, tanneries, and a few printing establishments; but it is much more a commercial than a manufacturing city. Next to Brody, with which it has a constant intercourse, it is the chief trading town of Galicia. Its position on the high road from Odessa to Silesia and Warsaw, renders it an emporium for much of the produce of S. Russia, Moldavia, and Wallachia, in its transit to central Europe. Large fairs are held at Lemberg; the most important is that called *Drei Königs Messe* (Three Kings' Fair), which lasts six weeks from Jan. 14., and attracts a vast concourse of Jewish, Christian, and even Mohammedan merchants. The Russians bring to the fairs large quantities of peltry from Siberia and Tartary, which they exchange for the woollen and cotton goods and hardware of Austria. Large herds of cattle arrive at Lemberg from Moldavia and Bessarabia, being thence distributed to different parts of Austria and Silesia.

Lemberg is also one of the principal corn-markets of the Austrian empire. Corn is sent from it to Przemyśl, on the San, where it is shipped for Dantzic; and it is, also, though more rarely, sent from it to some of the nearest stations on the Dniestr, for shipment for Odessa. But, owing to the length and difficulty of the navigation to either of these great emporiums, there is usually a very wide difference between the prices in them and in Lemberg. Thus, on the 28th of November, 1838, wheat sold at Lemberg for 15s. a quarter, whereas its price at Dantzic on the 20th of the same month, was no less than 41s. 6d.; the difference amounting to 26s. 4d. a quarter, being the measure of the cost of the conveyance from Lemberg to Dantzic! We may remark, by the way, that this fact sets in a very striking point of view the absurdity of the statements so frequently put forth in our newspapers, contrasting prices in this country with those in foreign markets, and ascribing their excess in England wholly to the influence of our corn-laws.

Lemberg was founded in the 13th century. It was taken by Casimir I. of Poland, in 1340. It was besieged in 1648 by the famous Cossack chief, Bogdan Khmelnicki, who threatened its extermination, but withdrew on receiving a large ransom. In 1673 it was taken by the Turks; and in 1706 it was taken and sacked by Charles XII. of Sweden, when it ceased to be of much consequence as a fortress. It came into the possession of Austria in 1772, since which it has progressively advanced in wealth and population. (*Oesterr. Nat. Encyc.*; *Malle-Brus, Tableaux de la Pologne*, ed. 1830, l. 419.; *Private Information*.)

LEMGO, a town of Germany. See LIPPE-DETMOLD.

LEMNOS (Turk. *Stalimene*), an island of the Grecian Archipelago, belonging to the dom. of the Porte, 43 m. S.E. the promontory of Mount Athos, and about the same distance W. from the mouth of the Hellespont, Mount Therna being in lat. 39° 53' 46" N., long. 25° 8' 32" E. Area about 150 sq. m. Pop. said to amount to 12,000, chiefly Greeks. It is of an irregular quadrilateral shape, being nearly divided into two peninsulas, by two deep bays or indentations of the sea, Port Paradise on its N. and Port St. Antonio on its S. side. The latter, which is capacious and land-locked, has good anchorage for large ships. The E. side presents to the sea a bold rock, *Monte Santo*, called by Æschylus the *Ἐγναίου λιμένας Ἀθήνων*, in his brilliant description of the watch-fires between Mount Ida and Mycenæ: a rocky bank projects from it upwards of 8 m. into the sea. The appearance of Lemnos is far from picturesque: barren, rocky, though not very high, mountains cover about two thirds of its surface, and scarcely a tree is to be seen, except in some of its narrow valleys, which are verdant and fertile, especially on its W. side. The whole island bears the strongest marks of volcanic action: the two highest mountains have craters; there are several thermal springs, and the rocks in many parts resemble the burnt and vitrified scoræ of furnaces. One of its mountains, indeed, appears, from a fragment of a Greek poet preserved by Nicander, to have been constantly emitting flame and smoke; and hence we may account for the fact of this island being sacred to Vulcan, who, when precipitated from heaven, is said to have fallen on its hospitable shores:—

"Lemnos cara deo: nec fames nocet Ætna
Aut Læpææ domus." *Val. Flaccus*, lib. II. l. 95.

This island has been long famous for its furnishing a peculiar siliceous earth or bole, celebrated for its detergent and medical qualities, called *Terra Lemnia* and *Terra Sigillata*, from its being impressed with a peculiar seal or mark. Galen visited the island in the second century, for the express purpose of making himself acquainted with this earth; and he states that it was then dug up with many religious ceremonies. (*De Simplic. Medic.*, lib. ix.) This practice has been continued down to our own times, or, at all events, to a very late period. The earth is dug up on the 6th of August,

in the presence of the chief men of the island: when a sufficient quantity is extracted, the hole is filled up; the bags or parcels are then sealed, and, a few being sent to the grand seignor, the governor is accountable for the value of the others. But the reputation of the Lemnian earth is now much fallen off, and the demand for it has proportionally declined. (*Ancient Universal History*, viii. 346. 8vo. ed.)

At present the high grounds of the island are grazed by sheep; but the W. and S. valleys produce corn, good grapes and figs, cotton and mulberry trees. The climate, however, is too cold to ripen oranges and lemons; and the island frequently suffers from the locust.

The wine of Lemnos is of two sorts, both red; the best fetches about 8 paras per oke, or 2s. 3d. per bottle. It produces more than sufficient grain for its own consumption, the rest, with some wine, being sent to Mytilene; but its chief exports are ewe-milk cheese, silk, cotton, and wool. Wheat sells for 4 piastres (6s.) the bushel, barley for 8 paras the oke, and cheese for the same. The inhabs. are divided between agriculture and fishing, and the women (celebrated for their beauty) are employed in weaving cotton cloths. The Turks resemble those of the other islands, both in dress and manners; but the costume of the Greek women is remarkable as well as picturesque. It consists of a short scarlet jacket, with long sleeves, loose in front, and reaching only a few inches down the back, very short petticoats, wide calico trousers gathered at the ankles, yellow Turkish slippers, and a white handkerchief tied like a turban round the head. The principal town Castro (the ancient *Myrina*), on the W. side, contains 3 Greek churches; and its port, or rather cove, is defended by a little pier, and commanded by a citadel on the overhanging rocks. Ships are built here; and the natives are excellent seamen. Pop. 2,000. The other port is St. Antonio on its S. side, at the bottom of the bay already noticed. (*Walpole's Memoirs*, ii. 54, &c.)

Lemnos, according to Pliny, had a labyrinth more remarkable than that of Crete or of Egypt. It was supported by 140 columns, and its gates were so admirably adjusted, as to be turned by a child. (*Quarum in officina turbines ita libratis pependunt, ut pueri circumagere tornarentur.*) It was the work of three architects, one of whom, Theodorus, was a native of the island. Its remains are said to have been extant in Pliny's time. (*Hist. Nat.* lib. xxxvi. cap. 13.) No certain traces of this famous edifice have been discovered in modern times; but this is probably a consequence of the island having been seldom visited by scientific travellers, or of the changes occasioned by the action of volcanoes, or other natural convulsions.

The first inhab. of the island are said to have been Thracians. In the reign of Thoas, the only Lemnian king mentioned in history, the Lemnian women are said, in imitation of the Amazons, to have treacherously killed all the males (*Herodot.*, lib. vi. cap. 138.); and hence any premeditated and detestable murder or other crime was long after called a "Lemnian action." Miltiades reduced the Lemnians under the sway of Athens.

LENA, a large river of N. Asia, the principal in E. Siberia, extending through 19° N. lat., and falling into the Arctic Ocean. It rises in lat. 42° 30' N., and long. 106° E., on the W. slope of the lofty granitic range, skirting the N.W. shore of the lake Baikal; and from the source as far as Ust Kuisk, a distance of 350 m., it pursues a N. course; but at that point it is turned E. by a chain of hills, and runs in a very tortuous channel E.N.E. for about 1,000 m. to Yakutsk, the metropolis of E. Siberia, where it is a wide and noble river. Its general course from Yakutsk is N. down to the apex of the extensive delta formed at its mouth, the distance between these two points being about 700 m. If the distances along the stream, carefully measured on J. Arrowsmith's map, be correct, the entire length of this gigantic river is probably somewhat more than 2,100 m. The basin of the Lena, according to Ritter, covers an area of about 800,000 sq. m., the principal tributaries above Yakutsk being the Kirenga, Vitim, and Olekma, on its E. side, while below that city, the main stream is joined E. by the Aldan, rising by several sources in the Stanovoi range, and W. by the Bilui, which rises on the E. side of the hills dividing the Lena basin from that of the Yenisei. The Lena has an extremely tortuous course with a sluggish stream, and encloses numerous islands. Mr. Dobell, who travelled up the stream from Yakutsk to Irkutsk, describes it as "one of the safest navigable rivers, of its size, in the whole world, its course being only very rapid in the spring, at the breaking up of the frost, when numerous tributary rivers and torrents, bursting their icy fetters, rush with impetuosity into the maternal bosom of the Lena. The river, at these times, is a truly sublime spectacle, particularly where it passes through what are called the *gates*, which confine it in a narrow channel between rugged cliffs rising perpendicularly nearly 300 ft. above the stream. The dashing and eddying of the

stream to the extent from one side to the other is fertility ground; and yet the native bentonite shingles to descend the river without injury even at this season. The forests on its bank are principally of oaks and the yellow pine, both of a large growth, and the soil on the mountain appears rich and good, and capable of producing grain of all sorts. Most of the farming settlements, however, are either on the level spots along the edge of the river or on the declivities of the mountains. Below Yabash, the face of the country is very different: the river rolls through vast and almost uninhabited plains, covered with snow and ice, which never wholly melts, and beneath which have been found the carcasses of mammoths, rhinoceroses, and other high animals." (*Dodell's Siberia*, II. 49-50; *Leitch's G. Geog.*, 1. 143-144.)

LENHAM, a damp market town and par. of England, co. Kent, 10 m. S. of Maidstone, 10 m. N. of Canterbury, and 40 m. S.E. of London. Area of par. 6,500 acres. Pop. in 1861, 2,314. The town consists of a principal street, on the high road between Maidstone and Canterbury, intersected by another of smaller size. The church has a square tower and 14 curiously carved stalls in its interior which are supposed to have belonged to the saint and monks of St. Augustine, at Canterbury, who had large estates within the par. The market has been long disused, and the inhabitants are almost entirely engaged to agriculture.

LENTINI (an *Lountano*), a town of Sicily, prov. Syracuse, on a hill, washed by the river Pantalano (an *Lento*), near the lake of Lentini, or Syracusa, 14 m. S.E. of Catania, and 30 m. N.W. of Syracuse. Pop. in 1861, 7,374. The country round is open, and of old, extremely fertile.

culture, to the extent of which is the all to suffer from the on and distant vegetation, the

by a colony of (Pom.) the coast also been on which a, such as that village of the was taken by (the principal) the system of a detailed de- do at that po- considered in gh the middle (public build- cements and is called the

two hills, which are rough and barren along their whole extent. But the summit of these hills is flat and plain, and is covered with vineyards and houses. There are two gates to the city: one of them is to the southern extremity of the city and conducts to Syracuse; the other is on the opposite side, and leads to those lands so famed for their fertility called the *Lentini* fields. Below the hill that stands on the W. side of the valley flows the river *Lento*, and on the same side of the river, there is a row of houses built under the very precipice, and in a line parallel to the river. (Strabo, lib. vi. c. 1. § 1. p. 104.)

In his third expedition against Verres, Cicero repeatedly refers to Lentini, and celebrates the extraordinary fertility of its territory. *Agri Lentini* caput rei rei frumentariae. (*In Verrem*, lib. iii. cap. 18.) The famous orator Caelius, whose eloquence was instrumental to persuading the Athenians to undertake their final expedition against Verres, was a native of Lentini.

LEOMINSTER, a par. bur. market-town, and par. of England, co. Bedford, 10 m. W. of Bedford, and 130 m. W. of London. Area of par. and par. bur. which are co-extensive, 9,200 acres; pop. in 1861, 4,261. The town consists of a good principal street, about 1/2 m. long, intersected by several narrow and inconvenient lanes. There are several handsome town and private residences, and being well paved and well lighted, it has, on the whole, a respectable appearance. The town hall, called the *Butter-hall*, in consequence of the butter market being held in the lower part, is an odd-looking structure of timber and plaster standing on oak pillars, with lower windows. A market house was erected in 1610, near which is a small pond. The church, which exhibits the architecture of several periods, has a tower 100 ft. high; the village is in the gill of the local character. The Baptists, Wesleyan Methodists, Methodists,

and the Society of Friends, have each places of worship; and well-attended Sunday schools are attached to the church and to various chapels. A free grammar-school, founded and endowed by Queen Mary II. has entirely ceased to furnish gratuitous education, and has become a private school: the corporation appoints the master, but beyond paying him an annual stipend of 500 they have no concern in the management of the school. (*Mem. Corp. Rep.*) An almshouse, dispensary and house of industry are the only other public establishments. Taxes collected by a rate and expended on the poor of the par. in 1867, 1000.

Leominster was formerly one of the principal seats of the glove manufacture, but latterly the business has been on the decline. Hats are made, and coarse woollens, but the latter only to a small extent. Tanning is extensively carried on. The principal dependence of the town is, however, on its retail trade with the adjacent county. Coal is brought from Shropshire, partly by canal and partly by waggons, from the *Coal Hills*.

The land in the borough and in the out-parish is to a great degree held, often in small portions, by the residents in the town. The country round produces, besides the common agricultural products, apples and hops in great abundance. In the townships neighbourhood of the town the meadow lands are for 6d. or 1s. per acre. Further off the average rent is about 2s. in the out-parish the rent was represented to us much lower, seldom exceeding 10s., and sometimes falling as low as 1s. The arable farms vary in size from 40 to 400 acres. There are few tenures by *free*—some lands and houses belonging to the corporation are let for long terms, subject to three joint lives, but renewable, as the *free* fall in, for them certain. There are some leases for terms of years, but the greatest number of holdings are from year to year, the leases for years expiring, and the tenant holding on. A considerable quantity of the land is occupied by the proprietors. The wages of labouring men, finding their own food, are, on an average of the whole par. about 10s. per week. (*Bound. Rep.*)

Leominster is a bur. by prescription, and received several charters between 1066 and 1100, the governing charter till 1861 having been 30 Charles II. The crown officers are, a recorder, 4 aldermen, and 19 councillors. Corp. rev. in 1867-8, 5111. Quarter and petty sessions are held in the town hall, and there is a court for the recovery of debts under 1000. The par. franchise was granted in 13 Edward I., since which time the bur. has sent 3 knights to the H. of C., the voters, down to the passing of the Reform Act being resident burgesses and tenants paying rent and tax. The Boundary Act made the par. bur. co-extensive with the par. Reg. electors in 1849-50, 415. Markets on Friday, large fairs for cattle, farming produce, &c. Feb. 13, May 13, Sept. 4, and Nov. 8. (*Mem. and Bound. Rep.*, &c.)

LEON, an ancient kingdom of Spain between lat. 40° 10' and 40° 30', and long. 4° and 1° W., bounded N. by Asturias, E. by Old Castile & by Estramadura, and W. by Galicia. greatest length, 200 m.; breadth, 120 m. area, 10,375 sq. m. Pop. according to 1810, 1,315,000. The whole of this region is included in the basin of the Duero, and is intersected by several large tributaries of that river: the principal being the Pisuerga, Ebro, and Tago. The N. and E. districts are mountainous, the former comprising various elevations from the Asturian chain, and the latter being skirted by the central chain of the Penedes, two of the highest summits of which are the *Sierra de Guadalupe*, 10,340 ft., and the *Pico de Francia*, 11,000 ft. The hilly country produces the richest and best wine in Spain, and is rich in iron ore, some portion of which is smelted and made into hardware goods. The habits of the Asturian mountaineers are a distinct race, robust, and simple in their manners, engaged during summer in pasturing cattle, mules, and the migratory flocks of sheep that pass at that season through their country and as other than employed in tillage and in collecting woodland moss, which is here very abundant, woodwork and medicinal plants, which they sell in the markets of Leon and Madrid.

The less elevated parts of Leon contain many tracts which afford excellent pasture, and dairy farming might be pursued with great profit, were it not for the want of satisfactory security and even tolerable roads. Wheat, barley, wheat, and hay are cultivated in some parts, but there is a great want of irrigation. The wine of Asturia is said to be of good quality, but that raised on the borders of Galicia is generally bad. Leon has no public manufactures worth notice, except that of hardware, but there is a good deal of domestic manufacturing of woollen and flannel stuffs for home consumption. The canal of Castile, constructed about 50 years ago, passes southward up the valley of the Pisuerga, but it was never finished, and contributes very little if at all, to the advantage of the districts through which it passes. To succeed, who visited Leon while the works were in progress, has given a good account of the undertaking. (*Voy. p. 200*.)

The kingdom of Leon is divided into 6 provs., Leon

and Pálenca in the N.; and Zamora, Toro, Valladolid, and Salamanca in the S.; the principal cities and towns being Leon, Valladolid, Ciudad Rodrigo, and Salamanca. This country was anciently inhabited by the *Vettones* and *Callaeci*, and formed a part of the Roman *Tarraconensis*. Don Pelayo and his successors during the 8th century formed this district into a kingdom, called after its capital, and connected with that of Asturias. It was first added to Castile in 1087, but continued in an unsettled state till 1230, when it was finally united to the dominions of Ferdinand III. king of Castile. (*Milano; Mod. Trav.*)

LEON, a city of Spain, cap. kingd. and prov. of same name, 49 m. S. Oviedo, and 176 m. N.W. Madrid; lat. $42^{\circ} 45' N.$, long. $5^{\circ} 17' 45'' W.$ Pop., according to Milano, 5,500. This ancient city, once the cap. of an independent kingdom and the residence of its sovereigns, stands on a kind of peninsula formed by the Bermeaga and the Torio. It is surrounded by decayed walls, and bears in its narrow, dirty, unpaved streets, and almost ruinous houses, the indications of poverty and wretchedness. Among the public buildings, the largest is the cathedral, a Gothic structure, with a lofty spire deservedly admired for its lightness and elegance: the ecclesiastical establishment comprises a bishop and 40 canons. There are no fewer than 13 par. churches in the town and suburbs, and 2 canonical houses for Augustinian monks, with 7 other monasteries. There are also 4 hospitals, one of which is for foundlings. The inhab. are employed in linen weaving, in knitting stockings and caps, and making leather gloves; there are, also, some tanneries and soap-factories. The surrounding country is bold and beautiful; but agriculture is in the most degraded state. Hay-making, however, though common here, is not usual in other parts of Spain.

Leon was founded prior to the reign of the Roman emperor, Galba: it was called by the Romans *Legio septima Germanica*, from the circumstance of that legion being stationed here: it was the first large town recovered from the Moors, after whose expulsion in 722, it was the residence of Christian kings during more than three centuries. (*Milano; Townsend*, vol. I. p. 376, &c.)

LEON, a town of Mexico, state of Guanajuato, in a fertile plain, and on the road from Guanajuato to Lagos, 36 m. W.N.W. the former city. Pop. estimated at about 6,500. It has 3 convents, a college, and an hospital, and carries on some trade in corn, &c.

LEON (ISLA DE), a long and narrow island close to the S. coast of Spain, prov. Cadiz, and separated from the mainland only by the narrow but deep channel of Santi Petri, crossed by the bridge of Zuarzo, which being the only point of approach to the important city of Cadiz, is defended by strong redoubts. It is about 8 m. long by about 2 in breadth, and consists almost entirely of a dreary sandy waste, abounding with salt-water marshes. Cadiz occupies a small peninsula at the extremity of a long sandy isthmus, separated from the rest of the island by a line of fortifications called the Cortadura. (*See CADIZ.*)

There are two other towns, the chief of which is San Fernando, otherwise called Isla, and sometimes Leon, $6\frac{1}{2}$ m. S.E. Cadiz. Pop., in 1830 (as estimated by Inglis), 32,000; but it had decreased 9,000 since 1810, and is probably at present, 1840, under 25,000. "Isla," says Inglis, "is certainly one of the prettiest towns in Spain, and I never saw a cleaner and handsomer avenue than its principal street, which is about $1\frac{1}{2}$ m. long. Every house is of the purest white, and every range of windows on every house has its green verandah." The principal buildings are the hôtel-de-ville, in the great square, and the great church, which is not only remarkable for architectural beauty, but also for a curious mausoleum, called the *Pantheon*, intended for the interment of the clergy. In 1809, when Mr. Jacob visited this town (which is quite of modern growth, having been built in the middle of the last century), it was inhabited by a numerous pop., more active and industrious than in any other part of Spain; most of whom either belonged to the navy, or were engaged in the then busy dock-yard of Caracca. But its present condition is the very reverse of prosperous; for "Isla," says Mr. Inglis (1830), "is a sadly fallen town: the great naval school, and extensive docks of Caracca once gave employment, and life and prosperity to Isla; but now there is not a ship on the stocks, nor a pupil in the college." (*Milano; Inglis*, vol. II. p. 89; *Mod. Trav.*, &c.)

LEON DE NICARAGUA, a city of Central America, and the former cap. of the state of Nicaragua; in a savannah near a volcano, by whose eruptions it has occasionally suffered; about 90 m. N.W. Grenada, and 5 m. from the N.W. shore of the Lake of Leon; lat. $12^{\circ} 20' N.$, long. $90^{\circ} 56' W.$ Pop., estimated by Thompson in 1829 at 38,000 (*Official Visit*, &c. 451.); but it has since been greatly reduced by the revolutions that have taken place within its walls, and the decay consequent on the removal of the seat of government to Grenada. It is sur-

VOL. II.

rounded by old walls; and has several suburbs, a cathedral, and 3 other churches, several convents, an hospital, and a college. It is a bishop's see; and was originally founded, in 1523, on the spot now called Old Leon, but was removed to its present site in 1532.

LEONARD (ST.), a town of France, dép. Haute Vienne, cap. cant., on a hill near the Vienne, here crossed by a handsome bridge, 12 m. E. Limoges. Pop. in 1836, ex com., 3,504. It was fortified in the 16th century; and has manufactures of coarse woollens, paper, earthenware, &c.

LEONESSA, a town of central Italy, in the Neapolitan dominions, prov. Abruzzo Ultra, 36 m. W.S.W. Teramo, and 14 m. N.N.E. Rieti. Pop., in 1830, 7,000. It has several churches and convents, and some large annual fairs. It is situated in a wild rugged country, in an amphitheatre, surrounded by mountains which, in winter, intercept the sun's rays for half the day, and render the climate very severe. (*Del R2*, II. 236.)

LEONFORTE, a town of Sicily, intend. Catania, dist. Nicosia, cap. cant., in a hollow of M. Tavi, near the Giaretta, and 37 m. W.N.W. Catania. Pop., in 1831, 10,678. Smythe says it is a fine town, in a healthy situation. It is surrounded with walls, and has a large square, from which two long and well-built streets diverge. Its trade in corn, wine, oil, and silk is considerable, and it has a large annual fair. A good deal of asphaltum is found in its vicinity. (*Smythe's Sicily; Ortolani Dizionario di Sicilia*, &c.)

LEPANTO (TOWN AND GULPH OF), Lepanto, (an. *Naupactus*), a sea-port town of W. Greece, on the N. shore of the Gulph of Lepanto, about $3\frac{1}{2}$ m. E.N.E. from the castle of Roumelia, at its entrance, and 1 m. W. from the mouth of the Morino, lat. $38^{\circ} 21' 50'' N.$, long. $21^{\circ} 46' E.$ Pop. 2,400? It is built on the side of a hill surmounted by a castle of little strength, whence two walls come down to the sea, enclosing the town on either side. The harbour, within the town, is shallow, and fit only for small craft, and the place has very little trade. In antiquity Naupactus was a place of considerable importance. It was occupied by the Athenians during the Peloponnesian war; and after many vicissitudes was nearly destroyed by an earthquake during the reign of Justinian. Its present walls are built on the foundations of those by which it was surrounded in antiquity. (*Cramer's Ancient Greece*, II. 107, &c.)

But, how unimportant soever, Lepanto has given its name to the extensive gulph on which it is situated, anciently the *Corinthiacus Sinus*, or Bay of Corinth. The entrance to the gulph, between the ruined castles of the Morea and Roumelia, at the bottom of the gulph of Patras, is only about 1 m. across. Within, it expands into a magnificent basin, stretching E. with a little inclination to the S. to Mazi, a distance of about 78 m., being, where widest, about 20 m. across. Corinth, whence it formerly derived its name, is situated near its S. extremity. It has many fine bays and harbours; and in antiquity, there were several considerable towns on its banks. Between the castles, at its entrance, there are from 30 to 35 fathoms water; and within the gulph, the water is generally very deep, there being no soundings in the centre at 300 fathoms.

Lepanto has, also, given its name to one of the greatest conflicts of modern times. Philip II., king of Spain, the Pope, and the Venetians, entered, in 1570, into a league against the Turkish sultan, Selim, who, having conquered Cyprus, and become very powerful at sea, threatened to invade Italy. The Turks, being apprised of the intentions of the confederates, assembled a powerful fleet in the gulph of Lepanto, having a large land force on board. The allies, commanded by Don John of Austria, having made equally great preparations, the two armaments encountered each other on the 7th of October, near the mouth of the gulph of Lepanto. The contest was long, bloody, and destructive; and was maintained, on both sides, with invincible courage and resolution. In the end, however, the allies gained a complete victory. The Turks lost above 25,000 men, killed, and 10,000 taken prisoners, and with the exception of 30 or 40 galleys, that effected their escape, their whole fleet was either taken or destroyed. The Christians lost about 10,000 men, killed in the engagement, or who died of their wounds. Estimating it by the number of men engaged, this was certainly the greatest sea-fight that has taken place in modern times. It was, also, the first signal victory achieved over the Turks, and diffused the greatest joy throughout Christendom. Owing, however, to the contentions among the allied admirals, the results were not such as might have been expected. (*Modern Universal History*, xxvii. 416—423., 8vo. ed.; *Watson's Philip II.*, book 9.)

LERIDA (an. *Ilerda*), a fortified town of Spain, Catalonia, 85 m. W. Barcelona, and 72 m. E. by S. Saragossa, lat. $41^{\circ} 36' N.$, long. $0^{\circ} 46' E.$ Pop., according to Milano, in 1826, 12,600; but, according to Hörschmann in 1833, 16,820. It is situated on the Segre (crossed here by a handsome bridge), under the protection of a hill on which

M

series; but the ability of their generals enabled the Thebans to achieve, despite every disadvantage, the greatest triumph ever won by one Greek army over another. Cleombrotus, the Spartan king, was left dead on the field, with many of his principal officers, and the flower of his troops. Sparta lost with this battle the ascendancy she had long enjoyed among the Grecian states. (*Xenophon, Hellen.*, lib. vi. cap. 4.; *Diodorus Siculus*, lib. xv.; *Mitford's Greece*, v. 90. 8vo. ed.)

LEUTSCHAU (Hungar. *Lőcse*), a royal free town of Hungary, co. Zips, of which it is the cap., on a hill 120 m. N.E. Pesth. Pop. (1837), 5,175, of whom Berghaus says three eighths are Protestants. It is old, and ill built, but has a large and handsome square, a Gothic church, with the largest organ in Hungary, a large old town-hall, a new council-house, and several other edifices, the oldest Lutheran gymnasium in Hungary, a Rom. Cath. gymnasium, a high school, a noble female seminary, and an asylum for soldiers' children. It produces linen fabrics, and mead, of which last a good deal is sent into Poland. (*Austrian Encyc.*; *Berghaus*.)

LEVANT, a term applied to designate the coasts of Europe, Asia, and Africa, along the Mediterranean, from Cape Matapan round the Ægean Sea, Asia Minor, and Syria, to the western confines of Egypt. In the middle ages, the trade with these countries was almost exclusively in the hands of the Venetians, Genoese, and other Italians, who gave to them the general designation of *Levante*, or Eastern countries. But the term *Levant*, being no longer vernacular in the languages of the nations now principally engaged in the trade with the countries referred to, it seems to be falling into disuse.

LEVEN, a bor. of barony, sea-port, and manufacturing town of Scotland, co. Fife, on a level at the mouth of the river of the same name, on the N. shore of the Frith of Forth, 19½ m. N. by E. Edinburgh; on the W. of the river is its suburb of Dubbleside, or Inverleven. Pop. of both, 1,827. Leven consists of two principal, and not very regular, streets, running parallel to each other E. and W., with a variety of bye-lanes, and detached houses. The communication between Leven and its suburb was long maintained by a suspension-bridge over the river; but a stone bridge was built in 1840. The only public buildings are the par church, a Free church, and chapels belonging to the Relief and the Associate Synod. There is, also, a small congregation of Independents. There are two libraries, a mechanics' institute, and a great variety of friendly societies.

Leven is chiefly remarkable for its manufactures. There were, a few years since, either in the town or its immediate vicinity, six mills for spinning flax, driven partly by water and partly by steam, employing about 520 hands. There are, besides, 170 hand-loom weavers of coarse linens, of whom 22 are females. It has also a foundry for cast-iron, a saw-mill, and wood yard, a mill for bruising bones, a brick and tile work, and an ochre mill.

The harbour is formed by a creek at the mouth of the river. At spring-tides it admits vessels of about 200 tons; but it dries at low water, and is, owing to sand-banks, extremely difficult of access. It has a small quay; quite insufficient for the growing trade of the place. Two brigs belonging to the port are employed chiefly in the American trade, and 5 sloops are engaged as coasters. In 1835 the value of the imports amounted to 43,190*l.*; and that of the exports to 60,483*l.* A steamer sails twice a day to Leith in summer, and once in winter. The game of Golf is much played on the links or downs of Dubbleside. (*New Stat. Acc. of Scotland*, & *Pifeshire*, pp. 264—277.)

LEWES, a parl. bor., market-town, and par. of England, co. Sussex, rape and hund. of its own name, on the Ouse (crossed here by a stone bridge), 7 m. N.E. Brighton, and 43 m. S. London. Pop. of parl. bor., which comprises, with the old bor., parts of four out-parishes, in 1841, 9,282. It is principally situated on a steep declivity W. of the Ouse, which here cuts through the chalk hills; but it partly, also, stands on the level ground on the E. side, sheltered by the South Downs, that rise abruptly almost close to the river banks. The streets are broad, well-built, paved, and lighted with gas; and the town generally has an appearance of wealth and respectability. The chief public building is the Assize-hall, in High Street, erected in 1812, at an expense of 15,000*l.*, comprising two courts, a council chamber, and other apartments. The house of correction, built on the plan of Howard, in 1794, was greatly enlarged in 1817, and now contains about 70 capacious rooms for prisoners, with 15 cells for solitary confinement. The silent system, with hard labour, is rigidly enforced, and the gaol is, on the whole, well conducted; but "the building is incurably bad, in an unhealthy situation, and much too confined for the wants of so large a county." (*Prison Inspectors' 4th Rep.*, part i.) There are six churches; and the ecclesiastical livings comprise four rectories, two of which are in the patronage of the crown. There are, likewise, seven places of worship for Wesleyan and Calvinist

Methodists, Baptists, Independents, Unitarians, &c., to which, as well as to the churches, are attached well-attended Sunday-schools. The free grammar school, supposed to have been founded in 1812, provides gratuitous instruction in classics, &c., to 12 boys, the sons of burgesses; and there is a university exhibition for the scholars, tenable for four years, of the annual value of 36*l.* National, Lancastrian, and infant schools, furnish elementary instruction for the children of the poor; and there are several endowed charities and benevolent institutions for the relief of the aged, sick, and indigent. Lewes had formerly an extensive trade in wool; but this has greatly declined; and the present traffic of the place, independently of a very considerable retail trade with the resident gentry of the district, is chiefly in grain, malt, sheep and cattle; it is estimated that upwards of 80,000 sheep are sold annually at the Sept. and Oct. fairs. The Ouse is navigable up to the town; and there is a considerable trade with London, through Newhaven, its port. (*See NEWHAVEN*.) Lewes is a bor. by prescription, and is governed by two headboroughs and two constables, elected by the burgesses; but these officers are subject to the jurisdiction of the co. magistrates. The Lent and summer assizes are held here, and the quarter sessions for the E. division of Sussex are held in Jan., April, June, and Oct. This bor. has sent 2 mems. to the H. of C. since the reign of Edward I., the franchise down to the passing of the Reform Act being vested in the scot and lot payers within the bor. The Boundary Act enlarged the limits of the bor. so as to include with the old bor. parts of the pars. of Southover, St. Anne's, St. Thomas-in-the-Cliffe, and South Malling. Registered electors, in 1849-50, 724. Lewes is the place of election for the mems. for the E. division of Sussex, and the head of a poor law union, comprising 7 pars. Markets on Tuesday; cattle fairs, May 8. and Whit-Tuesday; large sheep fairs, Sept. 21. and Oct. 2.

The fact of Lewes being a Roman station seems extremely doubtful; but it had acquired its present name (said to be derived from *leswres*, the Anglo-Saxon word for pastures) at least two centuries before the Norman conquest. William the Conqueror fixed on Lewes as the site of one of those fortresses by which he kept in awe his Saxon subjects; and considerable remains of it still exist, on a commanding height, N.W. of the town. One gateway is nearly entire; and the keep, which is in tolerable preservation, has recently been tastefully repaired. E. of the town also are the ruins of a very ancient and wealthy priory, the walls of which enclosed an area of about 33 acres: at the dissolution of the monasteries, its revenues amounted to 1,090*l.* (*Horsfield's Antiquities of Lewes*, vol. i.; *Parl. Reports*, &c.)

LEWIS. *See* **HEBRIDES**.

LEWISHAM, a populous village and par. of England, co. Kent, 1½ m. Sutton-at-Hone, and half-hund. Blackheath, on the Ravensbourne, a trib. of the Thames, 4½ m. S.E. London. Area of par., which includes the hamlet of Sydenham, 5,220 acres. Pop. in 1841, 12,276. The village consists chiefly of a long street, lined with good houses, and extending about 2 m. along the Hastings road. The lanes leading in different directions abound with handsome villas and detached residences, inhabited by opulent merchants and retired citizens, attracted thither by the beauty of the scenery and superior salubrity of the air. The church, which stands near the centre of the village, is a handsome structure, erected in 1832, on the site of an older but still modern building, accidentally destroyed by fire. There are, also, places of worship for Wesleyan Methodists and Independents; and in Sydenham, besides a district church and episcopal chapel, there are three dissenters' meeting-houses. A grammar-school, founded in 1647, and now under the trusteeship of the Leather-sellers' Company of London, is conducted by an upper and under master, and is alleged to be well attended. A charity school, three subscription day schools, and several Sunday schools, have been established for teaching poor children; and there are almshouses for six poor women, and minor charitable bequests. The trade of the village is almost confined to the supply of the families resident within the par.; but at Loampit Hill some marl and chalk pits furnish considerable quantities of lime, and there are some large brick and tile fields.

LEXINGTON, a town of Kentucky, U. States, co. Fayette, of which it is the cap., on Town-forte, a tributary of the Elkhorn river, 25 m. E.S.E. Frankfort, and 70 m. S. Cincinnati. Pop. (1840) 6,997. "Its situation is in the heart of a fine district, with a great many comfortable-looking villas and farm-houses in the neighbourhood. The town itself consists of handsome and substantial buildings, and is not unlike Doncaster. The chief street is a mile and a quarter in length, and 80 feet wide: there is an air of wealth about the place." (*Stewart's Three Years in N. America*, ii. 436, 437.) Lexington is one of the most ancient towns in the state, and for a long time was its political, as it still is its commercial, cap. Its chief public estab. is Transylvania university,

the oldest institution of the kind in the W. system. It was incorporated in 1708, and has now 19 professors, and usually about 100 students. In 1810 the principal edition, with the library, was destroyed by fire, but another library of 4,000 vols. has been collected. There are several superior private schools. The same female academy, founded in 1684, and which, in 1810, had 120 pupils (the L. High School took, about 1800, market house, a large master hall, and eight churches are the other chief public edifices. Leyden has manufactures of cotton bagging, cordage, woollen cloths and yarn, carpets, machinery, &c. The high are said to be temperate and unaccompanied, and the town of nearly agreeable. The town derived its name from a party of French, who first landed, while engaged up the spot where it stands of the memorable engagements between the French and British troops at Leyden in 1813-14. In 1776 a regiment of 100, in length, connecting this town with Frankfurt, is intended to be continued to Leyden, as the Ohio. A good turnpike road, for a long, has been also completed between Leyden and Maastricht.

LEYDEN (Lat. *Lejdunum*, *Lejdunum*) a celebrated city of Holland, being the fourth in the Kingdom of the Netherlands on the Rhine (from N. to S. Amsterdam, and 10 to N. E. the Hague, lat. 52° 7' N. long. 4° 57' E. Pop. in 1804, 30,000. It is surrounded by ramparts and a wet ditch, and is entered by several gateways. On the outer side of the ditch, or ditch, which every where encompasses the town except where it is cut by the Rhine, is planted a beautiful double row of green birches, spreading walks for the citizens; and on the inner side rise the low green mounds which serve the purpose of walls to this walled city. (Chambers.) Like other Dutch towns, Leyden is traversed by canals, created by numerous bridges, though as the walls are built of brick the canals are of little use. The streets are usually long, broad, and well built, and there are some striking public edifices, and the town has an antique venerable appearance. Beyond crosses the broad broad broad street of Leyden to the High Street of Oxford, reckoned among the finest in Europe. The name "Oxford" in the first place is a mark of honor, and at least three times the length, and, contrary to the usual practice of laying out streets by the Dutch, it has the same quality winding turn, but wants the grand square, which distinguishes as much to the beauty of the High Street of Oxford. The houses in that of Leyden are generally superior and more picturesque; and, though the number of colleges of modern architecture, with their towers, towers, and spires, in Oxford, caused the number of public buildings in the broad street of Leyden, there is one, at least, that will bear comparison with the most picturesque college in High Street. This is the old *Alma de Vrije* hall, as appears by an inscription in front, in the year 1576. It has a tall open, somewhat remarkable in its architecture, and not beautiful. It is built of a dark blue stone which has the appearance of black marble and its prominent parts are topped with gilding. The body of the building has nearly 50 windows on a line to front, 8 pediments, or gables, highly ornamented, a handsome entrance, surmounted by a flight of stone steps, and the whole front of this remarkable piece of architecture may be said to be

"With gilding open, and glancing above."

The ground-floor of the town-house is appropriated as a market for Dutch produce, but this is not seen from the street. Nothing can exceed the cleanliness of Leyden in all its streets, whether clean with or those without canals. The former, with their quays, are particularly neat, and the bridges are mostly of stone, of which, they pretend to say there are not fewer than 100. (Four in Holland 18. 77.) In the market and audience chambers on the first floor of the town hall, are several valuable paintings, as the Last Judgment, by Lucas Van Leyden, a large picture representing the state of the city and its trial during its siege by the Spaniards, including a portrait of the brave burghmaster Vondervort. The church of St. Peter founded in 1594 one of the finest Gothic edifices in Holland contains the tombs of Vondervort, the *Blauwman*, *Boulogne* *Campus* &c. Near this church is a large open square, ornamented with trees, and having a canal in its centre. It was formerly covered with houses, and almost destroyed by the clearing up of a boat basin with reference to the canal, in 1677. About 100 persons had been on this occasion. The church of St. Francis has also a most imposing front, and the tomb of Vondervort. In the centre of the city is a round tower called the *berg*, of uncertain but ancient date, covered on the only elevated spot of ground for many miles round.

Leyden is a very dull business town, without manufactures, trade, or length of any kind. But it is, notwithstanding, a great desirable residence for men of learning and research. The university, which, for a long time

past, was one of the most celebrated in Europe, was founded by the Prince of Orange, in 1575, to reward the scholars for their loyalty and to secure compensation for the sufferings they sustained during the siege of the city by the Spaniards. It soon attained to the highest estimation, being honorably counted one of the very best of the Continental schools for the study of classical, law, medicine and divinity. Among its professors, are the *Quintus* names of *Dionysius*, *Joseph* *Boetius*, *Daniel* *Histria*, *Comarus*, *Arctius*, *Bartholomaeus*, *Van* *Der*, *Leunclavius*, *Agnes*, *Bartholomaeus*, *Boetius*, &c. *Grutter* and *Thomaeus* were of the number of its pupils, as were *Levy*, *Pandey* and *Grutter*. And though no longer so celebrated as formerly, it is still extremely well supported, has valuable libraries and scientific collections, and able and learned professors. In 1810, it had in all, 647 students, of whom 500 studied law, 112 divinity, 112 medicine and 12 philosophy. The college buildings are detached, and in fact, are placed at considerable distances from each other in different streets, they are all plain stone and brick and sufficiently ornate by their appearance, that they have been intended for use and not for ornament. The principal of these buildings, which is very old, and was formerly a religious house, stands on the W. side of the city. The hall in which the student conferences meet, is adorned with a fine portrait of William Prince of Orange, founder of the university, and upwards of 100 portraits of professors in historical arrangement. The student consists of 10 professors, and as the university requires no test of religious faith either from its professors or students, it comprises all sects and denominations, both Christian and Jewish. Most of the lectures are delivered in Latin, and the public announcement of the course is in that language. The students, who were no particular dress, which is laid down in the town, and the greater number subscribe to a club house and reading room, supplied with German and French publications. The students of Leyden have a high character for diligence, but among other drawbacks, junior students have to cut the straw as high as those of older standing, and dwelling is said not to be told under any different pretence.

The museum of natural history attached to the university possesses most others in Europe, being mainly gathered for its application to the public spirit of the Dutch moral officers and foreign emigrants who take every opportunity of forwarding natural curiosity to their native country, but it also owes much to the acquisition of the valuable collection of birds by *Toussaint*, and to the labours of travellers and collectors sent by the academy to Africa, America, and other parts of the globe. The museum, which is open gratis to all students, consists of an upper and under story, occupying four sides of a large court. The classification of the animal kingdom is according to the system of *Cuvier*, and such is the best maintained in preserving the collections, that Mr. *Chambers* mentions that 3,000 guineas, or 300,000 sterling, had recently been paid by the university for one third of a month, to employ the services of such specimens.

The museum of Egyptian antiquities is particularly rich in papyrus, jewellery, and gold ornaments, and contains monuments from the ruins of Carthage, and the largest collection of Egyptian bronzes in the Alps. *Richard*'s extensive and valuable Japanese museum is also in Leyden. The library of the university has 60,000 printed volumes, and 14,000 MSS., more than 3,000 of which are Arabic. The botanic garden, which encompasses several acres, and is extremely well laid out, has an extensive series of specimens, arranged according to *Linnaeus* and *Jussieu*, with corresponding and growing tropical

herbarium, 17 churches (one of hospitals), an hotel for travellers, royal master house, chamber of Dutch literature, science, and is Society of Public Law, the society, and the Dutch Society of art of design, &c. It is said that all the churches belonging to the city are being destroyed; a small one is erected in the poor suburbs, which is not equal in Holland.

In the 17th century the population of this wealthy city was extensively derived on at Leyden, and it is said to have had, in 1610, about 3,000 houses, and 100,000 inhabitants. (See *Chart* p. 100.) Perhaps, however, this statement, is exaggerated; but it is said by *Smith* to have had in 1700, 14,000 houses, which, at an average of 7 individuals to a house would give a pop. of about 100,000. (*Smith*'s Geography, 4th. Ed. ed.) *Lathbury* however, it has increased very considerably; its pop. which in 1687 amounted to 100,000 having been under 20,000 in 1817. Its cloth manufactures have been for a long time period comparatively unimportant; but it is still carried on to some extent, particularly the

manufacture of coarse cloths, and of counterpanes, rags, &c. It also carries on some other branches of industry, and has a considerable traffic in wool, butter, and other articles of agricultural produce. It is connected by canals with Haarlem, Delft, and the Hague.

During the latter part of the 17th, and the greater part of the 18th century, the most interesting as well as the most celebrated branch of industry carried on at Leyden was that of printing and publishing. Many of the best and most beautiful of the Dutch editions of the classics, in 12mo., 8vo. and 4to., including most of those by the Elzevirs, issued from the presses of this city, and would alone have conferred on it imperishable renown. A good deal of printing and publishing is still carried on; but we shall look in vain among the works now published here, or, we may add, anywhere else, for any that will bear a comparison with the *chefs-d'œuvre* alluded to above.

The siege of Leyden by the Spaniards in 1574 is one of the most memorable events in the history of the great struggle made by the United Provinces to emancipate themselves from the blind and brutal despotism of Spain. The inhabitants displayed the most invincible courage and resolution. Valdez, the Spanish general, despairing of being able to carry the town by storm, endeavoured to cut off all communication between it and the surrounding country, and to effect its reduction by famine. He completed his lines of circumvallation, and so far succeeded in his object, as to entail the most tremendous suffering on the inhabitants, without, however, shaking their determination to die rather than give up their city to the enemy. At length the country round the town having been laid under water, a squadron of flat-bottomed boats laden with provisions and stores made its way through the Spanish lines to the city. This was decisive of the fate of the siege; the Spaniards being obliged immediately to raise it, after having incurred a very heavy loss. (*Watson's Philip II.*, b. 13.)

Leyden has given birth to some highly distinguished individuals. Rembrandt was born (in 1606) in its immediate vicinity; and it is the native place of Gerard Douw, Vanderveide, Mieris, Jan Steen, and other distinguished painters; and of Vossius, Heinsius, Muschenbroek, Van Swieten, John Bochoit, better known as John of Leyden, founder of the Anabaptists, &c. The learned and laborious geographer Philip Cluvier, or *Cluverius*, though a native of Danzig, resided principally in Leyden, where his learned and excellent works on the geography of ancient Germany, Sicily, and Italy, and his valuable *Introductio in Universam Geographiam* were published. He died here, in depressed circumstances, in 1622, at the early age of 42. (*Martinière*, art. *Leyde*; *Biographie Universelle*, &c.)

LEYTON (LOW), a village and par. of England, co. Essex, hund. Becontree, on the Lea, m. N.E. London. Area of par., 2,820 acres. Pop., in 1841, 3,274. Low Leyton is situated on the low grounds near the E. bank of the river; but further E., connected by a long straggling street, is Leytonstone, on an eminence, comprising several handsome villas, chiefly tenanted by London merchants and traders. The church, a brick building with a low tower, is remarkable only as having been the scene of the pastoral labours of Strype the antiquary, who held the vicarage 68 years, and was buried here in 1737. A Rom. Cath. chapel and chapel for Wesleyan Methodists, are the other places of worship; and the parish has, besides Sunday schools, a boys' free school, a school of industry for girls, and several minor charities.

LIBAU (Lettish, *Lepcia*), a sea-port town of Russia, gov. Courland, on the Baltic, beside the lake Libau, 106 m. W. by S. Mittau. Pop. probably 5,000. It is walled, and entered by a gate from the N. Its streets are narrow, and mostly unpaved; and its market-place, though large, is irregular. The houses are of timber, and only one story high. It has Lutheran, R. Catholic, and Calvinistic churches, an hospital, and an orphan asylum. The port, though commodious, has only from 8 to 12 ft. water, and cannot, therefore, be entered by vessels of much burden. It has, however, a considerable trade; most part of the produce of Courland, as cattle, linseed, corn, hides, tallow, &c. being exported from it. Its imports are chiefly colonial products, manufactured goods, wine, oil, fruits, &c. In 1833, the value of the exports from Libau amounted to 5,011,899 roubles, and that of the imports to 617,754 r. (*Schmidtler, La Russie*, 565.; *Possart, Des Kaiserth. Russl.* 415., &c.)

LIBERIA, a republican state of W. Africa, founded, in 1821, by free blacks from the U. States of N. America, under the auspices of the American Colonisation Society. Its territory extends along the Guinea coast for about 225 m., with a breadth inland of 20 or 30 m., chiefly between lat. 4° and 7° N., and long. 9° and 12° W. Pop. estimated at 4,000 colonists, besides natives. The coast is generally low, but the country gradually rises towards the interior, and at about 20 or 30 m. from the sea, the hills are of considerable elevation. Several rivers fall

into the Atlantic within the colony, — as the St. John, St. Paul, Mesurado, &c.; but they are navigable only by small vessels for short distances. The want, indeed, of any great navigable river that might have opened an intercourse with the interior, is a heavy drawback on the prosperity of this colony; and will always hinder it from becoming a place of much commercial importance. The soil is said to be fruitful, and the climate better, or rather less destructive, than in most other parts of the coast. Rice, cotton, coffee, sugar, indigo, bananas, cassava, and yams are raised; and camwood, palm-oil, ivory, hides, wax, and pepper, are among the exports. The settlement is visited by traders from the interior, and some trade is carried on with Europe and America, partly in colonial shipping. The care of the local interests and subordinate affairs of the colony is confided to native colonists, and it has two legislative chambers; but the powers of government are, notwithstanding, substantially vested in the agent of the American Colonisation Society. Its object, in fact, was to serve as an outlet for the blacks, who might there enjoy that independence and consideration which long-cherished prejudices hinder them from enjoying in the United States; and it was supposed that the being able to dispose of manumitted slaves by sending them to this colony would promote the practice of manumission; but we believe that in this respect it has had very little influence, only about 2,000 liberated slaves having been sent to it. A good many blacks rescued from slave-ships on the African coast and elsewhere have been landed here. Primary schools have been opened for the instruction of the blacks, and it has several churches, and a printing-press. But we understand, that, on the whole, the condition and prospects of the colonists are not very satisfactory.

The chief town, Monrovia, on Cape Mesurado, lat. 6° 26' N., long. 10° 36' W., has about 1,200 inhab. (*Encyc. Americana*; *Murray's Encyc. of Geog.*, Amer. edit. iii. 45; *Macquenn's Survey of Africa*.)

SEE SUPPLEMENT.

L'BOURNE, a town and river-port of France, dép. Gironde, cap. arrond. on the Dordogne, at its junction with the Isle, 26 m. E.N.E. Bordeaux. Pop. in 1846, ex. com., 8,850. Few towns in France are so regularly and well built. Its streets are wide and clean, its houses elegant, and it is surrounded with good walls and agreeable promenades. Among the chief public edifices are extensive cavalry barracks, a theatre, a public library, with 3,000 vols., and a handsome brick and stone bridge of 9 arches across the Dordogne. The port, at high water, has from 10 to 16 ft. water, admitting vessels of 200 tons burden. Libourne is the seat of a sub-prefecture, of tribunals of primary jurisdiction and commerce, and a sub-commissariat of marine. It has manufactures of woollen stuffs, articles of military equipment, glass and cordage, and docks for ship-building. It is an entrepôt for salt and agricultural produce destined for Bordeaux. It was founded by Edward I. of England, in 286. (*Hugo*, art. *Gironde*, &c.)

LICHFIELD, a city, parl. bor., and co. of itself, locally situated in co. Stafford, hund. Offlow, 15 m. N. Birmingham, 29 m. W. Leicester, and 108 m. N.W. London. Area of the co. of city (which is co-extensive with the parl. bor.) 2,180 acres. Pop., in 1841, 6,467. The city, which stands in a fine valley, on a small affluent of the Trent, is irregularly built, with narrow streets; but it is well paved and lighted, many of the houses are handsome, and its general appearance is respectable. The chief public buildings, besides the churches, are the guildhall, a neat stone edifice, on the top of which are carved the city arms; the market-house, occupying the site of an old market-cross; the bishop's palace, in the Close, and a small theatre. Lichfield is an episcopal see, and has a noble cathedral on the N. side of the town, close to a fine sheet of water. It is built chiefly in the decorated Gothic style peculiar to the 12th and 13th centuries, and comprises a nave, choir, and transepts, with a ladye-chapel. It measures, from E. to W., 410 ft., and is 153 ft. wide, measured along the transepts. There are three towers, the central one of which, rising from the intersection, is surmounted by a light steeple, and has a total height of 280 ft.: the towers at the W. end are each 180 ft. high. The body of the church is spacious and lofty, supported by pillars formed of clustered columns with neat foliated capitals: the roof is beautifully groined, the choir is elegantly furnished, and there are several fine monuments, one of which is to Dr. Johnson, the great lexicographer, a native of this city, where he first saw the light on the 18th of September, 1709. The exterior parts of the building are highly ornamented with sculpture and tracery-work: the W. front displays a multitude of figures in *alto relievo*, illustrative of passages in Bible history, and on the roof is a statue of Charles II., erected by Bishop Hacket, who exerted himself during many years to repair the damages inflicted on the cathedral by the parliamentary troops in the great civil war. The

whole building was thoroughly repaired in 1787-90, at an expense of 6,000*l*. The chapter comprises a dean, 6 residentiary canons, 14 prebendaries, and 5 priest vicars. At an average of the three years ending with 1831, the nett revenues of the bishopric of Lichfield amounted to 3,923*l*. a year; and at an average of the seven years ending with 1834, the revenues of the cathedral amounted to 1,673*l*. a year. In the city are 1 par. church and 2 chapelries, in the patronage of the dean and chapter; besides which, there are places of worship for Independents, Wesleyan Methodists, Rom. Catholics, and other bodies of dissenters. Among the educational establishments are several Sunday schools, 3 national schools, an English charity school, and a free grammar-school, founded by Edward VI., and stated to be in a flourishing condition, with 21 free boys and several stipendiary pupils boarding with the masters: among the former pupils of this school are the illustrious names of Ashmole, Addison, Garrick, Johnson, and Woollaston. The charitable institutions comprise two almshouses, an hospital for clergymen's widows and orphans, a mendicant society, and a dispensary. Lichfield has no trade or manufactures of importance: a carpet factory gives employment to about 150 persons, and 23 others are returned as belonging to a worsted-mill. Its trade is chiefly local, arising out of the wants of the town and neighbourhood, and there is little show of activity amongst those engaged in business. The Grand Junction Canal passes the city, and it is now, also, extremely well supplied with railway accommodation. It was anciently governed by a guild, dissolved by Edward VI., who gave it a charter of incorporation, subsequently confirmed by Charles II. Under the Municipal Reform Act, the bor. is divided into 2 wards, and the municipal officers are, a recorder, mayor, and 5 other aldermen, and 18 councillors. Corp. rev., in 1847-48, 2,750*l*. Quarter and petty sessions are held in the guild-hall, and it has a county-court, before which 508 plaints were entered in 1848. Since the 33d Edward I., Lichfield has, with some intermissions, sent 2 mems. to the H. of C. Previously to the Reform Act, the franchise was vested in the freeholders of the co. of the city of Lichfield, and in the freemen and burgage-holders of the city. The boundaries of the present parl. bor. include the co. of the city, and the place called "the Close," belonging to the cathedral. Registered electors, in 1849-50, 863. Markets on Tuesday and Friday; fairs, Jan. 10., Shrove-Tuesday, and Ash-Wednesday, for cattle, sheep, bacon, and cheese; May 12. for sheep and cattle; and first Tuesday in November for cheese.

LIECHTENSTEIN (PRINCIPALITY OF), an indep. state of S. Germany, and, according to most authorities, the least in extent and pop. throughout Europe; between lat. 47° 5' and 47° 18' N., and long. 9° 26' and 9° 38' E.; having S. the Swiss canton of the Grisons; W. the canton St. Gall, from which it is separated by the Rhine; and E. the Austrian duchy of Vorarlberg. Area, 53 sq. m. Pop. 16,351. The surface is mostly mountainous; a range of the Grison Alps traverses it, separating the Rhine from the Samina, a tributary of the Ill. Cattle-breeding, agriculture, timber-cutting, and cotton-spinning, especially the first, are the chief occupations of the inhab. Corn, wine, fruit, and flax, are the principal articles of culture. The government is vested in the prince, and in an assembly of deputies of the clergy and rural proprietors. Appeal from the court of original jurisdiction in Vadutz, lies to the court of chancery in Vienna, in which the prince has a seat; and thence to the court of appeal at Innspruck. Vadutz, or Liechtenstein, the cap., is a town of less than 1,000 inhabs. The princip. furnishes a contingent of 55 men to the army of the German confederation: it has one vote in the full council of that body, and, together with other small states (see GERMANY, Vol. I. p. 894.), a vote in the committee, and the 16th place in the German diet. The Prince of Liechtenstein is one of the richest proprietors of Europe: his estates in other parts of Germany, but especially in Moravia, extend over nearly 2,200 sq. m.; and his annual revenue is estimated at 1,200,000 florins; of which amount, however, his indep. sovereignty yields only about 20,000 *fl*. (*Berghaus; Almanack de Gotha, &c.*)

LIEGE (Dutch *Luyk*, Germ. *Lüttich*), an important commercial and manufacturing city and river port of Belgium, cap. prov. of same name: on the Maese, 13½ m. S. by W. Maestricht, and 54 m. E. by S. Brussels; lat. 50° 29' 22" N., long. 5° 31' 42" E. Pop., in 1846, 75,961; but the city is surrounded by a neighbourhood with a dense pop., employed in branches of industry similar to its own. Its pop. in the middle of the 15th century is said to have amounted to 120,000; latterly, however, it has been increasing. It is situated on the declivity and at the foot of a hill, and is consequently divided into an upper and lower town. The latter stands at the confluence of the Ourthe with the Maese, and is intersected by many branches of the last named river, which are enclosed by stone walls, and crossed by numerous bridges. The chief bridge, the *Pont de l'Arche*, thrown across the main stream

of the Maese, is 153 yards in length, 49 ft. in breadth, and has 6 arches, varying in diameter from 50 to 55 ft. A convenient quay for commercial purposes extends both above and below this bridge, for the whole length of the town along the Maese, which is navigable for small vessels as far as this city. Liege was formerly fortified, but its fortifications have been almost entirely destroyed. It is defended on the N.W. by a large citadel, lately rebuilt, and on the E.S.E. by Fort Chartreuse; besides which there are only a few outworks. There are 10 suburbs. Liege is, generally speaking, ill built. In both the lower and upper town, the streets are narrow, and in the latter they have the additional disadvantage of being so steep as to be ascended in many places by flights of steps. Among the 11 squares, are 2 tolerably spacious; in one of which stands the town hall, and in the other the theatre. The town hall, comprising the provincial court-house and prison, is a dark stone building, of great extent and magnificence, with two open courts, surrounded with a colonnade resembling that of the ducal palace at Venice. It was formerly the residence of the prince-bishops of Liege. The cathedral of St. Lambert stood in this square; but it was destroyed by the French revolutionary forces in 1794, and no traces of it exist. The church of St. Jacques, in the decorated Gothic, is the architectural glory of the city. It was completed in 1552. Its interior is astonishingly magnificent, and displays some of the finest specimens of tracery and fret-work that is any where to be met with. It has a noble organ, but its statues and paintings are inferior. St. Croix, and some of the other churches, of which there are 21 R. Catholic and 1 Protestant, are also fine structures. The theatre is a handsome modern building, surrounded by an arcade: from the square in which it stands a piece of water runs to encircle the town on its W. side, bordered by a promenade planted with trees. The buildings of the university stand beside the Maese, on the ruins of a church of the Jesuits. This institution, founded by the late king of Holland, in 1816, has faculties of theology, law, and physic; 46 professors, and usually from 400 to 500 students. It possesses a cabinet of mineralogy, with upwards of 5,600 specimens, a cabinet of 3,000 fossils, found in the vicinity, and other scientific collections, and a library comprising many curious MSS.

According to Mr. Chambers, "The sight of Liege at once reminds us of an English manufacturing town. We hail its engine chimneys and smoke as emblems both of wealth and advancement in the mechanical arts; and as we drive into its busy streets, and pass along its open quays thronged with commerce, we are apt to inquire of ourselves, can all this be on the Continent, and not in one of the manufacturing districts of England?" (*Tour, &c. in 1838.*) In fact, Liege may be regarded as the Birmingham of the Continent. It owes this distinction to its situation in a district abounding with coal and iron, and which also affords zinc, lead, copper, sulphur, alum, marble, and slate. The coal-field of Liege is the most extensive in the prov. of the same name, being 3 leagues in length, with a breadth varying up to 2 leagues. Coal is, however, rather expensive, the cost of raising it having been estimated, in 1836, at about 10 fr. per ton.

The manufacture of cannons and fire-arms is that for which Liege and its environs are most celebrated. The royal cannon-foundry in this city, instituted in 1802, produces at an average 9 pieces of ordnance weekly, partly brass and partly iron. There are numerous manufactories of fowling-pieces, muskets, pistols, &c. The guns of Liege are said to be cheaper than those of England; but there is not, we believe, any real ground for such an assertion; they may perhaps cost less money, but then they are not nearly so well finished, nor so good, as English guns. Had they been really cheaper, the manufacture would not have declined so rapidly as it did during the 4 years ending with 1838.

Account of the Quantities of Fire-arms manufactured at Liege in each of the 4 years ending with 1838.

Years.	Fowling Pieces.			Pistols.		Muskets and Military Fire Arms.
	Single Barrels.	Double Barrels.	Several Barrels.	Horse.	Pocket.	
1835	100,488	24,339	7,129	15,757	49,488	74,608
1836	152,044	24,846	8,438	22,066	70,314	71,751
1837	103,083	23,041	16,316	12,455	45,724	39,300
1838	56,753	21,226	13,906	10,354	52,637	34,542
Total	412,368	93,452	45,789	60,632	216,163	220,201

(*Briosoine, Industrie en Belg.* li. 309.)

In 1836, the most flourishing year of the manufacture, the value of the fire-arms issued from the different factories of Liege was estimated at 7,000,000 fr.

Steam engines and machinery are largely produced in Liege and in the adjacent busy and populous village of Seraing, about 2 m. to the S.W., on the opposite bank of

the Maese. The palace of the former prince-bishops at that place having been bought in 1817 by the Messieurs Cockerill, Englishmen, they established in it the largest hardware manufacturing establishment in Belgium, or indeed on the Continent. It is devoted to the construction of steam-engines and other descriptions of machinery, and to forging and manufacturing iron and iron goods.

It is said that 60 steam-engines, of the aggregate power of 695 horses, are constantly employed in this factory, with from 2,000 to 2,200 workmen, 500 of whom are miners. Most of the locomotive engines upon the Belgian railways, the engines for steam vessels, &c. used in Belgium, have been made here, and many have also been sent to other parts. But we regret to have to add, that from some cause or other, Messrs. Cockerill have recently been involved in serious difficulties; and if their works be now carried on, it must, we apprehend, be through the advances that have been made them.

Liege has also manufactories of files, nails, stoves, and hardware of all kinds; watches, jewellery, bronze, and other ornaments; woollen and cotton fabrics, hats, glue, tobacco, paper, chemical products, &c.; with numerous dyeing houses, tanneries, and distilleries. It has an exchange, a chamber of commerce, a bank, with the privilege of coining money, a savings' bank, a *mont-de-piété*, numerous hospitals, and benevolent institutions, superior and elementary schools, and various learned societies. A railway connects Liege with Louvain and Brussels.

In the 7th century, a village named *Legis* occupied a part of the site of the present city. In 712, the ancient cathedral was founded, and Liege was erected into a bishopric. In the 10th century its bishops were raised to the rank of independent sovereign princes. In the succeeding ages continual wars and disturbances prevailed between the burghers, who were ardently attached to popular institutions, and the prince-bishops. It was taken on the 30th of October, 1408, by Charles the Bold, duke of Burgundy, and barbarously delivered up to military execution. During the French ascendancy, it became the cap. of the dep. of Ourthe. (*Vandermaelen, Dict. of the Prov. Liege; Briavotinne, de l'Industrie en Belgique; Heuschling, Chambers, &c.*)

LIEGNITZ, a town of Prussia, prov. Silesia, cap. gov. and circ. of Liegnitz, on the Katsbach, at its confluence with the Schwarzwasser, 46 m. W. by N. Breslau; lat. 51° 12' 48" N., long. 16° 9' 47" E. Pop. (1837), 11,607. It was merely a fortress of some strength, but now has only gates without walls; and its ramparts being planted with trees and laid out in gardens, serve only for public walks. It is an old, but a handsome, well built town: it has several suburbs, 2 Lutheran, and 3 R. Cath., churches; a fine chapel — the *Furstencapelle* — in which are buried the princes of the line of Piast, a dynasty which gave 24 kings to Poland, and 123 dukes to Liegnitz, from 775 to 1678, when the family became extinct; the old castellated palace of those princes in the centre of the town, surrounded by a wet ditch, an ancient council-house, a gymnasium, an academy, established in 1810 for the sons of Silesian gentlemen, whether R. Catholics or Protestants, an orphan asylum, a workhouse, an hospital, &c. Outside the town is a good cemetery. Liegnitz is the seat of the superior judicial courts, boards of taxation, and weights and measures, &c. for its gov., and the head-quarters of several battalions of fusiliers, of a *landwehr* or militia battalion, and of a commandant of police. It manufactures woollen, cotton, and linen stuffs, stockings, lace, Prussian blue, and starch, and has several breweries and bleaching grounds, and an active trade in its own produce, and in madder and other products raised in the adjacent country. The gardeners in the vicinity are said to be the most expert of any in Silesia. On the 16th of August, 1760, Frederick the Great totally defeated the Austrian general Laudohn in the neighbourhood of this town; Frederick made his dispositions with so much skill as to render it impossible for Marshal Daun, who commanded another Austrian army, to come to Laudohn's assistance. (*Von Zedlitz, Das Pruss. Staat, iii. 148.; Berghaus, Allg. Länder, &c.*)

LIERIE, a town of Belgium, prov. Antwerp, cap. canton, at the confluence of the Great and Little Nethe, 10 m. S.E. Antwerp. Pop. in 1836, 13,090 (*Heuschling*). It is well built, and has several churches, a convent, an hospital, manufactures of cotton and woollen stuffs, with cotton-printing establishments, distilleries, breweries, and a number of oil mills, rape seed being largely cultivated in its vicinity. It sends 3 depts. to the provincial assembly. (*Dict. Géog., &c.*)

LIFFORD, an inland town of Ireland, prov. Ulster, co. Donegal, of which it is the cap. It is situated on the extreme E. verge of the co., on the Foyle, immediately below the confluence of the Finn and Morne rivers, 14 m. S.S.W. Londonderry. Pop., in 1831, 1,096. It is connected by a fine bridge over the Foyle with the town of Strabane in Tyrone, of which it is now merely a dependency. It consists of two small streets, and has a par. church, a Rom. Cath. chapel, a Presbyterian

meeting-house, a barrack, and a courthouse and prison for the co. Donegal. It sent 3 mems. to the Irish parliament till the Union, when it was disfranchised.

LIGOR, a town of S.E. Asia, cap. of a Malay principality, dependent on Siam, on the Ta-yung near its mouth, in the Gulph of Siam, about lat. 8° 17' N., long. 100° 12' E. Pop., estimated at 5,000; chiefly Siamese, Malays, and Chinese. It appears to have been formerly more populous; but it was captured by the Burmese, and its inhab. carried off, in 1760, and again in 1785. It has brick ramparts, and a wet ditch; and in 1825, 14 cannon were mounted on its walls. Within the town are many brick temples and pyramids, one having a gilt spire, a conspicuous object at sea; but all the dwelling-houses are of less solid materials. Two or three Chinese junks trade with Ligor, bringing cotton, and taking back tin, black pepper, rattans, &c. The rajah of Ligor has extensive authority, with the power of capital punishment over all the Malay states, tributary to Siam. (*Crawford's Siam, &c., ii. 211.; Hamilton's E. I. Gazetteer.*)

LIMA, the cap. city of Peru, and, next to Mexico, the most magnificent in the countries formerly comprised in Spanish America, on the Rimac (whence, by corruption, the name of the city), in a delightful valley, from 500 to 600 ft. above the level of the ocean, 6 m. from its port of Callao, on the Pacific, and about 300 m. S.S.E. Truxillo: lat. 12° 2' 45" S., long. 77° 17' 15" W. Pop. variously estimated, but it may probably amount to between 30,000 and 60,000. The great chain of the Andes passes within 20 leagues of the city; but its spurs approach to within three fourths of a league from its gates, and form an amphitheatre, within which Lima is built. The Rimac, which separates the city from its suburb, San Lazaro, is crossed by an excellent stone bridge of six arches, which, being furnished with recesses and seats, is a favourite promenade. The city, about 2 m. in length E. to W., by 1½ m. in its greatest breadth, is of a triangular, or rather, semi-circular, shape, the base, or long diameter, being formed by the river. Elsewhere, Lima is surrounded by a parapet wall, about 7 m. in circuit, from 18 to 25 ft. high, and about 9 ft. thick: it is pierced by six gates, open from 4 A.M. to 11 P.M., and is defended by 35 bastions. Except at some of the bastions, the wall is too narrow for the mounting of artillery; and it is merely sufficient to protect the town against any sudden attack by an Indian force, for which purpose it was constructed, in 1685. At the S.E. extremity of the city is a small citadel, in which are the artillery barracks, and a military dépôt. When seen from Callao roads, or even from a less distance, Lima has an imposing appearance, its numerous domes and spires giving it quite an oriental aspect. Like the other Spanish cities of America, it is laid out in *quadras*, or squares of houses, 400 ft. each way, and divided by streets 33½ ft. wide, intersecting each other at right angles. The courses of the streets do not follow the cardinal points, but vary from E. to S.E., that the walls may cast a shade both in the morning and afternoon." In 1791, the city, with its suburb, El Cercado, contained 209 *quadras*, and 355 streets. Since then little or no improvement has been made; not a single new dwelling having been built within the walls during the last 30 years. (*Three Years in the Pacific, i. 379.*) Through the centre of nearly all the streets directed E. to W. runs a stream of water, 3 ft. wide, used as a receptacle for all the filth thrown out from private dwellings. Most of the refuse is, however, got rid of by the Turkey buzzards, which swarm in Lima, and, like dogs in Lisbon, are the most efficient, or rather, the only scavengers. The streets are paved with round pebbles, and the narrow foot-paths with flat stones, in very bad repair. The same plan extends to the suburb of San Lazaro. The city is divided into 4 quarters, and each of these into 35 *barrios*. For each barrio an *alcalde*, or district magistrate, is selected from among the inhab. For religious purposes, it is divided into 8 parishes. On account of the frequency of earthquakes, few houses are more than one story high, or if there be two stories, the walls of the upper consist of only cane, or wattled reeds, plastered over with clay, and whitewashed or painted. This kind of architecture is applied to even the churches and other public edifices, their upper parts being of woodwork, covered with stucco. The lower parts of the houses are mostly constructed of *adobes*, or sun-dried bricks, made of clay and chopped straw. The roofs are uniformly flat. Some of the better sort of houses have a terrace on the top, formed of large thin baked bricks; the common dwellings are usually roofed only with thin rafters, cane, and mats, covered with a layer of earth an inch or more thick; but as it rarely or never rains with any violence in Lima, these light roofs sufficiently answer their purpose, at the same time that they are not so easily thrown down by an earthquake, and when thrown down are incomparably less dangerous than if they were constructed of more solid materials. Most of the houses have a *patio*, or court yard, in front, with a large arched gateway opening to the street, over which is a heavy

balcony. The walls of the *patios* are painted without and within with various devices, in fresco. Till of late years, few of the windows had either glass or sashes. Almost every house has a stream of water running through its precincts, which is used for domestic purposes. Gardens are rare.

In the centre of the city is the *Plaza Mayor*, or *de la Independencia*, the principal square and market-place. It is a fine open space, the size of a quadra. On its E. side are the cathedral, the *sagrario* or principal parish church, and the archbishop's palace; the last, a large superior edifice, is now partly occupied by the Peruvian senate. On the N. is what was once the viceroy's residence, an old unsightly structure, now appropriated to the courts of justice and other government offices. On the W. side are the *cabildo* or town-hall, a Chinese looking edifice, the city gaol, and other offices: and on the fourth side is a colonnade before a row of private houses. The above public buildings have all ranges of mean looking shops in their lower story. The booths of small traders cover nearly a third part of the area of the square. In the centre is a fine bronze public fountain, 40 ft. high, raised upon a level table of masonry 40 ft. on each side, ornamented with eight lions supporting a statue of Fame, and supplied with excellent water from the Rimac.

A considerable portion of the area of the city is occupied by convents and churches. Besides a great many convents and nunneries, with churches attached, Lima has 57 churches, and 25 chapels belonging to hospitals, colleges, &c. (For an account of the churches, convents, &c. when in their splendour, see *Ulloa, Voyage de l'Amérique*, i. 428., &c.) The cathedral, founded by Pizarro, and in which he is buried, is a large fine edifice, 186 ft. in front by 320 deep; but its effect is injured by gaudy colouring and grotesque ornaments. At either corner of the front is an octagonal tower, rising nearly 200 ft. from its base, which is 40 ft. high. These towers, having been thrown down by the earthquake of 1746, were rebuilt in 1800. In the belfries are several fine-toned bells, the largest of which weighs 310 quintals. The interior of the cathedral is magnificent. It is divided into three naves, and paved with large earthen tiles. The roof, which is beautifully panelled and carved, is supported by arches springing from a double row of square stone pillars. The high altar is in the Corinthian order, and its columns, cornices, and mouldings, are either cased with pure silver or are richly gilt. The seats and pulpit in the choir are exquisitely carved, and there are two large and fine-toned organs. "The riches which have been lavished at various times upon the interior of this edifice, are scarcely to be credited any where but in a city which once paved a street with ingots of silver to do honour to a new viceroy. The balustrades surrounding the great altar, and the pipes of the organ, were of silver. It may be mentioned, as a proof of the abundance of silver ornaments, that in 1821, 1½ ton of silver was taken from the various churches in Lima without being missed, to meet the exigencies of the state." (*Caldclough's Travels in S. America*, ii. 56.) The *sagrario* has a fine façade, and its interior is very splendid and richly adorned. The roof is lofty and beautifully panelled, and in the centre is a cupola resting on the four corners formed by the intersection of the cross aisle. Several of the other par. churches are worthy a visit. Some of the conventual churches are remarkably rich. That of the Dominicans, 300 ft. long by 80 broad, has a steeple 180 ft. high, being the loftiest in Lima.

The revolution secularised a good deal of church property; but previously to that event, the Dominican convent is said to have had a rental of 80,000 dollars a year, and a large library, some good paintings, and numerous reliques, &c., including a statue of the Madonna studded with gems, said to be of immense value. Some of the cells belonging to it were richly furnished. The Franciscan convent is among the oldest and largest in Lima. Its buildings cover two quadras, and its church, which is next in size to the cathedral, is gorgeously adorned. Its monks derive a considerable revenue from the manufacture of shrouds, of which they have, or at least had, the monopoly. In addition to the convents, there are *casas de ejercicio*, into which females retire during Lent, to perform acts of penance; and in the convent of Recoleta are similar cells for men. The number of monks and nuns here and in other parts of Peru was formerly very great; but it is now quite otherwise, and the influence of the revolution in turning out these lazy, dissolute drones, and in lessening the deference the inhabs. had been accustomed to pay to all priests, how undeserving soever, has been most beneficial. There are 2 foundling asylums, and 11 public hospitals, one of the latter, St. Andrea, having 600 beds. Attached to it, is an indifferent botanic garden; and adjoining it, is the medical college of San Fernando, established in 1809. Lima has a university, founded in 1571: it occupies a handsome building, and is partly supported by congress, and partly by the pro-

duce of an annual *bull-bait*! The students, of whom there are only from 30 to 50, generally reside within the walls of the institution. The Peruvian House of Representatives holds its sittings in an apartment in the university. The former palace of the Inquisition is now appropriated to a gaol, and to the national museum, which, though in extremely bad order, possesses valuable collections of minerals, and Peruvian antiquities. Lima has several ecclesiastical colleges, and seminaries, and a nautical academy. The colleges, however, are now in any thing but a flourishing state; but, on the other hand, numerous Lancastrian, and other primary schools, have sprung up, and it is alleged that all the white children are taught to read and write. Notwithstanding the low state of the university, it is affirmed that education has made a great advance in the Peruvian capital since the revolution, and its emancipation from the control of the priests is, at all events, an immense step in advance: a considerable number of modern scientific and other works are said to be annually imported from Europe.

There is a good theatre, but of rather a singular form, it being a long oval, with the stage occupying the greater part of one of its sides. Bull-fights were formerly celebrated at Lima with an *éclat* that rivalled those of Seville: and, though abolished by San Martín in 1822, they appear to have revived. The amphitheatre, *Plaza del Acho*, in the suburb of San Lazaro, where they are held, has an area 400 ft. in diameter, surrounded by a barrier 7 ft. high, and 3 tiers of boxes raised on brick pillars, with accommodations for from 10,000 to 12,000 spectators. Cock-fighting is a favourite public diversion; the cock-pit, or *coliseum*, is an area 50 ft. in diameter, surrounded by 9 benches and a tier of boxes, which, on Sundays and holydays, are usually crowded by visitors. Outside the walls, is the pantheon, a general cemetery established early in the present century. It is a square inclosure, laid out in walks and gardens, the surrounding wall being full of niches for the reception of corpses. These are generally deposited without coffins, their decay being accelerated by the application of unslaked lime. Before the establishment of the pantheon, the dead were always buried in churches; but this is now prohibited, and hearses belonging to the pantheon are provided for the performance of funerals, which are not allowed to traverse the streets after noon. Immediately without the suburb San Lazaro, are some excellent public baths. The road from Callao to Lima is quite straight, and for nearly the last 2 m. is fenced on either side by a brick wall and parapet, shaded with trees, and irrigated by running streams. At intervals of 100 yards are ornamental stone seats; but the whole work, together with the fine gateway at its upper end, by which the city is entered, has been suffered to fall into decay.

The vicinity of Lima, where not covered with villas and pleasure-grounds, is very productive of maize, barley, various other grains, beans, kitchen vegetables, fruits, sugar, rice, tobacco, yams, potatoes, &c.; grapes are abundant, and yield some pretty good wine; olives thrive well; and water-melons are important articles of culture, being largely consumed in the city during the hot months. But agriculture and horticulture, like every other branch of industry, is much neglected. As very little rain falls at Lima, artificial irrigation is indispensable. The Incas had cut numerous trenches and canals in the neighbourhood, which the Spaniards finding ready to their hands, took some care to keep in order; but at present it is said that the drains for conveying the water from the city are so bad that the water is either suffered to run to waste, or to stagnate and generate noxious effluvia. The refuse of the city might be made a valuable manure for the soil; but such is the carelessness and indolence of the inhab., that it is either thrown into the canals, or conveyed without the walls, or to the river's brink, where it is suffered to accumulate in fermenting mounds of immense size. (*Peru as it is*, i. 20, 21.) Live stock are fed in great numbers near Lima, large quantities of animal food being consumed in the city. The demand for poultry is immense, especially for geese and turkeys. The slaughter of pigs is supposed to exceed 20,000 a year: the trade of the pork-butcher is one of the most lucrative, after that of the baker and lottery-man. Cook-stands for fish (which are good and cheap) and fried pork, are to be found at the corner of every square. From 40 to 50 head of oxen, and from 300 to 400 sheep, are killed daily for the Lima market; the beef is very good; the mutton of inferior quality. Pastry and sweetmeat criers are seen every where in the streets; and *masamorias* or pap-shops are very common. Pap boiled with or without fruit or vegetable acid, and sweetened with sugar or molasses, constitutes the Llimenian dish "*masamora*," which is as great a favourite in Lima as roast beef in London. Few of the dishes, however, suit the taste of strangers, from their being, with the exception of poultry, either steeped in lard, or highly seasoned with pepper. Most families in inferior circumstances provide themselves with ready cooked food from the streets. Water for drinking, which is almost

wholly supplied from the large fountain in the *Plaza Mayor*, is carried round the city by asses and other beasts of burden, carriages of most kinds being rare.

The climate of Lima has been much praised: the extremes of heat and cold are never experienced; within the city the thermometer, in the shade, never falls in winter under 60° F., nor rises in summer above 82°, its usual station being about 80° in well-aired apartments. The ordinary daily range of temp. is only 3° or 4°. The year is divided between the dry and the moist season; the former begins in Nov., the latter in May; and throughout the winter (May to Oct.) a drizzly mist often prevails in the morning and evening, and light dresses are abandoned for woollens, &c. Cool breezes from the S.W. blow for 3-4ths of the year; and the hot rays of the sun are generally intercepted by a layer of clouds. Earthquakes occur every year, particularly after the mists disperse, and have usually been very destructive at intervals of 50 or 60 years; but Lima is free from storms. Epidemics are few. The climate, however, or rather, perhaps, the neglect of sanatory regulations and of cleanliness, seems to have an enervating tendency, as shown in the degeneracy of most of the inhab., especially the whites. The rate of mortality is also very high. The average number of deaths may, it is said, be estimated, from a tolerably correct return, from 1832 to 1835 inclusive, at 2,500 a year, which, in 30 years, would amount to more than its total pop. (See *Peru as it is*, i. 23-28.) Hence the pop. increases little, if at all. In 1793, it was stated to be 52,627; and in 1818, it amounted, according to a census, to 54,098; 27,545 males, and 26,553 females. Of this number, nearly 20,000 were whites and creoles, 6,000 *mestizos*, from 3,000 to 6,000 Indians, and about 20,000 negroes or blacks. The negroes are chiefly employed as domestics and mechanics; the *mestizos* in trade and agriculture. The physical and moral character of the white inhab. of Lima is Andalusian. The ladies are celebrated for beauty and fineness of figure, but want freshness of complexion. They wear a very remarkable walking dress, peculiar to this city and Truxillo. "This dress consists of two parts, one called the *saya*, the other the *manto*. The first is a petticoat made to fit so tightly, that, being at the same time quite elastic, the form of the limbs is rendered distinctly visible. The *manto*, or cloak, is also a petticoat, but instead of hanging about the heels, as all honest petticoats ought to do, it is drawn over the head, breast, and face; and is kept so close by the hands, which it also conceals, that no part of the body, except one eye, and sometimes only a small portion of one eye, is perceptible. A rich coloured handkerchief, or a silk band and tassel, are frequently tied round the waist, and hang nearly to the ground in front." (*Hall's Travels*, i. 108, 109.) Within doors the ladies adopt the English or French costume, with a profusion of jewellery. The morals of both sexes have been represented as lax in a high degree, but they are probably not worse (which, however, is not saying much) than in most other large cities of S. America. The author of *Three Years in the Pacific* says: "Intrigues are carried on to a great extent in fashionable circles; but I think there is more virtue and morality to be met with in the second ranks." (ii. 105.) Extravagance in living, dress, and gambling, are carried to a great extent; and smoking is universal among both men and women.

Lima was made an archbishop's see in the 16th century; and was long the grand *entrepôt* for the trade of all the W. coast of S. America; but a considerable part of the foreign trade of Peru is now carried on through Buenos Ayres, and the former is also in the habit of importing European goods at second hand from Valparaiso, and other parts in Chili. It is still, however, the great emporium of Peru. Its exports consist principally of bullion and specie, vicuña, and sheep's wool, bark, chinchilla skins, salt-petre, copper, tin, sugar, &c. The imports are principally woollen and cotton stuffs, cutlery, and hardware from England; silks, brandy, and wines from Spain and France; stock fish from the U. States; snuff, indigo, tar, naphtha, &c. from Mexico; tobacco from Colombia, with timber for the construction of ships and houses from Guayaquil; wheat, flour, dried fruits, and bullion from Chili; Paraguay tea from Paraguay, spices, quicksilver, perfumery, &c. (For full details as to these matters, see *Peru*.) The manufacturing industry of Lima is but insignificant. It has some smelting-houses, which, in 1834, produced 15,821 marcs of silver, but for several previous years double that quantity had been reduced to bars. It has also a mint at which, from 1786 to 1820, 2,557,914 marcs of silver were coined. (*Meyen, Reise, &c.*; *Rev.*, &c. *Tables*, 1838; *Com. Dict.*)

About 3 leagues to the S.E. is the favourite watering-place Chorrillos, resorted to by people of rank and fashion for several months in the summer, and by invalids during the winter. "It is only a small fishing village, constructed of cane and mud. The Indian owners of the houses let them to the bathers at a high rate during the bathing season; and some persons either

take them for a term of years, or construct other light summer houses for themselves. Chorrillos is sheltered from the S.W. blast by an elevated promontory, called the *Moro-Solar*." Numerous Peruvian antiquities lie scattered over the rich but now partly waste and desolate plain between this town and Lima.

Lima was founded by Pizarro in 1535, under the title of *Ciudad de los Reyes*, "City of Kings." It suffered severely from the earthquakes of 1678, and 1746, the latter leaving only 20 houses standing out of 2,000; and again by those of 1764, 1822 and 1828. San Martín entered it on the 12th July, 1821, and proclaimed the independence of Peru at Lima on the 28th of the same month. (*Ulloa, Voyage de l'Amérique*, i. 422-468., gives by far the most complete and authentic account of Lima, previously to the great earthquake of 1746. See also *Three Years in the Pacific*, 1835, i. 244-403.; ii. 1-200.; *Meyen Reise um die Erde*, ii. 56-64.; *Poeppig*; *Scarlet's Trav.*; *Stevenson's S. America*, i. 143-255.; *Cabotclough, &c. in Mod. Trav.*, vol. xxviii.; *Hall's Trav. in S. America*; *Encyc. Americana*, &c.)

LIMEHOUSE. See LONDON.

LIMERICK, an inland co. of Ireland, prov. Munster, having N. the estuary of the Shannon, by which it is separated from Clare, E. Tipperary, S. Cork, and W. Kerry. Area, 674,783 acres, of which 91,981 are unimproved mountain and bog. Except on the S., W., and N.E. extremities, the surface is generally flat. Climate mild, but very humid. Soil for the most part excellent, and applicable to every purpose of husbandry. Mr. Young describes a large tract, called the "Golden Vale," as the best land he had ever seen. Tillage has of late years been much extended in this co., but is, speaking generally, very backward: still, however, there is a good deal of grass land, and grazing husbandry and the dairy are both extensively pursued. Some fine long-horned cattle are bred and fattened in this co., particularly in the low grounds along the Shannon. The pernicious system of *con aore* (see *ant.*, p. 40.) has, unfortunately, been widely spread in Limerick; and, though there has been a great increase in the exportation of wheat, wheat-flour, oats, butter, and most other articles from the co., and a material improvement in stock, and in the implements of husbandry, it is believed that the condition of the cottiers, and the smaller class of occupiers, has been but little, if at all, improved. The latter, in fact, are in the most abject state; and it would seem that in Ireland, as in Italy and some other countries, the peasantry are frequently most wretched where the land is finest. Property in very large estates: tillage farms mostly very small, but some of the grazing farms are extensive. Average rent of land, 25s. 6d. an acre. Minerals and manufactures, excepting some departments of the latter carried on in the city of Limerick, of no importance. Principal rivers, exclusive of the Shannon, Maig, Deale, and Mulkerna. Limerick is divided into 9 baronies and 125 parishes, and sends 4 mems. to the H. of C., viz. 2 for the co. and 2 for the city of Limerick. Registered electors for the co., in 1849-50, 864. In 1841 this co. had 48,127 inhab. houses, 66,336 families, and 230,029 inhab., of whom 161,997 were males, and 168,032 females.

LIMERICK, a city, parl. bor., river port, and co. of a city in Ireland, prov. Munster, on the Shannon, 107 m. S.W. Dublin, and 55 m. E. Loophead at the mouth of the Shannon, lat. 52° 40' N., long. 8° 28' W. It is principally situated on the S.E. side of the river, within the co. of Limerick, but partly also on its N. side, within the co. Clare. The co. of the city, which is identical with the parl. bor., includes an area of 23,863 imp. acres; and had, in 1841, a pop. of 65,296, whereof the city and suburbs had 48,201, and the rural districts, or liberties, 16,906. Limerick is the fourth city of Ireland in respect of size and importance. It owes this distinction to its situation at the head of the estuary of the Shannon, which has made it the emporium of the extensive and fertile districts watered by that great river. It is divided into—1. The English town, now the oldest and most decayed portion, on King's Island, formed by a detached arm of the Shannon; 2. Irishtown, immediately S. of the above; and, 3. the New Town, to the W. of the latter, called Newtown-Pery, from Pery the family name of the Earl of Limerick, on whose estate it is built. Popularly the first two divisions are called the Old, and the latter the New Town. The country part of the city of the co., including Thomond Bridge on the W. side of the river, and many other extensive lines of cottages, is called the Liberties. The contrast between the different parts of the city is very striking. The Old Town is said in the Municipal Boundary Report to be "one vast mass of filth, dilapidation, and misery, which nothing but the general employment of the people throughout the country can correct, because the unemployed poor are attached to the large crumbling city, where they can find, at a cheap rate, something like a roof to cover them." The New Town, on the other hand, which has been wholly con-

structed within the last half century, is but little inferior to the best parts of Liverpool. It is well built, and the streets, which are broad and straight, cross each other at right angles. It has a handsome square, in which is a column surmounted by a statue of Mr. Spring Rice, now Lord Monteagle, to whom the city is much indebted. The houses in the liberties are mostly mere cabins, occupied by a very poor agricultural population. The main arm of the Shannon is crossed by two bridges, one of which, Thomond Bridge, originally constructed in the early part of the 13th century, was lately re-built; the other, or Wellesley Bridge, of 5 arches, each 70 ft. in span, a very handsome structure, was completed in 1827. There are three bridges over the smaller arm of the Shannon, between English-town and Irish-town.

The co. of the city has 13 parishes, and 8 parts of parishes, besides an extra-parochial district. Six of the parishes being within the city properly so called, which is also the seat of the see of Limerick. The cathedral, a large Gothic pile, has a lofty tower, a handsome interior, and many monuments, among which is that of Donogh O'Brien, king of Thomond. The embattled tower of this cathedral, 120 ft. in height, commands a fine view of the city and adjacent country, including the course of the Shannon. None of the parochial churches seem to be worth notice, except St. Minichin's church, formerly the most ancient in the kingdom, but lately rebuilt, which, though small, is for situation and architecture by far the handsomest sacred edifice in the city. According to the Rom. Cath. divisions, the city consists of five parishes, that of St. John being the bishop's mensal, and its church is considered the cathedral. The other places of worship are large, and some of elegant structure. There are friaries of the Augustine, Dominican, and Franciscan orders, all of which have large chapels attached to them. Nearly 9-10ths of the inhabs. are Catholics. The Presbyterians, Quakers, Wesleyan and primitive Methodists, and Independents, have each a place of worship. The handsomest public building in Limerick is the savings' bank, built in 1840. It is a Doric structure, of cut limestone. The savings' bank was established Jan. 1820, and had Nov. 20. 1848, 87,545*l.* of deposits. The diocesan school for the dioceses of Limerick, Killaloe, and Killfenora, is kept in the head-master's house. The literary and scientific institutions are the Limerick Institution, the Mechanics' Institute, and the Literary and Scientific Society. Those for charitable purposes connected with education are the Blue-coat school, founded in 1717; and free schools attached to the parishes and friaries, in which great numbers of children are instructed. No fewer than 1,200 children are educated in the schools of the "Christian Brothers," to whom the city is much indebted. There are also schools founded on bequests of Mrs. Villiers and Dr. Hall. In the Old Town is a school for females, conducted by the "Sisters of Mercy," assisted by a small grant from the Education Board: a Sunday school is also established in it, for the females employed during the week at the lace factories. In the New Town is a large female school, conducted by the nuns of the Presentation Convent. These three schools are attended by about 800 children, who, according to the statement of Mr. Inglis, are "able in general to write well, are perfectly instructed in reading, and exhibit in their appearance and behaviour the utmost order and neatness." In another school for females, 120 poor children are educated and clothed. The other charitable institutions are the County Hospital; Barrington's Hospital and City of Limerick Infirmary, a large building, containing 125 beds, built and munificently presented to the city by Sir Joseph Barrington and his four sons; the Lunatic Asylum for Limerick, Clare, and Kerry, opened in 1822, cost about 30,000*l.*; it has accommodation for about 340 patients. It cost, in 1845, 4,696*l.*, being at the rate of 13*l.* 10*s.* 8*d.* for each of the inmates. Here is also a Fever and Lock Hospital, and a Lying-in Hospital; several endowed almshouses; a Magdalen Asylum; an Asylum for the Blind; a mendicity institution; a charitable loan fund; and a charitable pawn-office, founded by Matt. Barrington, Esq., on the plan of the *Mont-de-Piété* at Paris. The Limerick union workhouse, opened in 1841, is on a large scale, being fitted to accommodate 3,450 inmates. Places of public amusement are not much encouraged. The theatre, a handsome building, was sold to the Augustine monks, and has been fitted up by them for a chapel, and a suite of assembly-rooms is applied to other purposes; but there is a small "circular" temporarily erected, occasionally used as a theatre. The Hanging Gardens, built by Mr. Roche, are formed of tiers of terraces, raised upon arches, on the uppermost of which is a range of green-houses, commanding a fine view of the city, river, and adjacent country. Limerick is the head-quarters of the S.W. military district, and has barracks for 1,450 men. Three newspapers are published in the town, each twice a week, so that a paper issues daily from the press.

The old corporation, which laid claim to prescriptive

privileges, confirmed by a series of charters from the time of King John, consisted of a mayor, two sheriffs, and an indefinite number of aldermen, burgesses, and freemen. The corporation now consists, under the municipal reform act, of a mayor, 10 aldermen, and 30 councillors. The city sent 2 mems. to the Irish H. of C.; and from the Union to the passing of the Reform Act, it sent 1 mem. to the Imperial H. of C. The last-mentioned act conferred on it the privilege of sending 2 mems. to the Imperial H. of C. Registered electors, in 1849-50, 917. The system of local taxation was said, in the Municipal Boundary Report, to be exceedingly unfair; and to press with unjust and extreme severity on the agriculturists in the liberty.

Assizes are held twice a year for the co. of the city, by the judges of circuit; courts of general sessions every quarter, and petty sessions every week, at which the mayor and city magistrates preside. A court of civil jurisdiction, which is empowered to hold pleas to any amount, is held on Wednesdays; and a Court of Conscience for suits under 40*s.* every Thursday. Civil bill cases are tried before the assistant barrister of the co., who holds a court for this purpose within the city twice a year. The income of the corporation amounts to between 7000*l.* and 8000*l.* per annum. The city Court-house is a plain building: the co. Court-house, a handsome structure, was erected in 1810, at an expense of 12,000*l.* The prisons for the co. and city are within the municipal limits. The former, erected in 1821, at an expense of 25,000*l.*, has a Doric portico, and is, perhaps, the finest building in the city; it is constructed on the radiating plan, and is said to be extremely well managed. The city gaol, a gloomy quadrangular edifice, is comparatively ill adapted for its purpose.

There are three institutions for the promotion of manufactures and trade; the Chamber of Commerce, a society of merchants, incorporated by royal charter in 1815, for the promotion and protection of trade, and who have expended considerable sums of money for these objects; the Agricultural Association; and the Trustees for the Promotion of Industry, in whom a fund of 7,000*l.* was vested by the London Distress Committee. Limerick, however, can hardly be said to have any manufactures. The linen manufacture, which had attained to some magnitude, and that of cotton, which had been introduced, are all but extinct. The manufacture of leather gloves, for which the city was once famous, has not entirely disappeared; though gloves, sold under the name of "Limerick gloves," are now not unfrequently made in Cork. There is a great deal of embroidering in lace; and three lace factories now at work give employment to from 1,200 to 1,400 females. Several large flour mills have also been erected; and the town has distilleries, breweries, tanneries, foundries, and a paper mill. Limerick has for many years been famed for its fishing-hooks sent to all parts of the United Kingdom and America.

The great support of Limerick is her trade, which is very extensive. She is, as already stated, the great mart for the country traversed by the Shannon, and that immediately connected with it. Her exports, like those of most Irish towns, consist mostly of corn and provisions, including beef, pork, butter, &c.; the value of these articles having amounted, in 1835, when prices were very low, to 717,600*l.* out of a total export of 726,430*l.* At present (1850) the value of the exports from Limerick is probably not under 1,200,000*l.* The imports consist principally of manufactured goods, coal and iron, tea, sugar, tobacco, wine, salt fish, timber, &c. The Bank of Ireland, and the provincial and national banks, have branches here. The gross customs' duties amounted, in 1845, to 193,497*l.*, in 1848 to 201,855*l.* The post-office revenue, in 1845 was 3,522*l.*; in 1848, 4,124*l.* Limerick either is, or is on the eve of being joined to Dublin by the South-Western railway.

This city, and, indeed, the whole kingdom, has derived great advantages from the improvements made in the navigation of the Shannon, and the steamers introduced on that river; and it will derive still farther advantages from the improvements that are projected in respect to it. The estuary of the Shannon forms one of the finest bays in the world: vessels of very large burden approach within a few miles of the city; and ships of 400 or 500 tons unload at its quays. But as the strand along the latter dries at low water, and as its bottom is hard, vessels of considerable burden have been seriously injured on their grounding. To obviate this inconvenience it was proposed to construct a weir or dam across the river, a little below the town, which would give a constant depth of from 16 to 18 feet water for a considerable distance upwards; and a loan of above 85,000*l.* was to be advanced by government for this purpose, and for the construction of quays. But as this project would have obstructed the navigation of the river, it has been abandoned, and government has recently agreed to advance 50,000*l.*, on security of the rates, to assist in the formation of a wet dock. The port is managed by com-

missioners. Harbour revenue, in 1847, 7,351*l*. In connection with the trade of the port may be mentioned the commercial buildings, erected, in 1836, by a company of shareholders, with apartments for the chamber of commerce, a library, &c.; the custom-house, and the exchange. There belonged to Limerick, on the 1st January, 1854, 166 vessels, of the aggregate burden of 13,829 tons.

There can be no doubt that the trade, wealth, and pop. of Limerick are rapidly increasing, but at the same time there is a vast deal of misery in it; and we regret to have to state that a large proportion of the lower classes, especially in the old town, were exposed, previously to the introduction of the compulsory provision for the support of the poor, to extreme and almost incredible privations. And this state of things, though in some degree amended, is still very prevalent. That so much squalid poverty and abject misery should exist along with so much wealth and comfort, is a painful and mortifying anomaly. We should think it well worth public consideration to inquire whether some national effort should not be made to relieve this and some other Irish cities of a portion of their pauper inhab., by sending them to the colonies; and whether measures should not be taken to prevent a recurrence of the evil, by preventing the building of any very inferior houses. The present state of the poor in Limerick, and some other Irish towns, is disgraceful to the country, and discreditable to civilisation.

Limerick was formerly fortified, and, from its commanding the first bridge above the embouchure of the Shannon, was an important military station. It was occupied, after the battle of Aghrim, by the troops of James II.: it capitulated to the English army under Ginkell, afterwards Earl of Athlone, on the 3d of October, 1691. The capitulation, or, as it has been usually called, the treaty of Limerick, was very favourable to the besieged, and, indeed, to the Irish nation, or, at all events, to the Catholics. But it was afterwards most shamefully violated by the conquering party, and its most important stipulations were openly set aside and trampled upon. The remains of its fortifications add considerable beauty and interest to this ancient city. "King John's Castle," from which the city arms are taken, forms part of the castle barracks, and the stone upon which the capitulation was signed is still in existence, and is regarded with watchful care by the citizens. (*Irish Boundary and Municipal Reports; Railway Report; Inglis's Ireland*, i. 294—312.; *Thom's Almanac*; and *Private Information*.)

LIMOGES (an. *Lemovicum*), a city of France, dép. Haute Vienne, of which it is the cap., on the declivity of a hill, at the foot of which is the Vienne, which is here crossed by an old stone bridge of six arches, 110 m. N. E. Bordeaux, and 215 m. S. S. W. Paris: lat. 45° 49' 53" N., long. 1° 15' 23" W. Pop., in 1846, *ex. com.*, 26,924. It is divided into the "city" and the "town." The former occupies the site of the ancient Celtic and Roman city near the river, and is ill built; its streets being narrow and ill paved, and its houses built of wood above the ground floor. The latter division, which is of modern date, on the upper part of the hill, is open, well built, surrounded with pleasant promenades, and particularly healthy. The cathedral, built in the 13th century, is of granite, and in the Gothic style. It has an imposing appearance at the first glance; but when examined in detail it presents many incongruities: among others, one end of the choir has bas-reliefs, representing the labours of Hercules! Another church, which stands in the highest part of the town, has an elegant steeple, 236 ft. in height, a conspicuous object at a great distance. The bishop's palace is a very handsome modern granite building, surrounded with gardens. Limoges has a good town-hall, several hospitals, an exchange, mint, theatre, prison, cavalry barracks, public baths, and many public fountains. One of the latter, the *Fontaine d'Aigoulène*, has a basin 38 feet in circ., supposed to be hewn out of a single piece of granite, and supplies the upper part of the town at every season with abundance of good water, derived from an ancient subterranean aqueduct. Besides this aqueduct, few Roman antiquities are found in Limoges: the site of an amphitheatre, the traces of which existed in 1822, is now occupied by the *Place d'Orsay*. Limoges is the seat of a prefecture and royal court, tribunals of primary jurisdiction and commerce, and a chamber of manufactures; it has a royal college, university academy, diocesan seminary, royal societies of agriculture, arts, and sciences, schools of drawing and commerce, a public library with 12,000 vols., museums of natural history, antiquities, the fine arts, and machinery, a *mont-de-piété*, and many charities. Its manufactures, which are important, include glass and earthenware, broad cloths, cassimeres, druggets, and other woollen fabrics, calicoes, cotton, linen, and hempen yarn, hats, wax candles, cards, paper, glue, &c. It has numerous tanneries, cotton and woollen dyeing houses, and iron forges: its wax bleaching factories rival those of Mans, and its brandy and liqueurs are in high repute.

Being situated at the junction of several great roads, it is an entrepôt for the trade of several depts. with Thoulouse and the S. of France, and deals extensively, not only in its own manufactured goods, but in agricultural produce, salt, iron, copper, and brass wares, &c. Marshal Jourdan, and Dupuytren, the famous surgeon, were natives of Limoges. (*Hugo*, art. *Haute Vienne; Guide du Voyageur*, &c.)

LIMOUSIN, one of the old provs. of France, in the central part of the kingdom, now distributed among the depts. of Corrèze, Creuse, Haute Vienne, and Dordogne.

LIMOUX, a town of France, dép. Aude, cap. arrond., on the Aude, 18 m. S. S. E. Carcassonne. Pop., in 1836, *ex. com.*, 6,666. It is generally well built, paved, and lighted, and has a large parish church, an hospital, two public halls, a theatre, and a small picture gallery. It is the seat of tribunals of primary jurisdiction and commerce, a chamber of manufactures, &c. Its woollen manufactures produce annually from 11,000 to 12,000 pieces of broad cloth, worth from 6 to 17 fr. an ell; it has also several woollen yarn factories, tanneries, and oil mills; and is an entrepôt for iron goods, in which, and in wines, oil, soap, and leather, it has an active trade. Its environs are highly picturesque and fertile. (*Hugo*, art. *Aude*, &c.)

LINCOLN, a marit. co. of England, on the E. coast, having N. the Humber, E. the German Ocean, S. the cos. of Cambridge, Northampton, and Rutland, and W. Leicester, Nottingham, and York. This is a very extensive co., comprising 1,671,040 acres, of which about 1,466,000 are said to be arable, meadow, and pasture. Though but little diversified in respect of surface, Lincoln is naturally divided into the districts of the *Wolds*, the *Moors*, and the *Fens*. The wolds, a ridge from 8 to 10 m. in breadth, extend from Spilsby N. to Barton on the Humber; the soil is principally sandy loam on a chalk bottom, of very various degrees of fertility, but now much improved, and generally producing very excellent crops. The Moors stretch N. and S., from the Humber to Grantham; the heath by which they were formerly covered has now mostly disappeared, and they are now very productive of oats. The Fens comprise all the flat parts of the co., from Wainfleet on the Wash round by the mouth of the Nen to the borders of Rutland: most part of this district is usually included within the great level of the Fens. (*See BEDFORD LEVEL*, Vol. I. 318.) Lincoln is one of the most productive cos. in the empire; and improvements of all sorts have been prosecuted in it for many years past with extraordinary spirit and success. Large tracts in the Wolds and Moors, that 20 or 40 years ago were all but unproductive, now yield heavy crops of barley, oats, and turnips. This great improvement has been chiefly brought about by the liberal use of bone manure, which has been applied for a longer period and on a more extensive scale in this than in any other co.

The excellence of the pastures in the Fens is too well known to require any special notice: immense sums have been expended on their drainage, and in the recovering of land from the sea. Formerly the Fens were frequented by vast numbers of aquatic fowl; but since their drainage these have much fallen off, and the *decoys*, for their capture, are now of much less importance: geese, however, are still bred in considerable numbers, and are regularly plucked four or five times a year for their feathers. Previously to the improvement of the Wolds, rabbit warrens were very common, but they are now comparatively scarce. The native sheep of the Fens were remarkable for their size and the extraordinary length of their wool; they have, however, been so much crossed with New Leicesters, that it is now difficult to find one of the genuine breed. Some of the finest of the London dray-horses are bred in the Fens. The cattle depastured in the Fens are principally short-horns, and attain to a great size.

Property very variously divided, there being estates of all sizes, from 25,000*l*. a year down to 5*l*., but the great majority small. In the district called the Isle of Ancholme, in the N. W. part of the co., between the rivers Trent and Ancholme, the inhab. live together in hamlets or villages as in France, and almost every householder is a proprietor, their properties varying from 1 to 50 acres. They are very industrious, and live very meanly. Size of farms various: in the Wolds and Moorish district they are mostly very large, but elsewhere they are rather small. They are generally held under leases of 7 and 14 years. Mr. Young has passed a high but well merited eulogy on the enterprise and intelligence of the higher class of farmers in this co. (*Survey*, p. 48.) Average rent of land in 1810, 18*s*. 11*d*. an acre; but, in 1842, 28*s*. 1*d*. Manufactures and minerals of no importance. The custom of *Borough English*, by which if the father die intestate, the younger son succeeds to the paternal property, to the exclusion of his elder brothers, prevails at Stamford, in this co. Principal rivers, Trent, Witham, Welland, and Ancholme. The Witham has been made navigable from Boston to Lincoln; and the Fosdyke

canal extends from the latter to the Trent, near Torksey, completing an internal navigation between the Wash and the Humber. The co. is popularly divided into the parts of *Lindsey* on the N., *Kesteven* on the S.W., and *Holland* on the S.E., and contains 33 hundreds, wapentakes, and soke, with the city of Lincoln and the bors. of Stamford, Boston, and Grantham. It is divided into 629 parishes, and sends 13 mems. to the H. of C., viz. 4 for the co., 2 for the city of Lincoln, 2 each for the bors. of Boston, Grantham, and Stamford, and 1 for Great Grimsby. Registered electors for the co., in 1849-50, 19,806, whereof 8,640 are for the S., or the Holland, and 11,166 for the N., or the Lindsey, division. In 1841 it had 72,964 inhab. houses, and 362,602 inhab., of whom 181,758 were males, and 180,844 females. Sum paid for the relief of the poor, in 1846-47, 130,564*l*. Annual value of real property, in 1815, 2,096,611*l*.; do. in 1843, 2,868,330*l*.

LINCOLN, a city, parl. and mun. bor., and market town of England, cap. of the above co., on the Witham, 36 m. S. Hull, and 121 m. N. London; lat. 53° 24' N., long. 0° 36' W. The parl. bor. (which the Boundary Act left unchanged externally, the only additions being the ball and close in its centre) is divided into 15 pars., and had, in 1841, a pop. of 13,411. It is situated on the S. slope and at the foot of a hill, on the top of which is the cathedral, a striking object for many miles round. The streets are irregularly laid out; the largest and handsomest runs N. and S. up the hill on which the cathedral stands. A small part of the town, comprising two pars., is on the S. side of the river, and is connected with the main body by one principal and two smaller bridges. The streets are well paved, lighted with gas, and supplied with water from public conduits. The principal and most interesting public building is the cathedral, erected at different times, from the 12th to the 15th century, and consequently exhibiting several varieties of architecture: the prevailing style, however, is early English, of a particularly rich and beautiful character. The closeness of the surrounding buildings is a great disadvantage to the display of architectural effect; but there is a tolerably open space towards the E. The church consists of a nave with its aisles, four transepts, a choir, chancel, and ladye-chapel: three towers rise above the building, two at the W. end, 180 ft. high, and one at the intersection of the nave and transepts, rising 303 ft. above the floor: they are all gorgeously decorated with varied tracery, pillars, pilasters, windows, &c. The W. and principal front, in which are three fine doors, is distinguished by its beauty and magnificence; and, from the variety of its styles, is certainly the workmanship of three distinct and distant eras. According to Britton, the interior dimensions are as follow:—Entire length, 482 ft., of which 222 ft. belong to the nave, and the rest to the choir and ladye-chapel; width of choir and nave, 80 ft.; height of ditto, 80 ft.; and width of W. front 174 ft.; length of principal transepts, 222 ft.; breadth of ditto, 66 ft. The great transepts, at the ends of which are circular windows, exhibit a good specimen of the English style; and the aisles on the E. side are divided into chapels and vestries: the choir, which is parted off from the nave by a stone screen, is of most elaborate composition; and the great E. window ranks as the second in England, in point of size and fine proportions. Attached to the E. side of the cathedral is the chapter-house, a structure differing from most others of the same nature in being *ten-sided*, and not octagonal: its groined roof is supported by an umbilical pillar, consisting of a circular shaft, cased by ten small fluted columns. The cloisters are on the N. side, and over them is the library, built by Dean Honeywood, at the end of the 17th century, containing a large collection of books, with some curious specimens of Roman antiquities. The cathedral bell, or "Great Tom of Lincoln," originally cast in 1610, having been cracked, was recast, with 6 other bells, into the present large bell and 2 quarter bells. The diameter of the great bell is 6 ft. 10½ in., and its weight 5½ tons, or about a ton heavier than the old one. At the time of the dissolution, Lincoln cathedral was one of the finest and most sumptuously adorned in the kingdom. There were then taken from it 2,621 oz. gold, and 4,285 oz. silver plate, besides precious stones of great value. It had formerly many costly sepulchres and monumental records; but the zealots at the Reformation either pulled them down or defaced them, so that, in 1549, scarcely a perfect tomb remained; and the little they left undestroyed was demolished by Cromwell's soldiers, by whom the cathedral was converted into barracks. The ruins of the bishop's palace, which was destroyed at the last mentioned epoch, stand S. of the church, and comprise a fine hall, an old gateway, and part of the kitchen. Adjoining these ruins, a modern house has been erected, which is occupied by the bishop during his stay in Lincoln. (See *Britton's Account of Lincoln Cathedral*.)

Among the tombs yet in a tolerably perfect state are those of Catherine Swinford, wife of John of Gaunt, duke of Lancaster, of their daughter Joan, and of several bishops and deans of the cathedral. The present establishment comprises a bishop, dean, precentor, subdean, chancellor, and 38 prebendaries, with 4 vicars-choral, and 20 choristers. The nett revenue of the see amounted, at an average of the 3 years ending with 1831, to 4,542*l*.; but, on the next avoidance of the see, the income was raised to 5,000*l*., with a further allowance of 500*l*., till a suitable residence be built: the limits of the diocese comprise only the cos. of Lincoln and Nottingham. (*Orders in Council, Aug. 1838*.) The cathedral revenues, which nett 6,986*l*. a year, are equally divided between the dean, precentor, subdean, and chancellor; and the vicars-choral divide 115*l*. yearly. Besides monasteries, nunneries, and other buildings devoted to pious uses, Lincoln had formerly upwards of 50 churches; but of these only 11 remain, exclusive of the cathedral, most of them being small and much mutilated. St. Peter at Gowths, evidently an old conventual church, and 3 other churches S. of the Witham, have lofty square Norman towers. An additional church was recently built by subscription. There are several places of worship for R. Catholics, Wesleyan Methodists, and other Dissenters; and attached to them are Sunday schools, which, according to the parl. returns, were attended, in 1833, by 700 children. The national school (also a Sunday school) had 474 scholars in the same year; and there were 2 infant schools with 330 children. The grammar school, still held in the Grey Friars' chapel, was founded in 1583: it is well endowed, and the instruction, not confined to classics, is given by an upper and under master, who, in addition to their salaries from the corporation, receive fees from the boys, and take boarders. The Bluecoat school, established in 1602, is endowed with landed property worth nearly 2,000*l*. a year, and furnishes clothing and instruction (with apprentice-premiums on leaving) to 56 boys. The master has 94*l*. a year, with a house, coal, and candle, and the establishment is said to be well conducted. Wilkinson's school, which is very slenderly endowed, furnishes instruction to 16 boys. Lincoln is very rich in endowed charities, among which, as one of the principal and most useful, may be mentioned Sir Thomas White's loan-fund, for deserving and needy tradesmen, the assets of which are estimated at 850*l*. (*Char. Comm. Report, part iv.*) A general dispensary, lunatic asylum, county hospital, and lying-in hospital, are the chief modern charities: and a flourishing mechanics' institute, several libraries, 2 news-rooms, and some book societies, are well supported. It has 2 weekly newspapers. Among the buildings devoted to civil purposes are the co. gaol and court-house, rebuilt from Smirke's designs, on the site of the old castle, a few remains of which are still standing on the hill W. of the cathedral. The co. gaol, constructed on Howard's plan, is well conducted. The Guildhall is an ancient Gothic building; but the borough court-house is modern, and the gaol is stated to be too small to admit of the classification of prisoners. The market-house, a small theatre, and an assembly-room, are the only other public buildings; but there are several markets. W. of the town is a good race-course, near which is a large building, now dismantled, but used during the late war as a military *dépôt*. As respects ancient remains, few towns in England exhibit so many and so interesting as Lincoln. Saxon, Norman, and pointed arches, doorways with turrets, walls, mullions of windows, and other fragments, appear in every direction. Leland says there were "5 gates in the walls of the citie;" and of these the Chequer Gate in the Close, and the Stonebow crossing the High Street, are still in good preservation. John of Gaunt's palace and stables present some good examples of the Norman and early English style.

The trade of Lincoln consists chiefly in the exchange of the raw produce of the surrounding district for manufactured and other commodities. Large quantities of flour are sent to Manchester and London. There are some tanyards, malhouses, and tobacco manufactories, and extensive breweries produce excellent ale. It communicates by the Foss-dyke canal with the Trent; and the Witham navigation, running S.E. past Boston, connects it with the North Sea. It is, also, connected by railways with all parts of the country. The Lincoln and Lindsey banking company and a private bank are established here; and there is a savings' bank, which, on the 20 Nov. 1848, had 98,631*l*. of deposits.

Lincoln received its first charter from Henry II., which was confirmed by several subsequent monarchs, its governing charter till 1837 being that of Charles I. Under the Municipal Reform Act the city is divided into 2 wards, and is governed by 6 aldermen (one of whom is mayor) and 18 councillors. It has also a commission of

the peace under a recorder. The assizes and quarter sessions are held for the city and co.; and it is the seat of a county court, before which 1243 plaints were entered in 1848. Corporation revenue 1847-48, 22,493*l*.

Lincoln has regularly sent 2 mems. to the H. of C. since the reign of Henry III., the electors previously to the Reform Act being the freemen of the city. The Boundary Act includes the insulated part called the bail and close in the pari. bor.; and those districts round the city called the liberties, which previously had not been represented, were added to the co. Registered electors in 1849-50, 1,327. Lincoln is likewise the election town for the N. division of the co.

Lincoln stands on the line of the great Roman road called *Eborac Street*; and derives its name from its occupying the site of the Roman military station called *Eborac*. It was fortified by the Saxons; and at the time of the Domesday survey was one of the richest and most populous cities of England, having 1,070 houses, and an extensive trade. The castle was built by William the Conqueror in 1068; and the prosperity of the town was further advanced by Henry I., who cleared out the fosse-dyke, and made it navigable. The town was annexed to the duchy of Lancaster at the end of the 13th century; and about the middle of the 14th century it was inhabited by the celebrated John of Gaunt, duke of Lancaster, who not only improved the castle, but procured for the town many valuable privileges. In the civil wars of Charles I. the king came to Lincoln, and convened the nobility and freeholders of the co. The inhabitants promised to support the royal cause; but in 1643 the city was in the hands of the parliamentarians. The royalists recaptured it; but were again dispossessed, both of the town and castle, on the 5th of May, 1644.

LINDFIELD, a town and par. of England, co. Sussex, hund. Burley-Arches, rape of Pevensey, 14 m. N. by E. Brighton, and 23 m. S. London. Area, 5,350 acres. Pop., in 1841, 1,939. This town deserves notice for its useful institution for instructing poor children of both sexes not only in reading, writing, &c., but also in the processes of agriculture, and various manual operations, as spinning, and netting, printing, shoe-making, &c., and also for a benevolent society, giving pecuniary and other relief to poor persons not willing to receive parochial aid. The church is an old structure of plain exterior, with a low square tower; and the living is a curacy in the gift of the Archbishop of Canterbury. There are 2 places of worship for dissenters. Fairs for cattle and horses, May 12.; and for sheep and lambs (the largest in the co.), Aug. 5.

LINGEN, an isl. of the E. Archipelago, off the N. E. coast of Sumatra, lying on the equator, and near lat. 106°. It is about 50 m. in length, by 30 in its greatest breadth; having a healthy climate, and producing abundant supplies of fruit and poultry. Its geological formation indicates the presence of tin; and it furnishes some little gold. Its inhabs. may be considered as presenting the type of the Malay race in its greatest purity. (*Hamilton's E. I. Gaz.*)

LINLITHGOW, a royal and pari. bor. of Scotland, co. Linlithgow, of which it is the cap., in a valley on the S. bank of a lake of the same name, 15 m. W. by S. Edinburgh. Pop., in 1841, 4,009. The town consists of one main street, along the line of road between Edinburgh and Falkirk, with several lanes branching off on both sides. The houses, with few exceptions, have an ancient and decayed appearance; the streets are lighted with gas, and macadamised. In addition to the town hall, and gaol, the most prominent public building is the parish church, erected in the 12th century, but afterwards much enlarged and repaired. This, which is one of the best specimens of Gothic architecture in Scotland, is 182 ft. in length, 100 in breadth, including the aisles, and 90 in height, exclusive of the steeple: the latter, rising about 140 ft. above ground, terminates in an imperial crown. The exterior had formerly a row of statues, of which one only remains, that of St. Michael, the tutelary saint of the borough: it is divided by a partition wall; the Eastern half only being used as the parish church; the other is unemployed.

The royal palace of Linlithgow is finely situated on an eminence projecting into the lake. This magnificent ruin is of a quadrangular form. It was begun so early as the 12th century; and was greatly enlarged and improved by James V., but was not finished till the reign of James VI. (James I. of England), who built the N. side of the quadrangle, after his visit to Scotland in 1617. The W. side of the palace is the most ancient; and here the apartment is still pointed out where the unfortunate Queen Mary first saw the light on the 7th of December, 1542. The palace was entire and habitable till 1746, when it was burnt, either intentionally, or through accident, by the troops under General Hawley. It covers an acre of ground; and though roofless, ruined, and desolate, its appearance sufficiently justifies the not very poetical eulogium of Scott:—

"Of all the palaces so fair,
Built for the royal dwelling,
In Scotland, far beyond compare,
Linlithgow is excelling."
Marmion, canto 4. stanza 15.

The hexagonal Cross Well, in front of the town-house, about 20 ft. in height, is surmounted by a lion rampant supporting the arms of Scotland. The sculpture, by which it is adorned, is very complex; and the water is made to pour in great profusion from the mouths of 13 grotesque figures. This well, constructed in 1806, is said to be a facsimile of one previously existing, constructed in 1620.

The Free Church, the Associate Synod, and Independents, have places of worship. The poor, as in other Scotch towns, are supported partly by the interest of certain funds left in mortmain, for the purpose, and by the church collections, and partly by a rate, which amounted, in 1847, to 960*l*.

There is a bor. school endowed by the town, but no parish school. There are sundry schools in the parish, all unendowed except the one referred to; and it is supposed that about 1-9th part of the pop. is at school. There are various reading-rooms, and a mechanics' library.

Linlithgow has little or no trade, but depends chiefly on its advantages as a provincial capital. Tanning and preparing leather, said to have been introduced by the soldiers of Cromwell, is the oldest and the staple branch of business, giving employment to nearly 100 hands. There are two extensive distilleries, a brewery, and a small glue manufactory, and a few hand-loom weavers (cotton and linen). There is only one branch bank. The Union Canal, between Edinburgh and Glasgow, and the Edinburgh and Glasgow Railway, pass close along side the town. Blackness, on the Frith of Forth, 5 m. distant, is its port.

Linlithgow was made a royal bor. in the 12th century. In 1512, in an aisle of the par. church, the apparition is said to have appeared to James IV., that warned him against the expedition into England which terminated in the fatal battle of Flodden. (*Pitcott's Hist. of Scotland*, i. 264, 265.) When passing through this town, on the 23d Jan. 1570, the Regent Murray (illegitimate brother of Q. Mary) was shot by Hamilton, of Bothwellhaugh, partly in revenge for a private injury, and partly from political motives. The house whence the shot was fired has been taken down and replaced by a modern edifice. The White or Carmelite Friars had a monastery here, founded in 1290; but all traces of it have disappeared. In addition to certain town dues, the municipal property consists chiefly of land; and the ancient custom of annually *riding the marches*, though disused in almost every other bor. in Scotland, is here regularly observed. Corporation revenue, 776*l*.; number of councillors, 27. Linlithgow unites with Falkirk, Airdrie, Lanark, and Hamilton, in sending a mem. to the H. of C. Registered voters in 1849-50, 101. (*Parl. Papers; Private Information*.)

LINLITHGOW. See LOTNIAN (WEST).

LINTON, a market town and par. of England, co. Cambridge, hund. Chilford, 10 m. S. S. E. Cambridge, 42 m. N. by E. London. Area of par., 3,663 acres. Pop. in 1841, 1,838. The town, which stands on the line of a Roman road, and at the foot of the chalk downs communicating with the Chiltern range, comprises several irregular streets and lanes, lined in part with good brick houses, but with a much greater number of low thatched cottages. The church is a low structure in the pointed style with a high embattled tower and handsome interior, the living being a vicarage in the gift of the Bishop of Ely. There are places of worship, also, for Wesleyan Methodists and Baptists, and two Sunday schools, one of which belongs to the church. The market-house is a small square building. Tanning is the chief trade of the place, and in the neighbourhood are extensive nursery grounds occupied by gardeners, florists, and seedsmen, who take their produce to the Cambridge market. Markets on Thursday; fairs for horses and lambs, Holy Thursday and July 20.

LINTZ, or LINZ, a city of the Austrian dom., cap. of Upper Austria, on the Danube, which is here crossed by a wooden bridge 280 yards in length, 41 m. S. E. Passau, and 96 m. W. by N. Vienna, lat. 48° 18' 54" N., long. 14° 16' 45" E. Pop., in 1845, 31,000, ex. garrison. It consists of the city-proper and three suburbs, which, as in Vienna, are more extensive than the city itself. All travellers speak favourably of Linz. "This beautiful city has nothing of Germany in it, except its language. The houses, all handsome and lofty, are stuccoed and painted, chiefly white, but many yellow or light brown. Almost all have architectural decorations and columns, friezes over the windows, and Venetian blinds outside. Balconies with flowers salute the eye at every turn; and not only on the broad, spacious 'Place,' but in the back streets also, the houses are lofty and elegant, and all look as clean, and white, and fresh, as if newly decorated and painted. We are sensible here of a decided change in

ciently derived a considerable revenue, and the Lipariot merchants great profits, now scarcely exists as an article of commerce: the failure of its production is supposed to be owing to a diminution in the intensity of the subterranean fires.

Sulphur is still exported, but not to the extent that it might be, from the notion that the vapour arising from its purification infects the air and injures vegetation. Salina is so called from the salt-pans on its S.E. shore, which produce enough of that article for the supply of all the islands. The *pruna marina*, from whose silky filaments the Romans made imperial robes, abounds on the shores of Salina. Next to pumice stone, wine, raisins, currants, olives, salt, and sulphur, soda, capers, coral, and fish are the chief articles of export. The natives are generally poor, though few are in the extreme of poverty. They are industrious, hardy, and make good seamen; but they are immoral, filthy in their habits, and infested with scabies. (*Dolomieu, Voyage aux Iles de Lipari*, 1—140.; *Smyth's Sicily*, 248—279.)

These islands were called *Hephestiades* by the Greeks, and *Vulcania* by the Romans, from their emitting smoke and flames; such places being supposed to be either inhabited by, or under the immediate protection of, Vulcan. Vulcano, however, was more especially sacred to the god of fire, and is said by Virgil to be

"Vulcani domus, et Vulcania nomine tellus."

They were also frequently called *Æolian* Isles, from *Æolus*, one of their sovereigns. This prince having learned, according to Piny, to foretell, from observations made on the smoke of the volcanoes, the coming changes of the winds, was said by the poets to have the latter under his command. (*Hist. Nat.*, lib. iii. cap. 9.) Virgil has described the power and functions of *Æolus* as ruler of the winds, in one of the finest passages of the "*Æneid*:"—

"Hic vasto rex *Æolus* antro
Lactantes ventos, tempestatesque sonoras
Imperio premit, ac vincula et carcere frenat.
Illū indignantes magno cum murmure montis
Circum claustra fremunt. Cæcū sedet *Æolus* arce,
Sceptra tenens; molitque animos, et temperat iras.
Nū faciat, maria ac terras cœlumque profundum
Quippe furant rapidi secum, verrantque per auras."
Æneid, l. lin. 56—65.

LIPARI, the cap. town of the above group of islands, and of a canton under the intend. of Messina in Sicily, on a steep declivity on the E. side of Lipari island; lat. $38^{\circ} 27' 56''$, long. $14^{\circ} 57' 50''$ E. Pop. 12,500. It is healthy, but crowded, irregular and dirty, with narrow streets, and ruinous public edifices; of which last the finest are the Capuchin convent, an hospital, a nunnery, and the bishop's palace. The castle, which encloses the cathedral and some other edifices, is erected in a commanding situation, on the summit of a huge volcanic rock. From fragments of a Cycloplan wall and other remains, Smyth conjectures that this was the identical Acropolis which the Romans, about anno 259 B. C., attempted to carry by escalade, but were repulsed and driven back with great loss by the Carthaginians under Hamilcar. (*Sicily*, &c., 264.) The greater part of the present fortress was built by Charles V., after Barbarossa had plundered the town in 1544. The cathedral is a neat edifice, but has been much injured by lightning. A college is established here, under which are 8 schools in different parts of the islands. Several Greek and other antiquities exist in and round the town: an excellent statue on the Marina, supposed to have been erected in honour of Timasitheus, has, "by the addition of a copper nimbus, been converted into a saint." Lipari has an active trade in the produce of the islands with Messina, Palermo, Naples, &c. Its bay or harbour, nearly 2 m. in circuit, has deep water and tolerably good holding ground, but from want of a mole, it is not at all times secure. (*Smyth's Sicily*, 263, 264., and *Appendix*; *Russell*; *Brydone*; *Rampoldi*, &c.)

LIPETZK, a town of Russia in Europe, gov. Tambof, on the Voroneje, an affluent of the Don, 80 m. W. by S. Tambof. Pop. nearly 6,000. It has several churches, most of them of wood. It had at the end of the last century an imperial cannon foundry, employing nearly 1,500 hands, but it appears to be no longer in activity. A mineral spring, frequented by numerous visitors, was converted into a spa, under the auspices of Peter the Great, a statue of whom was erected in the town by one of its citizens, in 1839. (*Possart*; *Das Kaiserth*; *Russland*, 570.)

LIPPE-DETMOLD, a principality of N.W. Germany, between lat. $51^{\circ} 47' 30''$ and $52^{\circ} 11' N.$, and long. $8^{\circ} 35'$ and $9^{\circ} 20' E.$, having N.E. and E. territories belonging to Hesse-Cassel, Hanover, Waldeck, and Prussia, and being elsewhere surrounded by Prussian Westphalia. Area, 445 sq. m. Pop., in 1838, 82,970, the great bulk of whom, with the reigning family, are Calvinists. The country is in general hilly, especially its S.W. part, where the *Teutoburgerwald* separates the basins of the Rhine and the Weser. The latter river

forms a part of the N. boundary: the Werra, one of its tributaries, is the other principal stream of Lippe-De-mold. The climate is one of the mildest and most agreeable in N. Germany. The mean temperature of the year, in the valleys and plains, is about 49° Fah.; and that of the winter, no lower than 35° Fah. Agriculture is the chief occupation of the inhabs. Corn, of various descriptions, beans and peas, rape seed, flax, and hemp are the principal articles of culture. The country is well wooded, particularly with oak and beech; and timber is one of its most important products. A good many sheep and hogs, and excellent horses, are bred; and the rearing of bees is extensively pursued. About 20,000 centners of salt are annually produced from salt springs; and marble, lime, and iron are obtained in small quantities. The weaving of linen fabrics, and the spinning of linen yarn from the flax produced in the territory, partially occupy the rural pop. Berghaus says there are 2,000 looms in the principality; and that linen goods to the value of 1,000,000 rix dollars a year are made. There are some woollen cloth and glass factories, tanneries, distilleries, and paper-mills; and Lemgo has a manufacture of *meerscham* pipe-bowls. These articles, after timber, linen stuffs, and yarn, and cattle, are the chief articles of export. The government is a constitutional and hereditary monarchy, remodelled in 1819; and vested in the prince, and a representative body, or diet of 21 members; 7 elected by the nobility and knights, 7 by the inhabs. of towns, and 7 by those of the rural distr. The diet is convoked every 2 years, and no new tax can be imposed without its consent. All questions relative to taxation are decided by the states in one assembly, by a majority of votes: on other questions, though the states deliberate together, they vote in 2 separate assemblies, the depts. of the nobles and knights forming one by themselves. Appeal lies from the civil and criminal tribunals of the princip. to the high court at Wolfenbittel. The people are better informed than in many parts of Germany, the princes of Lippe-De-mold having, for a lengthened period, been liberal patrons of public instruction. The gymnasium at Lemgo, and the high school and teachers' seminary at Detmold, are in high estimation, many of the most celebrated scholars of Germany having received the early portion of their education at one or other of those establishments. Lippe-De-mold furnishes 691 men to the army of the German Confederation: it has one vote in the full council of that body; and, along with other small states (*see* Vol. I. p. 894.), a vote in the committee.

Detmold, the chief town and residence of the prince, and seat of government and of the superior judicial courts, &c., on the Werra, 54 m. E. Munster, lat. $51^{\circ} 56' N.$, and long. $8^{\circ} 53' 15'' E.$, has 2,500 inhab. Lemgo, on the Bega, the largest town in the principality, has 3,400 inhab., with a seminary for noble females, and an orphan asylum. (*Berghaus, Allg. Länder, &c.*, iv. 477—479.; *Cannabich*; *Ann. de Gotha*.)

LIPPE SCHAUMBURG. (*See* SCHAUMBURG-LIPPE.)

LIRIA, a city of Spain, prov. Valencia, 18 m. N.W. Valencia. Pop., according to Miñano, 10,256. It partly occupies a space between two hills; but it is partly, also, on an acclivity, the summit of which is crowned by the ancient parish church *de la Sangre*. Another parish church, a chapel, and two monasteries, are the only other public buildings; and the town generally has a mean and neglected appearance. Its inhabs. are principally employed in the distillation of brandy, soap-boiling, tanning, tile-making, and the weaving of linen fabrics. The neighbourhood is well irrigated, and extremely productive. The marble quarried near Liria is also celebrated for its whiteness and fineness of grain. Its existence is traced by the Spaniards up to the time of the Carthaginians, who founded here the town of *Ederna*. Under the Romans it was called *Edria*, and was the cap. of the country of the *Edetani*. Having passed successively into the hands of the Goths and Moors, it was finally added to the crown of Arragon in 1252.

LISBON (Port. *Lisboa*; an. *Olisipo*, and afterwards *Felicitas Julia*.) the cap. city, and principal sea-port of Portugal, in the comarca of its own name, admirably situated for commerce on the right bank, and near the mouth of the Tagus, 172 m. S. Oporto, 220 m. N.W. Cadiz, and 320 m. W.S.W. Madrid. Lat. $38^{\circ} 42' 24'' N.$ Long. $9^{\circ} 5' 50'' W.$ Pop. 241,500, among whom are many negroes, and mulattoes. The city (as seen from the river) covering several hills with palaces, churches, convents, and dazzling white houses, that rise more or less abruptly from the quays, has a magnificent and imposing appearance; but when the traveller has once landed, the delusion vanishes; for nothing can be more literally correct than the poetic description of Byron:

"Whoso entereth within this town,
That sheening far, celestial seems to be,
Discomolate will wander up and down
Mid many things unsightly to strange ee;
For hut and palace show like stithly;

The dingy denizens are rear'd in dirt,
 Ne personage of high or mean degree
 Doth care for cleanness of surcoat or shirt,
 Though shent with Egypt's plague, unkempt, unwash'd, unhurt."
Childs Harold, cant. i.

The streets are badly paved, and generally narrow, and the houses, with here and there a latticed window, have a melancholy appearance: while in filthiness and impurity of every description Lisbon may vie with Constantinople. Mrs. Baillie, who resided here for more than two years, describes its streets as sending forth "the most pestilential effluvia. Dogs of every mongrel breed, lank, lean, and voracious, lie about the streets in alarming numbers. Indeed Lisbon maintains no other scavengers." The police, however, has been improved, and scavengers now cleanse the wider streets; but the greater part of the city is still worthy its ancient notoriety for the want of cleanliness, and even decency. The E. quarter of the town not having been destroyed by the earthquake of 1755, is the oldest, and has very narrow irregular lanes, skirted by high old-fashioned and half-ruinous houses; but lower down in the plain to which the ravages of that calamity were confined, the town has been rebuilt in a regular manner, and excellently paved, and there are a few squares and open spaces, which contrast strikingly with the mean appearance of other parts. Lisbon is an open town; and its suburbs are so nearly connected with it, that it is difficult to define its limits. Measuring, however, from the small river Alcantara eastward, to the termination of the continuous buildings, we find it to be about $3\frac{1}{4}$ m. in length; the breadth varies from 1 m. to $1\frac{1}{2}$ m., so that its total area comprises about 3,000 acres. The whole of this space, however, is not covered with buildings; for in many parts there are extensive plantations and gardens, public squares, and a vast extent of ground unoccupied, except by ruins and rubbish, the monuments of the catastrophe of 1755. Some houses also have been thrown down, and others greatly injured by subsequent shocks; and there is, perhaps, no great presumption in anticipating, owing to the frequency of these phenomena, that Lisbon may one day or other again become the subject of a similar calamity to that by which it was so nearly destroyed. One of the largest squares is the *Praça do Comércio*, in the centre of which is the equestrian statue, in bronze, of Joseph I. The front, towards the river, is open, and flights of stone steps descend from it to the water: on the E. side are the custom-house, E. India-house, and exchange; the public library is on the W. side, and facing the river stands a fine building called the *Junta do Comércio*. The *Rocio* is another fine square, communicating with that last-mentioned by several well-built and uniform streets; and in it stand the scorched and blackened ruins of a large mansion recently burnt down, once the palace of the Inquisition, but afterwards converted into government offices. In this square were celebrated the *Autos da fé* which once disgraced Portugal, even more than the rest of Catholic Europe. Of these streets, one, the *Rua d'Ouro*, is chiefly occupied by goldsmiths and jewellers: the silversmiths live in the *Rua da Prata* (Silver Street), and a third is filled with the shops of cloth merchants and embroiderers. The haberdashers and other tradesmen have likewise their streets called after the trade to which they are appropriated. Among the other squares and remarkable places of Lisbon may be mentioned the *Praça da Figueira*, used as a market for fowls and vegetables; the *Praça das Amoreiras*, in the centre of which is a large reservoir whence water is supplied to the various fountains of the city; and the *Praça de Alegria*, now as formerly celebrated as the Rag-fair, or Monmouth Street, of Lisbon. The *Salitre*, leading from the *Passeio Público* in the N. quarter of Lisbon, forms a cool and shady promenade; the quarter of Buenos Ayres, on the slopes W. of the town, is airy and pleasant, comprising many handsome residences, and a line of good streets runs westward over the bridge of Alcantara, connecting Lisbon with the suburb of Belem. The houses above the shops, and many others also, are let in separate floors, as at Madrid and Paris; and a common passage, not remarkable for cleanliness, leads to the door and staircase of each. The police, so inefficient during the peninsular war, that Byron might correctly have pictured Lisbon as

"That purple land, where law secures not life,"

was much improved after the peace by the establishment of Novion's police; but this useful body was broken up at the time of Don Miguel's expulsion, and property as well as life are almost as unsafe as ever. The streets, with the exception of a few great thoroughfares, are scarcely lighted at all: there are plenty of fountains; but water is not used to clean the streets, and there is no attempt at sewerage. Fires are frequent; but they are not destructive, owing, in part, to the solid construction of the buildings, and in part to the unfrequent use of domestic fires, and the formation of the *agoadeiros* or Gal-

lian water-carriers into corps, stationed at different parts, to convey water from the fountains on the first alarm. These, of whom there are about 7,000, are generally employed in Lisbon to carry burdens and perform the more severe labour. The work of porters, however, at the custom-house and India-house is done by the Portuguese, to the entire exclusion of the Gallegos.

Few cities of Europe are so scantily supplied with fine public buildings. The custom-house, exchange, and India-house are large and handsome; but besides these there are scarcely any except the churches and convents, which crown the hills, and look like palaces and fortresses. Some of the former, rebuilt since the earthquake, are very spacious, and profusely decorated in the worst taste. The principal of these are, 1. the cathedral, a large Moorish building restored in 1770, and situated on the slope of the hill on which is the *castello*, or citadel: 2. the church *Do Coração de Jesus*, the largest and most sumptuous sacred edifice built since 1755, surmounted by a finely-proportioned dome, and remarkable as containing a mausoleum dedicated to its foundress, the queen Maria; 3. the ancient church of the Martyrs, erected on the spot where Alphonso I. mounted the walls of Lisbon, and took it from the Moors; and, lastly, the elegant but still unfinished church of Santa Engracia, which not having been touched for the last thirty years, a proverb has come into use, entitling all incomplete undertakings as *obras de Santa Engracia*. Here, also, we may mention the church of San Geronimo, at Belem, built by King Emanuel in 1499, and exhibiting a fine specimen of the ornamental Gothic and Arabic styles: in the interior is a royal mausoleum. The convents, which are of large size, form a principal feature in the town; but, since the suppression of the monasteries in 1835, Lisbon has lost much of its monkish appearance, the buildings have been converted to public uses, or sold to private individuals, and the wealth has been thrown into the national treasury. The English built a Protestant chapel in 1823 contiguous to a cemetery, in which, among other remains of our countrymen, lie those of the celebrated Henry Fielding, who died here on the 8th of October, 1754, at the early age of 48. Among the other public structures, the fine aqueduct of *Aguas Livres*, deserves mention as one of the greatest works of modern Europe, and which will bear comparison even with the grand specimens of ancient bridge-architecture. It brings water from several springs about three leagues N.W. of the city: its course is partly under ground; but as it approaches Lisbon, and crosses the deep valley of the Alcantara, it is carried over 35 bold marble arches for a length of about 2,400 ft. The water enters the town at the *Praça das Amoreiras*, where, as before mentioned, is the great reservoir from which water is distributed to the various fountains, and whence the Galician *agoadeiros* draw the supplies, which they sell from house to house, and hawk about the streets. The palace of Necessidades, in which the present queen has resided and held her courts ever since the death of the late king-consort at Ajuda, is small and mean-looking, and the palace of Bemposta is equally unworthy so imposing a name; but the palace of Ajuda, near Belem, lately completed, is a large building, and, notwithstanding its faults of architecture, may rank as one of the finest in Europe. The arsenal, post-office, mint, corn-exchange, two public hospitals (one of which, called the hospital of San Joseph, is extremely well conducted, and has accommodation for 1,500 patients, with an attached school of medicine), the nobles' college, and the palace of Calhariz, are the only other national buildings of any importance, except the theatres. The opera-house of San Carlos is a large building of good proportions, with a noble box in the centre for the royal family; and Dr. Wilde, a very recent traveller in Portugal, says that the opera enjoys a well deserved popularity, the singing being very good, and the ballet really admirable. (*Narrative*, vol. i. p. 49.) There is a theatre for the performance of the national drama; but it is small and mean, and the plays as well as the performers are of a very inferior character. Lisbon, also, like Madrid and Seville, has a bull-ring, the size of which, however, will bear no comparison with the latter, nor are the performances so splendidly appointed or well managed. It must be observed, however, that the people of Lisbon visit the opera rather in obedience to fashion than from any desire for amusement: the bull-fights are not attended, as in Spain, by the *élite* of society, and the national drama is chiefly supported by the *bourgeoisie*. Out-of-door amusements are seldom sought, except water-excursions, in which the people generally take great pleasure; the shores of the Tagus are indeed most beautiful; the country on the opposite side offers many interesting objects, as Almada, Barreiro Seixal, Setubal the convent of Arrabida, &c.

The literary and educational institutions of the Portuguese cap. comprise, 1. a Royal Academy of Sciences, founded in 1778, having a good library and museum, and publishing memoirs and scientific works; 2. a patriotic

Literary society established in 1822, and sending forth a journal of its proceedings, a society for promoting national industry, and the following establishments, either wholly or in part supported by the government, viz. a school of commerce attended by about 150 pupils, a royal naval academy, a royal academy of engineering, a school of surgery, a music school, 12 schools of logic and rhetoric, 12 others for classical instruction, and 18 primary schools; but they are ill supported, inefficiently conducted, and have been, till very lately, remarkable rather for their antiquated style of instruction than for positive and general usefulness. The national public library of Lisbon in the Praça do Commercio has been much enriched by the addition of books formerly belonging to the monasteries, and probably now contains about 150,000 printed vols. besides MSS. The library of the Cortes in the *Hospicio real de Nossa Senhora das Necessidades*, where that body holds its sittings, comprises about 30,000 vols.; and that belonging to the theological seminary of San Vicente de Fora has about 18,000 vols.: but the books in these collections are chiefly ecclesiastical and old, while the departments of science, modern literature, and modern history, are almost entirely neglected. In fact, Portuguese literature, down to a very recent period, had been, for many years, in a state of stagnation, and the institutions of Lisbon are now only slowly recovering from the lethargy in which they had been buried upwards of thirty years. Besides the establishments already described may be mentioned the Royal printing-office, and the cabinet of natural history and botanic garden at Ajuda. Several newspapers are published in the cap.; but they are without exception badly conducted, and exercise very little influence either on society or government.

The harbour, or road of Lisbon, is one of the finest in the world, and the quays, which extend nearly 2½ m. along the banks, are at once convenient and beautiful. Fort St. Julian, built on a steep projecting rock, marks the N. entrance of the Tagus; and on it is a light-house, rising 120 ft. above the sea level. Two large banks, called the N. and S. Cachops, obstruct the river mouth, and on the middle of the latter stands the Bugio fort and lighthouse, the latter being 66 ft. high. The least depth of water on the bar in the N. channel is 4 fathoms, and in the S. 6 fathoms; and there is little danger in entering the port, except during ebb tides, which run out at the rate of 7 m. an hour. Inside the harbour the water from nearly 20 fathoms in mid-channel shoals gradually to the edge; but in some parts vessels may come within 200 yards of the shore. Lisbon, however, with all the advantages of its position and the excellence of its port, which commands the navigation of the Tagus, holds but a low rank in respect of commerce and industry. The despotism, intolerance, and imbecility of the government have weighed down the national energies, and the insecurity both of life and property, in consequence of bad laws and an inefficient police, have paralysed industry of every description.

The foreign trade of Lisbon, formerly of considerable importance, but, perhaps, at all times, much over-rated, has rapidly declined since the emancipation of Brazil. She had formerly about 400 ships, varying in burden from 200 to 600 tons, engaged in the South American trade; but at present only 50 vessels are employed in that trade, the average burden of which does not exceed 150 tons. Indeed, the produce of Portugal now sent to foreign countries is almost entirely conveyed to its destination in foreign ships. A small number of sea-going ships belonging to the port, probably about 60, of the aggregate burden of 9,000 tons, are engaged in foreign trade, partly with the E. Indies and China, but chiefly between Setubal (or St. Ubes), and Cork, exporting salt in return for butter; and about 200 small craft are employed in the coasting trade. The following table shows the number and flags of different ships that entered and left Lisbon in 1837-38:—

Countries.	Arrived.		Departed.	
	1837.	1838.	1837.	1838.
British	290	324	285	315
Portuguese	568	371	539	371
Swedish	52	79	48	79
Dutch	58	50	55	50
Russian	18	31	16	31
Spanish	14	27	14	27
Sardinian	18	21	16	21
American	11	19	10	19
French	34	19	33	19
Hanoverian	9	17	9	17
Hamburgh	12	15	11	15
All others	89	26	84	26
Total of ships	1,173	1,032	1,120	1,023

The exports comprise wine, oil, fruit, and salt; among the imports are, hemp, flax, and linen cloths from Russia; iron, steel, salt fish, timber, pitch, and tar from the Baltic; linens, corn, &c. from Holland and

Germany; silks from France; and cotton and woollen goods, cod-fish, hardware, ale and porter, linen, coals, and earthenware from England, which engrosses fully 7-8ths of the trade in foreign bottoms. The following account of the articles imported into Lisbon from the British dominions, in 1837, though imperfect, will give a tolerable idea of the present state of the trade between the two countries.

Description.	Quantities.	Value.
Cotton goods	10,202 cases	£395,144
Woollen do.	1,340 bales	136,448
Linen do.	618 cases	17,698
Butter	12,206 firkins	30,780
Cod-fish	84,837 quintals	67,791
Wrought metals	13,858 cases	28,969
Drugs	2,554 —	13,496
Earthenware	937 crates	12,137
Tea	814 chests	10,438
Coals	678,653 arrobas	11,516
Iron	12,209 quintals	8,101
All other articles	—	46,580
Total value of Imports from Great Britain		776,396

The port of Lisbon is open to all nations, all articles, except corn and flour, being allowed to be warehoused. Goods so admitted, with the exception of vinegar, wine, and spirits, pay 15 per cent. on the new tariff valuation of 1837, and, where there is no tariff, *ad valorem*. All exported articles pay a duty of 4 per cent. *ad valorem*. There is no regular warehousing and bonding system at Lisbon: all imported dry goods are allowed to lie in the custom-house stores two years, and liquida, six months, without charge, provided they are intended for consumption, and pay duty accordingly; otherwise, if re-exported, they pay 2 per cent. The port charges on a foreign ship of 200 tons, entering with a general or mixed cargo, and clearing out with the same, average 56,260 reis, or 11½ 6s., nearly 4-5ths of which are tonnage and light dues, the former being 100 reis, and the latter 40 reis, per ton. There are 3 respectable insurance companies — the Fidelity, Restauração, and Bonança, — in any of which insurances may be effected.

Lisbon has some fabrics of silk, paper, and soap; there are sugar refineries, tan-yards, and potteries; and its goldsmiths and jewellers are amongst the most expert in Europe; but in every pursuit is to be perceived a want of energy and industry, to be traced perhaps to the character of the people as well as to political causes. With respect to the character of other artisans, Mrs. Baillie observes: "It is surprising how ignorant, or at least superficially acquainted, the Portuguese are with the commonest branches of handicraft: a carpenter is awkward and clumsy, spoiling every work he attempts, and the way in which the doors and wood-work, even of good houses are finished, would have suited the rudest ages. Their carriages of all kinds, from the fidalgo's family coach to the peasant's market-cart, their agricultural implements, cutlery, locks and keys, &c., are ludicrously bad. They seem to disdain improvement, and are so infinitely below par, so strikingly inferior to the rest of Europe, as to form a sort of disgraceful wonder in the midst of the 19th century!" (*Lisbon*, l. 74.)

The bank of Lisbon, founded in 1822, had a capital in 1833 of about 691,100*l.* divided into 100*l.* shares. The bank discounts bills not having more than three months to run, at 5 per cent.; and it enjoys the singular but valuable privilege of having its claims on all estates paid in full, provided the estate amounts to so much, other creditors being obliged to content themselves with a division of the residue, if there be any. For weights and measures, see PORTUGAL; and for commercial details, see *Commercial Dictionary*, art. LISBON.

The climate of Lisbon is variable, but, on the whole, healthy and genial, notwithstanding the cold piercing winds from the sea, which are disagreeable even during the scorching heats of summer, with the thermometer at 96° and 100°: heavy rains prevail in Nov. and Dec., but it seldom snows: cold clear weather is usual in Jan. and spring commences about the middle of Feb.

The pop. of Lisbon is of an extremely varied character: nearly a third of the lower orders are Gallegos, blacks, or mulattos, who, though the worst used and least considered, have a just claim to rank as the most hardy and industrious people of the cap. Genoese, Spaniards, and a few French, also, are employed, as gardeners or as innkeepers, cooks, and stewards. The lower orders of the Portuguese, who are seen, perhaps, to more disadvantage in Lisbon than in any other part of the kingdom, are remarkable for their indolence and disregard of the comforts of life; but we believe that these evils are owing, in a great measure, to the total want of education, the influence of a debasing superstition, and the badness of the government. Garlick, rancid oil, dried fish, and goat-cheese, which constitute their favourite food, are easily procurable; and so unconquerable is the predilection for the *dolce far niente*, occasioned in part, we

titled the famous lines of Torres Vedras, which, in 1809, proved a sufficient defence against a fresh invasion of the French under Massena. (*Baillie's Lisbon*, 2 vols. passim; *Matthew's Diary of an Invalid*, pp. 10—28; *Sir C. Brooke's Trav. in Spain and Morocco*, i. pp. 8—11; *Wilde's Narr.*, i. pp. 40—82; *Mod. Trav. and Priv. Inform.*)

LISBURN, an inland town and parl. bor. of Ireland, co. Antrim, prov. Ulster, on the Lagan, and on the high road from Belfast to Dublin, 8 m. S.S.W. the former, and 80 m. N. by E. the latter.

This is one of the handsomest, best built, and cleanest towns in the N. of Ireland. It consists principally of a main street along the great road. Its church has been constituted the cathedral of the united dioceses of Down and Connor. It has also a R. Cath. chapel, a Presbyterian, 2 Methodist, and 1 Quaker meeting-house; a national school, 2 infant schools, and a school for the education of Quaker children, supported by the voluntary subscriptions of its members, several almshouses, the infirmary for the co., a market-house, which contains a suite of assembly rooms, and a court-house, formerly a place of worship for the Huguenot settlers. (See post.)

"The Lagan river, on which the town is situated, runs into the head of Belfast Lough, and divides the co. of Antrim from that of Down: it also separates a small suburb from Lisburn, no part of which is in the bor., though in the same par. (now in parl. bor.). Great improvements have been effected of late years in Lisburn by the Marquis of Hertford, who is the owner of the fee of the whole town, and of a considerable part of the surrounding country. A canal runs from Lough Neagh into the river Lagan near the town, by which agricultural produce is conveyed to Belfast. Damask of the most beautiful description is manufactured in the town, as well as muslin and linen, though the two latter branches have fallen off considerably. There are also extensive vitriol works on an island formed by the canal and river." (*Parl. Boundary Report*.)

Under a patent from Charles II., Lisburn sent 2 mems. to the Irish H. of C. The franchise was originally vested in the potwallpers; but was restricted by the 35 Geo. 3. cap. 29. to the 54. householders. Since the Union it has sent 1 mem. to the Imperial H. of C. The present parl. bor. comprises 1,264 acres; and had, in 1841, a pop. of 7,524. Registered electors, 1849-50, 163.

Court-leets are held twice a year; a manorial court of record, with jurisdiction to the amount of 20*l.*; and another for debts to 40*s.* every third Wednesday. The workhouse for the Lisburn union, opened in 1841, has accommodation for 1,450 inmates. Petty sessions are held every Tuesday. It is a constabulary station. Markets on Tuesday; fairs, July 21., and Oct. 5. Post-office revenue, in 1845, 480*l.*; in 1848, 510*l.* A branch of the Northern Bank was opened here in 1835.

This, which was long an obscure place, owed its first rise to the erection of a castle by Lord Conway, about 1627. It repulsed the Irish forces under Sir Phelim O'Neal with great slaughter, at the breaking out of the rebellion of 1641, and in 1644 baffled a similar attempt by General Monroe, who, a few years afterwards, was defeated near the town by the parliamentary forces. Shortly after the Revolution, a body of Huguenots, who emigrated from France on the revocation of the edict of Nantes, settled here, and introduced the finer branches of the linen manufacture, to which the town is mainly indebted for its prosperity. The castle, which was burnt down with a part of the town in 1707, has never been rebuilt.

LISIEUX (an. *Lerovium*), a town of France, dép. Calvados, cap. arrond. on the Tonques, 27 m. E. by S. Caen. Pop. in 1846, 11,345. It has but one good street, which forms part of the road between Caen and Evreux; all the others are narrow and crooked, and the houses built of wood, antiquated, and *triste*. It is, however, very well situated, and has environs of much beauty. Its cathedral, a Gothic edifice of the 12th century, has attached to it a fine chapel, dedicated to the Virgin, of a later date than the rest of the building. The bishop's palace, surrounded by noble gardens, the hospital, and the theatre, are all good buildings. Lisieux is the seat of courts of primary jurisdiction and commerce, and of a communal college, and has manufactures of woollen and cotton cloth, flannel, cotton and linen yarn, leather and brandy, and many bleaching factories and dyeing-houses. It was formerly a fortress of some consequence, and was frequently besieged and captured during the middle ages. (*Hugo, art. Calvados, &c.*)

LISKEARD, or LESKARET, a parl. and mun. bor., market town, and par. of England, co. Cornwall, hund. West, 11 m. E. Bodmin, and 205 m. W. by S. London. Area of par., which is very nearly co-extensive with the parl. bor., 7,740 acres. Pop. of parl. bor. in 1841, 4,226. The town, which is meanly built with narrow streets, appears still more irregular in consequence of its site, partly in a hollow and partly on rocky heights, the foundations of some of the houses being on a level with the chimneys of others. Of late years, however, it has been considerably improved by the erection of large and

handsome modern houses in the immediate environs. The town-hall, built at the beginning of the 18th century, is a large and somewhat elegant building supported by granite pillars. The church is a spacious Gothic structure, with a tower of more recent erection: the living is a vicarage, of the nett annual value of 3*l.* An ancient free grammar school has been allowed, with other charities, to go to decay (*Comm. 22d Report*, part i.); but a national school for both sexes, and a school of industry for girls, are efficiently conducted and well attended.

Liskeard, once a town of some consequence in the duchy as the principal place for the colning and stamping of tin, has at present neither manufactures nor commerce, but it is the market of an extensive agricultural district. It has some trade in the metals of the adjacent mining districts, and there are likewise tanneries, rope-walks, &c. Markets on Saturday; fairs, Shrove-Monday, Monday before Palm-Sunday, Holy-Thursdays, Aug. 15., Oct. 2., and the Monday after Dec. 6., for horses, cattle, sheep, and corn.

Liskeard (an. *Lis-kerraf*, meaning a fortified post) received its charter of incorporation in 1240, from Richard earl of Cornwall, which was subsequently confirmed by several sovereigns, and among others by Queen Elizabeth. According to the Municipal Reform Act, it is governed by a mayor, 8 other aldermen, and 12 councillors; it has a commission of the peace under a recorder. Corp. revenue, in 1847-48, 344*l.* From the reign of Edw. III. down to the passing of the Reform Act this bor. enjoyed the privilege of sending 2 mems. to the H. of C., who, for many years previously, though formally elected by the freemen, were, in fact, nominees of the Earl of St. Germain. The Reform Act deprived Liskeard of one of its mems., and at the same time enlarged the bor. so as to comprise the entire par. with such parts of the old bor. as are without the par. Reg. electors in 1849-50, 324.

LISLE, or LILLE (Flem. *Ryssel*), a strongly fortified city of France, dép. du Nord, of which it is the cap., on the canal connecting the Scarpe and Lys, in a spacious plain 9 m. from the Belgian frontier, and 124 m. N.N.E. Paris. Lat. 50° 37' 50" N.; long. 3° 4' 31" E. Pop., in 1846, 67,775. The shape of the city is oval; length N.W. to S.E. 1½ m., and greatest breadth about half as much. It is surrounded by a line of walls and bastions; beyond which, on its N.W. side, is the citadel, a regular pentagon, with a double ditch and extensive outworks, containing excellent barracks, officers' quarters, and magazines. This fortress has been considered the *chef-d'œuvre* of Vauban; and, in fact, Lille is one of the strongest cities of Europe. It is entered by 7 gates, the most southerly of which, or the *Porte de Paris*, is a handsome Doric arch, built in 1682, to commemorate the military exploits of Louis XIV., who is represented as crowned by Victory in a group over the centre, the sides of the arch being flanked by colossal statues of Hercules and Minerva (or Mars, according to Hugo). Few French towns are generally so well laid out as this, though some parts, principally inhabited by the manufacturing population, are of the most wretched description. There are nearly 200 streets, the principal of which are straight and wide; and 27 squares and market places, the largest, the *Grande Place*, being 170 yards in length by nearly 80 in breadth. The houses are mostly modern, and in a solid, plain style, built chiefly of brick, but in part of stone from the neighbouring quarries. Few have more than 2 or 3 stories. Of late years, many have been built with areas in front; and foot pavements are becoming pretty general in the principal thoroughfares. Lille has many large and conspicuous public edifices. The *Hôtel de Ville* is the most remarkable, though without any great beauty. It is a heterogeneous assemblage of buildings of different epochs, appropriated to various purposes, as the tribunal of commerce, council of *prud'hommes*, *dépôt* for the *octrois*, police office, the residences of the chief civil and military authorities, society of sciences and arts, museum of natural history, cabinet of physical objects, library of archives, &c. It was originally a palace, constructed by the dukes of Burgundy in the 13th century; and was inhabited in 1524 by the Emperor Charles V. In 1700 it was partly destroyed by fire; but its ancient hall of conclave still exists, ornamented with some fine wainscoting, and several good paintings by Arnold de Vues. In this chapel are preserved the likenesses of all the counts and countesses of Flanders, of the House of Burgundy. The church of St. Catherine, of simple and elegant architecture, is unfortunately hidden by mean buildings: it still possesses the magnificent painting by Rubens, of the martyrdom of St. Catherine, which luckily escaped destruction during the phrenzy of the Revolution; though the elaborately ornamented door of the choir was then carried off. A telegraph is erected on the tower of this edifice. The church of St. Maurice, built in the 12th century, is the largest and oldest in the city, but its tower, which had

become unsafe, has been removed. Previously to the Revolution, it possessed numerous excellent paintings; and it has still a St. Nicholas by Vanderburgh, and a martyrdom of St. Maurice by L. Jan. St. Madeline, with a handsome cupola, is the only other church worthy of remark. There are 5 hospitals. The *Hôpital Général*, founded in 1733, is a fine but unfinished pile of building, of great extent, and usually accommodating 1,500 patients. The *Hôpital Comtesse*, founded in the 13th century, by the daughter of Baldwin, Count of Flanders, and Emperor of Constantinople, though it suffered greatly from fire in 1467, preserves all the characteristics of its original style of architecture. Its chapel has some good paintings by Vues. The military hospital is large, well aired, and altogether one of the best in France. In 1814, a school of military surgery was established in it. Several large barracks are situated in different parts of the city. Lille has had a mint since a very early period; and of late, steam has been used in its machinery. The Protestant church, synagogue, *abattoir* or public slaughter-house, exchange, the prisons, the theatre, constructed in 1785, concert-hall, and prefecture, the last three being handsome buildings, are the remaining principal public edifices. Lille has numerous benevolent institutions, a communal college, a public library with 21,000 volumes, well arranged, and comprising some valuable MSS., and a gallery of paintings comprising some admirable works of Vandyke, Rubens, Vues, and other masters of the Flemish, French, and other schools. In 1834, this gallery was enriched by a collection of designs from the Italian school. A royal academy of music, academies of drawing, architecture, botany, &c.; a botanic garden, and various learned societies, nearly complete the list of public establishments. The canal on which Lille is built has several branches navigable for small trading vessels, which pervade the city. In its progress by and through Lille, different parts of this canal are called the upper, middle, and lower Doule; along the middle Doule, or portion between the town and the citadel, is a fine *esplanade*, the favourite resort of the upper classes. The middle Doule is here crossed by a handsome bridge, the *Pont Royal*, or *Pont Napoléon*; the other bridges are in no wise remarkable. Lille has few public fountains, and, in fact, the want of good water is the greatest inconvenience suffered by the city: nearly the whole supply has to be drawn from the canal, and is of very indifferent quality. Beyond the walls are several suburbs, chiefly inhabited by the manufacturing pop.

Lille is one of the chief seats of the French cotton manufacture. Calicoes, cotton handkerchiefs, *indiennes*, stockings, and cotton yarn, are the goods principally produced. The manufacture of table linen, linen thread, and lace, is also considerable; and fine woollen cloths, velvets, serges, hats, leather, paper, beet-root sugar, Geneva, soap, and mineral acids, are made, some to a greater, and some to a less extent. Government has here a tobacco manufactory and a saltpetre refinery; and the neighbourhood is studded with bleaching grounds and oil mills; and it is in the centre of some very extensive beet-root plantations. Steam power is extensively employed in the different manufactures. We regret to have to add, that the condition of the work-people employed in the different factories appears to be, speaking generally, exceedingly bad, and decidedly worse, indeed, than in any other town of France. M. Villermé says, that 4 out of every 13 persons are in a state of absolute indigence. Between 3,000 and 4,000 cotton weavers and twisters live in small, damp, ill ventilated, underground cellars, crowded to excess, and in the most deplorable state of poverty. After describing these wretched hovels, and the still more wretched furniture, M. Villermé adds:—“*Je voudrais ne rien ajouter à ce détail des choses hideuses qui révoltent, au premier coup d'œil, la profonde misère des malheureux habitants; mais je dois dire que, dans plusieurs des lits dont je viens de parler, j'ai vu reposer ensemble des individus des deux sexes et d'âges très-différents, la plupart sans chemise et d'une saleté repoussante. Père, mère, vieillards, enfans, adultes, s'y pressent, s'y entassent.*” (*Tableau Physique, &c. des Ouvriers*, i. 82, 83.)* After all, however, the cellars do not appear to be the worst lodgings, for the garrets, which are quite as ill furnished, are much more exposed to the inclemencies of the weather, and are inhabited by those who cannot afford to buy fuel. The linen thread spinners, the most numerous class next to the cotton spinners and weavers, are said to be favourably distinguished from the latter by their greater cleanliness, sobriety, and better general conduct, though their wages be even lower. Villermé roughly estimates that a workman's family, consisting of a father, wife, and child of from 10 to 12 years of age, who are all employed, might make, at an average, about 915 fr. (38*l.*) a year; of which the rent would absorb from 40 to 80 fr. (say 60 fr.), and food nearly 640; leaving less than 120 fr. for the expenses

* The details by M. le Vic. de V. Barmont, formerly prefect of the dep., are still more revolting. (See his *Rapport, &c. contre le Chol. Morb.* 1832.)

of furniture, clothing, washing, fire, candle, and tools; so that any slight indulgence, want of employment, or illness, could not fail to plunge the family into the utmost want. It is not easy, however, to see why, with such average wages, the labouring population of Lille should be so much depressed. A family of three persons, who should receive 50*l.* a year in England, would be reckoned any thing but badly off; and if it were true, as is commonly affirmed, that the cost of living is a third less in France than in England, a Lille workman with 38*l.* a year should be as well off as a Manchester workman with 50*l.* In truth and reality, however, there is no such difference between the cost of living in the two countries; and both it and the rates of wages in each approach much more nearly to an equality than is generally supposed. The Lille workmen, unlike those of Lyons, are not prone to engage in insurrections; and no French manufacturing town has, in proportion, so many mutual benefit societies. These, however, are so badly organised and conducted, as to be next to useless; their meetings are always held in a *beer shop*; and at the end of the year, all the money in the chest above a small amount is divided among the contributors, to be spent on the spot, “and the new year commences with the formation of a new fund, the ultimate destination of which is the same.” (*De Villeneuve-Bargemont.*) Drinking is, in fact, the prevailing vice and sole amusement of the workmen of Lille. Though most prevalent among the cotton weavers, &c., it is not a consequence of the introduction of the cotton manufacture; for long previously to that epoch many of the work-people were accustomed to work only three days in the seven, and to spend the other four in pot-houses.

Lille is the seat of courts of primary jurisdiction and commerce, a *conseil des prud'hommes*, forest inspection, &c., and is the head quarters of the 16th military division of France.

It is supposed to have been founded in 640; and successively belonged to the counts of Flanders, the kings of France, and the dukes of Burgundy. In 1667 it was taken by Louis XIV.; and being improved and fortified by Vauban, was definitively annexed to the crown of France. It has sustained several sieges, of which the most celebrated was that by the allies, under the Duke of Marlborough and Prince Eugene in 1708. It was bravely defended by Marshal Boufflers; but notwithstanding the gallantry of the garrison, and the fact that the French had a powerful army in the field, it was ultimately obliged to surrender. In 1792 it was bombarded by the Austrians. (*Hugo, art. Nord; Villermé, Tableau Physique, &c. des Ouvriers*, i. 78—107.; *Guide du Voyageur; Dict. Géog., &c.*)

L'ISLE, or L'ÎLE, a town of France, dép. Vaucluse, cap. cant., on an island in the Sorgues, a tributary of the Rhone, 12 m. E. by S. Avignon. Pop., in 1836, 4,818. It manufactures woollen fabrics and yarn, tram and organzine silk, and leather, and has some trade in silk, madder, oil, and wine.

LISMORE, an inland town of Ireland, cos. Waterford and Cork, on the Blackwater, 28 m. E.N.E. Cork. Pop., in 1841, 3,007. The town has been much improved of late years, principally through the exertions, and at the expense, of the Devonshire family, who have large possessions in this part of Ireland. It stands on an eminence overlooking the river, across which is a fine bridge, built at the expense of the Duke of Devonshire. Lisburn was formerly the seat of a bishopric, now united with Cashel and Waterford. The cathedral is in good preservation, and handsomely fitted up: it has also a large R. Cath. chapel, a Presbyterian and a Methodist meeting-house, an excellent grammar-school, built and endowed by the Devonshire family, some alms-houses, a court house, a fever hospital, and a dispensary. But the great attraction of Lismore is its magnificent old castle, founded by King John, in 1195. It is nobly situated on a rock rising perpendicularly from the river. This large and venerable pile was once the property of the famous Sir Walter Raleigh; and, after numerous vicissitudes, came, through the Boyles, into the possession of the Devonshire family, by whom it has been greatly improved and embellished. It is now in complete repair, and is occasionally visited by its noble owner. It has withstood several sieges. In 1785, the Duke of Rutland, then Lord Lieutenant of Ireland, held a court here, and issued some proclamations, dated from the castle.

Lismore returned 2 mems. to the Irish H. of C. till the Union, when it was disfranchised. A manor court holds pleas to the extent of 10*l.* every third week. Petty sessions are held on alternate Wednesdays. It is a constabulary station. The trade of the town is inconsiderable, though a canal has been constructed, by the Duke of Devonshire, from it to near Cappoquin, where the river becomes navigable. There is a salmon fishery close to the town, the produce of which is mostly sent to London. Post-office rev., in 1830, 273*l.*; in 1836, 271*l.*

LISSA (Polish *Leszno*), a town of the Prussian dom., prov. Posen, circ. Fraustadt, near the border of Silesia, 12 m. E.N.E. Fraustadt. Pop. about 8,600, of whom

4,000 are Jews. It is walled, and has three Lutheran churches, a Rom. Cath. church, a synagogue and Jewish school, a gymnasium, two hospitals, a fine council-house, and a theatre. Its streets are mostly narrow and dirty; and the greater number of the houses are of wood. The neighbouring castle was formerly the property of the Lecinski family, of which Stanislaus, the last king of Poland, was a member; but it is now the residence of the prince Sulkowski, to whom the town belongs. Lissa is the seat of a police court, and a board of taxation: a considerable manufacture of woollen cloth is carried on in it and its neighbourhood; and, besides woollen stuffs, it trades in furs, wines, and hardware. Lissa was an unimportant village, when a number of Protestants, driven from Silesia, Bohemia, and Moravia, by the persecutions of the 17th century, settled in it; and to these immigrants it owes its present consequence. (*Von Zedlitz, Das Preussische Staat*, iii. 156. &c.)

LISSA. See LESINA.

LITHUANIA, a country comprising a considerable portion of the ancient kingdom of Poland, at present parcelled amongst the Russian governments of Wilna, Grodno, and Minsk (which see).

LITTORALE (AUSTRIAN). See ILLYRIA, TRIESTE, &c.

LITTORALE (HUNGARIAN). See HUNGARY, CROATIA, FUMER, &c.

LIVADIA (an. *Lebadia* or *Lebadets*), a city of indep. Greece, which, under the Turks, gave its name to the prov. comprising E. and W. Hellas, in Boeotia, on the Hercyna, about 6 m. W. the Lake Copais, 25 m. W. N. W. Thebes, and 50 m. N. W. Athens; lat. 38° 26' N.; long. 22° 59' E. Pop. uncertain; but before the Greek revolution it was estimated at 10,000. At that period it had 1,500 houses, many of which were good, though its streets were dirty, narrow, and inconvenient. Its site is very striking, occupying several fantastic knolls and crags at the entrance of a deep defile in a branch of the Heliconian chain. The river Hercyna, which rises in a full stream and with great force from beneath a rock close to the town, rolls in foaming torrents over masses of rock: it is augmented near its source, by a tributary stream from the cavern of Trophonius. The ancient city, called *Mideia* by Homer, is supposed to have been built, in part at least, upon the lofty heights which overhang the modern town, and upon which the remnants of a citadel are still visible; with additional buildings constructed by the Catalans, when they were in possession of this country.

Previously to the revolution, Livadia was the seat of a voivode or governor, and a cadi, and had 6 mosques, and as many Greek churches. It had also a considerable trade in the produce of the surrounding territory, and of Attica, with Constantinople, and foreign countries. Madder, corn, oil, kermes, cotton, and honey, were among its principal exports, which it formerly sent to Trieste, Venice, Leghorn, Genoa, and even London. Its port at Aspropiti, the an. *Asicyra*, on the Corinthian Gulph, is 18 m. W. S. W. from the town. Livadia was burned by the Turks in 1821, and subsequently in part destroyed by the Greeks in an attack upon the Turkish garrison. There can be little doubt, however, that since the revolution it has recovered some portion of its former trade and prosperity. Its greatest drawback is the unhealthiness of its situation. It suffers from great extremes of temperature; the air is frequently loaded with dense fogs, and in summer is vitiated by pestilential effluvia from the neighbouring lake of Copais. In 1785-86, the plague carried off 6,000 of the inhab. (*Clarke's Travels*, vii. 146-170; *Hughes*, i. 337-349; *Hobhouse*, pp. 260-264.)

The entire celebrity and, perhaps, even existence of Livadia, was owing to its being the seat of the famous oracle or cavern of Trophonius. Dr. Clarke has sufficiently identified the site of this celebrated cavern; but the reasons he has alleged in favour of the hypothesis, that the Hercyna is identical with the fountain of *Lethe*, or waters of oblivion, are far from conclusive. (*Clarke*, vii. 161. 8vo. ed.) Clarke supposes the fountain that now issues from below the cavern to be that which anciently received the name of *Mnemosyne*, or waters of memory; but this fountain may formerly have been divided into two, or one of the ancient fountains may have disappeared through some convulsion of nature: at all events, it would seem to be pretty clear from the statement of Pausanias, that there were within the sacred precinct the two fountains of *Lethe* and *Mnemosyne*, exclusive of the source of the Hercyna. (*Pausanias*, lib. ix. cap. 39.)

This was one of the most formidable of the Greek oracles. The *Hieron*, or sacred cavern, was surrounded by bare, rugged, and high precipitous rocks. Thither those anxious to consult the oracle were, after long preparation, conducted at night through a grove; and could not fail to be deeply impressed by the solemnity of the place, and by the roaring of the waters of the Hercyna bursting forth from their subterranean caverns. Having arrived at the *Hieron*, the votary, after addressing a prayer to the statue of Trophonius by Dædalus, de-

scended into the *adytum*, a narrow and deep aperture excavated in the rock, and, no doubt, leading to some great natural cave or chasm. Those who ventured down into this hidden recess seem, generally, to have experienced rather rough treatment. Trophonius was not to be questioned with impunity. The votaries, when they came forth from the abyss, were usually much exhausted, and had no distinct recollection of what they either heard or saw. Generally, however, the mysteries of this dread cavern made a deep impression on their minds, and entailed upon them a settled melancholy for the remainder of their lives; so that it was a proverbial expression in Greece to say of a gloomy or melancholy individual, that "he had come from the cave of Trophonius." No doubt, however, the priests took care to modify their treatment of the votaries, as well as their responses, according to their rank and their bounty to the temple. Pausanias, who descended into the *adytum*, and describes what occurred to himself, states, that when he came out he was so confused as to have lost his senses. But this visit must have taken place so late as the middle of the 3d century, after the oracle had been long on the decline; and when, probably, it had been stripped of half the horrors by which it had formerly struck terror into those who attempted to penetrate by its means through the veil that conceals futurity from mortal eyes.

The accounts of Trophonius, the reputed founder of the oracle, vary extremely. This much, however, seems to be agreed upon; that he was a mortal to whom, after his death, divine honours were paid; and that he was supposed to be endowed, like Apollo, with the power of foreseeing and predicting future events. It is probable that the gloomy grandeur of the place, and the discovery of some hidden cavern, where all sorts of impostures might be easily practised, first suggested the idea of making it the seat of an oracle; and there seems little doubt, that it was indebted to the same circumstances for its celebrity and its votaries.

According to Dr. Clarke, the present town of Livadia occupies that part of the consecrated ground formerly covered by the grove of Trophonius; but this is merely one of those conjectures in which that ingenious person is, on all occasions, too prone to indulge. Pausanias says, that *Lebadia* was as much ornamented by temples, statues, and other splendid works of art, as any city of Greece. A statue of Trophonius by Praxiteles was deservedly reckoned among its principal treasures. (For further particulars as to *Lebadia*, see *Pausanias*, lib. ix. cap. 39; *Voyage D'Anacharsis*, cap. 34; *Potter's Grecian Antiquities*, book ii. cap. 10., &c.)

LIVERPOOL, a parl. and mun. bor. and sea-port of England, being, next to London, the greatest emporium of the British empire, in the co. Lancaster, hund. W. Derby, on the E. or right bank of the Mersey, 32 m. W. by S. Manchester, 67 m. W. S. W. Leeds, and 196 m. N. N. W. London; lat. of observatory, 53° 24' 48" N., long. 3° 0' 1" W. The pop. of the parl. and mun. bor., at the undermentioned periods, has been:—

Townships.	1801.	1811.	1821.	1831.	1841.

W. Derby	2,636	3,892	6,304	9,613	9,780
Toxteth Park	2,069	5,864	12,829	24,067	40,235
Total parl. bor.	82,857	103,851	140,214	205,964	286,487

At present (1850) the pop. of the parl. bor. may be estimated at about 370,000.

Liverpool stands partly on flat ground, along the edge of the river, and partly and principally on a gently rising declivity. Besides quintupling its population during the last half-century, it has been more improved, during that period, than any other town in England, not excepting Manchester. Before that time, narrow, inconvenient, and ill-paved streets, lined with dull, heavy-looking houses, were its characteristic features; but so great is the alteration effected chiefly through the exertions of the corporation and the public spirit of the citizens, that at present no town or city in the three kingdoms, except their capitals, has wider or handsomer streets, more sumptuous public buildings, or better constructed and more substantial private dwellings. The corporation is alleged to have expended on improvements between 1796 and 1840, no less than 1,700,000*l*. The present limits of the town comprise about

2-3ds of the parl. bor. : its length from N. to S. (measured from Brunswick Dock to the Gasworks in Vauxhall Road) is about $2\frac{1}{2}$ m., its breadth from the river to the Church at Edgehill, $1\frac{1}{2}$ m., and its area somewhat exceeds 2,500 acres. The central point, from which many of the principal avenues diverge, is the open space partly occupied by St. John's church, and the railway station: the diverging roads are, 1. Dale Street, a fine broad avenue running S.W. to the Townhall and Exchange Buildings, and continued, under the name of Water Street, to George's Dock; 2. Whitechapel and Paradise Street, leading to the Custom House; 3. Lime Street, Renshaw Street, Berry Street, and Great George Street, running nearly S. towards Toxteth Park; 4. the London Road, taking an E. direction towards the Zoological Gardens; and, lastly, Byrom Street, and Scotland Road, leading to the House of Correction in Kirkdale. The principal streets, independent of those above mentioned, are Castle Street, opposite the Townhall, Lord Street, Church Street, Hanover Street, Bold Street, Rodney Street, Mount Pleasant, St. Anne's Street, and the Vauxhall Road; and among the principal squares may be mentioned Great George's, Queen's, Abercrombie, Falkney, Clayton, and Cleveland. Liverpool is supplied with good water from wells sunk in the red sandstone in various parts of the town, that formerly belonged to two companies; but the supply being rather deficient for the growing wants of the pop., the corporation bought up the rights and property of the companies, in 1848, for 554,807*l.*; and they have since obtained an act of Parliament authorising them to bring an additional supply of water from Rivington Hills, the works for which purpose are now being carried on. Gas, of excellent quality, is supplied by a company, at 4*s.* 6*d.* per 1000 feet, not only to the streets, shops, factories, &c., but also to a large proportion of the most respectable private houses.

Corporation and Government Buildings.—The town-hall, which stands at the N. end of Castle Street, was commenced in 1749: its interior having been destroyed by fire in 1795, it has been since rebuilt at a cost of above 110,000*l.* It has a rustic basement, supporting a range of Corinthian columns and pilasters; in the S. front is a handsome portico, and the building is surmounted by a light and elegant cupola, above which is a colossal figure of Britannia. The interior comprises, besides a handsome suite of apartments for the mayor, a ball-room, 90 ft. in length by 40 ft. in breadth and height; a council-room, committee-rooms, town-clerk's, treasurer's, and surveyor's offices, &c.; the grand staircase, under the cupola, is a magnificent specimen of modern architecture: on the landing is a colossal statue of Canning. The Exchange-buildings, which form three sides of the square in which the town-hall stands, were completed in 1809, at a cost of 110,848*l.*, raised by 100*l.* shares. The principal front is 197 ft. in length; and the area, enclosed by the entire building, somewhat above 11,000 sq. yards: in the N. and S. fronts are two magnificent porticos, each supported by 8 Corinthian columns, and surmounted by a carved entablature with stone figures: a very handsome balustrade runs round the entire building. Piazzas extend round the basement, for the convenience of the merchants in hot and rainy weather. In the interior is a magnificent news-room, originally 94 but now 125 ft. in length, by 51 ft. 9 in. in width, having an arched roof supported by two rows of columns; above this is a splendid room for the

underwriters, while, in other parts of the building, are numerous counting-houses and offices, warehouses, &c. The Liverpool Exchange is, in fact, one of the best specimens of Grecian architecture in England; and, perhaps, the noblest structure erected in modern times for purely commercial purposes. In the centre of the square is a monument in honour of Nelson, executed in bronze, on a marble basement: it represents the dying hero; his foot on a prostrate enemy, receiving a naval crown from Victory. The principal group is surrounded by emblematical figures; but they are stiff, affected, and unnatural; and the monument neither redounds to the credit of the town nor of the artist. W. of the exchange stands the session-house, a low, plain, stone building with two principal entrances; in the interior are two spacious rooms, used as nisi prius and crown courts, with other apartments for the use of the judges, magistrates, jurors, &c.; the whole was built, in 1828, at a cost of 19,312*l.* exclusive of subsequent alterations occasioned by the removal of the assizes of the W. Derby and Salford hund. from Lancaster. The custom-house, excise-office, post-office, and other public offices, are comprised in the immense pile of building erected at the S. end of Castle Street, on the site of the old dock, which was filled up for the purpose. It covers an area of 6,700 sq. yards, has an extreme length of 467 ft. measured from E. to W., with a total height of 67 ft., the length of its wings being 225 ft., and their breadth 94 ft., and is remarkable not merely for its size, but also for its massiveness. Porticos, supported by Ionic columns, are attached to the centre, and to the E. and W. fronts; and it has a large dome, lighted by 16 windows, and embellished with pilasters. The basement, through which there is a public passage connecting Castle Street with Park Lane, is used for storing bonded goods. The central portion is occupied by the great staircases and the long room, 146 ft. in length, 70 ft. wide, and 45 ft. high, lighted from the dome; the W. or river wing contains the various offices of the custom-house; and the E. wing contains the excise-office, dock-offices, post-office, and stamp-office. This useful, though heavy-looking, building was erected in consequence of an arrangement between the corporation and the government, negotiated by Messrs. Canning and Huskisson. The corporation gave the land, valued at 90,000*l.*, and erected the building, which, at the end of 20 years, is to be ceded to government, on the latter paying for it the sum of 150,000*l.*, by annual instalments of 25,000*l.* The most magnificent building in Liverpool is, probably, that for the assize courts, inc. St. George's Hall, in Lime Street, opposite to the railway station. It is of the Corinthian order, the Eastern front being 420 ft. in length, and the columns 45 ft. in height. St. George's Hall, in the centre of the building, with a spacious court on each side, is a noble apartment, 175 ft. in length by 75 ft. in width, and 75 ft. in height. It is to the courts, between which it is placed, what Westminster Hall is to the courts adjoining to it. But when the courts are not sitting, it is appropriated to public meetings, concerts, &c. This building, which was designed by the late Mr. Elmes, cost in all about 192,000*l.* The hall in Hope Street, built by the Philharmonic Society, is also of very large dimensions, and is well suited to its object.

Literary Establishments, &c.—Though so extensively busied in trade and commerce, the merchants of Liverpool are honourably distin-

guished by their attention to, and patronage of, science and literature; and the town has several valuable institutions for their promotion. The principal among these are, 1st. The Royal Institution in Colquitt Street, formed in 1814, at the suggestion of the late Mr. Roscoe, by the subscription of 100*l.* shares, and chartered in 1822: it comprises academical schools, public lectures on various subjects, laboratories and philosophical apparatus, a collection of books, and a museum. The building, with a portico and two wings, contains suites of rooms well adapted to the purposes of the institution. The lecture room is capable of accommodating 500 persons; and the natural history department of the museum, occupying two floors of the building, is perhaps the largest and most valuable in the kingdom, after the British Museum, and that of the Zoological Society of London. The institution has also a fine collection of casts from the Elgin, Æginetan, and Phigalian marbles, and from some of the most celebrated statues of antiquity. 2d. The collegiate institution in Shaw Street, a fine building in the Tudor style, opened in 1842, cost about 30,000*l.* Its principal front is 280 ft. in length. It is 4 stories high; but, as the upper rooms are lighted from the roof, it has only 3 rows of windows. It has accommodation in separate schools and classes for 1,500 pupils; but is not at present (1850) attended by more than 500. The instruction in the different schools and the fees of admittance vary very materially; from their being intended to suit the wants and circumstances of the different orders of the community. It is conducted according to the principles of the Church of England, the Bishop of Chester being the visitor. 3d. The mechanics' institute in Mount Street, near St. James's cemetery, intended not only to meet the wants of the working classes, but also to bring them in contact with those in higher spheres of life, was opened in 1837. Its buildings, which, with courts, &c. cover nearly an acre of land, given by the corporation, were erected at a cost, inc. alterations, of above 15,000*l.* The front, in the Ionic style, has a heavy appearance: the grand theatre is capable of accommodating 1,200 persons: it has a museum, and a library, with 15,000 vols. It has attached to it different schools meeting at different hours, and intended, like those in the collegiate institution, to accommodate different classes of the pop. But these have not been very successful, partly from the absurd system of teaching originally introduced (which, however, is now greatly improved); partly from the competition of other and more popular seminaries; and partly from the discredit into which mechanics' institutes have generally fallen. The Medical Institution, in Mount Pleasant, built at a cost of about 2000*l.* ($\frac{1}{3}$ of which, with the land, was contributed by the corporation, and the rest by the medical practitioners of the town), has a circular-shaped front, of the Ionic order, 108 ft. in length, and 35 ft. in height; and in the interior are various large apartments, used as libraries, museums, lecture-rooms, &c. Apothecaries' hall belonging to a joint-stock company, may be mentioned here, not as a place of medical instruction, but as conferring important benefits on the profession and the public by importing and manufacturing medicines of the best quality: the building is handsome, and all the arrangements most complete. The school of medicine formerly attached to the Royal Institution has been removed to the infirmary.

Closely connected with the above are the news-rooms, among which the Athenæum holds

the highest station. The building, opened in 1799, is large, but plain; 500 proprietors subscribe to form a yearly income of 1,320*l.*; the library comprises 17,500 volumes; and the news-room is spacious, and well provided with the publications of the day. The Lyceum, a much handsomer building, erected at an expense of above 11,000*l.*, supported by about 800 proprietors, paying guinea subscriptions, has a library of about 85,000 volumes, in an elegant circular room lighted from a cupola. The Union news-room in Duke Street is also a respectable building; and there is an important news-room, already noticed, in the Exchange.

The celebrity and example of Mr. Roscoe, the most distinguished of all the citizens of Liverpool, had a wonderful influence in creating and diffusing a taste for literature among all classes of his townsmen. The first editions of his valuable and standard works, the lives of Lorenzo de Medici and of Leo X., were published here. They were printed by McCreery, the author of the poem entitled the "Press," and are enduring monuments of his skill and excellence as a typographer. The life of Poggio Bracciolini, by the late Rev. William Shepherd, a distinguished Unitarian minister of the town, is also one of the products of the Liverpool press; as is the edition of Burns' works, with his life, in 4 vols., by the justly celebrated Dr. Currie.

Newspapers.—A newspaper, entitled the *Courant*, was published in Liverpool in 1712; but it did not succeed; and the earliest of the existing journals appeared on the 28th of May, 1756. There are at present 10 newspapers. Of these *Gore's Advertiser* and *Myers's Mercantile Advertiser* are, as their names import, wholly devoted to commercial matters. Of those which reflect and endeavour to guide the public taste, the following is the distribution:—Monday, the *Albion*; Tuesday, the *Standard and Mercury*; Wednesday, the *Courier*; Thursday, the *Times*; Friday, the *Mercury*; Saturday, the *Mail, Journal, and Chronicle*. There are thus 8 papers for the 6 days, and 1 of them has 2 issues. Their politics may be stated thus;—3 are conservative, the *Mail, Courier, and Standard*; the remainder being more or less liberal.

Amusement and Recreation.—Liverpool has three theatres—the Theatre Royal, the Adelphi Theatre, and the Amphitheatre, a fourth having recently been converted into shops. The Theatre Royal, in Williamson Square, built in 1817, has a plain exterior, but the interior is comfortably fitted up and is well suited for hearing. The Amphitheatre, in Great Charlotte Street, is used mainly for equestrian exercises, but is frequently occupied with public meetings. The people of Liverpool, like those of the metropolis, have little taste for theatrical exhibitions. There is a race-course at Aintree, about 5 m. distant from the town; one at Hoylake, distant 9 m., and a third on the Rood-eye at Chester. From the facilities afforded by railway communication, Aintree and Chester are practically the race-courses of Liverpool; and it may be remarked, as a curious fact, that the cockpit on the verge of the former has recently been fitted up as the chapel of St. Peter, in connexion with the Established Church. The Zoological Gardens, on the eastern verge of the borough, occupy an area of about 10 acres, and the collection is regarded as extremely good. In the summer season, other attractions are added for visitors and subscribers, including fireworks, feats of strength, skill, and agility, music, &c. The grounds are well laid out, and the disposition of the build-

ings is well suited to the disposition of the anima's. The Botanic Garden, formerly on the borders of the parish, has been removed within the last 10 years to the extremity of the borough bounds, beyond Edge Hill. It was formerly the property of shareholders, but now belongs to the town, and is supported by a rate. It is constantly open, and is an agreeable outlet, especially for those in its neighbourhood. Within the borough, and bounded by its southern limit, the beautiful enclosure, called Prince's Park, has been purchased and laid out by Richard Vaughan Yates, Esq., at a cost of about 40,000*l*. It occupies about 45 acres, and is open to the public. In the township of Everton, the inhabitants of Shaw Street, dreading that their view would be impeded or their residences deteriorated by the building of small houses, formed a miniature park along one side of the street, which is open for the recreation of those only who live there. The corporation have recently, also, purchased the Newsham House estate, of nearly 200 acres, on the West Derby road, which it is intended to convert into a public park, with suitable situations for building-ground. The Prince's Parade, between Prince's Dock and the river, St. James's Cemetery, and St. James's Mount, on one side of the cemetery, are public promenades, which are kept in good order. To these may be added the landing stage. The Corporation Baths, at George's Pier-head, are extremely well conducted. There are large swimming-baths, both for ladies and gentlemen, private baths, warm, shower, vapour, and medicated baths, all of which can be obtained at moderate prices. The water is filtered from the river at high tide, and though not quite salt is nearly so. Since the commencement of the sanitary movement, the corporation erected a set of baths and washhouses for the poor in Frederick Street; the experiment succeeded so well, that a new set of baths and washhouses has been opened in Paul Street, the centre of a densely peopled district at the north end of the town. The payments are merely nominal, for the purpose of defraying the current expenses; and so many are desirous to take advantage of them that the prices are undergoing a still further reduction. A similar building, on a larger scale, is in progress at the south end of the town, in Cornwallis Street, and others are projected in different parts of the bor.

Markets, &c. — The markets of Liverpool are better supplied, perhaps, than those of any other town in the Empire. Ireland and Scotland, particularly the former, furnish grain, live stock, bacon and butter; and the Isle of Man, Anglesea, North Wales, and Cheshire, send excellent poultry and eggs, with butter and other farm produce; neither can any town in England, the metropolis not excepted, boast of market accommodation equal to Liverpool. The largest market building is St. John's, completed in 1822, at a cost of 36,813*l*., covering a space of nearly two acres, being 183 yards in length, by 46 in breadth. It is a light and lofty structure, having its roof supported by 116 cast-iron pillars; the walls are lined with 58 shops, and upwards of 400 stalls and standings run in four ranges up and down the interior. It is brilliantly lighted with gas; and on the whole, the regulations are so good, that it may be said to be unrivalled both for size and convenience. St. James's Market, at the end of Great George Street, though only half the size of that last mentioned, is still a large and well-constructed building, regulated by the corporation; as is St. Martin's Market in Scotland Road. There are six other markets. The total expenditure by

the corporation for these buildings has amounted to about 83,000*l*. The Corn Exchange, in Brunswick Street, erected by a subscription of 10,000*l*. in 100*l*. shares, has a plain but handsome front. Owing to the increase of business it has become too small, and is about to be enlarged.

Churches, Chapels, and Cemeteries. — Liverpool, which, till 1699, was a chapelry attached to Walton-on-the-Hill, was constituted by act 10 & 11 Will. 3. c. 36. a distinct parish divided into 2 medieties; the parish churches are St. Nicholas' and St. Peter's, and the livings are rectories, each valued at 615*l*. a year, exc. surplice fees, and in the gift of the corporation. Within the last twenty years, however, a great many other churches have been opened. Of these, some have been built by the corporation, who, though they have sold the patronage, are bound to keep the churches in repair, and to pay certain salaries to the incumbents. Other churches have been built by associations, and others by private parties. On the whole it would appear, from the returns carefully prepared by the Reverend Dr. Hume, that at present (1850) 31 churches and 4 rooms are licensed for divine service, according to the principles of the Established Church, in the old parish of Liverpool; and that 12 churches and 2 rooms are licensed for the same purpose in the adjoining parishes of Walton and W. Derby.

The emoluments of the established clergy in Liverpool, as in most of our large towns, are mainly dependent upon the voluntary principle, or arise chiefly from pew rents. Some of the new churches are endowed with 150*l*. per annum, in consideration of the body of the church being appropriated to the use of the poor; and the pews of the gallery are, also, let for the benefit of the clergyman. In a few other churches there are endowments from Queen Anne's Bounty, or other ecclesiastical funds, or from the interest of sums subscribed for the purpose; but in many, perhaps the majority, of cases, there is no endowment whatever. The clerical incomes are, therefore, extremely fluctuating. In the lower and central parts of the town, there has latterly been a steady decrease in the amount of pew rents, as the higher classes remove further out of town, and their successors sometimes cannot, and sometimes will not, pay. The annual statements in the "Clergy List" are, therefore, extremely incorrect; indeed, the receipts of a church sometimes show a material variation in the course of twelve months. The range of payments is from 100*l*. to 600*l*. per annum, perhaps not more than two reaching either this maximum or minimum limit, if so many. The average may be stated at the mean between these, or 350*l*.

Several of the churches and chapels have contiguous grave-yards; but the noxious practice of burying the dead within the town is nearly discontinued, in consequence of the formation of three large and well laid out cemeteries. St. James's cemetery, formed out of a stone quarry behind St. James's Walk, is planned with great elegance; another, at Low Hill, is called the Necropolis; the third, or St. Mary's cemetery, is at Kirkdale.

The dissenters in Liverpool are highly important and respectable, whether considered in respect of station, numbers, or character. The first Presbyterian congregation was established in 1672, and a second about thirty years afterwards: the Baptists settled themselves here in 1714, and the Independents in 1777. The first Wesleyan Methodist chapel was opened in Mount Pleasant in 1791; and the New-connexion Me-

thodists (or Kilhamites) built a chapel in 1798. Many of these places of worship are large and commodious, and a few exhibit much exterior elegance. The dissenting places of worship existing in 1850 may be thus classified:—

Wesleyan Methodists	- 11	New-connection Methodists	5
Baptists	- 7	Society of Friends	1
Welsh dissenters	- 16	Other dissenters	6
Scottish Kirk and dissenters	- 7	Jews	2
Unitarians	- 3		
Independents	- 6		
Roman Catholics	- 3		
			70

Schools.—The Manchester Statistical Society was engaged during nearly a year collecting statistics on the state of education in Liverpool; and from their report we learn that, in 1836, 32,700 children, of both sexes and all ages, were being instructed, being rather more than half the entire pop. between the ages of 5 and 15: of this number, 4,000 belonging to the upper classes were in private schools, 12,000 of the lowest order were in dames' schools, and the remainder in schools either endowed or supported by subscriptions. But since then several new schools have been opened; though, as a large proportion of the schools, especially those for the children of the upper classes, are private, it is difficult to obtain any satisfactory details with respect to them. Among the endowed schools, the principal are the corporation schools, formed in 1825, on the foundation of an old grammar school, that had been extinct since 1808: they are conducted on the national system, and infant schools are attached to each, so that, in all, above 1,000 children are taught in them. The N. and S. Church of England schools instruct 485 boys, 350 girls, and 453 infants. The Blue-coat Hospital, instituted in 1709, provides clothing, food, diet, and instruction for 250 boys and 100 girls. The building, which is of brick, has a handsome appearance, and the instruction, on the Madras system, is said to be as perfect as that of any school in England conducted on the same plan. The school of industry, established in 1810, is intended for training girls for domestic service. The number is limited to 100, and a few of the more deserving scholars have board and lodging, as well as a good plain education. Christ-church National schools educate 250 boys, 280 girls, and 200 infants; and Everton National school has 66 boys and 60 girls. Among the other schools may be specified Waterworth's school, in Hunter Street; St. Patrick's charity-school; the Duncan Street schools, supported by the Society of Friends; the Renshaw Street school, maintained by the Unitarians; the Caledonian school in Oldham Street, and there is likewise a blind school, and a school for the deaf and dumb. (See Table at the top of next column.)

These statements are highly creditable to the liberality of all classes of Liverpool. The principal schools, now referred to, are, speaking generally, well conducted; their buildings are suitable, and the means of instruction, inc. slates, books, &c. abundantly provided. Still, however, it would appear that additional means are required for the efficient instruction of the children of the poorer classes, especially of those not connected with the Church of England. And we may also add, that a good deal remains to be done before the education of the upper classes can be considered in a satisfactory condition. We doubt whether there be, at this moment, with the exception, perhaps, of that attached to the Royal Institution, a single really good classical school in Liverpool.

Charitable Institutions, &c.—Liverpool has many extensive and respectable edifices devoted to charitable purposes, among which may be

connected an institution for diseases of the ear. The ladies' charity affords relief to about 1,200 lying-in women every year, with supplies of linen, &c.; the other principal charities are the Stranger's Friend Society, relieving about 1,000 persons yearly, with a similar institution called the Charitable Society, the Penitentiary and Refuge for the Destitute, both intended for the reformation of degraded females, the Marine Humane Society, and the District Provident Society. A large handsome building, near the Custom-house, now on the eve of being completed, is intended for a Sailors' Home. It is to include a Savings' Bank for seamen, a reading-room, &c., with lodgings for a considerable number of sailors, and lists of those lodging-houses in the town where they will be best accommodated. The plan has been already tried in a temporary building, and seems to be successful in improving the habits, as well as in adding to the comforts, of the seamen frequenting the port. There is also a deaf and dumb institution, and two asylums for the blind, one of which is supported by the Roman Catholics. There are likewise many religious societies, the chief of which are the Bible Society (by far the largest in point of income), the Society for Promoting Christian Knowledge, and the Mariner's Church Society.

Port and Docks.—The rapid rise of the port of Liverpool to its present consequence, though, no doubt, principally owing, like that of the town itself, to the astonishing increase of manufactures and population in the extensive district of which it is the grand emporium, is also, in part, owing to the facilities which have been given to navigation and commerce by the construction of wet and dry docks. The entrance to the estuary of the Mersey is a good deal incumbered with sand-banks, and is crossed by a bar, which, however, has at low water spring tides, where deepest, 11 ft. water; and as the tides rise 21 ft. at neap and 31 ft. at spring tides, there is water for the largest ships. The channels being indicated by light vessels, and well marked with buoys, there is no difficulty in making the port.

The land around being low, the ships in the river are exposed to risk from gales of wind; and to obviate this inconvenience, and to facilitate their loading and unloading, the docks have been constructed which constitute the great glory of the town. The first wet dock in the British empire was opened here in 1718, the act for its formation, the 8 Ann. c. 12., having been passed in 1709. Another act was passed in 1738, the 11 Geo. II. c. 32., authorising the construction of a second dock. Since that period many more docks have been constructed on a very extensive scale, so that the aggregate area of those now in use amounts to above 174 acres, and the quay-space to about 14 m. in length. The area of the principal docks is as follows, viz. Brunswick, 12 ac. 2744 yds.; Prince's 11 ac. 3889 yds.; Queen's, 11 ac. 3101 yds.; King's 7 ac. 3896 yds.; Albert, 7 ac. 3542 yds.; Trafalgar, 6 ac. 2643 yds., &c. &c.

The King's Dock, being contiguous to the King's Tobacco Warehouse, receives all vessels from Virginia and other parts laden with tobacco; the Queen's and Brunswick Docks are occupied by ships laden with timber from Honduras, Canada, and the Baltic; the Canning Dock receives coasting-vessels which exchange corn and provisions for colonial produce; and other docks are appropriated to other purposes. All these works are defended on the side next the river by a strong sea-wall upwards of 2½ m.

in length. But a number of other docks are now in the course of being constructed; and when these and the great timber float are finished, the sea-wall will be above 4 m. in length. Every precaution is taken to prevent the accumulation of mud in the docks by the use of steam-dredging machines; and strict rules, enforced by a vigilant police force, are established to maintain good order and prevent both fire and depredations.

The docks are all constructed on the estate of the corporation, and are managed by commissioners appointed by act of parliament. The bonding and other warehouses do not, however, in general belong to the dock estate, but are principally private property. Most of them are in the immediate vicinity of the docks, but some are at a considerable distance; and there is not, in consequence, the same accommodation, or the same security against fire and depredations, in the Liverpool as in the London docks, where, the warehouses being built along the dock-quays, goods are loaded and unloaded with the greatest facility, and are subsequently under the most efficient protection. But the many destructive fires that have taken place of late years in warehouses in Liverpool, and the consequent rise in the premium of insurance, which is now very heavy, will no doubt lead to considerable changes in the disposition of the warehouses. Indeed, the warehouses attached to the Albert dock, one of those most recently constructed, are built round the quays and encircled by an outer wall, and are conducted by the dock trust on the same plan as the London docks.

The difference in the situation of the warehouses in the two ports leads to a difference in the mode of discharging and loading ships in each: in the port of London this is done by the servants of the different dock companies; whereas in the port of Liverpool it is effected by gangs of private labourers, called *lumpers*, who contract for a specific sum to load or unload a vessel. A great reduction was effected in the scale of the Liverpool dock dues in 1836, and again in 1848, and they are now extremely moderate.

But vast as is the accommodation afforded by these docks, it will be very greatly increased when the gigantic works now in progress at Birkenhead, on the opposite side of the Mersey, are completed. (See Vol. I. p. 376.) Birkenhead is, in fact, a suburb of Liverpool, and should be regarded as forming part and parcel of the latter. The warehouses in this new dependency are to be all isolated; and the wet and dry docks are to be formed, not only on the largest scale, but after the most approved models. Hence, however they may affect the existing dock interests, they cannot fail to be of much advantage to the trade of this great emporium.

Commerce.—Though extraordinary, the rise of Liverpool has not, perhaps, been quite so rapid as has been represented. In the reign of Henry VIII. she is noticed by Leland as a place to which merchants resorted because of her moderate customs, and as being a great mart for Irish yarn. At a later period she is described by Camden as being "the most convenient and frequented passage to Ireland," and more celebrated for her "beauty and populousness than for her antiquity." (*Gough's Camden*, iii. 376, ed. 1806.) She was once joined for fiscal purposes with Chester, but she had more trade than the latter, and could not have been correctly described as "the little creek of Liverpool." It appears from the subjoined table, that in 1709 she had about 8,000 inhab. (a large pop. for that period), and nearly 6,000 tons

Account of the Principal Articles of East and West Indian and other Produce imported into Liverpool during each of the 5 Years ending the 31st December, 1849; with the Stocks on Hand on the 31st December, each Year. — (From the Tables published by the Brokers' Association.)

The vast preponderance of Liverpool in the cotton trade is obvious from the following

Account of the Packages of the different Varieties of Cotton imported into Great Britain from 1839 to 1849, both inclusive, and showing also the Numbers imported into Liverpool.

	1839.	1840.	1841.	1842.	1843.	1844.	1845.	1846.	1847.	1848.	1849.

Total into G. Britain	1,116,900	1,599,400	1,244,000	1,392,900	1,744,100	1,681,800	1,435,700	1,242,500	1,232,700	1,739,997	1,903,437
Total into Liverpool	1,019,229	1,415,541	1,164,262	1,349,811	1,557,697	1,420,284	1,252,751	1,154,194	1,067,038	1,565,097	1,732,727

And we may farther mention, in corroboration of what has now been stated, that while the declared value of the exports of the produce of the U. Kingdom from London in 1849 amounted to 11,746,822*l.*, that of the exports from Liverpool amounted, as already seen, to the immense sum of 32,341,918*l.* The cross-channel trade of Liverpool with Ireland, and her coasting trade generally, is, also, of vast extent.

Next to the consequence of Liverpool as a trading port, is its high importance as a packet station, second probably to none in the world, except London. The packet-ships, or *steeers*, to New York and other parts of the United States, which, for size, excellent accommodation, and speed, are justly the objects of general admiration, leave the port weekly; and at present 13 steam ships of unexampled magnitude are engaged in the trade to New York, Boston, Halifax, &c. Packets are also regularly sent to the E. Indies, Rio de Janeiro, Lagusya, Buenos Ayres, Lima, Lisbon, Oporto, and the Mediterranean; and a steamer trades regularly between Liverpool and Havre. There is, also, a daily communication with Dublin; and at intervals not greater than once a week, and generally less, with Waterford, Belfast, Glasgow, the Isle of Man, Drogheda, Wexford, Cork, Bristol, Dumfries, Carlisle, Whitehaven, Wigtown, &c. A host of river steamers, also, are constantly plying

for passengers at the various ferries of the Mersey, or running up and down the stream. In short, nothing can be more striking, or better convince the stranger of the gigantic scale on which the entire business of Liverpool is conducted, than the view from the Cheshire shore of the forest of masts, extending upwards of 2*m.* along the opposite banks; the activity ever visible in all the docks, the warehouses along the quays, instinct with life and labour; the ships constantly entering and leaving the Mersey, and the almost innumerable steamers of every size and quality, packets, ferry-boats, and tugs, rapidly coursing up and down the river to their several destinations.

A commercial town like Liverpool must necessarily have many joint-stock banking companies and private banks. Among the former are the Branch Bank of the Bank of England, the Royal Bank of Liverpool, the Bank of Liverpool, the Borough Bank, the Liverpool Union Bank, the Liverpool Commercial Bank, the Manchester and Liverpool District Banking Company, the N. and E. Wales Bank; there are, also, four private banks, and a savings' bank, which, on the 20th Nov., 1849, had 442,244*l.* of deposits.

Manufactures.—Liverpool is not, properly speaking, a manufacturing town; but the vast magnitude of its foreign commerce necessarily demands the practice of a

The following Table shows the distribution of the foreign and domestic trade of Liverpool:—

Account of the Number and Tonnage of the Vessels that entered and cleared from the Port of Liverpool, in 1848, specifying the Countries whence they came, and for which they cleared, with the Departments in which they were engaged.

great number of domestic trades, some connected with shipping, and others dependent on the peculiar nature of the traffic of the port. There are several large sugar refineries, iron and brass foundries, public breweries, roperies, glass-staining works, and alkali works. The manufacture of soap is more extensively carried on here than in any town of the kingdom, the quantity produced in 1849 being 20,968,290 lbs. of hard,

and 6,416,690 lbs. of soft soap. The business of ship-building has fallen off in Liverpool, and in this respect she is now very inferior to Sunderland, and to her great transatlantic rival New York. Efforts are now, however, being made to recover and revivify the trade.

There are several windmills, and steam-engines for grinding corn, colours, dye-woods, &c., and numerous and large manufactories of chain cables, anchors, &c.

LIVERPOOL.

by the crown, and a few years ago the assizes for W. Derby and Salford were removed hither from Lancaster. The police, organised in 1836, and conducted by a commissioner, is formed, like that of the metropolis, into divisions, with superintendants, inspectors, sergeants, &c., and is said to be extremely efficient in suppressing crime, and maintaining order both in the town and port. The force consisted in 1849 of 936 men, including inspectors, &c., and cost 56,686*l.* 18*s.* Liverpool has three prisons.

There is great scope for the committal of offences in Liverpool; and, owing to the number of sailors frequenting the town, and the number of destitute immigrants, Irish and others, that are thrown upon its streets, we need not be surprised at the great number of petty offences. Happily, however, the number of serious crimes is not very considerable; less, indeed, than might have been fairly anticipated in so motley and excitable a population. Drunkenness is here, as in most similar places, the grand source of disorder. In 1849, no fewer than 18,564 individuals were brought before the magistrates charged with offences of various sorts. Of these, 8,504 were admonished and dismissed; 10,985 were summarily convicted; and 1,100 were committed for trial. Of the latter, 206 were sentenced to be transported, and 1 to be executed.

The bor. jail, erected on the plan of Howard, and formerly used as a *dépôt* for French prisoners, having become too small to admit of the proper classification of the prisoners, a new, enlarged, and improved prison is now being erected to the N. of the town. The Bridewell is well managed. The county House of Correction is situated at Kirkdale. A County Court is established in the town, before which 12,365 plaints were entered in 1848.

The provision for the poor, in so populous a town as Liverpool, is, of course, on a large scale. The total sum raised by a rate and expended on account of the poor in the par. of Liverpool in 1849-50, amounted to 100,644*l.*, assessed upon property valued at 1,082,261*l.* a year. The poor-house, which, from its extent, might well be called a little town, is one of the largest in the kingdom. It admits of the perfect classification of the inmates, according to the principles of the Poor Law Amendment Act, and of considerable indulgence being granted to the sick and aged.

Latterly the pauper children have been removed from this building to the industrial school prepared for their reception at Kirkdale. This, which is a large quadrangular edifice, was finished in 1846 at a cost of 28,135*l.* 13*s.* 8*d.* In 1850 no fewer than 1,123 pauper children, viz. 640 boys and 483 girls, were boarded and educated in this school, the annual cost of their support and education being 12,404*l.* The establishment is well conducted, the education useful and good, and much better, indeed, than industrious artisans can give their children.

The bor. has enjoyed the privilege of sending 2 mems. to the H. of C., since the 26th of Edward I. Down to the passing of the Reform Act, the elective franchise was vested in the freemen and free burgesses. The Boundary Act enlarged the bor. so as to include the out-townships of Kirkdale, Everton, W. Derby, and Toxteth Park. Reg. electors, in 1849-50, 17,216.

Condition of the People &c.—Owing to the rapid rise of Liverpool, its population consists, in a great degree, of adventurers, not merely from all parts of the United Kingdom, but of the world, attracted to it in the expectation, which, in many instances, has not been disappointed, of making a fortune. In such a society there is necessarily less prejudice, and fewer conventional and established observances, than in other and differently constituted towns. There is here, in fact, the greatest toleration for all sorts of individuals, and all sorts of opinions. Exclusiveness in Liverpool is, speaking generally, entirely out of the question; and you meet everywhere with people of all grades, all occupations, and all countries. It would be idle in such a place to look for that polish, and careful avoidance of debateable or irritating topics, that distinguish more aristocratical societies; but, on the other hand, it is free from the sameness and insipidity which characterise the latter. The ostentatious display of wealth made by a lucky hit or successful speculation is sometimes, no doubt, offensive enough; but, on the whole, society in Liverpool is, from its variety and ease, superior to that in most other purely mercantile

towns. The higher class of merchants, having connections and correspondents in most parts of the world, are generally very well informed; and some of them are honourably distinguished by their taste in literature, science, and the fine arts. All classes are eminently enterprising (sometimes, perhaps, to excess), vigilant, and industrious; and possess, in a high degree, the qualities that go to form successful merchants and traders.

The situation of the lower or labouring classes in Liverpool, is, in many respects, less satisfactory than could be wished. Owing to the intimate intercourse it has with Ireland, and the small expense at which an individual may be brought over from Dublin, vast crowds of Irish labourers land at Liverpool, where they constitute a large proportion of the labouring population. Many of these persons are often, especially on their landing from Ireland, and before they find employment, reduced to a state bordering on destitution; and even after they obtain employment, they are frequently in a very depressed condition. In the departments of skilled labour, such as those of carpenters, smiths, bricklayers, &c. which are not interfered with by the Irish, wages are high; and employment being pretty constant, such workmen as are sober and industrious are in comfortable circumstances.

In consequence partly of the unfavourable condition of so many of the lower classes, but partly, also, of the vast amount of property that is here always, as it were, in a state of transition, passing from the warehouses to the shops, and from the warehouses to the conveyances by which it is to be carried to its ultimate destination, there is at once a great incentive to indulge in dishonest practices, and great opportunities for depredation.

In Liverpool, as in Manchester and Glasgow, a very large proportion of the labouring classes are miserably lodged; but since a sanitary act was passed relative to Liverpool, great improvements have been made in the circumstances conducive to the health of the town. This will be evident from the following statement by Dr. Duncan, the intelligent medical officer of the town: — "The corporation of Liverpool in 1846 obtained a local sanitary act (9 & 10 Vict. c. 127.), which came into operation Jan. 1. 1847. Since this period much has been done in the way of paving, sewerage, systematic cleansing, &c., to improve the condition of the lower and most densely peopled districts of the town; and the result has been a most gratifying change for the better in the back streets and courts inhabited by the working classes. The courts built since the act came into operation are all flagged, and are much more open and airy than those previously erected. The cellar habitations of Liverpool, long notorious as nurseries of disease, have been much improved. Upwards of 5,000 of the worst description have been closed under the powers of the act, and more than 2,000 others, which are unfit for human dwellings, are being gradually cleared of their inmates. The inferior lodging-houses have also been brought under regulation, with the view of preventing over-crowding and enforcing cleanliness and ventilation. Down to the present time (November, 1850) nearly 700 houses have been registered under the act, and brought under sanitary inspection. These operations have produced a marked improvement in the health of the worst conditioned districts. The mortality of Vauxhall Ward, for example, which ten years ago was 1 in 23½, has during the present year (1850) been not more than 1 in 31.

And the mortality of the whole borough, which was formerly 1 in 31, has been, during the three first quarters of the present year (1850), at the rate of only 1 in 37 annually."

The northern part of the town, as far S. as Whitechapel and Dale Street, is seated on a coarse, red, diluvial clay; the remainder is the new red sandstone; and, having a gentle declivity, it has every facility for drainage. It is also protected by hills from the cold, withering, N.N.E. winds; the climate, in fact, though humid, is more equable than in most other places; the sea breezes temper the heat of summer, and the cold of winter is usually from 6 to 8 degrees below that under the same latitude on the E. coast of the island. Its situation is, therefore, one of the healthiest that can be imagined; and though the mortality has sometimes been, as in 1847, excessively great, and is at all times very heavy, that is to be mainly ascribed, partly to the destitute, diseased, condition of many immigrants on their arrival in town, partly to the ill-ventilated, wretched habitations in which they have hitherto mostly resided, and partly to the poverty, improvidence, and vice prevalent among great numbers of the lower classes.

The suburbs of Liverpool are of great extent. Everton, Edgehill, and Kirkdale, are now indeed joined to the town; and this is nearly also the case with Bootle, from the extension of the docks to the N. Aigburth, West Derby, Wavertree, and Allerton are getting fast covered with handsome villas; and on the W. shore of the Mersey, Rock Ferry, Tranmere, Egremont, and New Brighton, are becoming very populous. The works at Birkenhead, to which we have already alluded (see the article), have been resumed; and it will, no doubt, become a place of importance, and command a fair share of the trade of the Mersey. (*Enfield's History of Liverpool*; *Baines's valuable History of Liverpool*, now (1850) in course of publication; and *Private Information*.)

LIVONIA (Russ. *Liflandia*, Germ. *Livland*, or *Liefland*), a marit. gov. of European Russia, on the Baltic, having N. the gov. of Revel, E. the lake Peipus, separating it from the gov. of Petersburg, and the govs. of Pskov and Vitebsk, S. the latter and Courland, and W. the Gulph of Livonia. Length, N. to S., about 150 m.; average breadth, 117 m. Area, including the island Oesel, in the Baltic, 17,500 sq. m. Pop. in 1846, 814,100. The coast, and the greater part of the surface, are flat and marshy; but in the districts of Venden and Dorpat are some hills of considerable elevation: Eierberg, one of these, being nearly 1,100 ft. in height. There are several extensive lakes: the principal, Virtserf, 24 m. in length by from 2 to 6 m. in breadth, communicates with the lake Peipus by the Embach. Besides the last named, the chief rivers are the Dwina, which forms the South boundary, the Evst, and the Bolder-Aa. The soil, though in some parts loamy, is in general sandy, but being abundantly watered, it is, by proper manuring, rendered very productive. Rye and barley are the principal crops, and more of both is grown than is required for home consumption. Wheat and oats are less cultivated; buckwheat is raised on sandy soils: flax, hops, and pulse are also produced; and the potato culture is on the increase: fruits are of very indifferent quality. In some districts, agriculture is tolerably well conducted. The forests are an important source of wealth, and supply excellent timber; they abound, not only with game, but also with wolves, which are sometimes very destructive to the cattle. The rearing of live stock, though not altogether neglected, does not receive adequate attention; the breed of black cattle is, however, in the course of being improved. Horses and sheep are very inferior. The fisheries, both on the coast

and in the fresh waters, are important. Chalk, alabaster, and other calcareous materials are abundant.

Rural industry, and the distillation of spirits are by far the most important occupations. The manufactures of this government are, however, more extensive than those in its vicinity. The peasantry spin linen yarn, and weave their own cloths; and in the towns, especially Riga, there are sugar refineries, and tobacco, woollen cloth, cotton, linen, glass, and other factories, which employed, in 1837, about 3,800 hands, and produce goods of the amount of 11,000,000 roubles a year. (*Possart.*) The N. part of Livonia formerly constituted a portion of Esthonia, and the S. a part of Lithuania. The pop. consists of Esthonians, Lithuanians, Russians, Germans, and (along a portion of the coast) Lives, the most ancient inhab. of the country, and from whom it has derived its name. About 82,000 of the inhab. reside in the towns, and these, as well as the nobles, clergy, &c. are chiefly of German descent. Until 1824, the Esthonians and Lithuanians were in a state of predial slavery; now, however, they are free, but without the right to hold real property. The prevailing religion is the Lutheran; there are only about 12,000 individuals of the Greek church, and other professions of faith. Education is tolerably advanced in the towns, and the university of Dorpat, in this government, is the first in the empire. But, after all, only 1 in 143 of the inhab. is said to be receiving public instruction. Livonia has a governor-general, whose authority extends over the government Pskov, and the other Baltic provinces; but it has its own provincial assembly, magistracy, &c., and has preserved many peculiar privileges, among which is that of exemption from the state monopoly of ardent spirits. It was divided into 9 districts by Catherine II.: Riga is the capital and centre of its commerce; the other chief towns are Dorpat, Pernau, Fellin, and Arensburg in the island Oesel. Livonia was conquered by the Danes in the 12th century, and held by the Teutonic knights from 1346 to 1561. It afterwards belonged to Poland, and next to Sweden; but was definitively annexed to Russia, by the treaty of Nystadt, in 1721. (*Schnitzler's La Russie*, 558—565.; *Possart; Das Kaiserthum; Russland.*)

LIXURI. See CEPHALONIA.

LIZARD POINT, a bold headland, on the British Channel, being the most southerly promontory of England, on the S. coast of Cornwall, 23 m. E.S.E. the Land's End, lat. of highest light-house, 49° 57' 41" N., long. 5° 11' 5" W. The Lizard is famous in navigation, from its being the point whence ships usually take their departure from the channel, and being, also, the best place for a land-fall when homeward bound. It is surmounted by 2 light-houses with fixed lights, at a short distance from each other, the lantern of the one being 225 ft. and of the other 221 ft. above the level of the sea. Some steep rocks, called the Stag's, lie to the S. of the Lizard.

LLAMPETER, or LLAN-BEDR, a parl. bor., market-town and par. of S. Wales, co. Cardigan, hund. Moyddyn, 25 m. E. by N. Cardigan, and 180 m. W. by N. London. Pop. of parl. bor., which is contributory to Cardigan, 902, that of the entire par. being, in 1841, 1,507. The town, which stands on a slope about $\frac{1}{2}$ m. N. of the Teify (crossed here by a stone bridge), appears to have been larger formerly than at present, when a score of tolerably built houses, and about 100 cottages, comprise the whole of its private dwellings. The church, which stands on an eminence at the N. end of the town, is very ancient, and being shaded with venerable yews, has a very picturesque appearance: there are also two chapels for Calvinistic Methodists and Presbyterians. The chief ornament of the place is the College of St. David's, a handsome Gothic structure erected in 1825. This institution, founded by George IV. in 1822, at the suggestion of the late Dr. Burgess, then bishop of St. David's, and endowed with 6 livings, is intended to furnish clerical instruction for the clergy of the S. part of the principality, and has already done much to raise a profession, which, owing partly to the misconduct and partly to the poverty and ignorance of its members, had fallen into merited disrepute. The students reside within the college, the business of which is conducted by the principal, who gives theological instruction, and is assisted by Greek, Hebrew, Welsh, and other professors. The course of instruction lasts during two years, and is attended, at an average, by about 60 students, whose necessary expenses do not exceed 55*l.* a year. The bishop of the diocese, who is the visitor, ordains none except graduates of the English universities, or certificated students of Llampeter College. The town is of little trading importance. Markets on Saturday. Fairs, well attended, for horses, cattle, and hogs, Jan. 11., Wednesday in Whitsun-week, July 10., first Saturdays in Aug. and Sept., Oct. 19., and first Saturday in Nov. The town is incorporate, governed by a portreeve, and sessions are held annually by the co. magistrate on the second Wednesday in Oct.

LLANDRILLO-FAWR, a market-town and par. of S. Wales, co. Caermarthen, hunds. Caro and Perfedd, on the Towy, 13 m. E. by N. Caermarthen, and 169 m. W. by N. London. Pop. of par. (including 10 hamlets), in 1831, 5,149: do. of township, 1,268. The town, situated in the beautiful and interesting vale of the Towy, is small and ill-built, the only public buildings being an old church, and 4 places of worship for dissenters. Newton Park, the residence of Lord Dynevor, and Golden Grove, belonging to Earl Cawdor, are the principal country-seats of the neighbourhood, which is very productive, and has some rich mines of coal and iron. A railway connects this coal-field with the port of Llanelli. Quarter sessions are held here; and Llandeilo-fawr is one of the polling places for the co. Markets well-supplied with corn, &c., on Saturday; fairs, Feb. 20., May 5. and 12., June 21., Aug. 23., and Nov. 12.

LLANDOVERY, a mun. bor. and market-town of S. Wales, par. Llandinog, co. Caermarthen, hund. Perfedd, 23 m. E.N.E. Caermarthen, and 162 m. W. by N. London. Pop. of bor. in 1831, 1766. The town, agreeably situated in the upper part of the vale of the Towy, at a short distance from that river, has one principal avenue, and 8 other streets lined with respectable houses. The keep of an old castle, destroyed by Cromwell, occupies the summit of an insulated rock, and forms a chief feature of the place. The par. church stands a little S. of the town, and there are likewise 4 places of worship for dissenters, with attached Sunday schools. National and Lancastrian schools are established, and there are almshouses and other charities for the aged poor. There is little trade or traffic of any kind in Llandoverly; but it is a mun. bor., governed, since the Municipal Reform Act, by a mayor and 3 other aldermen, with 12 councillors. The petty sessions for the hund. of Perfedd are held here, and Llandoverly is one of the polling places at the elections for the co. Markets on Wednesday and Saturday: cattle fairs Wednesday after Jan. 17., the 2d Wednesday after Easter, Whit-Tuesday, July 31., and Nov. 26.

LLANELLY, a parl. bor., sea-port, market town, and par. of S. Wales, co. Caermarthen, hund. Caernwallon, 13 m. S.E. Caermarthen, 10 $\frac{1}{2}$ m. W.N.W. Swansea, and 174 m. W. by N. London. Pop. of parl. bor. in 1841, 6,818. The town is irregularly built, on a creek near the sea-shore; but some of the houses are good, and the place, on the whole, appears to be thriving. The church is an old irregular structure, remarkable as having two towers, one embattled, and the other surmounted by a steeple: the living is a vicarage, and within the par. are two chapels-of-ease. Dissenters also of different denominations have several places of worship. A free school and two other schools, chiefly supported by subscription, furnish instruction to the children of the poor; and there are four charities for the relief of the sick and aged. Llanelli is situated in the midst of the rich mineral basin of S. Wales. Four large collieries at Llangenneck employ upwards of 500 persons; and the abundance of excellent coal, a part of which is exported to France, Spain, and the Mediterranean, for the use of steam-boats, has caused the establishment of the Llanelli and Cambrian copper-works. The ore is imported chiefly from Cornwall; and the copper-cakes and sheathing are sent to Liverpool, and other ports of the kingdom. There are also two iron-foundries, but both are air-furnaces, and of no great importance. The town has four docks, two of which are floating basins, the largest being capable of accommodating no less than 50 vessels of 500 tons register. This port had, in 1850, 70 ships, of the aggregate burden of 4,469 tons; and the register tonnage cleared outwards, in 1849, amounted to 174,675 tons. The gross customs' revenue, in 1846, amounted to 953*l.*

The interests of the town have been recently much promoted by the construction of a railway, with branches into different parts of the fine coal-field near Llandeilo; and it is probable that Llanelli will, at no distant period, become one of the principal trading ports of the principality. The parl. bor., which is contributory to that of Caermarthen, includes the bor. hamlet, with some additions. Registered electors in both bors., in 1849-50, 718. The bor. is governed by a portreeve and burgesses, and had formerly both civil and criminal jurisdiction. Markets on Thursday and Saturday: fairs on Ascension-day and Sept. 30.

LLANGADOG-FAWR, a market-town and par. of S. Wales, co. Caermarthen, hund. Perfedd, on the Towy, here crossed by a handsome stone bridge, 19 m. E. by N. Caermarthen, and 167 m. W. by N. London. Pop. of par., in 1831, 2,476. The town has two pretty wide streets, with a few well-built houses and numerous cottages, an old church, and 3 dissenting places of worship, being the only public buildings, besides a ruinous old castle. Woollen stockings, and coarse woollen cloths, are made here; but the chief business is the sale of farm produce at the fairs and markets, which are very considerable. Markets on Thursday; fairs,

March 12., July 9., Thurs. after Sept. 11., and 2d Thurs. after Oct. 10.

LLANGOLLEN, a town of N. Wales, co. Denbigh, hund. Chirk, on the Dee, 20 m. S. W. Chester, and 168 m. N. W. London. Pop. of par., in 1841, 4,906. The town, beautifully situated in a deep, narrow vale, enclosed by lofty mountains, and watered by the Dee, which is crossed here by a good stone bridge, consists of one principal and a few smaller streets, lined with old and mean houses, interspersed with a few handsome modern dwellings, amongst which are three large and commodious inns. The church, in the early English style, has service performed in it both in English and Welsh: there is a chapel-of-ease at a hamlet within the par., and the dissenters have three places of worship. The inhab. derive their chief support from summer visitors, who, in making the tour of N. Wales, usually make some stay here, in order to enjoy the fine scenery of this vale, which in some respects excels that of the vales of Clwyd and Feelinog. Many families, also, reside here during summer, so that Llangollen may be considered as a sort of watering-place. The Reform Act made it a polling-place for the co. Markets on Saturdays. Fairs, March 17., May 31., and Aug. 31.

About 1 m. from Llangollen, situated on a high and steep conical hill, are the ruins of the castle of Dinas Bran, once a fortress of considerable strength; and about 1 m. beyond, nearly in the same direction, are the majestic remains of Vale-crucis Abbey, still in tolerable preservation: the name of this abbey is derived from a pillar or cross, situated in an adjoining field, supposed to be of high antiquity. Four miles from the town, and in another direction, is the Cysylltau aqueduct, by which the Ellesmere canal is conveyed across the Dee, a noble structure of 19 arches, raised 126 ft. above the river, at a cost of 47,000*l*.

LLANIDLOES, a parl. bor., market-town and par. of N. Wales, co. of Montgomery, hund. Llanidloes, at the confluence of the Clevedon with the Severn, 37 m. W. S. W. Shrewsbury, and 156 W. N. W. London. Pop. of town in 1841, 2,742. It is situated in a valley on the E. bank of the Severn (crossed here by a handsome stone bridge of 3 arches), and is surrounded on all sides by lofty hills: the buildings have increased rapidly, and several respectable houses have been substituted for others composed of wood and plaster, which formerly gave the place a mean appearance. A new town-hall stands nearly in the centre of the town. The church, built in 1542 on the site of an older structure, and very recently repaired, is chiefly remarkable for a ceiling of delicately carved oak, and for a square tower of great antiquity. There are also places of worship for Independents, Wesleyans, Calvinistic Methodists, Baptists, and the Society of Friends. Instruction is furnished in day-schools to about 70 children; but education is little valued, and the mass of the population are described, we hope too strongly, as being "cradled in ignorance, and inured to vice both by habit and example."

Flannel and other woollens are the principal articles manufactured in Llanidloes, and the present improved condition of the town is wholly attributable to its trade in these articles. The spinning of wool is conducted in six mills, employing 180 hands; but the cloth is wholly made by hand-loom. The quantity of flannel annually manufactured averages 4,300 pieces: there were 815 looms at work in 1838, which employed 520 men, 176 women, and 106 children. The wages of the best weavers are 10*s*. a week; but the average is about 7*s*. Spinners earn about 12*s*. The weavers are stated to be drunken, improvident, dishonest, and insubordinate: "in fact, between poverty on the one hand, and want of education on the other, the condition of Llanidloes presents a picture darker, by many shades, than any town of its size in the principality, except Merthyr-Tydvil." (*Hand-loom Rep.*) Within the par. is the lofty mountain of Plinlimon, or, more properly, *Pumlumon*, "the five-peaked hill," on which are the sources of the Severn, Wye, and Rheidol; and at the foot of the range there are slate quarries and lead mines, the produce of which contributes to the support of the place.

Llanidloes is a corporate town, having a mayor, coroner, and other officers, elected at a court-leet: it was not considered sufficiently important to be included in the provisions of the Municipal Reform Act. The Reform Act made it a parl. bor., contributory to Montgomery, which sends 1 mem. to the H. of C., and the electoral limits comprise, besides the town, a considerable extent of surface on both sides the Severn. Registered electors, in all the bors. in 1849-50, 1,048. Markets on Saturday: fairs, April 5., May 11., June 21., July 17., September 13., October 3. and 28.

LLANRWST, a town of N. Wales, partly in co. Caernarvon and partly also in co. Denbigh, on the Conway, 37 m. W. Chester, and 183 m. N. W. London. Pop. of par., in 1841, 2,906. The town, in a spacious vale, surrounded by lofty and well-wooded hills, stands chiefly on the E., but partly also on the W. bank of the Con-

way, which is crossed here by an elegant bridge, constructed in 1636, from the designs of Inigo Jones. Three considerable streets, lined with tolerably built houses, branch from a spacious market-place, in the middle of which is the town-hall, a substantial brick structure. The church, an old and small building, has adjoining to it the Gwydir chapel, a square castellated edifice, originally erected as a family mausoleum, by the Wynne family, and now used as a place of worship. It has many monuments; but its chief celebrity is owing to its containing the remains of the great Lewellyn, removed thither from the abbey of Aberconway, in which they were originally interred. There are also 11 chapels for dissenters within the par., and some good Sunday schools. Llanrwst, formerly noted for its harp-manufacture, depends at present almost entirely on its retail trade; for the spinning and knitting of wool is become quite insignificant. It derives considerable advantages from its position on the Conway, which brings up vessels of 60 tons burden to Trefriw with coal, lime, timber, &c. in return for slate and iron. Gwydir castle, a rather large and very elegant modern structure, is situated about $\frac{1}{2}$ m. from the town. Markets on Tuesdays and Saturdays. Fairs on March 8., April 25., June 10., Aug. 10., Sept. 17., Oct. 25., and Dec. 11.

LLANTRISSENT, a parl. bor., market-town, and par. of S. Wales, co. Glamorgan, hund. Miskin, 10 m. N. W. Cardiff, and 140 m. W. London. Pop. of parl. bor. in 1841, 855: ditto of par., 2,222. The town, which stands on a commanding eminence overlooking the vale of Glamorgan, consists only of three or four narrow and irregular streets, lined with old and ill-built houses. The town-hall and market-house were erected by the Bute family, who are lords of the manor, and the principal landowners in the par. The church is a large structure in the Norman style, the living being a vicarage in the gift of the dean and chapter of Gloucester cathedral. There are also two chapels of ease in the out-townships, and several places of worship for dissenters, with attached Sunday schools. The ruins of an old castle with a high tower stand close to the town; and at a short distance are some interesting remains of an old monastery. Llantrissant has very little trade; but coal, lead, and iron are found in considerable quantities, in the hamlet of Pentyrch, and sent to Cardiff for exportation. The charter of the bor. was granted by Edward III., and the government is vested in a portreeve, constable, and 12 aldermen, whose privileges were left untouched by the Municipal Reform Act. Llantrissant is a parl. bor., contributory with Cowbridge to Cardiff, which sends 1 mem. to the H. of C. Registered electors in all the bors. in 1849-50, 898. Markets on Friday; fairs, Feb. 12., May 12., Aug. 12., and Oct. 29.

LLERENA, a town of Spain, prov. Estremadura, 59 m. N. Seville, and 200 m. S. W. Madrid. Pop., according to Milhano, 6,495. It stands on a plain at the foot of the Sierra San Bernardo, which separates Estremadura from Seville; and has 2 par. churches, 4 convents, and an hospital. The inhab. are chiefly engaged in grazing sheep and cattle on the rich pastures of the vicinity, and in collecting oak-bark, galls, and timber from the neighbouring forests.

LO (ST.) (an. *Briovera*), a town of France, dep. La Manche, of which it is the cap., on the Vire, and on the high road between Paris and Cherbourg, 156 m. W. by N. the former. Pop. (1846), *ex. com.*, 8,339. It is ill laid out; streets steep and irregular; they mostly lead from a square in the highest and central part of the town, which has several of the principal public buildings: among these the few that deserve notice are, the church of Notre-Dame, with two lofty spires; that of St. Croix, built in 806, and considered the best specimen of Saxon architecture in France; the prefecture, a handsome new edifice; the town-hall, judicial court, prison, hospital, theatre, and a bridge of six arches over the Vire. The environs are picturesque and agreeable. St. Lo is the seat of tribunals of original jurisdiction and commerce, a chamber of manufactures, and a communal college. It has a public library with 2,500 vols., a philharmonic society, societies of agriculture and commerce, manufactures of fine woollen cloths, druggets, canvass, serges, calicoes, lace, cutlery, &c., and considerable trade in thread, iron, salt butter, cider, honey, cattle, &c. It derives its present name from a bishop of Coutances in the 6th century. (*Hugo. art. Manche.*)

LOANGO, a kingdom of W. Africa, on the Atlantic Ocean, bounded N. by Mayomba, and S. by Congo, from which it is separated by the Zaire. The coast is high and abrupt, but the hills are covered with earth and luxuriant vegetation. The soil is generally a stiff loam, and very productive; but near the coast is an extremely fine sand, that is carried about by the lightest breeze. The lakes and rivers, of which there is a considerable number, abound with fish, and in the forests are found tiger-cats, ounces, hyenas, monkeys, antelopes, hares, and other game. The climate is excessively hot; it sometimes rains, but the dews are sufficient for vege-

LODI, a city of Lombardy, cap. deleg. Lodi and Crema, on the Adda, here crossed by a wooden bridge, and on the road from Milan to Piacenza, 18 m. S.E. Milan. Lat. $45^{\circ} 18' 31''$ N., long. $9^{\circ} 20' 58''$ E. Pop. (1838), 15,962. It is situated on slightly rising ground, and is surrounded by old walls, and entered by four gates. It is generally well built, and has broad and regular streets, an old citadel, now dismantled, and converted into barracks by the Emperor Joseph II., numerous churches, a large hospital, a theatre, several handsome palaces, and a large market-place surrounded with arcades. The church *della Incoronata* is said to have been designed by Bramante; it has a fine rotunda, and is ornamented with frescoes and paintings by Callisto, a pupil of Titian. In the cathedral is the "Murder of the Innocents," by the same artist. Lodi is a bishop's see; and the seat of the governor, assembly, and superior judicial courts for the delegates; it has a royal and ecclesiastical gymnasium, a public library, a normal school, founded by Joseph II., orphan and foundling asylums, a workhouse, a *mont de piété*, a large porcelain factory, and manufactures of linen fabrics, &c. It is the centre of the trade in Parmesan cheese. (*See ITALY (AUSTRIAN)* in this vol., p. 64.)

Lodi is famous in modern history for the victory achieved here on the 10th of May, 1796, by Napoleon, in his first Italian campaign. The cannon of the Austrians swept the bridge behind which they were drawn up; but it was, notwithstanding, forced by the French at the point of the bayonet, and the Austrian army totally defeated. On this occasion, the intrepidity and gallantry of Napoleon shone as conspicuously as his skill as a tactician. (*Quæst. Nat. Encycl.; Berghaus; Conder's Italy, &c.*)

LOFFODEN ISLES, a group of islands on the coast of Norway, between lat. $67^{\circ} 40'$ and $69^{\circ} 30'$ N., and long. $11^{\circ} 40'$ and $16^{\circ} 20'$ E. There are five larger and several smaller islands, having in all from 2,000 to 4,000 inhab. The principal are (taking a S.W. direction) Andöen, Langöen, and Hindöen, which is the largest of the whole group, and, with six others, forms, on the side of the Norwegian continent, the great gulph of West Fiord. The coasts of these islands are extremely irregular, and they rise into lofty and rugged mountains, covered with perpetual snow, and in some places with glaciers. There are no trees, but only a few stunted shrubs, grass, and cryptogamous plants; nor are these islands of any importance, except on account of the fisheries, which are very extensive and valuable. "In the beginning of February the cod-fish set in from the ocean, and occupy the banks in West Fiord. These banks are from 3 to 10 m. out in the Fiord, at a depth of from 60 to 80 fathoms; and the fish crowd so much together while depositing their spawn, that it is said a deep sea lead is often interrupted in its descent to the bottom through these fish-banks. The fishermen assemble in the month of January at the different stations, and the fish are caught by nets and long lines, set at night and taken up in the morning. An outfit, or company, consists of 2 boats, each having 5 men, and provided with 6 or 8 nets; and every 20 or 30 of these companies have a large tender to bring out their provisions, nets and lines, and to take the produce to market. The fish are cured as round or stock fish till April, after which they are split, salted, and carried to Drontheim, or other places, to be dried on the rocks, like the Scotch-dried cod. The stock-fish are merely gutted and hung up, two together, across poles, and are dried, without salt, in the wind. In a medium year (1827) there were 2,916 boats fishing in 83 different stations, accompanied by 124 tenders, the number of men in all being 15,324. The produce amounted to 16,456,620 fish, which, when dried, would weigh 8,800 tons; there were, also, 21,500 barrels of cod-oil, and 6,000 barrels of cod-roa. This important winter-fishery ends in the middle of April. The herring fishery on these shores is of much less consequence." (*Laing's Norway*, p. 200—43.)

LOGHUR (*Lohagur*, "the iron fort"), a strong hill fort of Hindostan, prov. Aurangabad, in the British territories, 30 m. N.W. Poonah. From the perpendicular height of the rock on which it is built, this fortress could not, if properly defended, be taken by storm. It is supplied with water by numerous tanks and springs, and has extensive excavated magazines. It came into the possession of the British in 1818.

LOGRONO (an. *Juliobriga*), a town of Spain, in Old Castile, prov. Soria, on a spacious plain on the Ebro, which is here crossed by a handsome bridge, 57 m. W.S.W. Pampeluna, and 166 m. N.E. Madrid. Pop., according to Mifano, 8,210. It comprises, besides several good streets, two fine squares, with a collegiate church, 5 par. churches, 8 convents, and 2 hospitals. It has tanneries, distilleries, and fabrics of saddles, hats, and candles.

LOHEIA, a sea-port town of Arabia, the most northerly in the territ. of Yemen, on the Red Sea, 175 m. N.N.W. Mocha, lat. $15^{\circ} 41' 20''$, long. $49^{\circ} 46' 14''$. It stands on low ground, sometimes inundated by the sea. Its port is so shallow that vessels of even small burden are obliged to anchor at a considerable distance off shore. The environs are arid and sterile, and the town is ill supplied with water. It is not walled, but is defended by several towers at equal distances round it, though only one of these is defensible by cannon. A few houses are of stone; but the greater part are mere mud huts, thatched with grass, with a straw mat for the door, and rarely any windows. The chief edifices are, a mosque, with the tomb of the Mohammedan saint who founded the town; the governor's residence; the custom-house, and some coffee warehouses. The coffee shipped at Lohelia is inferior to that of Mocha; but it notwithstanding carries on a considerable trade in it with Cairo, through Djidda. Lime is prepared in the neighbourhood by the calcination of coral; and near the town is a salt mine. (*Niebuhr, Voyage de L'Arabie*, l. 242.; *Geog. Journal, &c.*)

LOIRE-ET-CHER, a dep. of France, reg. centre, between lat. $47^{\circ} 15'$ and $48^{\circ} 10'$ N., and long. $0^{\circ} 30'$ and $2^{\circ} 15'$ E., having N. Eure-et-Loire, E. Loiret and Cher, S. Indre and Indre-et-Loire, and W. the latter, and Sarthe. Length, N.W. to S.E., 80 m.; breadth varying from 20 to 45 m. Area, 625,971 hectares. Pop. (1846), 266,833. Surface mostly plain, with a general inclination toward the W. The Loire intersects the dep. nearly in its centre in a direction from E. to W.; the other chief rivers are, in the N. the Loir, a tributary of the Sarthe; and in the S. the Cher, Bouchere, and Cosson, affluents of the Loire. In the S. of the department are numerous pools and marshes, which in the arrondissement of Romorantin cover nearly 2,400 hectares. In 1834, it was estimated that 360,627 hectares of the surface were arable, 31,634 occupied with pastures, 26,591 with vineyards, 70,210 with woods, and 80,096 with heaths, wastes, &c. More corn is grown than is required for home consumption; in 1836, 1,861,598 hectolitres were harvested, chiefly oats and wheat. The annual produce of wine is estimated at above 900,000 hectolitres, some of which is of a pretty tolerable quality: the wines are principally made into brandy and vinegar; but a peculiar variety, of a very deep dark hue, is extensively employed to deepen the colour of other red wines, and to give a reddish tint to white wines. (*Jullien, Topographie*, p. 84.) Beans and peas, fruit, hemp, liquorice, and beet-root, are raised in considerable quantities. In 1830, about 277,000 sheep were kept in the dep., the annual produce of their wool being estimated at 795,010 kilogr. A good many poultry and bees also are reared. The rural pop. is, however, in a very depressed condition; the labouring class occupy miserable huts, and in one village the habitations are said to be mere caves dug in the rock. In 1835, of 96,041 properties subject to the *contribution foncière*, 49,780 were assessed at less than 5 fr., and 14,384 at from 5 to 10 fr. Iron, turf, and alabaster are met with, but the most valuable mineral product is flint: the most extensive beds of which in France are in the S. part of this dep., which has furnished the greater part of the gun-flints used in France. A good workman produces in a day 400 flints of the first, and 600 of the second quality; and it is accordingly estimated that 100 workmen, assisted by their families, will probably send to market in a year, 30,000,000 flints of all descriptions. The employment is very injurious to the health, and it is alleged that most workmen die of chest diseases before they attain to 30 years of age. The dep. has several iron forges, tile and glass factories, potteries, &c., with manufactures, though on a small scale, of serge, woollen cloth, and other woollen fabrics, cotton and hempen cloths, paper, leather, chemical products, &c. It is divided into 3 arronds.; chief towns, Blois, the cap., with 13,123 inhab., Romorantin, and Vendôme. Total public revenue in 1844, 7,282,647 fr. (*Hugo, art. Loire-et-Cher; Official Tables, &c.*)

LOIRE (an. *Liger*), the principal river of France, through the central part of which it flows in a W. direction to its *embouchure* in the Atlantic. Its basin, which comprises nearly 1-4th part of the kingdom, has the basin of the Seine on the N.E., that of the Garonne on the S.W., and that of the Rhone on the E. It rises in Mount Gerlier de Jones, on the W. declivity of the Cevennes, in the dép. Ardèche, about lat. $44^{\circ} 38'$ N., long. $4^{\circ} 30'$ E., at an elevation of 4,593 ft. above the sea. (*Bruguière*.) Its general direction is N.N.W. to near Orleans, after which it flows mostly W.S.W. to its mouth near Paimbœuf, in about lat. $47^{\circ} 15'$ N., and long. $2^{\circ} 15'$ W. Its entire course is estimated at 670 m., of which 512 are navigable. Before losing itself in the ocean, it spreads out into a considerable estuary; below Nantes it is between 2 and 3 m. in width; but its navigation in the lower part of its course is rendered difficult by shallows, and numerous islands. Ships

of 800 tons, though built at Nantes, are loaded at Palmaruf or St. Nazaire; and all ships of considerable burden unload nearly 80 m. below Nantes, their cargoes being conveyed to that city by lighters. During the first 40 m. of its course, the Loire has an average descent of more than 16 ft. a mile; its rate of descent afterwards averages 4 ft. a mile. Its current is every where rapid; and its inundations are frequently productive of much damage; to prevent which, extensive embankments have been erected along its banks below Orleans.

The tide rises to about 5 m. below Nantes. Its chief tributaries are the Maine, Erdre, and Sèvre from the N.; and the Allier, Loiret, Cher, Indre, Vienne, and Sèvre-Nantaise from the S. It is connected with the Seine, by means of the Orléans, Briare, and Nivernais canals; with the Rhone by the Canal du Centre; and with Brant Harbour and the English Channel by the Nantes and Brant canal. To obviate the impediments to navigation from sandbanks, &c., above Orleans, a lateral canal, commenced in 1833, has been constructed along the river. It begins opposite the mouth of the Briare canal, in the dep. of Loiret, and runs along its S.W. bank till it terminates opposite the Canal du Centre, in the dep. of Allier. The entire length of this canal is 126 m. The scenery along the Loire, though in parts very fine, is generally surpassed by that of the Rhone. Some very important cities stand on its banks, among which, reckoning from its source, may be specified, Roanne, Nevers, Orleans, Blois, Tours, Saumur, Angoulême, and Nantes. (*Dist. Geog.*, &c.)

LOIRE-HAUTE, an inland dep. of France, between lat. $44^{\circ} 45'$ and $45^{\circ} 30'$ N., and long. 2° and $4^{\circ} 30'$ E., having N. Puy-de-Dôme and Loire, S.E. Ardèche, and S.W. Lozère and Cantal. Area, 408,880 hectares. Pop. 307,162. It is generally mountainous, with a slope to the N. The Cévennes mountains run along its S.W. border, and a range, passing off laterally from them, intersects the dep. about its centre, and afterwards bounds the dep. of Loire on the W. But most of its mountains belong to the volcanic system of France. The Loire and Allier are the principal rivers, and receive numerous small streams within the dep.: there are many small lakes and pools around Le Puy, and elsewhere. The bottoms of the valleys are fertile, but not the other parts of the dep.: by far the greater portion of the surface being stony or sandy. In 1884, it was estimated that there were 226,073 hectares of arable land, 79,433 ditto meadow, 74,080 ditto woods and forests, and 30,329 ditto heaths, &c. Agriculture is extremely backward; half the arable land is constantly in fallow, and the occupiers are miserably poor. Sufficient corn, chiefly rye with some wheat, is, however, grown for home consumption, but about 80,000 hectol. of wine are annually imported. The natural pastures are good, and their irrigation is pretty well conducted. In 1880, there were about 188,000 head of cattle, and 278,000 sheep in the dep.; the latter yielding about 268,000 kilog. a year of wool. The rural pop. is, in general, very poor; and about 3,000 individuals annually leave the dep. in search of employment in the other dep., as rangers, road-makers, day labourers, &c.; and usually return, after about six months' absence,

back, to the S., 4 m. in length by about the same in breadth. There are only a few hills of insignificant elevation in the N.E.; but along a part of the coast is a succession of sandy dunes (*dunes*), which, not having been fixed by any artificial method, are gradually extending themselves, and have quite buried the old village of Escaubiac. On various parts of the shore, as at Guernandé, &c., the sea has receded to a considerable extent. The lakes of Noir-Moutiers and Badois belong to this dep. In 1834, about 228,000 hectares were arable, and 108,092 in pasture; vineyards occupied 29,346 hectares, orchards 10,984 hect., woods 28,019 hect., and heaths, wastes, &c., 129,208 hect., or nearly 1-4th part of the entire surface. The country, on the S. bank of the Loire, is much superior in fertility to that on the N., and it is nearly all under culture; but agriculture is everywhere in the most backward state. There are a great number of little proprietors, many of whom engage themselves as labourers on the larger farms, who hold from 1 to 10 acres of land, farmed by their families. Very few properties yield a rental of 6,000 francs (1,500*l.* a year). The largest farms seldom extend beyond 800 acres; the greater number varying from 100 to 200. In 1828, of 128,000 properties subject to the contribution foncière, 67,798 were assessed at less than 5 fr., and 19,814 at from 5 to 10 fr. In the vicinity of Nantes there are lands which let as high as 3*l.* 10*s.* an acre; while in the vicinity of Châteauneuf the average rent is under 1*l.*, and in other parts of the dep. it is still less. Leases generally run from 3 to 6 and 7 years; seldom beyond the latter term. Few farms are let for a money rent. Some farmers pay a stipulated quantity of grain for the arable, and money for the pasture land; but the far greater number hold on the métayer principle, paying half the gross produce to the proprietor. The reader will not, consequently, be surprised to learn, that the farmers are without capital or intelligence, that their implements and cattle are very inferior, and that the land, which is not half tilled, is usually left fallow every other year, and frequently for some years together. The usual wages of farm labourers vary from 7*d.* to 8*d.* a day, women get from 4*d.* to 7*d.* During harvest wages are about half as much higher. Little butcher's meat is consumed by the agricultural pop. Their food consists principally of bread, butter, or fat, cabbage soup, buckwheat, pease-soup and potatoes. Fampers are very numerous in winter, and in the rural districts there is no adequate provision for their support. The occupiers are in general miserably lodged, frequently sleeping in the same apartment with their cattle. They are not in debt, but have no money; are strongly attached to routine practices; and move on without an effort to improve their condition. (*Circular Report*.)

The produce of corn is estimated at about 1,400,000 hectolitres a year, principally wheat, buckwheat, and rye; a good many turnips are raised as food for cattle and sheep. The produce of wine is estimated by Julien at 300,000 hectolitres, but the quality is inferior; about 800,000 hectolitres are consumed in the dep., the rest being principally converted into brandy. The annual produce of cider may be about 180,000 hectolitres. The

are excellent, and the cows are good ones to furnish for the up amounted to 220,000 of wool. The horses, and hand-oxen. The feed a good many hogs, and wax of the dep. more and having employed 2,000 fishermen women is making me. The manufacture of hats at Noirmoutiers, about 7,000 hands, and 600,000 fr. a year. Bag the arrondissement of Angoulême is wrought at Puy-de-Fr., &c., are the other are two royal cannon works in the dep., and glass, porcelain, tiles, &c. this department contains (which see). It is divided into, Nantes, the dep., Briare, Angoulême, Palmaruf, revenue in 1844, 1,10,000,000 fr. (*Revue Officielle*; *Paris*.)

region centre, between lat. $47^{\circ} 45'$ and $4^{\circ} 45'$ N., of-Orléans, and Sèvre-et-Cher, and Loire-et-Cher, 217,573 hectares. Pop. most part, level; bottom

the N. is a chain of hills separating the basins of the Loire and the Seine. The Loire traverses the S. half of the dep., generally in a W. direction. It receives the Loiret, which rises within the dep., and joins the Loire after a short course, being, however, navigable for boats nearly to its source. S. of the Loire, the country is marshy, uncultivated, and infertile; but, in other parts, it is very productive, particularly in the W. districts. In 1825, the arable lands were said to comprise 304,480 hectares, meadows 24,454 ditto, vineyards 30,003 ditto, and forests 90,474 ditto. Agriculture is in a comparatively forward state. The corn grown, which is chiefly oats and wheat, exceeds the quantity required for home consumption. The annual produce of wine is estimated at 7 and one twelfth millions of which is accounted

grounds, breweries, distilleries, oil mills, &c. It has large weekly markets, and a considerable trade in its native products, and those of the adjacent country. (*De Caste; Henschling, &c.*)

LOMBARDY. See ITALY (AUSTRIAN)

LOMBOK, an island of the eastern Archipelago, between lat. 8° and 9° N., and long. 116° and 117° E., separated on the W. from Bali by the strait of Lombok, and on the E. from Sumbawa by the strait of Alas, the last being the most commodious passage through the Sunda chain of islands.

Lombok is of a rhomboidal shape; its length may be estimated at 60 m.; average breadth, 45 m. Area, probably 2,400 sq. m. A mountain chain covered with forests, runs W. to E. through the S. portion of the island, and an isolated height, the peak of Lombok, rises in the N. to 8,500 ft. above the sea. Several rivers disembogue on the N., E., and W. coasts. The country is populous, fertile, and well cultivated. Rice is raised by artificial irrigation, as in the Carnatic; and abundant supplies of bullocks, hogs, poultry, vegetables, &c. may be obtained at the commodious port of Ampenan, on the W. coast. The inhab. are Mohammedans, and more civilized than the E. Islanders in general. They carry on a considerable trade with Java, Borneo, and other Malay islands. Lombok and Mataram are the chief towns; the last is the residence of the rajah, who is tributary to the sultan of Bali. (*Crawford's Indian Archipelago; Hamilton's E. I. Gazetteer.*)

LOMOND (BEN), this mountain attains to an elevation of 3,196 ft. above the level of the sea. From its vicinity to Glasgow, from which it is distant N. W. 37 m., and its position between Lochs Lomond and Katrine, it is by far the best known and most frequently visited of any of the highland mountains. Its summit, which is composed of numerous strata, mixed with quartz, commands a great extent of view. "The whole extent of Loch Lomond, with its wooded lakes, appears just beneath. Loch Long, Loch Katrine, Loch Eara, and the river Clyde, form the principal waters. The mountains of Arran appear very distinct; and to the N. alps upon alps fill up the amazing view." (*Fennell's Tour to Scotland, II. 176., ed. 1794.*)

LOMOND (LOCH), a lake of Scotland, between the co. of Stirling and Dumbarton, its most southerly extremity being 6½ m. N. from the town of Dumbarton. This, which is the largest of the Scotch, and, indeed, of the British lakes, is a noble sheet of water, of a triangular shape, about 24 m. in length N.N.W. and S.S.E., and where broadest, along its S. shore, it is from 7 to 8 m. across; but its upper portion, from Howersdounan inn, N. to Ardiesch, is comparatively narrow, being only about 1 m. in breadth. Its area is estimated at about 25,000 acres; its most usual depth is about 20 fathoms; but in some places it has a depth of 80, and even of 120 fathoms. It is studded with numerous islands, some of which are of considerable size, and finely wooded. The scenery of this lake is varied and magnificent. Its N. extremity stretches into a wild, rugged, and dreary country. On the E. side Ben Lomond, one of the most stupendous of the Grampian mountains, rises from its margin; but on descending the lake, the character of the scenery changes; the mountains become less precipitous; the glens between them are well wooded, and filled with gentlemen's seats, and on the S. it is bounded by a low, rich, fertile, and well cultivated country. Its surface level is from 3 to 5 ft. higher in winter than in summer; and it is generally about 2½ ft. above the sea level. It receives several streams, of which the Endrick, which flows into its S.E. corner, is the most considerable. Its surplus waters are conveyed away by the river Leven, which, issuing from its S. extremity, falls into the Frith of Clyde, close to Dumbarton. In summer it is much resorted to by tourists; and a steamer is established on the lake for their accommodation. It may be worth while to state that the waters of this lake were violently agitated at the period of the great earthquake at Lisbon in 1755.

LONATO, a town of Lombardy, deleg. Brescia, cap. distr. on the summit of a hill, 13 m. E.S.E. Brescia. Pop. 5,000. It is walled and defended by a castle, has four churches, an hospital, a *mondy de pèdes*, cavalry barracks, and manufactures of silk twist and saltpetre.

LONDON (Lat. *Londinium*, Fr. *Londres*), the metropolis of the U. Kingdom of Great Britain and Ireland, and the most populous, wealthy, and commercial city, of which we have any accounts, is situated partly and principally on the N. bank of the Thames, in the co. of Middlesex, and partly on its S. bank, in the co. of Surrey, about 45 m. above the river's mouth at the Nore, and 13 below the highest tideway. The site on the N. side is high and dry, but on the S. it is so low as to be under the level of the highest tides; though by a well constructed system of drainage it is kept perfectly free from wet. The subsoil is a hard clay, known to geologists by the name of London clay, lying in the middle of the great chalk basin, extending from Berkshire to the E. coast. In several places the clay is covered by thick beds of gravel. Lat. of St. Paul's Cathedral, 51° 30' 45" N., long. 0° 48' W. Greenwich. Exclusive of the city of London, properly so called, the metropolis comprises the city of Westminster, the borough of Tower Hamlets, Southwark, Lambeth, and Marylebone, and other contiguous districts, which, though formerly distinct, are now combined into one vast mass of houses.

The Pop. of the Cities of London and Westminster, and of the Five Parli. Bors. comprised in the Metropolis, with the Par. of Chelsea, has been as follows, in 1601, 1811, 1821, 1831, and 1841.

But, exclusive of the cities, bors., and parishes comprised in the above table, the metropolis includes Deptford, Greenwich, and sundry other districts; so that its entire population amounted, in 1841, to 1,873,676, and at present (1850) it is probably little, if at all, under 2,100,000; being

a greater amount of population than has ever been previously accumulated in the same space.

But some additional suburban districts, inc. Wandsworth, Clapham, Putney, the union of Lewisham, &c., have been comprised within the metropolitan district, or the bills of mortality, by the Registrar General. In this enlarged sense, the metropolis extends over an area of about 74,070 acres, and had, in 1841, a pop. of 1,950,526. The estimated pop. within the above limits in the intervening years has been —

1842 - - -	1,980,776	1847 - - -	2,139,209
1843 - - -	2,011,495	1848 - - -	2,172,386
1844 - - -	2,042,690	1849 - - -	2,206,076
1845 - - -	2,074,370	1850 - - -	2,240,289
1846 - - -	2,106,540		

London is of great antiquity. It is said by Tacitus to have been in the days of Nero, *capiti negotiatorum et commeatum maximè celebre*. (*Annal. lib. xiv. § 33.*) It suffered severely in the revolt of Boadicea; but it speedily recovered from that disaster, and has always been the largest and most important of British towns. It is mainly indebted for its early and long-continued prosperity to its admirable situation. Though 45 m. from the sea, it enjoys, owing to its position on a great navigable river, all the advantages of an excellent sea-port, vessels of 800 tons burden coming up to London Bridge. Had it been built lower down, it would have been less healthy and more exposed to hostile attacks; and had it been higher up, it would have been deprived of the inestimable advantage of a deep-water harbour.

The Romans surrounded London with walls. It is probable that its limits were then commensurate with the part of the city said to be "within the walls," reaching from the end of Leadenhall Street to the top of Ludgate Hill, and from the Thames to London Wall and Little Britain. The wall appears to have inclosed it along the water as well as on the land sides. The great Roman roads called Watling Street and Ermin Street, as well as the *viæ vicinales*, centred in London.

The continued and rapid increase of buildings render it difficult to ascertain the extent of the metropolis at any particular period. If we include in it those parts only that present a solid mass of houses, its length, from E. to W., may be taken at 6 m., and its breadth, from N. to S., at about 3½ m. There is, however, a nearly continuous line of houses from Blackwall to Chelsea, a distance of about 7 m., and from Walworth to Holloway of 4½ m. The extent of surface covered by buildings is estimated at about 16 sq. m., or above 10,000 acres, so that M. Say, the celebrated French economist, did not really indulge in hyperbole when he said, *Londres n'est plus une ville: c'est une province couverte de maisons!*

Notwithstanding its immense size, it is not difficult for strangers to make their way in London. The Thames runs through it lengthwise from W. to E., and most of the great lines of streets are parallel to the river, being intersected at variable distances by lines of cross streets, or of streets running N. and S. Of the former, or of the longitudinal streets parallel to the river, there are two principal lines. The most northerly of these enters London on the W. by the Bayswater Road, passing in front of the fine terraces facing the N. side of Hyde Park: It then runs along Oxford Street, about 1½ m. in length, till, after passing the S. or lower end of Tottenham court Road, it unites with and is prolonged by Holborn, a wide and handsome street about 1 m. in length; whence it proceeds through Skinner

Street, and Newgate Street, till it reaches Cheapside, one of the greatest thoroughfares in the city. It next passes through the Poultry, having the Bank and the Exchange on the one hand, and the Mansion-House on the other, along Cornhill, to Leadenhall Street; from which it is continued by Whitechapel and the Mile End Road, into the country. Its entire length, from Hyde Park to the Regent's Canal, Mile End, is above 6 m.

The other great longitudinal street, to the S. of that now traced, enters London on the W. after passing through Kensington. This is by far the finest of the avenues to the metropolis. On the left Kensington Gardens appear like an ornamental forest; Hyde Park gradually rises to the splendid terraces on the N., and is bordered on the E. by magnificent houses, or rather palaces; and on entering Piccadilly is the handsome approach to Hyde Park and the W. front of Apsley House, the town residence of the Duke of Wellington, *decus et tutamen patriæ*. On the right are the bold arch and gate leading to the Queen's Palace, surmounted by the statue of his grace; the Green Park, apparently stretching to the towers of Westminster Abbey; and a long line of splendid buildings, with the Norwood Hills in the distance. The promise of a magnificent city is not belied by an advance through Piccadilly. This, which is the first of the London streets traversed by the traveller from the W., is 1 m. in length, and is principally built only on the N. side, the other being open to the Green Park. It contains many splendid private residences, and shops. On reaching the E. end of Piccadilly, the continuous line of street divides into two main lines: one of these runs on through Coventry Street, Leicester Square, Long Acre, and Great Queen Street, till it unites with Holborn: the other line deflects to the right through the Haymarket, whence it proceeds to the E. along the line of E. Pall Mall, through Trafalgar Square, and past St. Martin's Church, till it unites with the Strand: This, though formerly in many places narrow and encumbered, is now a magnificent street: it follows pretty closely the line of the river, from which it is not far distant; and, besides two churches in its centre, has Exeter Hall on its N., and Somerset House on its S. side. Contiguous to the latter is Wellington Street, leading to Waterloo Bridge. The Strand terminates at the ancient gate of Temple Bar, the boundary of the city on the W. The great line of street is thence prolonged through Fleet Street, at the E. end of which, on the right, is a fine street leading to Blackfriars Bridge; and on the left Farringdon Street, one of the widest in the city, which it is intended to prolong to Islington. From Fleet Street the line continues up Ludgate Hill, till it reaches St. Paul's, the noblest edifice in the kingdom.

At the E. end of St. Paul's Churchyard, the wider channel of communication joins in Cheapside the grand northern line already traced, coming from Oxford Street, Holborn, &c.; but another branch of the former line runs nearer the river, through Watling Street, Eastcheap, and Tower Street, to the wide area of Tower Hill, whence it may be traced either in a straight line through Ratcliff-highway, N. of the London Docks, or close by the river along Wapping and Shadwell, where the lines again form a single street leading to the W. India Docks. The streets E. of the Tower are narrow, and lined with mean houses mostly occupied by persons connected with shipping. This line is altogether about 6 m. in length.

Another line of street which unites with that

last described, may be considered as beginning at Vauxhall Bridge, close to which is an open quay, $\frac{1}{2}$ m. in length, commanding a view of the river and of the archiepiscopal palace of Lambeth. The line of road is, however, soon separated from the river by ranges of buildings, along which it passes, till it reaches Abingdon Street. At the termination of the latter it runs on, having Westminster Abbey on the left, and the Houses of Parliament with Westminster Hall and bridge on the right: after leaving these, it connects with Parliament Street, and then with the spacious street called Whitehall, in which are the Treasury, Horse Guards and Admiralty, separating it from St. James's Park on the left, and the Banqueting Hall, with other handsome mansions shutting out the view of the river. The magnificence of the buildings in this short line of street is unequalled, except by those at the W. entrance of Piccadilly, and by the terraces of the Regent's Park. Beyond Whitehall is Charing Cross and Trafalgar Square, with the Nelson monument in its centre, and the National Gallery on its N.W. side. Here the line, bending E. with the river, unites with the Strand, already noticed.

Among the principal streets running from N. to S., the 1st and most westerly is the Edgware Road, with its continuations, Park Lane, Grosvenor Place, and Vauxhall-bridge Road, which, for the most part, bound the metropolis westward: The 2d, proceeding eastward, is the line formed of Portland Place, Regent Street, and Waterloo Place, extending between the Regent's and St. James's Parks, and forming the most splendid public thoroughfare in London, as well from the width of road as from the grandeur of the houses and shops on either side. At its S. termination is a granite column, surmounted by a bronze statue of the Duke of York, brother to George IV. A little N. of Piccadilly the line curves through the Quadrant, a handsome range of buildings. From this point it continues northward to Oxford Street, where it expands into a circus, and then, resuming its former dimensions, proceeds to the church in Langham Place: here, by a slight curve westwards, it opens into Portland Place, a wide and well-built street, formerly a favourite residence of the foreign ambassadors, but latterly declining in the scale of fashion: Park Crescent and Park Square, opening into the Regent's Park, form an appropriate finish to the whole. The 3d great N. and S. line is a continuation southwards of the road from Hampstead: it passes along Tottenham-court Road to the E. end of Oxford Street, from which point its course may be traced through narrow streets down St. Martin's Lane to Charing Cross: but though a busy, it is an intricate thoroughfare, and is devoid of architectural interest. The other principal N. and S. lines consist of Gray's Inn Lane and Chancery Lane; Goswell Street and Aldersgate Street; and the line of street commencing at the Regent's Canal on the N., successively called Kingsland Road, Shoreditch, Norton-Folgate, Bishopsgate Street, and Gracechurch Street: at the S. termination of the latter this line passes over London Bridge, and is thence prolonged across the Borough as far as Kennington Church in Surrey: its length is about 4 m., which may be considered the breadth of London in this quarter. The portion of this line at and near London Bridge affords some of the finest points for viewing London and the scenery on the river. Exclusive of the above, there are an infinite number of cross

streets, some of which are of great importance. Among others, a spacious line has been opened from Finsbury Square through Moorgate Street, Princes Street, and King William Street, to London Bridge.

In addition to the various routes intersecting each other in different directions, a grand line of road embraces the greater part of London on the N., in a manner not unlike that in which the Boulevards encircle Paris. It commences in the Uxbridge Road, and has a N. E. course as far as King's Cross, St. Pancras, where, turning eastward, it ascends Pentonville hill, and entering the City Road, terminates in Finsbury Square.

In Southwark, the great roads from the different bridges unite at the well-known posting house called the Elephant and Castle. They are generally wide and well-built streets, though, with the exception of Blackfriars Road, inferior to the principal thoroughfares N. of the river. A line of street, extending from Westminster Road to the Borough, connects these several roads with each other.

Unlike Edinburgh and many other great towns, the houses in London are not, with the exception of those in the Temple and Inns of Court, divided into stories (*Scottice* "flats"); but in the vast majority of instances belong to or are hired by one individual, by whom, however, portions of them are frequently let to lodgers. They have usually a story sunk below the level of the street, comprising the kitchen and other offices, above which are usually 3 or 4, or more stories. The smaller, and by far the most numerous class of houses have narrow fronts, containing one room or shop in the front of the street floor, and that immediately above it, the stair and a smaller apartment occupying the back part; the two upper floors are frequently divided into smaller apartments. Every house has the inestimable advantage of having an abundant supply of water; and in all the better class of houses it is supplied to the top as well as to the under story. Except in the very worst parts of the town, all the refuse water and drainage of the house is conveyed by a covered drain to the sewer, or grand receptacle in the centre of the street, sunk below the line of the lateral drains. Most houses have cellars opposite to them under the street for the stowage of coal, and such like articles. No filth is ever laid down upon the streets, which have universally flagged foot-paths along each side; and notwithstanding the concourse of horses, and the grinding of the pavement by carriages, the streets are, speaking generally, extremely well kept.

Until a comparatively late period the external appearance of the houses of London was little in harmony with the wealth of their occupiers, and the richness of their interiors. Internal comfort was long the only, as it still is (and it is to be hoped will long continue to be) the grand object of the Londoner. Provided his house were clean, commodious, and well and handsomely furnished, he cared little about its outside. Hence it was that the interminable rows of dull-looking brick houses, erected with little or no regard to uniformity, led strangers to remark that the best streets resembled long walls pierced with holes for doors and windows. Even Bond Street was said, in 1810, by an intelligent foreigner, to be "an ugly inconvenient street, the attractions of which it is difficult to understand." But the same author (*Simond*) adds—"You cannot pass the threshold without being struck with the look of order and neatness of the interior. Instead

of the abominable filth of the common entrance and common stairs of a French house, here you step from the very street on a neat floorcloth or carpet, the wall painted or papered, a lamp in its glass ball hanging from the ceiling, and every apartment in the same style. All is neat, compact, and independent."

With the exception, indeed, of St. Paul's, Westminster Abbey, Somerset House, and a few more churches and public buildings, London displayed, till within the last few years, little architectural elegance. In our own times, however, the erection of magnificent ranges of buildings, in every direction, has made our metropolis as superior to most capitals in appearance, as it has long been in wealth, cleanliness, and comfort. The line of Regent Street has been already mentioned, to which may be added the Regent's Park, "affording a landscape bounded by hills, and more than half surrounded by a large circuit of buildings, worthy the capital of the world." Belgrave and Eaton Squares, and the adjoining streets and squares on the estate of the Marquis of Westminster, with the terraces in Carlton Gardens, have all been raised within the last 30 years, and are probably unequalled for symmetry and magnificence. Within a still shorter space a splendid city has been built on the elevated ground on the N. side of Hyde Park. And these, with the new buildings in Pall Mall, St. James's Street, &c., render the W. end of London a residence worthy the wealthiest aristocracy in the world. But the improvements effected of late years in the city, or oldest part of the town, have been equally great and striking. The new streets that lead from the Bank to London Bridge on the one hand, and to Moorfields on the other, are on a grand scale; and when it is borne in mind that the ground which they traverse was previously occupied by a dense mass of houses which had to be purchased at a high price, it will be seen that they do as much credit to the public spirit as to the taste of the citizens. Four new and noble bridges over the Thames form no small addition to the improvements of the last forty years. Although, therefore, it cannot be said of George IV. and William IV., that, like Augustus, they found a capital of brick, and left one of marble, it must be admitted that during their reigns an extraordinary impulse was given to city architecture and embellishment: And this impulse still continues, and bids fair to render the reign of Queen Victoria yet more memorable in the annals of civic improvement.

The houses of London, with very few exceptions, are built of brick. But within the last few years those in the principal streets have been mostly plastered or stuccoed over, and their fronts made so exactly to imitate the finest freestone, that it is sometimes no easy matter to distinguish between them. This method of dressing up houses has contributed most materially to the improved appearance of the town. Those indeed, who have been accustomed to stone structures, are apt to associate ideas of insecurity and of rapid decay with stuccoed fabrics; but, provided the walls be well built, and the plaster be kept in repair by occasional painting, stuccoed houses are, in fact, all but imperishable. The cheapness of stucco, too, allows it to be applied to the inferior class of houses; while, from the facility with which it may be moulded, it permits an elaborateness of ornament that could not be executed in stone at

many times the cost. Belgrave Square, and the magnificent terraces of Carlton Gardens, Hyde Park, &c., owe most part of their elegance to the judicious application of stucco.

The insides, as well as the outsides, of the houses have been greatly improved within the last 30 or 40 years; those now and lately built being far more conveniently constructed than formerly, and better suited to the accommodation, the comfort, and the health of their inmates.

It is frequently both a difficult and a dangerous matter to get across a crowded street, or one much frequented by carriages. This difficulty has, however, been in some parts a good deal lessened by constructing raised landing-places in the middle of the streets, protected by pillars and lamps, to which passengers may resort. But though these conveniences do not cause any sensible obstruction to carriages, their supply is scanty in the extreme; there not being, in fact, one where there should be ten.

It is much to be regretted that the Thames, which from its breadth and depth might be the greatest ornament of the city, as well as the principal source of its wealth and prosperity, is so closely pent up by wharfs, warehouses, and other buildings, that it is almost shut out from the view, except where it is crossed by bridges. It is, however, fronted by the Custom-house and Somerset house, the Adelphi Terrace, and by the Temple Gardens, and some private houses in Whitehall. But the most magnificent views of the river, and, indeed, in some respects, of the city, are obtained from the bridges.

Divisions.—The most popular division of London is into three parts: the city, the west end, and the borough; Temple Bar dividing the city from the west end, and the river separating both these portions from the borough. This division is necessarily vague, and, for specific purposes, different divisions are made. The city of London, strictly considered, is situated nearly in the centre of the metropolis, and is the seat of commerce on the largest scale. The city of Westminster, W. of the city of London, contains the royal palaces, the houses of parliament, the law courts, most of the public offices, and the town residences of nearly all the nobility and aristocracy. The cities of London and Westminster, however, do not comprise above an eighth part of the area, or a fourth part of the pop., of the whole of what may be considered the metropolis. For parliamentary elections, the metropolis is divided into 7 districts: the cities of London and Westminster, as above stated; the borough of Finsbury, N. of the city of London; the Tower Hamlets, E. of Finsbury and the city; Marylebone, N. of the city of Westminster; and 2 districts S. of the river, Southwark on the E., and Lambeth on the W. side.

The area of the city of London, which comprises only a small portion of the metropolis, is roughly estimated at about 570 acres. Its boundary line leaving the Thames at Temple Lane, passes northwards, crossing Fleet Street at Temple Bar, and Holborn at "Holborn Bars." Turning eastward, it thence takes an undulating course, inclosing Smithfield, Finsbury Circus, and Bishopsgate Street S. of Spital Square. It thence passes S.E. through Petticoat Lane, to Aldgate, from which point the boundary, pursuing a S.S.W. course, reaches the Thames by a very irregular line, excluding the Tower. The city is divided into 108 parishes, of which 97 are said to be "within," and 11 "without" the walls. This division is now merely nominal, the ancient city boundary having long disappeared, although the city gates, where the walls passed the great thoroughfares, were standing in the last half of the 18th century.

The E. boundary of the city of Westminster coincides with the W. boundary of London at the Thames and Temple; it thence runs N.W. to the junction of Tottenham-court-road and Oxford Street. The latter street constitutes the whole N. boundary as far as the W. extremity at Kensington Gardens. From this point a very irregular line, running to Chelsea Hospital, forms the W. boundary. It then turns to the S.W. along the Serpentine river, on leaving which it goes S. until it reaches the Thames near Chelsea Hospital.

The five metropolitan boroughs, being parliamentary only, and not municipal, need not be minutely described. Marylebone includes the three parishes of Marylebone,

Paddington, and St. Pancras; Finsbury comprises nine parishes, and the Rolls' liberty; and the Tower Hamlets includes fifteen; Southwark embraces not only the municipal borough, but the parishes of Bermondsey and Rotherhithe; and Lambeth comprises Camberwell and Newington, as well as the parish of its own name.

Parks, Squares, &c. — The W. end of the town is beautified and rendered healthy by four extensive parks, appropriately called the lungs of London. They are open to the public; and, though each has a different character, they all afford ample scope for recreation and exercise. Hyde Park (once the manor of Hyde, and belonging to the Abbey of Westminster), lying W. of Piccadilly and Oxford Street, and between the roads leading therefrom, contains about 400 acres, and has a large and deep artificial lake, crossed by a handsome bridge of five arches. This lake, which is slightly bent, is, by an absurd misnomer, called the Serpentine river. The whole of this park was, till lately, an open field, dotted with trees, and traversed by carriage-ways, which, in fine weather, during the season, are crowded with gay and fashionable equipages. But a portion of it on the S. W. side of the Serpentine river has, within this short time, been taken off for the extraordinary fabric of iron and glass that is now being erected for the Grand Exhibition of next year. This fabric, which is to cover several acres of land, will be one of the principal "lions" of the metropolis. It is not yet, we believe, determined whether it is to be pulled down when the exhibition is over; but if not, the encroachment on the park will, we apprehend, go far to balance much of the advantage of which the exhibition may be productive. Kensington Gardens, lying W. of Hyde Park, and separated from it by a trench and wall, are open to the public. They are extensive, and are finely wooded. St. James's Park, between the Horse Guards and Buckingham Palace, is less than a fourth part of Hyde Park, and not so open; its site being low, damp, and marshy. Within these few years, however, the central part has been tastefully laid out, and what was a dirty straight canal, running through a marsh, has been converted into a varied sheet of water, interspersed with islands affording a secure retreat to numerous aquatic birds, and surrounded by lawns, shrubberies, and trees. The avenues on the N. side of this park are open to all pedestrians, but only to the horses and carriages of some privileged members of the aristocracy. The S. drive is open to all private and hackney carriages. The Green Park, a triangular piece of ground, about as large as St. James's, from which it gradually rises to Piccadilly, is open, well aired, and forms a sort of miniature Hyde Park. Along its E. margin are some of the most splendid houses in the metropolis, inc. those of Earl Spencer, the Duke of Sutherland, and the Earl of Ellesmere. The latter, in the Palladian style, is a noble palace, and will, when finished, be the most magnificent private residence in London.

The Regent's Park, which is nearly as large as Hyde Park, with an equally varied surface, was formed during the regency in the latter years of the reign of George III. It is sit. N. of Portland Place, on high ground, surrounded by elegant buildings. But it has a clay subsoil, is wet, and badly drained. Neither is it, what it professes to be, a place wholly appropriated to the accommodation and recreation of the public: on the contrary, the public is shut out from a considerable portion of its extent, and some even of its finest parts have been let to individuals who have built villas upon them! This is a gross abuse of the public property: and it is astonishing that it should have been allowed to be perpetrated, almost without

notice. The gardens of the Zoological Society are situated on the N. side of this park; and the central portion is occupied by the garden of the Botanical Society.

A portion of the advantages so long enjoyed by the W. end of the town in the possession of its four parks, has latterly been conferred on the E. parts of the city, where Victoria Park has recently been opened to the public. It comprises about 800 acres of land, which were bought by and laid out at the expense of government. It is much frequented by the adjoining pop., especially on Sundays. It is situated a little to the N. E. of Bethnal Green. Another new park is, also, about to be opened in Battersea Fields, W. from Lambeth.

On the E. side of the Regent's Park, near Park Square, is the large building inaptly styled the Colosseum. It is a 16-sided polygonal structure, with a magnificent portico and cupola. It is principally used for the exhibition of panoramic views on a large scale; but it has, also, a spacious room for the exhibition of sculpture, with the trumpery of grottoes, a Swiss cottage, &c.

The squares of London are pretty numerous in all parts, but the largest and handsomest are in the W. end. In many, the houses are on a grand scale, and the central gardens well laid out. Grosvenor, Berkeley, and Hanover Squares, which lie between Oxford Street and Piccadilly, were formerly, and still are, favourite resorts of the aristocracy. Perhaps, however, Belgrave Square, in Pimlico, with the surrounding streets and squares, and Carlton Terrace, may at present be the most fashionable quarters. St. James's Square, between Piccadilly and Pall Mall, and Cavendish, Portman, and Manchester Squares, on the N. side of Oxford street, are mostly occupied by persons of distinction. Trafalgar Square has two fountains; but they are the reverse of ornamental. Further E. are Russell and Bedford Squares, and a cluster of squares to the N. of these, chiefly occupied by merchants and tradesmen. Lincoln's Inn Fields, S. of Holborn, is a large and well built square, and its enclosure is more tastefully laid out than any other in the metropolis. Finsbury Square lies N. of the city, and near it is Finsbury Circus. Other squares, formed of good houses, are to be found in all parts of the town and neighbourhood.

Statues and Public Monuments. — Several of the best squares are decorated with statues; among which may be remarked those of Charles II., William III., Anne, and George I. in Soho, St. James's, Queen's, and Leicester Squares; that of George I. in Grosvenor Square; of William, Duke of Cumberland, in Cavendish Square; of Pitt, by Chantrey, in Hanover Square; of Fox, by Westmacott, in Bloomsbury Square; of the Duke of Bedford, by the same sculptor, in Russell Square; and of George IV., by Chantrey, in Trafalgar Square. Other statues are placed in different parts of the metropolis, among which are the equestrian statue of Charles I., by Le Sueur, at Charing Cross; of James II., by Gibbons, behind Whitehall; of Anne, by Bird, in front of St. Paul's; of George III., by Wyatt, Pall Mall; of the late Duke of Kent, in Park Crescent; of William IV., in King William Street, city; of Canning, by Chantrey, in Palace Yard; of the Duke of Wellington, by Wyatt, over the grand arch at the junction of the street, at Hyde Park Corner, with the road leading by Constitution Hill to Buckingham Palace; and another statue of his grace, by Chantrey, opposite to the Bank of England in the city. Near the E. entrance to Hyde Park is a statue copied from a figure at Rome, said, but without any authority, to be that of Achilles. It is of brass, and was formed out of

cannon captured by the Duke of Wellington, in whose honour it was erected, and to whom it is inscribed, by the ladies of England! But with all due deference, it is not easy to imagine any thing more absurd. What has the Duke of Wellington, by far the most illustrious Englishman of his age, in common with a colossal gladiator, that a statue of the latter should be erected in his honour?

The Monument on Fish Street Hill, built in 1671-77, to commemorate the burning of London, is a fluted Doric column, 202 ft. in height, designed by Sir Christopher Wren. The pedestal is decorated by a representation, in relief, of the destruction of the city, sculptured by Cibber: at the top of the column is a gallery affording a view of the E. part of the metropolis, and on the summit is a blazing urn, recently regilt. It is a noble column, and had it been better situated would have been one of the greatest ornaments of the city. A short English inscription on the pedestal ascribed, without the slightest foundation, the conflagration it is designed to commemorate to the treachery and malice of a Popish faction. Pope alluded to this when he says,

"Where London's column pointing to the skies,
Like a tall bully, lifts the head and lies."

But, in 1830, this offensive inscription was obliterated, in pursuance of a resolution of the Court of Common Council.

The York Column is a plain Doric pillar of granite, surmounted by a bronze colossal statue of the Duke of York. The height of the column is 124 ft., and above the capital is an iron gallery, from which a good view is obtained of the W. end of the town. This column, erected in 1833, is situated on the N. side of St. James's Park, at the lower end of Waterloo Place.

A fluted Corinthian column, with a capital of cast metal, has been erected in Trafalgar Square in honour of Nelson. It is surmounted by a statue in stone of the hero; and on its pedestal are some spirited sculptures in *alto rilievo*, in bronze, representing his death, and some of the most striking events of his life. It is 176 ft. 6 in. high from the base to the top of the statue; but, on the whole, it has a poor effect.

Bridges.—The Thames, which, in its course through London, has a medium width of about 1000 ft., is crossed by 6 bridges for carriages, &c., and by a bridge for foot passengers only, built at an aggregate expense of above 5,000,000*l*. A wooden structure had been thrown across the river early in the 11th century; but the frequent and costly repairs indispensable for its maintenance led to the construction of one of more durable materials. A stone bridge, of pointed architecture, was completed in 1209, which, by means of occasional renovations, was kept standing till 1834. Down to the middle of last century, this was the only bridge between London and Southwark. The great inconvenience of a circuitous journey from the west end of the town to the city before the river could be crossed by carriages, induced parliament, in 1738, to make a grant for the erection of Westminster Bridge at the court-end of the metropolis. Blackfriars Bridge (intended by its projectors to have been called Pitt Bridge, in honour of the first great statesman of the name of Pitt), was built about 20 years after, the expense of its construction being defrayed by a toll exacted during 19 years. Westminster and Blackfriars Bridges were built of Portland stone, which, being too soft to resist the constant attrition of the water, and of the ice of winter, their piers were so much worn as to threaten their entire destruction: latterly, however, the piers of Black-

friars Bridge have been cased with granite, and it has been otherwise repaired at a heavy expense. Considerable progress has, also, been made in the repair of Westminster Bridge; and it is probable that it would ere now have been completely renovated, had it not been latterly proposed to take it down because, being in the immediate neighbourhood of the new Houses of Parliament, its height does not harmonise with their low elevation! The bridges erected within the present century have completed the connection between all the important districts on both sides the river. Two of these, Vauxhall and Southwark Bridges, have iron arches. The latter, the most splendid structure of its kind hitherto erected, has only three arches, the span of that in the centre being 240 ft., and the weight of metal in it 1,665 tons! Waterloo Bridge, which Canova said was "worth a visit from the remotest corner of the earth," is of granite, and has 9 elliptical arches, each 120 ft. in width. It was built by a joint stock company; but owing to the want of any great thoroughfare leading to or from it, and to the influence of the toll on the passengers and carriages that cross the river by its means, it is little frequented, and has been most unprofitable. The demolition of old London Bridge was owing less to its decayed state than to the defects of its construction. The piers and starlings between its numerous arches (21 at the period of its removal) occupied so large a portion of the waterway as to obstruct the course of the water both during the flow and ebb of the tide, especially the latter. At low ebb, indeed, there was a difference of nearly 5 ft. between the level of the water on the upper and lower sides of the bridge. This, by occasioning a dangerous fall and eddy in the water for a considerable time both before and after low water, interrupted the navigation, and occasioned every now and then fatal accidents. At length it was determined to abate the nuisance, by pulling down the old bridge, and erecting in its stead a new structure with arches of such a size as not sensibly to affect the flow of the river. New London Bridge, like the Southwark and Waterloo Bridges, was planned by the late John Rennie. It is built of granite, the span of the centre arch being 150 ft.; and whether we consider its magnitude, or the beauty and simplicity of its structure, it is certainly a noble specimen of bridge architecture. The heavy expense of this fabric has been partly defrayed by a duty on all coal brought into the pool, and partly from the revenues of property appropriated for the support of "London Bridge."

The following table comprises a statement of the principal particulars connected with the different carriage bridges belonging to the city. (*Leeds on the Public Edifices of London*, ii. 402.)

Name.	Date of Completion.	Cost.	No. of Arches.	Length.	Breadth.	Span of Central Arch.
London Bridge	1831	<i>L</i> . 2,000,000	5	920 ft.	55 ft.	150 ft.
Southwark	1819	800,000	3	700	42	240
Blackfriars	1770	360,000	9	1,000	42	100
Waterloo	1817	1,150,000	9	1,326	42	120
Westminster	1751	389,500	18	1,066	42	76
Vauxhall	1814	280,000	9	809	36	78

The Hungerford Suspension Bridge for foot passengers, between Westminster and Blackfriars Bridges, was opened in 1845. This handsome and convenient structure is supported by two towers in the river.

The Tunnel, which, unlike the bridges, passes

under and not over the Thames, effects a connection between its banks nearly 2 m. below London Bridge. The erection of a bridge in the centre of the port was of course impracticable, and the mode of uniting the two shores, without injury to the shipping interest, was long a difficult problem for engineers. It was at length solved by Sir I. Brunel, who designed and completed the tunnel. It consists of a hollow brick cylinder, or tube, subdivided into two road-ways, each 15 ft. high and 12 ft. broad. Notwithstanding the danger attending the execution of the work, owing to the perpetual oozing through and occasional bursting in of the river, the loss of life during the 15 years it occupied was very inconsiderable. But it has hitherto been a most unprofitable speculation; and how curious soever in other respects, we incline to think that the tunnel never will be of much practical utility. The difficulty of the descent will always be a formidable obstacle to its extensive use. It was begun by a private company, but it could not have been completed without the aid of grants from the public.

Palaces and Houses of Parl.—St. James's, at the W. end of Pall Mall, is an irregular mean-looking brick building, totally unworthy the name of palace: it was erected by Henry VIII., on the site of an hospital for female lepers, which existed in the 11th century. The interior, however, is handsomely fitted up, and it is well adapted for court levées and drawing-rooms, which are mostly held in it. The chapel attached to this edifice is that used for the ancient hospital.

Buckingham Palace, at the W. end of St. James's Park, occupies the site of Arlington House, pulled down by John Sheffield, Duke of Buckingham, who erected in its stead a plain, respectable mansion. Having been purchased by George III. in 1762, it became the favourite abode of Queen Charlotte. Under George IV., whose rage for building was as decided as his taste was equivocal, Buckingham House was entirely rebuilt; and became, in 1837, the town-residence of the Queen. Till recently the principal front to the E. consisted of three sides of a square, a marble arch (a miniature imitation of that of Constantine at Rome) being a little in advance of its narrow projecting wings. But this arch, which did not harmonise with the rest of the building, and was, at the same time, mean and paltry, has been removed in the course of the present year (1850).^{*} A new Eastern front has, also, been given to the building, which is now quadrangular. This new portion is of great magnitude; and though, perhaps, some of its details may be objected to, it is, on the whole, an imposing structure, and makes an important addition to the palace. The apartments in it are more lofty than those in the other portions of the building, and are better fitted for state-display. The garden façade, an elevation of the Corinthian order on a rustic basement, is the best part of the palace built by George IV. The gallery, about 160 ft. in length, contains some good pictures. Except in the new front, the rooms in the basement story are low, and some of them, with the greater number of the corridors and passages, are badly lighted.

The situation of this palace is not favourable. It is closely hemmed in on the S. side by inferior houses; while, on the W. side, the grounds are overlooked by the houses in Grosvenor Place. Improvements are now being made between the new front and St. James's Park, which, certainly, were much needed. Hitherto, the road in front of the palace, and along the mall, not being paved,

but covered with a compound of gravel and clay, became in wet weather a mere puddle.

The old Houses of Parliament stood upon ground formerly occupied by the palace of Westminster. Their appearance was far from imposing; but a certain degree of antiquated splendour, the associations connected with their history, and the importance of the purposes to which they were appropriated, made them respectable in the eyes of Englishmen. They were, however, wholly destroyed by fire on the 16th October, 1834. A building, which it was supposed would be one of the noblest ornaments of the metropolis, has for some years past been in the course of being erected on the same spot by Mr. Barry. It has a river front 900 ft. in length, and several towers, that at the S.W. angle, over the royal entrance, in the perpendicular English style, being intended to be 346 ft. high. It would, perhaps, be going too far to say that the expectations that were originally formed of this building bid fair to be wholly disappointed. But, in so far as it may be judged by its present appearance, we cannot help agreeing in great part with those who think that both externally and internally it will be an all but complete failure. Its site is too low, but this defect might easily have been obviated by artificial means. The elevation, also, of the greater part of the building is too low; and this is made the more obvious by contrast with the grand tower, which is to be of an extraordinary altitude. It is, also, overlaid with an endless profusion of minute ornaments, which detract from its simplicity, appear paltry, and are good for nothing, but to catch soot and smoke, and to form convenient receptacles for swallows' nests. The passages inside, being in the last degree complicated, are more like the mazes in a labyrinth than the corridors in a palace. The new House of Lords is as gorgeous and meretricious as gilding and painting can make it; and the new House of Commons is said to have all the faults such a building can have. It is of little consequence who is really responsible for all this. But it is much to be regretted that the opportunity, so unlikely to recur, of raising a structure worthy of the legislature of a great nation, has been thus thrown away; and that the enormous expense that has been, and will yet have to be, incurred in completing the present fabric, should not have been expended on some worthier building.

The *Government Offices*, inc. the Treasury, Home Office, and Board of Trade, on the W. side of Whitehall, have recently been much improved by the erection of a uniform and handsome palatial front. The Board of Control has an Ionic portico, but is, otherwise, a plain building. The Ordnance and Admiralty offices make no pretensions to display; and the "Horse Guards," which does pretend to it, is in very bad taste. Many of the public offices are in Somerset House, once a palace, occupied by Edward VI. and Elizabeth. The old building was taken down in 1776; and the present quadrangular structure, designed by Sir William Chambers, was completed in 1782, and distributed into government offices. The street front is only 200 ft. in length, but that facing the river is 800 ft. in length, and is one of the noblest elevations in London. An eastern wing was added by King's College, in 1880, in completion of the architect's design.

On the river's bank, in the E. part of the city, is the *Tower*,

^{*} "With many a foul and midnight murder fed."

This rude fortress, about $\frac{1}{2}$ m. below London Bridge, was begun by William the Conqueror in 1078. The

^{*} It is now being rebuilt at Cumberland Gate, Hyde Park.

original building, now called the White Tower, was completed in 1098. Additions were made by Henry III. in 1240, by Edward IV. in 1465, and the whole was substantially repaired by Charles II. in 1668. The Grand Storehouse, a large building N. of the White Tower, begun by James II., and completed by William III., was burned down in 1841, when about 280,000 stand of muskets and small arms were destroyed. On the site of this Storehouse a large semi-Gothic structure, called the Wellington barracks, and serving partly as such, and partly as an armoury, &c., has been erected. It is fire proof, and is constructed so that it could not easily be taken, unless artillery were employed against it. The Tower was a royal palace during more than five centuries. It was long, also, and still in fact is, a state prison; and several royal personages, and some of our highest nobles, and most distinguished commoners, have perished in this edifice, some by the hands of public executioners, and some by the dagger and bowl of the assassin. It anciently contained several detached masses of building, most of which have now disappeared. The original tower, now called the White Tower, still remains the principal edifice. The Martin Tower is now called the Jewel Tower. The Lantern Tower, the Royal Palace, and the Mint, have been pulled down. Of the remainder of the old building vestiges may be traced under altered names. The present edifices consist, ex. the barracks, already referred to, of the church of St. Peter, the ordnance office, the record office, the jewel office, armouries, &c. The whole is surrounded by a moat, filled with water from the Thames, and the outer bank has been recently turned into pleasure grounds. The Tower is open to visitors, who pay 6d. to see the armouries, and a similar sum to inspect the regalia. The ménagerie, formerly the best in England, having been superseded by that belonging to the Zoological Society in the Regent's Park, was dispersed some years ago.

The Mint, formerly in the Tower, but now on Tower Hill, is a stone building of Greek architecture, consisting of a centre and wings. The workshops and offices occupy about 8,000 square yards, and the machinery for coining is complete and efficient. The selection and remuneration of the officers and workmen is in some respects anomalous, and will, probably, be soon changed. The money coined in 1847 consisted of 5,158,440*l.* in gold, 125,780*l.* in silver, and 8,960*l.* in copper. The gold is computed at the Mint price of 3*l.* 17*s.* 10½*d.* per oz. troy, or 46·7 *sovs.* to the lb. troy; the silver at 5*s.* 6*d.* per oz., or 66*s.* to the lb. troy; and the copper at 224*l.* per ton, or 24 pence to the lb. avoird.

Post-Office.—The Post-Office, in the centre of the metropolis, near St. Paul's, a large, handsome building, completed in 1829, of Portland stone, is 390 ft. in length, 180 ft. in width, and 64 ft. high. The façade has three Ionic porticoes, over the central and largest of which is a plain pediment. Within this portico is the great hall, 80 ft. by 64 ft., divided into three compartments by rows of Ionic columns on granite pedestals: passages lead from it to the principal offices.

The business transacted in this building, embracing as it does the internal correspondence of this immense city, and its external correspondence with all parts of the U. Kingdom and of the world, is necessarily of vast extent; and is conducted with a degree of dispatch, regularity, and accuracy, that is quite extraordinary. There are about 200 houses for receiving letters within what is called the "town district" of the metropolis. The postage collected in London amounted in 1847

to 888,948*l.*, and in 1848 to 876,851*l.* The post-office revenue of Liverpool, which is next to that of London, amounted in 1848 to 57,678*l.*

Religious Establishments and Buildings.—London is a bishop's see, the highest in rank in the kingdom under the archbishops. The diocese till lately comprised 199 parishes in Middlesex, 398 in Essex, 56 in Hertfordshire, and 4 in Buckinghamshire, in all 650; but under the new ecclesiastical arrangements it comprises all the parishes of Middlesex, 28 in Surrey, 10 in Essex, and 9 in Kent, making a total of 241 parishes, and 818 benefices. The nett revenue of the diocese, at an average of the three years ending with 1831, was 13,929*l.* *per annum*, and owing to the building that has been and is now going on upon the bishop's estate, it will, at no distant period, amount to three or four times that sum; but on the death of the present incumbent, the income of the see is to be fixed at 10,000*l.* a year nett. There are in the city of London 118 parishes, of which 97 are within the walls, and 16 in the liberties: the 97 parishes are very small, and only 57 of them have churches; those belonging to the others either having been burned down at the great fire of 1666, and not rebuilt, or been since removed to make room for improvements. Some additional churches have been built in the liberties, making the whole number now in the city 75. Westminster contains 10 parishes, 4 of which were formed early in the last century, in consequence of the great increase of pop. at the W. end of the town, and 1 recently; 2 only of these parishes, St. Margaret's and St. John's, are considered to form the city of Westminster, the other 8 being denominated the liberties. Westminster was erected into a bishopric by Hen. VIII. in 1541, when the whole of Middlesex, exclusive of the city of London and the parish of Fulham, was assigned as its diocese; but this bishopric existed only nine years, at the expiration of which the ecclesiastical government reverted to its former channel. Within the present century, sundry district churches have been built. According to what appears to be an authentic statement, there are at present about 160 churches in the metropolis, exclusive of those in the city, or 285 in all; and to those have to be added about 85 episcopal chapels. It is needless, perhaps, to add that in addition to the churches and chapels belonging to the establishment, there are immense numbers of other places of worship in London. In it almost every class of religionists has its representatives, and its chapels. And some of these, as the Methodists, R. Catholics, Baptists, Unitarians, Foreign Protestants, Scotch Presbyterians, Jews, &c. are very numerous. The entire number of chapels, &c., belonging to dissenters, that is, to all parties not in communion with the Church of England, amounts to about 280.

St. Paul's, the cathedral church of London, is not only the great architectural glory of the metropolis, but of the empire. It stands in an elevated situation at the top of Ludgate Hill, on the site of the former cathedral, destroyed during the great fire of 1666. Its foundations were laid on the 21st of June, 1675; and Sir Christopher Wren, by whom it was designed, and under whose directions the work was carried on, lived to complete the stupendous edifice, the last stone of which was laid by his son in 1710. It is built in the form of a Latin cross, with an additional arm or transept at the W. end to give breadth to the front, and has a semicircular projection at the E. end for the altar, and semicircular porticoes at either end of the transept. It is 510 ft. in length, E. to W., the

length of the cross, exclusive of the circular porticoes, is 250 ft., the breadth of the W. façade with the turrets, 180 ft., and the height of the walls 110 ft. An immense dome, or cupola, rising over the centre, is surmounted by a lantern, ball, and cross, the latter being elevated 362 ft. above the level of the floor, and 370 feet above the pavement of the churchyard. The two turrets, or belfries, in the W. front, are each 222 ft. in height. The walls are decorated by two stories of coupled pilasters arranged at regular distances, those below being of the Corinthian and those above of the Composite order. The whole building is of Portland stone; and the excellence of its foundations, and the massive solidity of its walls and piers, warrant the inference that it will be as lasting as it is magnificent.

St. Paul's, it is frequently said, is copied, or at least closely imitated, from St. Peter's at Rome; and to some extent this is true. But it is a copy that bears the impress of transcendent genius; and may be said to be to St. Peter's what the *Æneid* is to the *Iliad* and *Odyssey*. The fronts of both cathedrals are the parts, perhaps, in which they are most deficient; but in neither instance was the architect allowed to follow out his own conceptions. Bramante and Michael Angelo wished to have the portico of St. Peter's formed on the plan of the Pantheon, and Wren was obliged to modify his masterly designs so as to make them acceptable to those to whom he was obliged to defer. The belfries of St. Paul's give it a character very different from that of St. Peter's. Neither is the dome of the latter so spherical as that of the British cathedral, nor is it so striking a feature of the building, being placed so far behind the lofty façade as to be almost invisible to a person standing near the edifice. But in the vastness of its proportions St. Peter's as far exceeds St. Paul's as the latter does the largest of the English churches. Perhaps, also, it is superior to St. Paul's in the harmony of its parts; the dome, though so grand a feature in the latter, being, it is very generally admitted, too large for the other parts of the building. But the English cathedral is, though *longo intervallo*, second only to St. Peter's; and is unquestionably the noblest of transalpine and of Protestant temples.

The interior of St. Paul's is chaste and imposing; but, owing to the want of ornament, it has rather a naked and austere appearance. Latterly it has been attempted to obviate this defect by placing within the cathedral monuments erected at the public expense to eminent individuals, among whom may be specified Marquis Cornwallis, Earl St. Vincent, Lord Nelson, Abercrombie, Earl Howe, Howard the philanthropist, Dr. Johnson, Sir William Jones, Sir Joshua Reynolds, &c. But these, with few exceptions, do no credit either to the artists or the country, and are totally unworthy of the temple which they only encumber.

The remains of Sir Christopher Wren are deposited in one of the vaults of the cathedral; and before the entrance to the choir is the following appropriate inscription to his memory:—

SUSTUS. CONDITOR. HUIUS. ECCLESIAE. ET. URBS.
CONDITOR. CHRISTOPHORUS WREN. QUI. VIXIT.
ANNOS. ULTRA. NONAGINTA. NON. SISI. SED.
BONO. PUBLICO. LECTOR. SI. MONUMENTUM. REQUIRIS.
CIRCUMSPICE.
ORBIT. XXV. FEB. ANNO. MDCCXXIII.
ÆTAT. 91.

Individuals ascend by an inside stair to the stone gallery which surrounds the exterior gallery above the colonnade; and by a more diffi-

cult ascent they reach the Golden Gallery, which crowns the apex of the dome, at the base of the lantern. The view from this latter point, on a clear day, is unrivalled. The entire metropolis, vast as it is, appears to be spread out at the spectator's feet. The broad and silvery line of the river, crossed by numerous bridges, and bearing on its bosom thousands of vessels, gives infinite grandeur and variety to the scene. At this height, the people, horses, and carriages in the streets, and every thing else on the surface, appear so greatly diminished, that the bustle of the crowd has been, not inaptly, compared to that of a swarm of emmets. Owing to the usual density of the smoke, this splendid view is seldom seen in perfection. It appears to the greatest advantage early in a clear summer morning, before the fires are lighted.

The more adventurous visitors not only ascend to the top of the cupola, but enter the lantern, and thence make their way into the copper ball by which it is crowned. The diameter of the latter is 6 ft. 2 in.

The whole cost of this noble structure amounted to only 747,954*l.*, less than a fourth part of the sum that will probably be required to complete the new Houses of Parliament! It was, as has been often remarked, finished in 35 years, under the superintendence of one architect, by one master mason (Mr. Strong), and during the incumbency of one Bishop of London (Dr. Henry Compton). St. Peter's, on the contrary, was 145 years in building, during which time no fewer than 12 architects were employed upon it, and 19 popes sat in the papal chair! (See *Brayley's Account of St. Paul's*, in the *Survey of London and Middlesex*, ii. 249—310.; *Aikin's Essay on St. Paul's*; *Britton's Account of St. Paul's*; *Elme's Life of Sir Christopher Wren*, &c.)

It is greatly to be regretted that St. Paul's is so much hemmed in by the surrounding buildings. The view of the grand façade, with the dome rising above it, from the E. end of Ludgate Street, is, however, uncommonly fine; and a good view of a portion of the building is now obtained from the opening made at the S. end of the new Post-office. The dome appears to great advantage from the bridges and the river; and is seen at a great distance from all parts of the surrounding country, towering above the smoke by which the city is generally enveloped.

The effect of the smoke on the structure is not a little curious. In the parts protected from the weather it adheres, and the building has, in consequence, a black and sooty appearance; while, on the other hand, the parts exposed to the weather seem bleached or whitened. But this sort of pie-bald aspect has not the bad effect that might *a priori* be expected.

Westminster Abbey, which, next to St. Paul's, is the noblest ecclesiastical edifice in London, dates from the 13th century, though portions of the edifice, erected by Edward the Confessor, may still form part of the building. Great additions were made to it by Henry VII., who built the splendid chapel that still bears his name; and at the beginning of the last century the two towers of the W. front were added, from designs furnished by Sir Christopher Wren. In 1808 a considerable part of the building was destroyed by fire; but it has since been completely repaired, and Henry VIII's chapel renovated in its original style. It is 360 ft. in length, and 195 wide, within the walls. Though built at many different times between the reigns of Henry III. and Henry VII., and never quite completed, it offers one of the best specimens of the pointed style in Eng-

land. It is in the form of a cross, the shape of which, externally at least, at the E. end, is almost obliterated by 12 minor chapels, of which that of Henry VII. is the largest and finest. The great variety of the abbey renders any thing like a general description impossible. The N. side, with its beautiful gate, may be considered the principal front; but the view is much injured by the interference of St. Margaret's church, which ought to be removed. It presents a line of ornamental turreted buttresses and pointed windows, with a fanciful sculptured porch, decorated with immense flying buttresses, lofty pinnacles, and a large wheel window 32 ft. in diameter. The most striking view of the interior is from the W. entrance, where the lofty pointed aisles, clustered columns, rich tracery work, and monumental decorations, judiciously lighted by painted windows, present a harmonious effect well calculated to arrest the attention of the most insensible. Many of the most illustrious of the statesmen, orators, warriors, philosophers, divines, poets, and distinguished individuals of all sorts, celebrated in the annals of the empire, are buried within its precincts; and their monuments, which are distributed all over the Abbey, give it the highest interest, and deeply impress the mind with feelings of awe and veneration. Since its restoration, in 1820, Henry VIII's chapel has formed the most beautiful of the subordinate portions of the Abbey: it is universally considered a gem, and is, undoubtedly, a very choice specimen of its style.

The other churches of London have no pretensions to be compared with those last mentioned. Of those which escaped the great fire of 1666, St. Saviour's in the Borough, and the Temple Church, deserve special mention. The former, recently restored to much of its ancient freshness, is a good specimen of the architecture of the 14th century: the latter, which will be subsequently noticed, is still more ancient, and is remarkable for its peculiar architecture, and for the fine Norman arch forming the entrance to the building. After the fire, several churches were built by Sir Christopher Wren, but the fame of St. Paul's has obscured the lustre of his other works. Bow Church, in Cheapside, St. Bride's, Fleet Street, and St. Stephen's, Walbrook, are the most admired of Sir Christopher's churches. The latter, which has recently been renovated, is entitled to the highest praise. "He has not omitted a single beauty of which the design was capable; but has supplied them all with infinite grace." (*Dallaway's Anecdotes*, p. 142.) In the early part of last century several churches were erected, of which St. Martin's, St. George's, Hanover Square, and St. George's, Bloomsbury, have very fine porticoes, especially St. Martin's. Within the last 50 years, however, a complete change, and, which is worse, a great deterioration, took place in our ecclesiastical architecture. St. Pancras church, and some others, may, perhaps, be excepted from this censure; but an extreme poverty of architectural talent was shown in designing new churches, which are quite unworthy of those formerly erected, and of the city. More recently, however, the taste has been again improved; though the Gothic or mediæval style be now, perhaps, too universally followed. The places of worship for Dissenters are, with few exceptions, plain brick buildings, well arranged for the accommodation of large congregations, but constructed with little attention to ornament or taste.

Lambeth Palace.—One of the most extensive and imposing buildings S. of the Thames is Lam-

beth palace, on the river's bank, nearly opposite the new houses of parliament. The original building, erected in 1191, was first intended for a college of canons; but, as the pope refused his consent to its establishment, it was converted into an archiepiscopal palace, and has ever since been the town residence of the primate of all England. Great additions were made to it about 1250, and in the 15th century Archbishop Chichele built a square stone tower towards the river, called the Lollard's Tower, from the fact of some of those early reformers having been confined in it. Subsequent additions were made by Cranmer, Pole, Parker, Juxton, Sancroft, and Tillotson; but the whole, as seen from the outside, is a heavy dull-looking brick structure, little interesting except from its antiquity. The late additions, however, completed in 1838, at a cost, including internal fittings, of nearly 80,000*l.*, are executed in better taste. The new buildings, of Bath stone, stand in the gardens, E. of the old palace: the principal edifice is a splendid structure, the ornamental portions, which are particularly rich, being copied from Westminster and St. Alban's Abbey. The entrance front, flanked with square towers, is 160 ft. in length, the opposite or garden front being 30 ft. longer. The principal rooms are of fine proportions, and richly though chastely embellished, the wood-work being almost wholly of oak. The library is perhaps one of the finest parts of the interior; and though remarkably plain in its decorations and furniture, produces, from its great size, a very imposing effect. It contains upwards of 25,000 vols., among which are sundry rare works in classics, divinity, &c.; and the MSS., some connected with the history of the see, and others of a miscellaneous character, are said to be very valuable. In the older parts of the building the chief rooms are the long gallery, containing a curious collection of paintings, chiefly portraits of former prelates, the great hall, with an open roof of oak, presenting one of the best specimens in the country of internal Gothic decorations; and the chapel, a small but extremely elegant apartment, fitted up with oak stalls, pews, and an exquisitely carved pulpit and screen. The altar-piece, however, ill accords with the rest of the fittings, being of the Corinthian order, painted and gilt! The park and gardens belonging to the palace occupy about 18 acres: they are completely walled round; nearly 4 acres are appropriated to the kitchen garden, the rest being planted, and laid out in shrubberies.

Cemeteries.—The crowded state of most of the metropolitan churchyards, and the growing conviction of their injurious influence over the health of the neighbourhoods in which they are placed, have, within these few years, suggested the establishment of public cemeteries at some distance from town. The first of these, at Kensal Green, occupying a piece of ground 48 acres in extent, tastefully planted and laid out, was opened in 1832. It is situated about 2 m. N.W. of London; and has chapels where the funeral service is performed according to the rites of the Church of England, and of other religious persuasions. The success of this undertaking, which was long opposed by ignorant prejudice, led to the construction of other cemeteries. That at Highgate, consecrated in 1838, and occupying about 20 acres, in an elevated situation N. of the city, commands a very extensive view. The Norwood cemetery, 6 m. S. of the city, is double the size of that last mentioned. Other cemeteries have been completed, at Abney Park, Stoke Newington; Earl's Court, Brompton; and at Victoria Park and Bow Common in the E. Hitherto, however, the new cemeteries have been

too far from town, and too expensive, to be used by the poorer classes. But others of a less costly description will, no doubt, be speedily provided for their use. The act of the 13 & 14 Vict. c. 62. (1850), providing for the abolition of intramural interment, provides, also, for the formation of new burial grounds in convenient situations, and at reasonable rates of charge.

Commerce.—London is not only the capital of a great empire, but is one of the first commercial cities of the world. Her intercourse extends to the remotest countries, and her merchants are not surpassed for wealth, enterprise, and integrity. The establishments connected with commerce are on a scale commensurate with the amount of business to be transacted. The public buildings for commercial purposes consist chiefly of the Bank of England, East India House, Royal Exchange, Custom House, Corn Exchange, and Coal Exchange.

The Bank of England, from its first incorporation in 1694 to 1734, transacted its affairs at Grocers' Hall, in the Poultry. The first stone of the present building was laid in 1732; 40 years afterwards the E. and W. wings were added, and in 1781 the church of St. Christopher was taken down to make room for further additions. Until 1825 this edifice exhibited a great variety of incongruous styles; but endeavours have since been made, and with some success, to produce uniformity. The building is insulated, and covers 8 acres: its shape is an irregular parallelogram, the longest side measuring 440 ft. Many of the rooms in the interior, such as the court-room, pay-hall, and dividend-office, are spacious and well-proportioned: the largest and loftiest of all is the rotunda, a circular hall, 57 ft. in diameter, and crowned by a handsome cupola and lantern. The chief transactions connected with the funds take place in this apartment. The affairs of the Bank of England are managed by a governor, deputy-governor, and 24 directors, elected annually. The business is conducted by about 800 clerks, whose salaries amount to about 180,000*l*. A valuable library, intended for their especial use, has recently been established in the Bank by the liberality of the directors.

In 1844 the charter of the Bank was continued till 1855, its capital being then also fixed at 11,015*l*,100*l* lent to government at 3 per cent. Branch banks in connection with the Bank of England have, since 1826, been established in most large towns, the chief business of which is to discount bills, issue notes, and transmit money to and from London. The profits of the Bank accrue from interest on exchequer bills, discounts of commercial bills, interest on the capital lent to government, an allowance of about 50,000*l*. a year for managing the public debt, and some other sources. The dividend received by the proprietors is 7 per cent.

Statement of the Liabilities and Assets of the Bank of England, on the 7th of September, 1855, that is, of the Bank Notes in circulation, and the public and private Deposits held by the Bank, on the one hand, and of the Securities and Bullion in her possession, on the other.

But it must not be supposed that anything like the whole of this business can be done by the banks for whose especial benefit savings' banks were devised. On the contrary a very large proportion of the deposits belongs to parties in the middle ranks of life, who have been tempted to make use of savings' banks by the high rate of interest they have allowed. It is much to be regretted that artisans make so little use of these establishments; however high their wages may previously have been, they are usually found when they happen to be thrown out of employment, to be all but destitute.

Of about 55 private banking houses at present in London, two at least were in existence before the Bank of England, viz. those of Messrs. Child, Temple Bar, and Messrs. Hoare, Fleet Street. Within the last few years numerous joint stock banking companies have been established in the city, on the model of the Scotch banks; and the presumption seems to be that they will gradually supersede the private bankers.

The Royal Exchange, originally erected by Sir T. Graham, in 1666, was burnt down in the great fire. It was rebuilt within three years, and extensively repaired between 1820 and 1826. Having been again destroyed by fire on the 10th of January, 1838, it has been again rebuilt, from a design by Mr. Tite, and is now one of the colonial fabrics of the city. It is quadrangular, and has a colonnade and pediment fronting Cornhill. The court inside is surrounded by piazzas; but the merchants and others frequenting the building are not sufficiently protected from the weather, a defect which is much and justly complained of. In the quadrangle is a statue of Her Majesty by Lough, and it is further ornamented with statues of Queen Elizabeth, Sir Thomas Graham, and Sir Hugh Myddleton. Lloyd's, and the Royal Exchange Assurance, have their offices in the building. It was opened on the 28th of October, 1844.

The East India House, in Lundenhall Street, is the place where the East India Company's business is chiefly transacted. It was first built in 1726, but has been since so much altered and enlarged, that scarcely any part of the old edifice now remains. It has a stone front with a portico supported by six fluted Ionic columns, above which are a frieze and pediment ornamented with sculptures. The interior comprises numerous apartments, of which the largest are the court-room, the committee-room, and the two sale-rooms. In the E. wing are the library and museum: the former contains a pretty extensive collection of works connected with the arts, sciences, and literature of

Asia, and some rare Oriental MSS. The museum, which is open every Saturday, is furnished with a great variety of Indian curiosities, &c. The E. I. Company is now an exclusively political institution; the act 3 & 4 Will. 4., prolonging the charter till 1854, having debarred the company from the privilege of trading.

River and Port.—What is legally termed the port of London extends 6½ m. below London Bridge to Bugsby's Hole, beyond Blackwall; though the actual port, consisting of the upper, middle, and lower pools, does not reach beyond Limehouse. The whole of the latter space is generally covered with vessels; a channel, only 300 ft. wide, being left clear for craft passing up and down the river. The port having been long insufficient for the proper accommodation of the shipping resorting to London, and being often blocked up by fleets of merchantmen, the quays also being heaped with bales, boxes, bags, and barrels, in such confusion that the most barefaced robberies were committed with impunity, the necessity of further protection for merchandise became evident. Accordingly, at the close of last century, it was determined to excavate wet docks, capable of accommodating a large number of ships, with contiguous warehouses, the whole being inclosed by high walls. The West India Docks, the first of these establishments, and the largest belonging to the port, were opened in 1802. They are situated about 4 m. down the river: including the City Canal, a work intended for another object, but now a part of this establishment, they comprise about 295 acres, ¼ part of which is covered with water, the rest being occupied with quays and warehouses, the latter of great magnitude, and furnished with every convenience. They have an import and an export dock, with sufficient accommodation for 500 large merchantmen. The London Docks, about 1½ m. from London Bridge, were opened in 1805. They cover about 100 acres of ground, of which nearly a third part is water. The vaults beneath the warehouses have cellars for 65,000 pipes of wine, and one of them has an area of 7 acres! The tobacco warehouses are very extensive. The East India Docks, smaller than those above described, and further down the river, were opened in 1808. Their water-area is 30 acres, and their great depth (23 ft.) enables them to accommodate vessels of very large size. The East and West India Dock Companies are now incorporated, and form only one association. The Commercial Docks, on the S. side of the river, consist principally of the old docks for the Greenland ships, enlarged and provided with warehouses for bonding foreign corn. They comprise 49 acres, 40 of which are water; and are principally used by vessels engaged in the Baltic and E. country commerce and the importation of timber. The St. Katherine's Docks, opened in 1828, are the nearest to London Bridge, being just below the Tower. They inclose 24 acres, of which 11½ are water. The warehouses, which are on a very extensive scale, are close to the quays, having the lower or basement story open for the purpose of receiving or delivering goods from and to vessels that are being laden or unladen; the arcades are supported by iron columns of great strength. These docks have all been constructed, at a vast expense, by joint stock companies; and have on the whole been profitable concerns, though they have redounded more to the advantage of the port than to that of their projectors.

The number of colliers frequenting the port has often suggested the idea of excavating docks for their accommodation in the Isle of Dogs, opposite Greenwich; but nothing has yet been effected

towards the execution of this plan. According to the present system, that part of the port below the lower pool serves as a place of anchorage for the colliers, only a certain number of which are allowed to be in the pool at once, and a flag is hoisted to notify when it is full. On the flag being hauled down, the first collier in rank enters the pool, and the others follow, until the number is completed, when the flag is again hoisted; the rest wait their turn. The following statement of the quantities of coal and culm brought into the port at different periods, from 1820 to 1849, both inclusive, shows the consumption of coal in London. The great increase within the last dozen years is chiefly owing to the introduction of steam navigation and gas lighting.

Account of the Coal imported into London in 1849; specifying the Ports whence the Coal was shipped, and the Number of Cargoes and Tons imported from each.

Ports whence shipped.	Cargoes.	Tons.
Newcastle -	4,545	1,422,670
Sunderland -	3,371	927,514
Stockton -	2,872	749,568
Blyth -	455	95,235
Scotland, ports of -	30	4,509
South Wales, do. -	389	94,011
Yorkshire, do., &c. -	376	38,740
Total of Coal -	12,018	3,332,067
Culm -	6	1,173
Cinders -	50	5,906
Total -	12,074	3,339,146

Exclusive of the above a small quantity of coal, amounting in 1849 to 41,640 tons, is brought to London by inland navigation and by railway.

The new Coal Exchange, in Lower Thames Street, is a magnificent, though rather incongruous, building. The great hall, which is circular, is 60 ft. in diameter, and 74 ft. to the apex of the glazed dome by which it is covered. The structure cost about 40,000*l*.

The Custom House, a large building by the river-side, between London Bridge and the Tower, was opened for business in 1817. The old one was burnt down in 1814, though not before the present building was begun, the former having been inconveniently small. The river-front, 480 ft. in length, is built of Portland stone, and, though rather plain, is decorated by 8 porticoes, each supported by 6 Ionic columns. The *long room*, where the public business is transacted, is 185 ft. in length, 66 ft. in width, and 55 ft. in height. Owing to the insufficiency of its foundations this structure became insecure, and had to undergo some very extensive repairs in 1825.

The immense extent of the trade of London will be apparent from the subjoined statement of the gross customs revenue of the port in the under-mentioned years:—

1835 -	11,773,616 <i>l</i> .	1847 -	10,597,442 <i>l</i> .
1840 -	11,068,053	1848 -	11,193,707
1845 -	11,083,806	1849 -	11,070,176
1846 -	10,886,156		

Now, as the total gross customs revenue of the United Kingdom amounted, in 1849, to 22,483,956*l*. it would seem from this statement that the import trade of London only equalled that of all the rest of the kingdom! This, however, would be a most fallacious inference. The imports into several of the other great ports, including Liverpool, Hull, Dundee, &c., consist principally of cotton, wool, flax, and other raw materials of

our manufactures, which are mostly admitted free of duty; whereas the imports into London consist principally of articles of consumption, *inc.* tobacco, sugar, tea, coffee, wine, timber, &c., on which high duties are paid. Hence it is that the amounts of the import duties collected in different ports afford no fair criterion, or, indeed, any criterion at all, of the real extent of their import trade. In regard to exports, the articles produced in London are intended more for the home than for foreign demand, and do not constitute any very large proportion of the shipments to foreign parts. These, however, are notwithstanding very large; for, owing to the extreme facility of communication between London and the manufacturing districts, and the low rates at which goods may be lodged in the dock warehouses, London has greater facilities than any other port for the making up of mixed or assorted cargoes, and has, in consequence, a large export trade. Thus, in 1849, the declared value of the goods exported from London amounted to 11,748,889*l.*, being, we believe, about the same as the value of the exports from Hull. But during the same year the declared value of the exports from Liverpool amounted to no less than 82,841,918*l.*, or to nearly three times the value of the exports from London. There can, therefore, be no doubt that as respects foreign trade London is surpassed by Liverpool, and, perhaps, also, by New York. But as regards foreign and home trade taken together, London is at least equal to any other place. She may be truly said to be *universi orbis terrarum emporium*; and owing to her being the grand mart of all the rich, extensive, and densely-peopled districts included within the basin of the Thames, we do not think, provided the country continue to prosper, that there is any ground for apprehending any falling off in the commerce of London. It is impossible to form any accurate estimate of the total value of the produce conveyed into and from London; but, including the home and foreign markets, we believe it will not be overrated at the prodigious sum of sixty-five millions sterling.

Some idea, however imperfect, may be formed of the extent and distribution of the trade of London from the following statements.

An Account of the Number and Tonnage of those Ships that entered the Port of London with Cargoes from Foreign Ports, in 1848, distinguishing the Countries whence they came.

Total of sailing and steam-vessels	816	26,728	2,237	640,769	3,053	667,497

The crews may amount to about 85,000 men and boys. This, which is a greater amount of shipping than belongs to any other British port,* will appear the greater, when it is recollected that the colliers almost all belong to Newcastle, Sunderland, and other ports in the N. An immense number of barges are employed in the loading and unloading of colliers and other vessels in the river. The out-of-doors establishment of the customs, which is mostly all employed in the business of the port, comprises about 1,000 individuals.

The insurance of houses, ships, lives, &c. is carried on to a far greater extent in London than anywhere else. Marine insurances are mostly effected by private parties; but other insurances are generally made by joint stock companies. Some of these have been very successful, and have accumulated vast sums. It is believed, however, that not a few insurance companies are of a very questionable description; and the conviction seems to be gradually gaining ground, that some public regulations should be laid down for the formation and guidance of such companies, so as to protect the insured against the extravagance, mismanagement, and bad faith of the directors.

Manufactures, retail trade, and markets.—London presents itself under too many points of view to be called a manufacturing city; yet it is the seat of many, and of some very extensive, manufactures, several of which have their distinct quarters.

The silk manufacture is conducted on a large scale in Spitalfields, Bethnal Green, and Mile-end. It employed, in 1840, about 7,000 hands, which may, probably, be about the number at present engaged in it. The trade fluctuates extremely, owing chiefly to the caprices of fashion, and great numbers of workmen are often thrown out of employment; but the distress, so often said to prevail in this densely-peopled district, is owing at least as much to the drunken and improvident habits of many of the weavers as to any falling off in the demand for labour. The nett wages of plain silk weavers, when fully employed, range from 9s. to 11s. 6d., and those of velvet weavers from 15s. to 23s. a week. With respect to physical condition, this numerous body are, speaking generally, diminutive, impoverished, and feeble, unable to withstand disease, and not long-lived, circumstances attributable to close in-door employment, bad air, bad lodging, and bad food. We shall elsewhere notice the tendency to epidemic fevers in close and ill-drained neighbourhoods, and in no part of London are the fatal effects of lodging in close courts and cellars more visible than in Spitalfields and Bethnal Green. (See *Dr. S. Smith's Evidence before the Committee on Health of Towns*, pp. 1—7.)

Porter is the favourite beverage of the lower and also of a considerable proportion of the middle classes of London. The breweries in which this favourite liquor is prepared are mostly on a very large scale; and are, indeed, by far the greatest manufacturing establishments in the metropolis,

much exceeding any thing of the kind to be found any where else. In addition to the capital vested in buildings, machinery, horses, &c., a first-rate brewery has, also, a large amount of capital vested in public-houses in all parts of the town. The principal establishments produce from 200,000 to 270,000 barrels a year, principally porter, but partly also ale. It has been estimated, that about 1,200,000 barrels, or 43,200,000 gallons of porter and ale are brewed for consumption in London only, besides which great quantities are sent to different parts of the United Kingdom, and exported to the E. and W. Indies, the United States, and continental Europe. In 1848-49, the consumption of malt by the different brewers, victuallers, &c., in the London collection amounted to 6,299,908 bush. The splendid teams of horses in the drays belonging to the chief breweries are among the objects most worthy of admiration in the metropolis. There are several very extensive distilleries, vinegar-factories, chemical works, and soap-boiling houses, most of which are situated on the S. side of the river. In 1849, 44,548,865 lbs. of hard and 618,917 lbs. of soft soap were made in London. About 20 large engineering establishments employ several hundred workmen in making steam-engines and other machinery, chiefly in Lambeth and Southwark.

The principal sugar refineries are in Whitechapel, E. of the city. Clock and watchmakers, who are numerous, reside principally in Clerkenwell. The finest cutlery and hardware are produced, and the manufacture of metals of all kinds is carried on to a great extent. In 1847, 4,783 oz. of gold plate, and 860,799 oz. silver do. were assayed in London, being double the quantity of the gold plate, and four times the quantity of the silver plate, assayed in the rest of the U. Kingdom. Coach-building is an important business; and the carriages of London are not only the handsomest, but the best built and most durable of any in the empire. Great numbers are made for exportation. Many hands are employed in type founding, constructing musical instruments, and in engraving music. The tanning, currying and dressing of leather is carried on more extensively in Bermondsey than anywhere else in the U. Kingdom. And, notwithstanding large numbers of shoes are imported ready made from Northampton and other places, their manufacture and that of harness gives employment to an immense number of hands in the metropolis. In proof of this we may mention that of 187,943 shoemakers and 14,091 saddlers in England and Wales in 1841, no fewer than 28,574 of the former, and 2,171 of the latter belonged to London. Ship-building, and the infinite variety of trades connected with shipping, are extensively carried on E. of London Bridge. Owing to the extent to which the division of labour is carried, the tradesmen and artisans of London have attained to the greatest proficiency in their respective callings; and there cannot be a question that the jewellers, silversmiths, engravers, cabinet-makers, printers, tailors, shoemakers, book-binders, &c., of the metropolis are quite unrivalled.

There are no means of forming anything like even a rough estimate of the extent of the retail trade of London, but it must be immense. The trades, generally speaking, are mixed indiscriminately, though some remains may yet be traced of the ancient custom of particular trades congregating in particular places. Thus we still find coach-makers in Long Acre, stay-makers in Holywell Street, booksellers in Paternoster Row, and bankers in Lombard Street. A good deal of business used to be transacted by itinerant venders; but these are now seldom met with. Fashionable

* We say British port, for it is surpassed by the shipping of New York, which amounted in 1819 to 796,492 tons.

shops attract attention by the magnificence and gorgeousness of their wares: their windows are, in many instances, made of the finest plate glass, set in brass frames, and their interior is frequently

lined with mirrors. All sorts of devices, some of them being occasionally not of the most creditable kind, are used by shopkeepers to attract customers.

Classified Account, taken from the Population Returns of 1841, of the Persons, distinguishing their Sex and Ages, that were then engaged in the principal Trades and Professions carried on in the Metropolis.

The *Markets* of London are supplied at all seasons, and with all sorts of articles, whether produced in the U. Kingdom or in the most distant countries, with a facility and a regularity that are truly marvellous, and could not *à priori* have been deemed possible. And now that the freedom of trade has been fully established, all articles are sold at their necessary prices, or at the prices required to produce them under the most favourable circumstances and to bring them to market. We are now, also, for the first time in our history, in a situation freely to avail ourselves of all the peculiar products and advantages of climate, soil, and skill, with which Providence has endowed different countries. Inventions and discoveries made in China, the U. States, or elsewhere, which lessen the cost of producing any desirable article, or facilitate its conveyance, will henceforth most probably conduce as much to our advantage as if they had been made in England. The age of monopolies and preferences has passed away; and while combinations for the purpose of artificially raising prices are all but impossible, they could not fail, were they really entered into, to be instantly defeated. Hence the fair presumption that in time to come our markets will be furnished with a still greater variety of products, of a continually improving quality, and sold at lower prices.

In the great provision markets articles are sold, partly by wholesale, and partly by retail. Generally, however, the inhabs. prefer purchasing at shops distinct from the markets. Smithfield is the great market for live stock, which is sold on Mondays and Fridays. No fewer than 1,514,130 sheep were sold here in 1849, with 223,560 head of cattle, and 26,422 calves. We may remark, by the way, that Smithfield market is situated in the very centre of the city; and this circumstance, by obliging the stock to be driven to and from it through crowded streets, makes it an abominable nuisance. Frequent

attempts have been made to have it removed to the suburbs, but hitherto without effect. London is also totally unprovided with proper slaughter-houses, or *abattoirs*, and is, in this respect, behind Paris and other continental cities. Exclusive of the stock brought to Smithfield market, a good many cattle and sheep are imported in steamers, and privately sold; and in the colder months slaughtered cattle and sheep are extensively imported, particularly from the ports on the E. coast. Newgate and Leadenhall markets, with the Whitechapel carcass butchers, supply most part of the butchers of the town and neighbourhood.

Covent Garden is the principal vegetable market, and the immense supply of the finest fruits and vegetables, and the beauty of the plants on sale, make it well worth a visit. Billingsgate is the great fish-market, whence fish of all sorts are distributed to the shops and markets in different parts of the town. Hungerford market is also a well-supplied fish *dépôt*; but at this and Farringdon market butchers' meat, fruit, and vegetables are also sold. The corn market, held in a fine Doric building in Mark Lane, is attended almost exclusively by wholesale dealers.

Different statements have, from time to time, been put forth respecting the consumption of the principal products brought to London; but, with the exception of coal, and one or two other articles, there are no means by which to arrive at any thing like a correct conclusion. Allowing for the carcasses imported by steam and otherwise, the annual consumption of butchers' meat may, however, be, at present, estimated at about 240,000 bullocks, 1,700,000 sheep, 28,000 calves, and 85,000 pigs, exclusive of vast quantities of bacon and hams.

Leadenhall is the principal market for the sale of poultry and game; and, according to a curious and apparently authentic statement that recently

appeared in the Morning Chronicle, the sale of these articles in that market, in 1849, was as follows, viz.,

TAME BIRDS AND DOMESTIC FOWLS.			
Fowls	- Nos.	1,266,000	Turkeys - Nos. 69,000
Geese	- —	888,000	Pigeons - — 284,500
Ducks	- —	235,000	
Total 2,742,500.			

WILD BIRDS, ANIMALS, AND GAME.			
Grouse	- Nos.	45,000	Plovers - Nos. 28,000
Partridges	- —	84,500	Larks - — 213,000
Pheasants	- —	43,900	Wild Birds - — 39,500
Teal	- —	10,000	Hares - — 48,000
Widgeons	- —	30,000	Rabbits - — 680,000
Snipe	- —	60,000	
Total 1,281,900.			

Total of Birds and Animals, 4,024,400.

But in addition to the above, very great quantities are sold in Newgate and other markets, and many poulterers, in all parts of the town, and private families, are supplied in whole or in part direct from the country, and not at second-hand from the markets. In severe winters there are large supplies of wild ducks, principally from Holland, woodcocks, &c. Snipes come principally from Ireland. Three-fourths of the pigeons come from France. Black-cocks are all from Scotland. Sometimes, after a grand *battue*, there is a glut of hares and pheasants in Leadenhall market.

Exclusive of those brought from the different parts of the U. Kingdom, from 70 to 75 millions of eggs are annually imported into London from France and other foreign countries! About 18,000 cows are kept in the city and its environs for the supply of milk and cream; and if we add to their value that of the cheese and butter brought to the city, the expenditure on dairy produce will appear to be enormous. The consumption of wheat may, perhaps, be estimated at about 1,600,000 quarters a year; and the vast number of horses in London, and their high keep, must occasion an immense consumption of oats. The imports of salmon from Scotland and other parts of the U. K. may be estimated at from 2,500,000 lbs. to 3,000,000 lbs. a year; and to this have to be added the large quantities that are now imported from Holland and the N. of Europe. The supplies of turbot, cod, lobsters, oysters and shrimps, are quite immense. The best cod is brought from the Dogger bank, and the greater number of the lobsters from Norway. The value of the fish, vegetables, &c., consumed in the city, has been set down by some intrepid calculators; but the data on which they formed their estimates were too loose and unsatisfactory to entitle them to any credit.

External and internal Communication.—The communication between London and foreign countries is carried on partly by sailing vessels, and partly by steamers, regular lines of packets of both descriptions of vessels being established with the principal foreign and colonial ports. These, also, are the media of communication between London and the various ports of Great Britain and Ireland. The intercourse with the interior is partly carried on by canals, partly by high-roads, and partly by railways. The latter, though of such recent date, already stretch from the metropolis to the most remote parts of the empire. They have multiplied the means and facilities of travelling in a degree which, but a few years ago, could not have been imagined. The journey to Dublin, Edinburgh, and Glasgow, is now regularly performed in about 12 hours; and it might be performed in considerably less time if such extreme speed were necessary. The cheapness of this rapid travelling, its comfort and security, are equally remarkable. What are called "pleasure trains," at extremely low fares for the accommodation of the lower classes, are

frequent in summer, and carry vast numbers of passengers. In addition to the great lines of communication, short lines are opened to Blackwall, Greenwich, Kew, Richmond, Windsor, and other places in the vicinity of town.

We may take this opportunity of stating that the Doric portico at the terminus of the Great North Western Railway at Euston Square, and the Hall inside, are amongst the most magnificent structures of their kind anywhere to be met with. The hall is 130 ft. in length by 62 ft. in width, and 64 ft. in height.

The Thames is, also, a grand line of communication; the intercourse between the E. and W. ends of the city, and with the different places above and below the bridges, such as Putney, Barnes, Kew, Richmond, Kingston, &c., on the one hand, and Greenwich, Woolwich, Gravesend, Margate, &c., on the other, being kept up by means of steamers. Of these about 70 ply, during the summer season, between the limits above referred to, those plying between the bridges passing and repassing almost incessantly. In fine weather, especially on Sundays, they convey vast numbers of passengers. According to a curious estimate that lately appeared (October, 1850) in the Morning Chronicle, the receipts of the river steamers amount in the season to nearly 10,000*l.* a week.

The port of London is connected with the Irish Sea by a chain of canals, of which the Regent's canal, passing along the N. of the city, is the first link. The N. Western and other railways are, also, connected with the port.

Hackney-coaches were introduced more than 200 years ago; and previously to the introduction of cabriolets, in 1820, were very numerous, but they are now all but wholly superseded by the latter. It is a singular and not easily explained fact, that, with but few if any exceptions, the hackney-coaches and cabs to be found in the streets of London are the dirtiest, shabbiest, and most uncomfortable carriages that are anywhere to be met with. The drivers are worthy of the carriages; the one and the other being a disgrace to the city, and such as would not be employed anywhere else.

Literature.—London ranks still higher as a literary than as a commercial city. Notwithstanding the factitious encouragement given to learning and science in Oxford and Cambridge, London is the favourite resort of literary and scientific men. Its immense population, the wealth and intelligence of its inhab., and the circumstance of its being the seat of government, attract aspiring individuals from all parts of the empire, especially those ambitious to distinguish themselves in literature or politics. The practical, common-sense character of the philosophy and literature of England is probably, indeed, in no small degree owing to its being principally cultivated in London, where the writers, by mixing with the world, learn to avoid those over-refined theories and fanciful distinctions in which recluse speculators are so apt to indulge. With the exception of the provincial newspapers, the whole periodical literature of England centres in London. The number of persons engaged in this department, as authors, publishers, printers, &c., is very great. London has no fewer than 12 daily newspapers, ex. lists, and 80 that appear at other intervals. Many of these journals display great, and some consummate talent; and, considering the extreme rapidity with which articles for the daily journals must be written, and the want of time for revision, they are certainly extraordinary performances. So far as respects its newspaper press, London is infinitely superior to every other city; and how-

ever one-sided, prejudiced, and little to be depended on in party matters, it is not easy to imagine that it is likely to gain much in ability, variety, and interest.

It appears, from the *Stamp-office Returns*, that of 84,339,415 stamps, inc. supplements, issued to the different newspapers published in the United Kingdom during the year ended 31st Dec. 1849, no fewer than 49,006,730, or more than the half of the whole, were issued to those published in London! And when the superior ability and information of the London press is taken into account, its preponderance will appear still more striking. During the same year, the total amount of the duty on advertisements paid by the newspapers of the United Kingdom amounted to 163,211*l.* 1*s.* 4*d.*, of which 69,512*l.* 19*s.* 6*d.* was derived from the metropolitan journals.

A prodigious number of weekly, monthly, and quarterly magazines, reviews, and other publications, issue from the London press; and though many of these be of a very trashy and worthless description, a considerable number are of a widely different character, and are well fitted to amuse, instruct, and improve the reader. By far the greater number of these publications appear on the last day of every month, known among booksellers as "Magazine day;" when the great publishing houses make up and forward innumerable parcels, containing every variety of works, to their correspondents in all parts of the kingdom.

The magnitude and importance of the periodical press of the metropolis will be best seen from the following statement, compiled by Messrs. Longman and Co. for 1850.

Description of Periodical.	Number.	Price.
Weekly Magazines, &c.	35*	1 <i>d.</i> to 8 <i>d.</i>
Ditto parts of entire works	5	1 <i>d.</i> to 2 <i>d.</i>
Monthly Magazines, &c.	262	6 <i>d.</i> to 5 <i>s.</i>
Ditto parts of entire works	61	6 <i>d.</i> to 10 <i>s.</i>
Quarterly Reviews, &c.	36	6 <i>d.</i> to 7 <i>s.</i> 6 <i>d.</i>
Ditto parts of entire works	3	4 <i>s.</i> 6 <i>d.</i> to 6 <i>s.</i>
Transactions of Learned Societies	30	2 <i>s.</i> 6 <i>d.</i> to 45 <i>s.</i>
Law Reports	25	
Total of Periodicals, &c. (not Newspapers)	450	
Newspapers, daily morning	7	average 6 <i>d.</i>
Ditto, daily evening	5	
Ditto, thrice a week	3	
Ditto, twice a week	5	
Ditto, once a week (including Sunday)	72	3 <i>d.</i> to 1 <i>s.</i>
Total of Newspapers and stamped Publications	92	

The greater number of the works written in Scotland are now published in Edinburgh; but nearly the whole of the myriads of works written in England and Ireland are published in London. The latter, in fact, is to the literature of Britain what Leipsic is to that of Germany, or Paris to that of France. The London publishers have agents all over the country, to whom they send new publications; so that in the few instances in which books are printed at Oxford or Cambridge, or other provincial towns, it is usual to send them to London to be published.

Education.—London, unlike most other European capitals, had no university empowered to grant degrees till 1836, when one was established by royal charter (renewed in 1837) for "the advancement of religion and morality, and the promotion of useful knowledge," without distinction of rank, sect, or party. This institution differs (and, as we think, advantageously) from all other universities, in its having nothing to do with the business of education, being constituted for the sole purpose of ascertaining the proficiency of candidates for academical distinctions. It is, in fact, a Board of

Examiners, empowered to grant degrees in science and literature to such candidates as are found, on examination, to have attained the required proficiency. The senate, or board, consists of a chancellor, vice-chancellor, and 35 other members. The faculties are those of Arts, Law, and Medicine, in each of which are several examiners, some of whom are members of the senate. The sittings are held in Somerset House, and the examinations are half-yearly. The greatest number of candidates for degrees has hitherto been furnished by the University and King's Colleges, both of which are proprietary establishments. The former of these, opened in 1828, is governed by a council and senate of professors: the course of education embraces classics, pure and mixed science, history, jurisprudence, and medicine, religion being wholly excluded. The success of the medical school, which has for some years been the largest in London, has led to the erection of a good hospital close to the college. The general classes have not been so well attended as the more sanguine friends of the establishment at first expected; but the attendance is likely to be increased by the addition to the institution of a well-attended junior school, the instruction in which forms a good preparation for higher studies. King's College is a similar establishment to that last mentioned, and is similarly conducted, except that religion is taught in it in accordance with the principles of the Church of England. The general classes are well attended, as is the junior school. The medical school is small. The buildings of these establishments are handsome and commodious: the portico of University College is one of the finest in London.

Among the literary and scientific establishments of the metropolis, one of the best supported is the Royal Institution in Albemarle Street. The building, the front of which is in good taste, with 14 Corinthian columns, comprises a good library and reading room, a theatre for lectures, capable of accommodating 900 persons, and a chemical laboratory supposed to be one of the largest and best supplied with apparatus in Europe. Lectures on various subjects are delivered by the professors and other gentlemen temporarily engaged; and the important investigations made here by the late Sir Humphry Davy, Mr. Faraday, and others, have conferred on the institution a well-merited celebrity. Next in importance to that just mentioned is the London Institution, in Finsbury Circus, Moorfields, the objects of which are very similar, though not so fully and scientifically carried out. Lectures are given on literature, the fine arts, &c. once or twice a week from November to May: the library is both large and well-selected, and the reading rooms are supplied with the greater number of English and foreign literary journals. The Russell Institution, in Great Coram Street, is similar in most respects to those just described; but, owing to a falling off in its funds, its usefulness is at present very much circumscribed.

Efforts have, also, been made to promote the welfare and improvement of the working classes, and of young men generally, by the establishment of mechanics' institutes in different parts of London. But, whatever may be the cause, these, of late years, have generally been declining. The earliest, called, *par excellence*, "The Mechanics' Institute," in Southampton Buildings, Holborn (opened in 1824), which formerly had about 1200 members, has, at present (1850), about 600. The subscription is 24*s.* a year, and 2*s.* 6*d.* at entrance. Classes are established for languages, arithmetic, geometry, &c., and the library, which comprises 6,500 vols., is said to be well selected. The Western Literary Institution, the City Insti-

* This number (35, does not include the low class of periodicals, emanating chiefly from Wych Street and the parlours of St. Giles's.

tution, in Aldersgate Street, and other establishments of the same kind in various districts, have since been founded.

Among the many endowed schools in the metropolis, the most celebrated are: 1. Westminster School, founded by Queen Elizabeth in 1560, for the free instruction, clothing, board, and lodgment of 40 boys, called king's scholars. But, in point of fact, their education is not free, but, at present (1850), costs, with board and lodging, about 45*l.* a year. The school is attended by other boys, partly boarders and partly day-boarders, the number of whom varies according to circumstances. The king's scholars are selected for merit from the whole school. At the end of the 4th year, 8 or 10 of the senior boys are elected off, according to the vacancies occurring, as students to Christchurch, Oxford, or as scholars to Trinity College, Cambridge. The school forms part of the collegiate establishment of the abbey. Dryden and Locke were educated in it; and William Murray, the famous Earl Mansfield, was a king's scholar, and dux in 1728. 2. The Charterhouse (corrupted from *Chartreux*), founded in 1611, and endowed with property, the gross rental of which, in 1815, was 22,000*l.* a year. There are on the foundation boys of two classes, pensioners and scholars, both nominated by the governors, among whom are usually some of the most distinguished personages in the country. The number of pensioners is limited to 80, and that of scholars to 44. The former are boarded and lodged at the expense of the hospital, and have, in addition, a pension of 25*l.* a year (whence their name) and a gown: the scholars are educated wholly at the expense of the hospital, but have no pension. The exhibitions to the universities belonging to this school do not appear to be limited in point of number. Boys elected to them have their option both as to college and university; and are allowed 80*l.* a year for the first 8 years, and 100*l.* for proceeding to the degree of B.A. Gratuities of 100*l.* are given to those scholars who do not proceed to either university. Besides the foundation-boys, the school is attended by others, whose number fluctuates according to the reputation of the masters, &c. 3. Merchant-Tailors' school, founded in 1561, in Suffolk Lane, Thames Street. The statutes provide that a classical education be furnished gratis for 100 boys, and for 150 others at rates varying from 5*s.* to 2*s.* 6*d.* a quarter. The scholars are examined once a year, and the most advanced are sent to Oxford, where the school has 43 fellowships, of which 37 were founded in St. John's by Sir Thomas White: it has, also, 7 fellowships at Cambridge. This school is in a very efficient state. 4. St. Paul's School, established in 1509 by Dean Colet, and placed by him under the direction of the Mercers' Company, provides a free education for 153 boys, the most advanced of whom are sent to Oxford and Cambridge, with exhibitions varying from 50*l.*, or less, to 120*l.* in value. The present building was erected in 1824; the gross income of the school is upwards of 6,000*l.*, and it enjoys a high character. It has to boast of having had Milton for a pupil. 5. Christ's Hospital, more commonly known as the Blue-coat School, was incorporated by Edward VI. in 1553, and owes its origin to the active benevolence of some distinguished citizens. It was, whatever may be the case at present, originally intended to maintain, clothe, and educate the young and helpless; and 840 boys and girls were admitted soon after its foundation. A second charter from Charles II., in 1678, provided for the education of 40 boys in mathematics and other learning calculated to qualify them for the sea-service. The management of the institution is vested in a

body of governors (nearly 500 in 1850), who have each contributed, at least 400*l.*, to the funds of the institution; but recently the qualification for a governor has been raised to 500*l.* An individual, on becoming a governor, is entitled to present one boy; and he has usually a presentation once every succeeding three years. The present (1850) revenue of the hospital, arising from rents, and all other sources, amounts to above 60,000*l.* a year, and its expenditure to nearly as much. Its establishment in London, on the site of the Old Grey Friars' monastery, accommodates, at present, 920 boys; and it has attached to it a subsidiary establishment at Hertford, for the younger children, where there are usually about 450 boys and 80 girls; making in all about 1450 children, maintained, clothed, and educated by the establishment. There are schools for grammar, mathematics, writing, and drawing. The *Grecians*, or those most advanced in the grammar school, are sent with valuable exhibitions to Oxford and Cambridge, and those in the mathematical school are placed with commanders of ships, and equipped with clothing and nautical instruments, at the hospital's expense. Others are apprenticed to different trades. A magnificent building, called the Great Hall, erected by public subscription, and finished in 1829, opens towards Newgate Street, and is one of the finest ornaments of the city. The hall, in which the children breakfast, dine, and sup, is 187 ft. in length, 51 in width, and 46½ ft. high. Occasionally they sup, though with questionable propriety, in public, and on these occasions there is a great concourse of strangers to witness the spectacle. The interior arrangements deserve high praise; and every attention is paid to the health and comfort of the children. The well-known dress of the boys, which has not been changed since the formation of the institution, is, however, not merely antiquated, but inconvenient and uncomfortable; and it is certainly high time that it were modified. Presentations can only be obtained from the governors. 6. The City of London School, established in 1835, may be said to have resulted from the inquiries of the Charity Commissioners. A Mr. Carpenter had left an estate for a school, and the value of the property had greatly increased without any proper application of the funds. Repeated inquiries and remonstrances at length induced the corporation to establish a school on the site of Honey-lane Market, Cheapside. The system of instruction is good, and the school is attended by upwards of 500 boys. The buildings, occupying a space 180 ft. long and 80 ft. broad, are commodiously contrived, and have externally some pretensions to architectural elegance. Independently of these and other endowed schools, almost every parish supports a free school by voluntary contributions, and thus about 14,000 children of both sexes are clothed and educated. The number of private and Sunday schools is extremely great, but cannot be accurately estimated. The National Society, in connexion with the Church of England, has done much to diffuse education. In Middlesex only it supplies instruction in week-day and Sunday schools to no fewer than 80,000 children; of whom about 22,000 attend week-day schools only, and 19,000 Sunday schools only. The model school of this society is in the Sanctuary, Westminster. Great numbers of children are also taught in the Lancastrian method by the British and Foreign School Society. The model boys' school belonging to this society in the Borough Road has about 700 boys, and the model girls' school, about 300 girls in constant attendance. Both this and the National Society have normal schools for the instruction of school-masters and school-mistresses. Much, however, still remains

to be done towards giving a sound elementary education to the children of the industrious classes; though it must, at the same time, be admitted that the benefits of which it is expected to be productive have been ridiculously exaggerated.

The charges on account of education at most of the superior schools in London, except to boys on the foundation, are oppressively high, the most reasonable being three times as expensive as the High School of Edinburgh, which is quite equal to the best of them. This circumstance, combined with the want of schools in many districts, and the wish to improve their health, has led to the practice, so general in London, of sending children to the outskirts of the town to be boarded and educated. But the education in very many of these boarding establishments is of a very worthless description; and it is surprising that no effort should have been made by subjecting the masters to examination, establishing proprietary boarding-schools, or otherwise, to improve the quality of these suburban seminaries.

British Museum. — This national institution, established in 1753, is an immense repository of books, MSS., statues, coins, and other antiquities, specimens of animals and minerals, etc., and is, in most respects, one of the richest in Europe. It is principally deposited in buildings raised on the site of Montague House, formerly the residence of the Duke of Montague, Great Russell Street, Bloomsbury. The nucleus of the collection was purchased by government of Sir Hans Sloane's executors for 20,000*l.*, and the museum was first opened to the public in January, 1759. But Montague House, though spacious as a private residence, having been found inadequate to the proper accommodation of the vast and continually increasing collections that belong to the museum, a new quadrangular building, on a very extensive plan, was designed by Sir R. Smirke, and is now open to the public. In 1755 the Harleian MSS. were purchased, and the Cottonian library was removed from Dean's Yard, Westminster: in 1757 the royal library, founded by Henry VIII. out of the libraries of the suppressed monasteries, and enlarged by his different successors, was presented by George II. George III., in 1763, gave a valuable collection of pamphlets on the civil wars; and between 1806 and 1818 the Lansdowne, Hargrave, and Burney MSS. were purchased at an expense of 26,400*l.* Various presents have been made from time to time; the most valuable additions of late years having been the library of George III., collected at an expense of 200,000*l.*, and presented to the Museum by his successor*, and the sumptuous collection of Mr. George Grenville, valued at 60,000*l.*, and bequeathed by him to the nation. Modern English publications are added, free of expense, in consequence of a privilege which this establishment enjoys in common with the two universities, and some other bodies, of receiving *gratis* a copy of every book entered at Stationers' Hall. A considerable sum (it amounted, in 1848, to about 21,400*l.*) is expended in the purchase of old and foreign books, to which departments very extensive and valuable additions have been made of late years. The collection comprises in all about 460,000 printed books, and 81,000 MSS., exclusive of charters. The want of a catalogue *raisonné*, or rather, perhaps, of a series of such catalogues, is much complained of by the great majority of persons who resort to the library for study or research. The reading-rooms are open from 9 till 4 in winter, and till 7 in the evening during 4 summer months. Admission is procured

by a recommendatory letter either to one of the trustees, or to the chief librarian; and every facility is given by the numerous attendants for the most extensive research. No books are allowed to be taken out, it being supposed that such permission would lead to frequent and heavy losses; but, provided the value of the books were previously deposited, we incline to think that certain descriptions of works might be lent out with advantage. In the department of antiquities may be mentioned the collection of Egyptian monuments, including the famous Rosetta stone (see Vol. I. p. 751.), acquired at the capitulation of Alexandria, in 1801; the Townley marbles, purchased for 28,000*l.*; the Phigalian and the Elgin marbles, the cost of which was 35,000*l.*; the latter include the statues of Theseus and Iliassus, and the sculptures in *alto-relievo*, from the friezes of the Parthenon. Very recently the stock of antiquities has been much increased by the winged bulls and other interesting remains dug up from the ruins of Nineveh, and sent home by Mr. Layard. The collection of minerals was, for many years, deficient in various important particulars; but the additions purchased from Messrs. Hawkins and Mantell are extremely valuable; and now, both for size and classification, this department will bear to be compared with any mineralogical collection in Europe. The department of zoology is said to be rich; but we confess we do not see the advantage of filling the museum with stuffed representations of animals that may be seen alive in the zoological gardens and in every menagerie. The collection of medals, which has been accumulating since the foundation of the museum, consists of about 20,000 coins, above 6,000 being purchased with the Hamilton collection of Herculean antiquities, in 1772. The coins can only be seen by an order from a trustee, or a private introduction to the officer to whose charge they are entrusted. The public days at the museum are Mondays, Wednesdays, and Fridays, when all persons have free admission from 10 to 4, and in the summer months from 10 to 7. The building is closed during the first weeks of January, May, and September. The establishment is governed by 48 trustees, 23 of whom are official; and to these the officers are responsible. The chief acting trustees, with whom the appointment of the officers has hitherto rested, are the archbishop of Canterbury, the lord chancellor, and the speaker of the H. of C. But it is probable that in consequence of the late Report of the Commission of Inquiry into the affairs of the Museum, its governing body will be changed, and rendered more efficient.

The Royal College of Surgeons, in Lincoln's Inn Fields, has a fine portico. Its museum contains the anatomical collections of the celebrated John Hunter, bought by government and deposited in it.

The museum of Practical Geology, in Piccadilly and Jermyn Street, promises to be of much utility, not merely to scientific men, but to those practically engaged in the business of mining. The building was erected at the expense of government.

Literary and Scientific Societies. — Before the present century the learned societies of London were few in number, and very comprehensive in their objects. The great advancement of the physical sciences in recent times, and the increased ardour with which every branch of knowledge has been cultivated, have produced a corresponding increase in the number of learned associations, and in all recent instances each body has confined its operations within a limited sphere. The following list comprises some of the principal societies, with the dates of their formation, the objects contemplated by them, when not sufficiently indicated by their names, and the publications made at their expense: —

The Royal Society; physical and mathematical sci-

* It is much to be regretted that this library was not placed in an accessible situation in the W. end of the town.

ences. Instituted early in the 17th century; incorporated 1683. "Philosophical Transactions," from the year 1666.

The Society of Antiquaries. Instituted 1717; incorporated 1794; but now split into two sections, — the Archaeological Institute of Great Britain and Ireland, and the British Archaeological Association. "Archæologia," from the year 1770.

Medical Society. Established 1773. "Veneria Monumenta," from 1747.

Society of Arts. Established 1754, for the encouragement of the arts, commerce, and manufactures of Great Britain, by granting rewards. "Transactions," from the year 1760.

Linnæan Society, natural history. Established 1789; incorporated 1800. "Transactions," from the year 1794.

Royal Institution. Established 1799, for the application of science to the ordinary purposes of life. "Journal," from 1816.

Historical Society. Established 1830; incorporated 1839. "Transactions," from 1812.

Royal Medical-Chirurgical Society. Established 1835. Chartered 1831. "Transactions," from the year 1833.

Geological Society. Established 1807; incorporated 1825. "Transactions," from 1811.

Society of Civil Engineers. Established 1817; incorporated 1868. "Transactions," from 1836.

Royal Astronomical Society. Established 1820; incorporated 1831. "Memoirs," from 1833.

Medical-Botanical Society. Established 1821. "Transactions," from 1826.

Royal Asiatic Society. Established 1823; incorporated 1836. "Transactions," from 1837 to 1839; "Journal," from 1834.

Royal Society of Literature. Founded 1811; incorporated 1877. "Transactions," from 1877.

Entomological Society. Instituted 1826; incorporated 1839. "Transactions," from 1833.

Royal Geographical Society. Chartered 1830. "Journal," from 1831.

Entomological Society. Established 1826 or 1831.

Statistical Society. Established 1831. "Journal," from 1837.

Archæological Society. Established 1831.

Royal Institute of British Architects. Established 1835; incorporated 1838. "Transactions," from 1836.

Royal Botanic Society. Chartered 1839.

Nearly all these societies hold meetings twice a month,

from November to June inclusive, at which papers are read illustrative of matters connected with the objects of each association.

Picture Galleries. — The present national col-

lection of pictures is of recent foundation, and,

though valuable, can only be looked upon as the

remains of one that may hereafter be worthy of

the country. It occupies the W wing of the

National Gallery, erected 1864-67, at the public

expense, on the NW side of Trafalgar Square,

facing Whitehall and Parliament Street, unques-

tionably the finest situation in the metropolis.

The building has a front of 460 ft., with a portico

and dome in its centre, supported by Corinthian

columns. But whether it were owing to the

limited means at the disposal of the architect, or

to some incapacity on his part, the fabric is neither

worthy of its site, its object, nor of the country.

Unfortunately, too, the defects of its exterior are

not counterbalanced by any superiority of internal

economy, the apartments for the exhibition of the

pictures being miserably deficient in point of size,

and ill-arranged. The pictures, which consist

of the Angerstein collection, purchased in 1824, of

Sir G. Beaumont's collection, given by him in

1826, and of others, partly presented and partly

purchased, are arranged in five rooms, of such

diminutive size, that they will contain only a few

more pictures, and none of large size. About half

the pictures belong to the Italian school; and of

these the *Emo Homo*, and the *Mercury, Venus,*

and *Cupid*, of Correggio; the *Raising of Lazarus*,

by Sebastian del Piombo; the *Dacchus and Ari-*

adus, of Titian; and the *Holy Family*, by Ma-

rillo, are reckoned the most valuable. The works

of the two Carracci, M. and G. Poussin, and Claude,

may be here seen in their highest perfection; and

there are some fine specimens of the English

school, by Reynolds, Hogarth, Gainsborough,

William, Wilkie, and Lawrence. The gallery is

open to the public on the first four days of the

week: on Friday and Saturday students are per-

mitted to copy the pictures. The pictures, mostly

by native artists, bequeathed to the public

by the late Robert Vernon, Esq., have been de-

posited in the meantime in Marlborough House.

The Royal Academy, which at present (by per-

mission of government) occupies the remainder of

the National Gallery, was established in 1768, for

the instruction of young artists. Lectures are de-

livered in anatomy, painting, sculpture, and archi-

tecture, and daily instructions are given to the

students by the keeper, and other academicians.

The annual exhibition of this corporate society

usually comprises about 1,300 specimens of art,

and is one of the favourite lounges during the

summer months. The profits of the exhibition,

besides paying the expenses of the schools, con-

tribute to form incomes for the most deserving

artists, while studying at Rome. (See *Ann. Re-*

port on the Arts, &c. of 1868.) The Society of

British Artists exhibits annually a good collection of pictures; but, as a whole, they are very inferior to those exhibited by the Academy. The British Institution, and Society of Painters in Water Colours, have, also, exhibitions, and their rooms are crowded during the fashionable season. Many private individuals have splendid galleries, among which may be specified those of the Earl of Ellesmere, the Marquis of Westminster, the Duke of Cumberland, Sir Robert Peel, Mr. Hope, &c.

Theatre and Music. — The great theatres of London present a curious contrast to the rude and confined buildings called the Globe, Swan Theatre, and Old Drury in the time of Shakespeare, in which neither scenery nor the comfort of the audience was at all considered. The two patent theatres, Drury Lane and Covent Garden, contiguous to each other, have handsome exteriors, and very extensive and highly decorated interiors. They enjoy, or rather are supposed to enjoy, the exclusive privilege of representing tragedy and comedy, or the legitimate drama. But this monopoly is no longer of much, or perhaps, of any value. Late dinner hours, the cheapness or dearth of fashion, the inferiority of the actors, and other causes, have contributed to weaken the taste for the regular drama. Operatic spectacles, masked balls, and, as both at present enjoy the largest share of public favour. But it is not, speaking generally, enough to make them profitable; and with few exceptions these all varieties of theatres have, for a considerable time past, been unprofitable concerns. Tragedy and comedy have long ceased to be the staples of Covent Garden. For a while it was leased by the Anti-sentimental gentlemen; and more recently it has been converted into an Italian opera-house in opposition to Her Majesty's theatre. But, owing to the immense expense attending it, this has not been a successful speculation. The Haymarket theatre, which has recently enjoyed more than ordinary prosperity is of similar size; and therefore better adapted for hearing, than the immense boxes above mentioned. It is open for about eight months of the year including the recesses of the two patent theatres. Besides these, there are several minor theatres, the names, facilities, and objects of the principal of which are given in the following table:—

Among these, Astley's, or Batty's, deserves notice, for the excellent horsemanship displayed by the corps d'entraine. It is even perhaps superior, to that exhibited in the Frenchie theatre at Paris.

The Italian Opera House, in the Haymarket, is the largest theatre in London. It is, of course, however, devoid of the name of a national theatre, inasmuch as the singers, dancers, and musicians are chiefly foreigners.

and as it depends for its support chiefly on the patronage of the court, nobility, and higher classes, many of whom held private boxes, at rents varying from 100*l.* to 500*l.* a year. All the patronage of rank and wealth, however, cannot, owing to the enormous cost of the performances, make it a good speculation for the manager. The established London concerts consist of the ancient, philharmonic, and sacred harmonic concerts, all of which are well and fashionably attended; many others are given by professional persons, for their own benefit, in the different public rooms in the W. end. Promenade concerts are, also, given in imitation of those of Paris.

Benovolent Institutions.—There are a vast many establishments in London for the cure of disease; consisting partly of hospitals properly so called; partly dispensaries, where medicine and advice are gratuitously administered; and partly of infirmaries for special diseases; with lying-in charities. Asylums for orphans and otherwise destitute persons, and other benovolent establishments, are, also, very numerous; and some of them are well endowed and liberally supported. The principal are the following:—

1. St. Bartholomew's Hospital, in West Smithfield,

in Whitechapel, was founded in 1740. Its wards accommodate about 200 patients. 7. Westminster Hospital, rebuilt in 1693, near the Abbey, has 174 beds; but 3 wards, containing space for 50 additional beds, are unfurnished, notwithstanding there is a great demand for hospital accommodation (*Low*, p. 8). 8. The Mary-in-Bone and Paddington Hospital, opened in 1850, has 150 beds, which it is proposed to increase to 375, supposing the necessary funds to be forthcoming. This, and the four last mentioned hospitals, depend wholly, or almost wholly, on voluntary subscriptions, which are said to be very insufficient to meet the demands upon them. The University College and King's College Hospitals, and Charing Cross Hospital, are smaller establishments of the same nature, each accommodating about 120 patients, and there are other establishments of the same sort.

Medical schools are connected with the above hospitals, in which lectures are delivered by the officers, and which are attended, altogether, by about 1,200 students.

Bethlehem Hospital, or Bedlam, is appropriated exclusively to the insane poor; it was founded in 1546, in Moorfields, whence it was removed, in 1815, to St. George's Fields. The present building received some extensive additions in 1839, and is now 627 ft. in length, "and possesses, from its elevation and extent, an appearance approaching to the magnificent." The rooms are large and airy, well warmed and ventilated, and are sufficient for the accommodation of above 400 patients. St. Luke's, Old Street Road, established for a similar purpose in 1751, accommodates 250 persons.

The Foundling Hospital, Brunswick Square, was founded by Capt. Coram, in 1739, but the building was not commenced till 1742. It was established for the indiscriminate admission of deserted children; but the numbers were found to increase so rapidly, that the funds failed, and in 1760 the mode of admission was so much altered, that it is now nominally only a Foundling Hospital. The number of children averages about 500, and they are maintained till the age of 12, when they are either apprenticed or otherwise provided for. The revenue is about 10,000*l.* per annum; which will increase according as the leases fall in of the houses built on its estate.

The Magdalen Hospital, Blackfriars Road, was established in 1749, for the reformation of females who have fallen into vicious courses.

The Philanthropic Institution, St. George's Fields, was founded, in 1789, for the reception and reform of young criminals discharged from prison. It provides them with immediate means of subsistence, and instructs them in some trade, so as to prevent the otherwise almost inevitable necessity of their returning to their former habits.

It would far exceed our limits to attempt even to enumerate the names of the various charitable institutions in and about the metropolis. But those who wish for information respecting them will find the principal facts in regard to each institution, accurately and clearly stated in the comprehensive and valuable little work of Mr. Sampson Low on the Charities of London, published in the present year (1850). We borrow from this work a

Hospital, near Hyde Park corner, lately rebuilt, has a fine front, 300 ft. in length, facing the Green Park. It accommodates 400 in-patients. 5. The Middlesex Hospital, near Oxford Street, founded in 1745, has 265 beds, and relieves numerous out-patients. 6. London Hospital,

Summary, exhibiting the leading Objects of the Charitable Institutions of London, the Number in each Class, the Periods when they were founded, and their Incomes, distinguishing between the Funds derived from voluntary Contributions, and from other Sources.

* This is exclusive of Savings' Banks and Loan Societies.

† Exclusive of Chelsea and Greenwich Hospitals.

‡ This amount of 23,722*l.* of course includes "members' payments."

§ Does not include libraries, madras colleges, or proprietary schools.

‡ Exclusive of parochial schools.

§ Inclusive of government grants or establishments.

¶ This apparently large amount comprehends sale of publications, &c.

Prisons.—There are about a dozen criminal prisons, of which 3 are in the city of London. 1. Newgate, under the control of the corporation, is a building, the architecture of which is singularly appropriate to and characteristic of its destination. It was a prison early in the 12th century; but the present edifice was erected in 1773, and again repaired after the riots of 1780. This, which may be called the great metropolitan goal, may contain proper accommodation for 300 or 400 prisoners, but before the shooting of seasons it has sometimes as many as 1000 or more crowded within its walls waiting for trial; and it then, no doubt, deserves some portion, at least, of the reproaches which have been made against it. In front of this prison all the criminals of London and Middlesex, capital convicted, suffer the last penalty of the law. 2. The Bridewell, near Blackfriars Bridge (once a royal palace), is a house of correction for vagrants, pilferers, or disorderly persons, summarily convicted before the lord mayor and aldermen. The number confined averages 100. The building is said to be inconvenient for the purposes of penal discipline. "The prisoners dine together in day-rooms without superintendence, and there is little or nothing in the discipline to deter either the old or young offender" (*Inspector's Report, 1860*.) 3. Giltspur Street compter, opposite St. Sepulchre's church, a plain edifice with a stone front, is used as a place of confinement for all prisoners tried at the Central Criminal Court and the London sessions, and summarily convicted within the jurisdiction of the city magistrates; a house of correction is attached to it. It holds about 300. 4. Clerkenwell prison, belonging to the county of Middlesex, is one of a similar character with the last. It serves, also, as an auxiliary to Newgate, receiving prisoners remanded from the police courts, or committed for trial at the general sessions. 5. Cold-Bath-Fields prison, a very extensive brick building, near Gray's Inn Lane, is a house of correction for Middlesex, and contains felons, misdemeanants, rogues and vagabonds. It is an insulated brick building, containing spacious courts and airing grounds. The classification is good, and the silent system is followed, connected with hard labour. A large tread mill employs 300 prisoners at a time. This

mill is for debt. Formerly they were often very much crowded, and parties used to be confined in them for long periods of years.

A great deal has been effected, of late years, in regard to the improvement of prisons and of prison accommodation, but we doubt much whether the grand object of a prison has not been very frequently lost sight of in these and other reforms. A prison ought to be made a terror to, and not an asylum for, evil-doers; it should be a place of punishment as well as of safe custody; and if the inmates in prisons be lodged better and fed better than the generally of the poorer classes, they are perverted from their principal object, and become incentives to, instead of checks upon crime. The efforts made to instruct and improve the grown-up occupants of goals, of which we have heard so much, have, in truth, had little other effect than to turn them out more accomplished and dexterous villains than when they entered them.

Crimes.—The crimes committed in London are both grave and numerous; but the degree of demoralisation, as compared with the pop., is not greater than in other places offering the same facility for successful depredation, and having an equal amount of poverty. The Report of the Comptrol. Genl. gives the following statement of depredations known to the metropolitan police in 1860.—

Burglars and housebreakers	-	317
Highway-robbers	-	20
Pick-pockets and common thieves	-	4,420
Coiners and utterers of base coin	-	344
Forgers	-	3
Swindlers, &c.	-	300
Horse and dog stealers	-	100
Begging-letter impostors	-	120
Disorderlies, habitual	-	2,300
Vagrants	-	2,300
Street prostitutes	-	6,371

The annual average of convictions during several late years within the metropolis and its environs exceeds 4,200, more than half of which are for slight crimes, demanding six or three months' imprisonment. Capital offences, except murder, are now generally punished by transportation for life to Norfolk Island. The executions in London have lately not exceeded two or three a year. The serious crimes of the metropolis are, perhaps, on the decrease, and the frequent notification of them at present is more owing to the vigilance of the police, who detect and prosecute offenders, than to any actual increase of crime.

Police.—Till 1830, the police of London had the reputation of being the most defective establishment of the kind in Europe. A great reformation, however, has been effected within the last few years, and the metropolis is now, perhaps, superior in this respect to any other city in Europe. There are 13 police offices, 9 of which are in the city, and one in Southwark. These are—

The Guildhall, in the City.	Vincent Square, Westminster.
The Mansion House, do.	High Street, Marylebone.
Bea Street, near Covent Garden.	Great Marlborough Street, Oxford Street.
Clerkenwell, Rognigge Wells Road.	Worship Street, Finsbury Square.
Hammer-smith and Wandsworth, in Wandsworth.	Kennington Lane.
Greenwich and Woolwich.	Union Office, Southwark.
	Thames Police, Wapping.

The first two of these offices are regulated by the city authorities; the rest are under the control of the Secretary of State. Magistrates sit every day at each office, to hear and determine cases of misdemeanour and breach of the peace, as well as to examine and commit for trial all persons accused of felonies, to administer oaths, swear in constables, and perform other magisterial functions. A number of officers is appropriated to each establishment, and a river police is attached to the Thames office.

The chief instrument of preserving the peace of the metropolis is the metropolitan police, established by Sir R. Peel in 1829. This body is dispersed over the whole of London, excepting the city, which is protected by a distinct body, of similar character, but less effective and not so well disciplined. The city police is under the control of the corporation; the other force is governed by two commissioners, who communicate directly with the Secretary of State for the Home Department. The whole body is distributed into 16 divisions, each being under a superintendent, and having such a conveniently situated station-house. The force consists at present (1860) of 10 superintendents, 120 inspectors, 344 sergeants, and 4,000 constables. The sphere of their duties reaches beyond the metropolis; and comprises, with the exception of the city of London, the whole country within 15 m. of Charing

The building is insulated, and is surrounded by a wall enclosing 15 acres of ground. 6. The Pentonville Prison, Pentonville, is appropriated to the confinement of male prisoners under sentence of transportation. 7. The Surrey county goal is in Horsehoe Lane, Newington Causeway. It contains about 300 prisoners, and there is little classification. The top of the building is used as a place of execution. 8. The borough compter, in Mill Street, is a house of correction for female prisoners, and is said to be well managed; average number of inmates about 60. 9. The Brixton House of Correction is exclusively confined to prisoners sentenced to hard labour at the sessions and sessions, or by magistrates, under summary convictions. Hard labour and the silent system are rigorously enforced. A new prison is now being built at Holloway to accommodate 600 prisoners on, what is said to be, an improved plan. It is intended to receive convicted prisoners only.

The principal prisons for debtors are, 1. The Queen's Bench, in the borough, chiefly used for debtors on process from the Court of Queen's Bench, but also for persons committed for libels, contempts, &c. It is a spacious healthy prison, containing 307 rooms, in which 600 persons have occasionally been confined at once. The 2 & 3 Vict. c. 12 abolished the former practice of granting day rules, and of permitting prisoners to reside within the rules, which occupied a space of nearly 1 sq. m. 2. White Cross Street prison, in the street of that name, in the city, is inconveniently built and badly managed. Its confined extent, when compared with the average number of the inmates, and the disorder prevalent in every part of it, are not a little discreditable to the corporation of London. The prisons for debtors have been comparatively deserted since the changes introduced within these few years into the law respecting imprison-

Cross. The expense is defrayed by an assessment limited to 8d. in the pound on the parish rates, the deficiency being made up by the treasury. The city, as before said, is not under the charge of the metropolitan police, but is protected by a body of men organised on the plan, and in imitation of the arrangements of that body, but placed under the city authorities. The city police, consisting, in 1850, of 565 officers and men, is divided into six companies, to each of which belong inspectors, serjeants, and constables, and the whole is immediately under the control of a superintendent. All the constables, both of the city and metropolitan police, wear a blue uniform, with the number of each man, and a letter designating the division to which he belongs, on the collar of his coat. They are constantly on duty, day and night; but the force is increased at night.

Return of the Number of Persons taken into Custody by the City Police, and the Results, in each Year from 1844 to 1848 inclusive.

Results.	Number of Persons taken into Custody.				
	1844.	1845.	1846.	1847.	1848.
Discharged by magistrates	2,080	2,098	2,342	2,177	1,831

Total	311,140	156,308	129,057	25,773	19,417	4,499	1,859

Pauperism and Mendicity.—London, with all its wealth and its many societies for the relief of distress, contains much misery and indigence, of which a large proportion is attributable more to demoralisation than mere misfortune. Since the Poor Law Amendment Act, most of the metropolitan parishes have placed themselves under its regulations, only 11 parishes still adhering to the old system of maintaining their poor. The money raised by rates, and expended for the relief of the poor, in the metropolis in 1846-47, inc. Chelsea, Greenwich, Lewisham, &c., amounted to 634,360*l.*, assessed upon property valued at 8,820,518*l.* a year. The mendicants, a class almost wholly separate from the paupers, pursue their vocation almost as regularly and with as much success as tradesmen. The Mendicity Society have laboured usefully in exposing the impositions of mendicants; but neither their agents nor the police have been able wholly to suppress them. "Of the London beggars, nine out of ten are gross impostors and convicted vagrants; and of these the very worst are the blind and cripples. The records of the above Society afford surprising proofs of the profligacy of the regular street-beggars, and the inveteracy of their idle and dishonest habits. The metropolitan police, in 1837, apprehended 4,300 mendicants." (*Metrop. Police Off. Rep.* 1838.) The really indigent are relieved by an institution, entitled the Refuge for the Destitute, which provides a meal and a bed for those who give satisfactory proof of requiring such assistance. The private

lodgings of mendicants are crowded, unwholesome, and literally sinks of iniquity.

Water.—The supply of London with water was anciently procured from brooks running through the city. The increase of inhabitants made these sources insufficient; while, at the same time, they became less accessible, owing to the encroachment of buildings. To remedy this inconvenience, water was brought by leaden pipes in the 13th century from Tyburn, then a mere country village, into the city, where it flowed into conduits from which the inhab. drew it at pleasure. In the beginning of the 17th century Sir Hugh Myddelton projected, and, despite the greatest difficulties, carried into effect, in 1613, his plan for bringing the water of two copious springs in Hertfordshire to London, by an aqueduct, called the New River, 40 m. in length, including windings. The Thames has long been one of the great sources of supply; and, as early as 1581, water-wheels and other hydraulic machinery were established at London Bridge. These wheels, which at one time raised 45,000 hogs. per day, were wholly removed when the old bridge was pulled down. The greater number, however, of the existing water-companies derive their supply from the Thames, the water being filtered in immense reservoirs. In 1834 the following account of the houses supplied with water, and of the quantity furnished to each, with the different rates of charge, was laid before the H. of C.:—

Water Companies.	Houses supplied.	Total yearly supply.	Daily average to each.	Charge per 1,000 hlds.
		<i>hogsds.</i>	<i>galls.</i>	<i>s. d.</i>
New River Company	70,145	114,650,000	241	17 2
Chelsea do.	15,892	15,753,000	168	29 0
Grand Junction do.	8,780	21,702,567	363	48 6
W. Middlesex do.	16,000	20,000,000	185	45 6
E. London do.	46,421	37,810,000	121	24 0
S. London do.	12,046	8,100,000	100	15 0
Lambeth do.	16,644	11,908,600	124	17 0
Southwark do.	7,100	7,000,000	100	21 0
Total water supply	191,066	237,014,761		

In every street in London there are fire-plugs or cocks, at any of which a copious supply of water should be obtained in a few minutes in case of fire; though it must be admitted that the supply has sometimes, through neglect, been very long delayed, to the great injury of property. Much water is also used in watering the streets and improving the drainage: indeed, scarcely a third part of the supply is used for purposes strictly domestic. Abundant springs of the finest water may be procured in all parts of London, by boring below the clay strata; but no public measures have yet been taken to ensure a supply from this source, or (excepting the New River) from springs at a distance. It is probable, however, that steps will, at no distant period, be taken to effect this object.

Sewers.—The sewers of London, which began to be constructed so early as 1426, constitute a system of drainage unknown to most modern cities; and, though out of sight and hardly appreciable except by engineers, they have excited the astonishment of all who have investigated the subject. Their depth is, in most cases, sufficient to drain the deepest cellars in each neighbourhood, and the size of the main branches rivals that of the celebrated Roman Cloacæ. But notwithstanding what has been done, a vast deal still remains to be accomplished before the sewerage can be said to be on a perfectly satisfactory footing. In some low neighbourhoods, such as Wapping, Stepney, Bethnal Green, Bermondsey, Westminster, &c., it is still very imperfect, and wherever this is the case, malignant fevers and other epidemic diseases, make fearful ravages among the lower classes. The sewers were formerly under the direction of different boards of commissioners. Inasmuch, however, as these bodies frequently entertained conflicting views, it was resolved, to obtain that unity of view and of action which in such matters is so essential, to consolidate the different metropolitan boards into a single board. But though the new board comprises some very able men, their proceedings have not hitherto, perhaps, been very satisfactory. A good deal of allowance should, however, be made for the all but insuperable difficulties of the task they have undertaken. Hitherto the river has formed the grand outlet, the *cloaca maxima*, for all the sewers of the city. But the opinion has become very general that the Thames should no longer be employed for such a purpose; and that a vast subterranean canal should be dug on each side the river to receive the drainage of the sewers coming from the interior of the town, and to convey it to some considerable distance from the city where it may be converted to useful purposes, and hindered from polluting the waters of the river. Whether this grand project will ever be fully carried out, or whether if carried out

it will have the beneficial effects that have been anticipated, are questions more easily proposed than answered. But whatever may be done with this great project, it is to be hoped that no further time may be lost in taking measures for the efficient drainage of those parts of the town where sewers are defective, or where they are wanting.

Paving.—The streets of London are not only well paved for carriages, but they have also on both sides, for the accommodation of pedestrians, smooth and usually wide flagged footways, raised some inches above the carriage way. This advantage it enjoys in common with most English towns, but few cities in the Continent are provided with a similar convenience, though Paris has in some measure followed the example in streets wide enough to admit of it. The paving is under the control of numerous boards, each of which has its particular district. It is conjectured that the streets expended in paving the streets of London amount to £11,000 per ann. Pavement was first laid down in the suburbs in 1417. In 1448, in 1458, the plan of having footways of broad stone was begun, but it did not become universal till the middle of last century. For some time past the principal streets have been paved with granite, mostly brought from Aberdeen. Very recently indeed, some portions of them have been paved with wooden blocks, and two singular covers it may appear (this sort of pavement was found to be quite as durable as granite, while it lessened the noise and wear of carriages like dust, and noise). Unhappily, however, it becomes so very slippery in wet weather that horses are very apt to stumble upon it, and as no means of obviating this serious defect have been discovered, it has been rather generally given up.

Lighting.—The metropolis is exceptionally lighted with gas, even in its most remote and secluded parts. With-out going back to 1818, when lanterns were first being set before citizens' houses, or even 5 centuries later when an act passed to compel housekeepers to light up a lamp for 1 hour during the dark nights, many may remember the old oil lamps, which were used by a street-sweeper to "edge the streets with two long lines of brighten little dim indicative of light, but shining very little."

It seemed somewhat exaggerated the deficiency, but still the difference between the old and present plan of lighting is immense. Gas was first tried in London in 1801, but with little success, as no means had then been discovered for removing its impurities. But Watt had found the same year the only secret then known, when, in 1804, a charter was obtained by a gas company which shortly has certainly extended his operations. The profits of this speculation led to the formation of other companies, but it was not till 1810 that any considerable portion of the metropolis adopted gas. From that period, however, public bodies and private traders began rapidly to introduce it into their establishments, and particular boards adopted the numerous gas jets in line of the early glimmering oil lanterns. There are now 18 gas companies, who may probably produce at an average 1,000,000 cubic feet of gas every 24 hours. The number of lights is variously estimated, in 1810 it was stated before a committee of the H. of C., that the number was nearly 60,000, and there may now probably be three times as many or more. The cost of gas has been lately reduced. The price at present (1850) varies from 6s to 10s per 1,000 cubic feet.

Fire.—London has suffered from fire almost, perhaps, than any other capital, except Constantinople, but the precautions taken in rebuilding the city, after the great fire of 1666, were calculated to prevent the recurrence of such a calamity. The streets were made quite wider, brick and stone were substituted for wood, and party walls were built between adjacent buildings. At a subsequent period the Building Act of 1774 (c. 74) completed the erection of brick party walls between the separate tenements, and obliged each parish to keep one or more fire-engines always ready for service. The various insurance offices also began to maintain fire companies at their own expense, attended by bodies of well-disciplined firemen, and in 1800 some of the largest of them establishments entered into an arrangement, by which all their force was put under one superintendence. The fire brigade association was gradually joined by the other offices, and at present all the London insurance offices contribute to support this most efficient establishment. One establishment now guards the whole, aided by about 100 firemen and engines, who are placed at 16 different stations in all parts of the town and suburbs. The firemen, who are all numbered, wear a uniform of dark grey and a strong leather belt, a third part of their body is always on duty and they are provided with the best means of extinguishing fires, and removing persons in danger. The average number of fires for the 5 years ending with 1846, was 615 per annum, of which 300 were slight, and 315 seriously destructive.

Health.—The metropolis has in itself all the elements of a healthy city. If the tide leave the banks of the Thames exposed, that great river sweeps through the city from W. to E. and the winds rush fresh over its waters. The land rises in undulations to Hampstead Heath, and the Survey hills, pure water is abundant, and would flow under almost every street; the artificial heat and gas, volume as it sometimes is, ascends in a vast column to the sky, and is replaced by under-currents from the surrounding country. (*App. to Reg. Com. 2d Rep.*)

But notwithstanding these favourable circumstances, London was long exceedingly unhealthy, and down to 1665 was hardly ever free from the plague. This excess of mortality was, no doubt, occasioned by the wretched state of the town. The streets were then narrow, crooked, many of them unpaved, and generally filthy; the houses, built of wood and lofty, were dark, irregular, and ill-contrived, each story projected over the one below, so that they almost met at the top, thereby precluding, as much as possible, the escape of foul and the access of pure air; the shops were also furnished with enormous signs, which being suspended cross-wise in the middle of the street, tended still further to prevent ventilation; the sewers were, at the same time, in a very imperfect state, the drains which conveyed away the filth not being arched over, but running above ground; and if we add to this the deficiency of water, and the prevalence of stouthness in doors, which then existed to an extent not easily to be imagined*, we need not wonder at the ravages made by the plague and other diseases. (*See Matten's Hist. of London, passim; and Holme's Treatise on Diseases p. 71*)

In 1592, the deaths by the plague within the bills of mortality amounted to 11,500, in 1603 to 20,000; in 1625 to 24,000, in 1665, to 10,000; and in the dreadful year even of 1693 they rose to 20,000. And it is impossible to say how soon it might have again burst forth, had it not been for the severe but providential visitation of the great fire by which it was immediately followed, and which, by destroying the most crowded and ill-built parts of the city afforded an opportunity, which was luckily embraced, of rebuilding them on a better and more commodious plan. Very severe regulations were then also laid down for the enforcement of cleanliness; and the supply of water being at the same time augmented and better distributed, and the drains greatly improved and arched over, London has not been again visited by any very destructive epidemics. Still, however, the mortality during the first half of last century was very great; and short, Corbyn Morris, Price, and other well-informed writers of the period, indulge in bitter complaints of the severe drain on the country, occasioned by the waste of life in London. The pop. appears, indeed, to have declined between 1740 and 1760, and during the 10 years ending with 1760, the burials appear to have amounted at an average to 20,000 a year, while the baptisms did not exceed 15,710. (*From vol. II p. 26*) A portion, however, of this enormous discrepancy is apparent only, and may be accounted for by omissions in the registers of

* Dr. Keene, who visited England in the year 1711, and was well acquainted with the state of the country at that time, says, "The streets of London are so narrow, crooked, and so filthy, that it is impossible to see a single house without seeing a great number of children, and a great number of dogs, and a great number of cats, and a great number of rats, and a great number of mice, and a great number of flies, and a great number of worms, and a great number of other vermin, which are all the cause of the plague." (*See Keene's Travels, vol. II, p. 100*)

baptisms. But it is, notwithstanding, abundantly certain that the deaths very materially exceeded the births at the period referred to; and that they preserved this ascendancy down to a much later period. The mortality in 1765-1775 was estimated at about 1 in 20, or 5 per cent. of the existing population; but from this period a very material change for the better began to take place. In 1790 the baptisms, for the first time, exceeded the burials; and during the 10 years ending with 1820, there was an excess in the total number of baptisms of 51,000 over the total number of burials. This excess has since continued to increase. Hence it is plain, supposing no unfavourable change to take place, that London might go on adding indefinitely to her population, without drawing a single recruit from the country.

The mortality of London in the 7 ordinary years (1838-44), was at the average rate of 25 deaths annually out of every 1000 inhab. The mortality, in the same time, was 22 in 1000, over all England; and only 16 or 18 in 1000, in the healthiest districts of the country: in 11 of the 38 London districts the mortality was lower than in all England; in 6 of the districts, from 28 to 30 in 1000 of the inhab. died annually. The region round Smithfield, Blackfriars Bridge, and the Tower, is the most unhealthy; the healthier tracts include Lewisham, Hanover Square, Camberwell and Hackney. The mortality of Paris is about 33 in 1000 annually; being higher, consequently, than the mortality of the worst districts of London.*

The mortality of males in London is 27, of females 23 in 1000: so that out of equal numbers living of the two sexes, 5 males die to 4 females.

The mortality of boys under 5 years of age, is at the rate of 93 in 1000; of girls of the same age, 80 in 1000: the mortality then rapidly declines, and at the age of 10-15, is at the rate of 5 in 1000 in both sexes; at the age of 15-25, only 8 males and 6 females in 1000 die annually; at the age of 25-35, 11 men and 9 women in 1000 die annually. The mortality then rapidly increases, and 18 men and 14 women in 1000, of the age of 35-45, die annually. It is worthy of remark that at the corresponding age (35-45), the mortality of men and women, in all England, is equal, being at the rate of 12 in 1000 annually. The excess in the mortality of men in London continues up to an advanced age: and is partly accounted for by the fact that a great number of the women are domestic servants, while the men are artisans, and work in close, dirty, crowded rooms.

Of 519,757 deaths in London, during the 10 years 1840-49, the causes were returned in 516,708 instances, 9,146 being referred to small-pox, 13,161 to measles, 17,574 to hooping-cough, and 19,084 to scarlatina. These diseases, with water on the brain and convulsions, are chiefly incidental to childhood. So also are pulmonary inflammations, including bronchitis, pleurisy, and pneumonia, which were fatal in 57,924 cases. Of the diseases that attack adults, typhus and consumption are the most destructive; 19,695 deaths having been ascribed to the former and 69,414 to the latter malady. 4,164 women died in childbirth; 13,614 persons died violent deaths. Dysentery, which was formerly so common, caused only 1,961 deaths; diarrhoea 13,505, cholera 15,521. The three latter diseases prevail in summer, the inflammations of the chest in winter.

About 1 in 6 of the people of London die in workhouses, hospitals, or lunatic asylums.

Cholera broke out as an epidemic in 1832-34, and again in 1848-49, when it was fatal to above 14,000 persons. The mortality of this epidemic was greatest in low, badly drained, poor districts. It killed 66 in every 10,000 of the inhabitants; but was nearly three times as fatal on the S. as on the N. side of the Thames. The chief differences in the circumstances of the people N. and S. of the river are shown in the annexed table from the Registrar-General's returns.

London.	North Side of the River.	South Side of the River.	
39	51	5	Elevation of the ground in feet above Trinity high water mark.
30	52	14	Density, or number of persons to an acre, 1849.
7	8	6	Number of inhabitants to each house, 1841.
40	46	25	Annual value in pounds, of houses, assessed to Income Tax for year ending April 5, 1843.
13	12	18	Pence paid for relief of the poor to every £l. of house rent annually, 1842-43.
66	44	127	Deaths from Cholera to 10,000 persons living in 60 weeks, ending Nov. 24th, 1849.
252	251	157	Deaths from all causes annually to 10,000 persons (5,000 males, 5,000 females), living during the 7 years 1838-44.

The deaths have been reduced from 5 per cent. of the inhabitants in the 17th century, to 2½ per cent. in the present day; and it is gratifying to find, upon looking into the causes of the excess of mortality which still prevails, that all of them may either be mitigated or counteracted. Measures will, no doubt, be speedily taken for removing Smithfield market and the houses for the slaughter of cattle from the centre of the city; and for interring the dead at a distance from human dwellings. If purer water be required it may be procured, and supplied in abundance. The houses and workshops of the poorer classes have been and may be farther improved. The abuses of the inferior lodging-houses should, in as far as practicable, be corrected. And the sewerage should be perfected. And, were these things done, London, which is now less unhealthy than any other large city, would, probably, enjoy an immunity from epidemics, and be nearly as salubrious as the country in its vicinage.

"It is found, from a comparison of the several metropolitan districts, that, *ceteris paribus*, the mortality increases as the density of the pop. increases, and that where the density and the pop. are the same, the rate of mortality depends on the efficiency of the ventilation, and of the means employed for the removal of impurities." (*App. to Regist. Gen. 1st Rep.*) Epidemic diseases in the crowded parts of London are attended with nearly double the mortality that belongs to them in more airy districts; and diseases of the respiratory system are increased 50 per cent. in close neighbourhoods. Mr. Farr's statements in the Report of the Registrar General, in regard to the importance of ventilation and drainage, are fully corroborated by Dr. Smith, Dr. Arnot, and other authorities. The following table (next page) represents the mean annual mortality *per cent.* in the metropolis, and in England and Wales, from 12 classes of disease. (*2d Rep. App. p. 13.*)

Summer is the healthiest, winter the most fatal season: and this rule has prevailed since the beginning of last century. The deaths out of 100 living (1838) averaged in Jan., Feb., March, '85; in Apr., May, June, '70; in July, Aug., Sep., '60; in Oct., Nov., Dec., '66.

Increase of Population.—It is much to be regretted that there are no accurate accounts of the population of London previously to the census of 1801. The population of the city was, however, estimated by Graunt, the well-informed author of the famous *Treatise on Bills of Mortality*, at 384,000 in 1661, and adding 1-5th to this for the population of Westminster, Lambeth, Stepney, and other outlying parishes, he estimated the entire population at about 460,000. (*Observations, &c.* 5th ed. p. 82. and p. 105.) In all large towns, except (as in Petersburg) there be a great excess of military, the number of females is, in modern times, found invariably to exceed that of males; but, if we may depend on Graunt's estimate, the reverse was the case in the city of London at the epoch referred to, for he makes the number of males 199,112, and of females only 184,886. (p. 83.) In 1696 the population of the city and the out parishes was carefully estimated, by the celebrated Gregory King, at 527,560; and considering the great additions that had been made to the metropolis between the Restoration and the Revolution, this increase does not seem to be greater than we should have been led to infer from Graunt's estimate. The population advanced slowly during the first half of last century, and indeed, as already stated, it fell off between 1740 and 1750. In his tract on the population of England, published in 1782, Dr. Price estimated the population of London, in 1777, at only 543,420. (p. 5.) But there can be no doubt that this estimate, like that which he gave of the population of the kingdom, was very decidedly under the mark; and the probability seems to be that, in 1777, London had from 640,000 to 650,000 inhab.* Its population amounted, including Chelsea, as has been already seen, to 888,198 in 1801, and to 1,873,676 in 1841; and at present it is probably little short of, if it do not exceed, the prodigious sum of 2,100,000—the greatest number of human beings ever, we believe, congregated within the same space, in any age or country.

“Opulent, enlarg'd, and still
Increasing London! Babylon of old,
Not more the glory of the earth than she,
A more accomplish'd world's chief glory now.”

London is, no doubt, principally indebted for her extraordinary rise and unexampled magnitude, to her admirable situation, on a great navigable river within a short distance of the sea, and in the centre of a rich and fertile country, of which she is naturally the emporium. Her river enables her to obtain abundant supplies of all the bulkier descriptions of products, not only of all parts of the United Kingdom, but also of the world, at the lowest possible cost. The advantages thence resulting have been great and obvious. A city in an inland situation never could

have attained to any thing like the colossal magnitude of London. Indeed, almost all great cities, in all ages of the world, have been built either on the sea-shore or on the banks of some great navigable river. Paris is probably the largest city that ever existed without any very great command of water carriage. But her advance has been slow compared with that of London; and notwithstanding the advantage she has long enjoyed, from being the capital of a powerful monarchy, and the residence of a polished and luxurious court, her population is not, at this moment, half that of London.

The extraordinary growth of the latter during the present century seems to be mainly attributable to the same causes that have increased wealth and population in other parts of the empire, that is, to the progress of arts, manufactures, and commerce. Though not in the manufacturing districts, London is now, by means of canals, railways, and other improved means of communication, intimately connected with them; and the many advantages she enjoys as a trading and commercial port, will always secure for her a large share of the shipments of manufactured products. London has also derived a vast accession of influence from her being the seat of government, the place where the dividends on the public debt are paid, where all transfers of stock are effected, and where all the important pecuniary transactions of the empire are ultimately adjusted. And how paradoxical soever it may at first sight appear, it is certainly true that the very magnitude of London is an efficient cause of her continued increase. The greater a city becomes, the greater is the scope she affords for the exercise of every talent and acquirement, and for the gratification of every taste and desire; and the more powerful, consequently, are the motives by which she attracts all sorts of individuals, whether aspiring or careless, industrious or idle, grave or gay, virtuous or profligate.

The brief but comprehensive account given by Seneca, of the motives which drew so great a concourse of people to imperial Rome, applies without the alteration of a syllable to London:—“*Aspice aedem hanc frequentiam, cui vix urbis immensae tecta sufficiunt. Ex municipiis et coloniis suis, ex toto denique orbe terrarum confluerunt. Alios adducit ambitio, alios necessitas officii publici, alios imposita legatio, alios luxuria, opulentum et opportunum vitiis locum quarens: alios liberalium studiorum cupiditas, alios spectacula: quosdam traxit amicitia, quosdam industria, latam ostendenda virtuti nacta materiam: quidam vanalem formam attulerunt, quidam vanalem eloquentiam. Nullum non hominum genus concurrat in urbem, et virtutibus et vitiis magni praemia ponentem.*” — *Consolat. ad Helviam*, cap. 6.

Vast as London is, the chances are, should the country continue to prosper, that she, also, will continue to increase in magnitude; and the progress she has already made, unprecedented as it has been, may, not improbably, be surpassed by that which she is yet destined to make.

Habits, Condition, &c.—The peculiarities of character belonging to the inhab. of London must be learnt from observing the manners of the middle and lower classes, especially the latter; for the higher classes, who reside in it only during four or five months of the spring and summer, can scarcely be called Londoners. Great activity, unwearied diligence in business, a shrewd perception of character, and an ever-watchful regard to self-interest, not unmingled, however, with generosity, are the chief characteristics of the native pop. Owing to the extreme subdi-

* See the Tracts of the Rev. Mr. Howlett and of Mr. Wales, in answer to Dr. Price.

vision of employments, and the undivided attention which most individuals give to their own pursuit, the citizens are, for the most part, singularly expert in it, and proportionally ignorant of every thing else. This, however, is less so now than formerly; the extensive circulation of cheap publications having diffused information in regard to many topics of which the bulk of the pop. had formerly the most imperfect ideas. The principal merchants, bankers, and tradesmen, have generally houses in the environs of the town, or in the country, to which they retire after business during summer; and many indeed, though with little advantage to their business, occupy these houses during the whole year. Others again, who are, or pretend to be, of the highest class, have houses in the W. end of the town as well as in the country, and live in first-rate style. But the expenses in which they are thus involved frequently exceed their means, and are a principal cause of those wild speculations and disgraceful failures which, of late years, have been so very frequent. The wealth of London is not, in truth, to be found amongst those who make the greatest display, but among the quiet living, unostentatious, tradesmen.

The inferior shopkeepers and tradesmen, though sometimes very wealthy, abstain from all expensive indulgences. Sometimes, indeed, they resort to an over-crowded watering-place for a week or fortnight, trying, in vain, to rid themselves of the anxieties of business. But a far larger number may say, with Mrs. Gilpin,

“ For twice ten tedious years, yet we
No holiday have seen.”

The London tradesman, unlike the Parisian, is essentially domestic. He knows nothing of *table-d'hôtes*. His visits to the sea-side, the country, his friends or club, are all exceptions to his ordinary regularity.

Most classes of skilled workmen receive high wages, which having been little, if at all, reduced since 1815, they are at present much better off than during the war. Their circumstances vary, of course, according to their prudence. Few save money; but all live well, using butchers' meat to an extent unknown any where else, and dressing, on holidays at least, in a style equal to that of the classes above them. Many, not contented with one holiday in the week, keep a second, known as “St. Monday,” and not unfrequently a third, sometimes spent in revelry, but more frequently, perhaps, in country excursions with their families. Others, however, work unremittingly from one year's end to the other, content with an Easter or Whit-monday's trip to Gravesend or Sheerness in a steamer, or to Windsor or Brighton by a pleasure train, or to Hampton Court, Richmond, Kew, Hampstead, or Blackheath, on a pic-nic excursion. In summer mornings large parties may be seen leaving town on some such expedition, in vans, well provided with good cheer, and not unfrequently, also, with one or more musicians; and in the evenings the same parties may be seen returning in a state of uproarious enjoyment. But it must, notwithstanding, be admitted, that beer shops and gin shops are the favourite resorts of the labouring classes of London.

The class of female domestic servants comprises a far greater number of individuals than any other business or occupation in London. Their wages are high, and they are in general extremely well off. Perhaps they are not as provident as they might be, and that money is frequently spent on useless finery that had better be deposited in Savings' banks. Needlewomen, washerwomen, &c.,

especially the former, are not nearly so well off as indoor servants; and it would not, we think, be difficult to show, were this a proper place for such discussions, why this is the case. On the whole, however, it may be safely affirmed that nowhere in the U. K. are the industrious classes, provided they be well conducted, so comfortably situated as in London.

The lowest class of all, those whose means of existence are precarious, disreputable, or dishonest, have peculiar habits. They care little for appearances; and are all but unknown to the rest of the people, except when their wants or delinquencies intrude them on the public notice.

All classes of Londoners, from the highest to the lowest, are brought together on Epsom Downs on the “Derby,” or grand race day. The assemblage is as motley as it is immense; but nowhere else in the world is there to be seen so vast a concourse of well-dressed people, splendid equipages, and high-bred horses. All the characteristic humours of the lower classes are displayed on the road and on the Downs.

Environs. — The metropolis is surrounded by a country of varied surface and great productiveness. The ground on the E., W., and S. extends in a flat along the river, which is prevented from inundating it at high water by extensive embankments, probably constructed by the Romans. On the N. the ground rises gradually to an elevation of 800 or 400 ft., and the flat on the S. is also bounded by grounds which attain to a like elevation. The picturesque hills of Surrey, near Dulwich and Norwood, are studded with the villas of citizens, who retire thither from the bustle of town. Blackheath, more to the E., and nearer the river, though not so fashionable as in the days when Greenwich had a palace and a court, continues to be a favourite resort in summer, and its buildings have increased since the access to it has been facilitated by the railway. N. of the metropolis lie Hampstead and Highgate, both of which command extensive views of Hertfordshire, Surrey, and other counties: these villages, with others on the N., and Dulwich, Camberwell, Clapham, &c., on the S. side of the river, consist, mostly, of the houses of tradesmen and others who daily visit the city in pursuit of business. This prevalent fashion among the Londoners of fixing their abode in the suburbs has been greatly encouraged by the easy communication afforded by the omnibuses and coaches which run to and from at all hours of the day, and till late at night. Owing to this circumstance, the pop. of the city proper has decreased since the commencement of the present century. It may now, indeed, be called a collection of shops and warehouses rather than of residences for families. The suburban villas vary in size and grandeur, according to the means or tastes of their proprietors; but comfort and neatness are their universal characteristics.

Corporation. — The City of London is under the government of the lord mayor, 2 sheriffs, 25 aldermen, 206 common-councilmen, a recorder, and other officers, and is divided for municipal purposes into 26 wards, each of which is under the government of an alderman. The Saxon denomination for the governor of London was *portgraf* or *portreeve*, which, about a century after the Conquest, was changed to mayor. This officer was appointed by the Crown till 1215, when the citizens obtained the right of electing their own mayor. The mode of election now followed was fixed in 1476 by an act of common-council.

The lord mayor is annually chosen from the body of aldermen, at a court held at Guildhall on

Michaelmas day, and is sworn in to the duties of his office on the 9th of Nov. following. A grand pageant takes place on the occasion, followed by a dinner and ball at Guildhall. In most instances, though not always, the alderman next in seniority to the lord mayor is elected his successor. He is always free of one of the great city companies, and must have served the office of sheriff. The lord mayor is second only to the sovereign within the city, and at the sovereign's death he takes his seat, at the privy council, and signs before every other subject. His powers are similar to those of a lord-lieutenant of a county, and his authority extends over the whole city and a portion of the suburbs.

The division of the city into wards appears to have been made very early in the 13th century; there were twenty-four wards, which became twenty-five in the year 1393 by a division of the ward of Farringdon. In 1550 a great part of the bor. of Southwark was formed into a ward, and called Bridge Ward Without; but it is now merely a nominal ward, giving a name to the senior alderman, who on the occasion of a vacancy is removed to it from his own ward, and is then called "the father of the city."

The following is an alphabetical list of the names of the wards, with an indication of their situation, and the number of common-councillors*:

1. Aldersgate, on both sides of Aldersgate Street, including the Post-office. Com. coun. 8.
2. Aldgate, at the E. end of the city. Includes the E. ends of Leadenhall Street, and Fenchurch Street, and Crutched Friars, called Alegate in the old list of 1285, given by Maitland. Com. coun. 8.
3. Bassishaw (corrupted from Basinge's-haugh) includes little more than Basinghall Street. Com. coun. 4.
4. Billingsgate, from Billingsgate Market to near Fenchurch Street. Com. coun. 8.
5. Bishopsgate, both sides of Bishopsgate Street. Com. coun. 14.
6. Bread Street, E. of St. Paul's, and S.W. of Cheapside. Com. coun. 8.
7. Bridge Within, London Bridge and Fish Street Hill, includes the Monument. Com. coun. 8.
8. Bridge Without, part of the Borough of Southwark.
9. Broad Street, between Bishopsgate Ward and Coleman Street, includes the Bank; this is apparently the Lodginger of the ancient list. Com. coun. 8.
10. Candlewick, between Lombard Street and London Bridge, named from Cannon Street, which was formerly called Candlewick Street. Com. coun. 6.
11. Castle Baynard, from St. Paul's to the Thames. Com. coun. 8.
12. Cheap, both sides of the E. end of Cheapside and the Poultry, including Guildhall. This is probably Ward Fori in the ancient list. Com. coun. 8.
13. Coleman Street, includes Lothbury, part of London Wall and Finsbury Circus. Com. coun. 8.
14. Cordwainers, S.E. of Cheapside; includes Bow Church. Com. coun. 6.
15. Cornhill, a small ward on both sides of Cornhill, includes the Exchange. Com. coun. 6.
16. Cripplegate, reaches from Wood Street, Cheapside, to the boundary of the city on the N.; it includes Fore Street and the Barbican. Com. coun. 16.
17. Dowgate, between Southwark Bridge and London Bridge, includes Merchant Taylors' School. Com. coun. 6.
18. Farringdon Within, includes St. Paul's Cathedral, part of Cheapside, Newgate Street, and Ludgate Street, and reaches the river near Blackfriars Bridge; this and the following are the "Lodgate and Newgate" of the old list. Com. coun. 14.
19. Farringdon Without, includes Smithfield, the Old Bailey, the Fleet, part of Holborn, and the whole of Fleet Street. Com. coun. 16.
20. Langbourne, includes Fenchurch Street, and a part of Lombard Street. Com. coun. 8.
21. Lime Street, includes the East India House, and a small space around it. Com. coun. 4.
22. Portsoken, Eastward of Houndsditch and the Minories. Com. coun. 8.
23. Queenhithe on the River, W. of Southwark Bridge. Com. coun. 6.
24. Tower, from Tower Hill to Billingsgate, includes the Custom House. Com. coun. 8.
25. Vintry, on the Thames, and both sides of Southwark Bridge. Com. coun. 6.
26. Walbrook, S. of the Mansion House, includes the Mansion House, and the Church of St. Stephen's, Walbrook. Com. coun. 6.

The aldermen are chosen by such householders as are freemen, and pay an annual rent of 10*l*. Each alderman is elected for life, and has the direction of the business of his ward, under the superintendence of the lord mayor. They are all justices of the peace within the city. The sheriffs are elected every year, on Midsummer day, by the corporation and freemen, and are sheriffs of the county of Middlesex, as well as of the city of London: they enter on their duties, and are sworn in at Westminster on Michaelmas day. The common councilmen are chosen by the householders in all the wards except Bridge Without. The common councilmen are the representatives of the inhabitants in the "Court of Common Council," which is composed of the lord mayor, aldermen, and common councilmen. This court disposes of the corporation funds, makes laws for the regulation of the city, and nominates certain of the city officers. Its sittings are usually public, and its title "honourable."

It must, however, be admitted that here, as in most other great towns, civic dignities have been long declining in the public estimation. The principal bankers, merchants, and tradesmen, all but uniformly decline serving in any civic office, and rather than do this will submit to pay very heavy fines. In consequence, the offices in question have been filled, for some years past, by an inferior, though still very respectable class of citizens. It has been customary, on certain occasions, to advance lord mayors, and other city functionaries, to the rank of knights and baronets. But it were well that this practice, which has nothing save its antiquity to recommend it, were discontinued. It has sometimes made honours be conferred on very questionable parties.

The Livery consists of freemen of the city, who are also free of one or other of the city companies. Each of these companies was, at its formation, intended to comprise the different individuals within the city, properly so called, engaged in the peculiar department of industry called by its name; and had power to enact bye-laws, and to lay down regulations for the government of the trade. Thus, for example, no one could commence business within the city of London as grocer, mercer, or goldsmith, without being free of the grocers', mercers', or goldsmiths' companies. And this freedom could only be acquired by inheritance, serving an apprenticeship to a freeman, or paying a fine, or otherwise, as the company might choose to order; and after admission, all individuals had to conform in the conduct of their business to the rules and regulations laid down by the company. But the inconveniences of this system gradually became obvious; and it has, in consequence, been so much modified, that the privileges of the different incorporated companies no longer oppose any obstacle to individuals from distant parts of the country establishing themselves in business within the city, nor interfere in any degree with the management of their concerns. In fact, any one who pleases may now purchase at Guildhall a licence entitling him to trade within the city for 5*l*. without being free of, or having anything to do with, any company. The city companies have, in truth, become charitable rather than political, or even municipal, institutions. Some of them have a great deal of property. The principal

* At first each ward sent 2 councillors, but the number has been gradually increased, till it reached 240 in the whole: but by a regulation made in 1838, the number was reduced to 206.

companies obtained very large grants of land in Ulster during the reign of James I.; and most of them are trustees for sums of money and other property bequeathed by benevolent individuals. They expend their revenues partly in festivities, but principally in pensions to widows and decayed brethren, the support of schools, &c. There are in all 91 companies, of which 40 have halls, where they transact business, keep their records, and hold festivals. Some of these halls are very fine fabrics; that of the goldsmiths in Foster Lane, rebuilt since 1831, is a magnificent structure; and were it in a situation where it could be seen, would be one of the principal ornaments of the city.

The following 12 are called the *Great Companies*, and from one or other of them the lord mayor must be elected:—

Mercers.	Merchant Taylors.
Grocers.	Haberdashers.
Drapers.	Salters.
Fishmongers.	Ironmongers.
Goldsmiths.	Vintners.
Skinners.	Clothworkers.

There are about 12,000 liverymen, in whom, previously to the passing of the Reform Act, in 1832, the right of returning the 4 mems. of the H. of C. for the city was exclusively vested. A Common Hall is an assembly of the liverymen, called together at the requisition of a considerable number of their body: the lord mayor is the president by right of office.

The Guildhall, where the Corporation meetings, festivals, and common halls are held, stands at the N. end of King Street, Cheapside. Having been much damaged in the great fire of 1666, it was replaced by the present edifice, constructed of the materials of the old building. The front, added in 1789, is in a heterogeneous style. The great hall, 158 ft. in length, by 48 in breadth, and 53 in height, built and paved of stone, is capable of accommodating 6,000 persons; at least that number were present at the grand entertainment given by the corporation to the allied sovereigns in 1814. At each end of the hall is a magnificent painted glass window in the pointed style; but the roof is flat, panelled, and inappropriate; and the whole requires to be renovated and made consistent with the original character of the building. In the hall are statues erected by the corporation in honour of Lord Chatham and his son the Right Hon. William Pitt, Nelson, and Alderman Beckford. On the pedestal of the latter is inscribed the famous reply made, or rather said to have been made, in 1770, by Beckford, who was then lord mayor, and one of the mems. for the city, to the answer of his majesty (George III.) to an address and remonstrance of the common-council.* At the W. end of the hall are the two wooden giants called Gog and Magog, the subject of so many nursery tales. In the council-chamber, where the lord mayor, aldermen, and common-council hold their courts, is a statue of George III. by Chantrey; it has also a library containing books of reference, relative chiefly to the history of London, and the affairs of the city, and various other rooms for the use of the corporation.

The city has its peculiar courts of law, most of which are held in the Guildhall. The lord mayor's court, for actions of debts and trespass, and for appeals, is presided over by the recorder of the city. The sheriffs hold courts of record four days every week. The Chamberlain's court, held daily, decides disputes between masters and apprentices,

* It appears to be pretty well established that Beckford did not really make the reply ascribed to him.

and admits qualified persons to the freedom of the city. Courts of Petty Session for small offences are held daily at the Mansion House, by the lord mayor and an alderman, and at the Guildhall by two aldermen. There are also several minor courts.

The revenues of the corporation of London amounted, according to the commissioners' report, to 152,035*l.* in 1831, and to 160,194*l.* in 1832. These large funds are derived from rents of houses and land, market tolls, bequests, interest on government securities, and a few other sources. The expenditure in the year 1831 was 149,411*l.* and in 1832, 169,256*l.*: the chief items consist of salaries to municipal officers, maintenance of police and prisons, corporation entertainments, purchase of securities, and payment of debts. The lord mayor has 8,000*l.* a year allowed him to support the dignity of his office, and a splendid official residence, the Mansion-house, at the E. end of the Poultry, nearly opposite the Bank. This, which has been much, and in some respects, perhaps, not very justly censured, is a large structure, begun in 1789, and finished in 1758, with a Corinthian portico on a rustic basement. The grand or Egyptian Hall (in which, however, there is nothing Egyptian!), the ball-room, and the saloon, are magnificent apartments, but some of the private apartments, occupied by the lord mayor, are but indifferently lighted. The plate used at civic entertainments belongs to the corporation, and is very valuable.

The city of Westminster was anciently governed by the abbot; but since the reformation it has been under the authority of civil officers nominated by the dean. The chief magistrate is the high steward, generally a nobleman, who holds the office for life; the next is the high bailiff, chosen by the high steward, who also holds the office for life. There are 16 burgesses, whose offices are similar to those of aldermen, each having jurisdiction in a separate ward; out of these are elected two head burgesses, one for the city and the other for the liberties, who take rank after the high bailiff; each burgess has an assistant; there is also a high constable, who has authority over the other constables. The Court of Quarter Sessions is held at the Westminster town-hall four times a year. The court of St. Martin's-le-Grand is held for the trial of personal actions relating to that part of the liberties. The court-leet is held under the authority of the dean, for choosing officers, removing nuisances, and similar matters.

Southwark was anciently governed by its own officers, but since the year 1827, it has been for many purposes subject to the lord mayor, who governs by a steward and bailiff, the former of whom holds a court of record every Monday at the Town-hall in the Borough High Street. Another court is held at Bankside for the Clink liberty, a mean densely-peopled district, to the westward of London Bridge.

Parliamentary Representation.—Down to the passing of the Reform Act, in 1832, the metropolis sent 8 mems. to the H. of C., viz. 4 for the city, elected by the liverymen; 2 for the city of Westminster, elected by scot and lot voters; and 2 for the bor. of Southwark, also elected by scot and lot voters. In addition to the above, the Reform Act created 4 new bors., out of parts of the metropolis not included in the former bors.; viz. those of Marylebone, Finsbury, the Tower Hamlets, and Lambeth, giving to each 2 mems. Hence the metropolis now returns 16 mems. to the H. of C. elected by the 10*l.* householders, and those previously in possession of the franchise. Subjoined is an

Account of the Parliamentary Boroughs in the Metropolis, with the Number of their Representatives, and the Electors registered in each in 1849-50.

Historical Notice. — Nothing is known of London previously to the invasion of the Romans; and it may be doubted, from the silence of Julius Caesar, whether it then existed, or, at all events, whether it had attained to any considerable magnitude. But, however this may be, it is clear, from the statement of Tacitus (*Annal.* lib. xiv. cap. 88.), already referred to, that so early as the reign of Nero it was an important emporium, though not distinguished by the title of colony; and it is doubtful whether it ever attained to that distinction.*

After the Romans had left Britain, and the Saxons had divided the country among themselves, London is supposed to have become the capital of the E. Saxon kingdom. On the introduction of Christianity into England, it was one of the first places to embrace the new faith, and early became a bishop's see. St. Paul's, and St. Peter's, in Westminster, were first founded about this time. In the paucity of intelligence concerning the period of the heptarchy, all we hear of London is, that it suffered severely from fire in 764, 798, and 801, on each of which occasions it is said to have been nearly destroyed. As soon as England had been united under one monarch, it appears to have become the metropolis of the empire; and, in 888, a wittenagemot, or parliament, was held in it to consult on the best means of repelling the Danes, who were ravaging the eastern counties. It was, however, sacked by the Danes in 889: in 982 it was nearly destroyed by fire; and in 994, the inhab. purchased a temporary remission from the attacks of the Danes, by paying them a high ransom.

At the Conquest, London submitted to William, and soon after received a charter in the English language, the original of which is still preserved. Within the 60 years following the Norman conquest it suffered severely by fire on five different occasions; but being then built principally of wood, it was easily repaired from the timber furnished by the extensive forests of Islington and Hornsey, which still existed when Fitzstephen wrote in the succeeding century. London was then unpaved, and, if we may believe the statement of contemporary historians, the rafters of the roof of Bow church, which were blown off by a hurricane in 1091, struck into the ground to a depth of 20 ft. The same hurricane caused so high a tide in the Thames, that the wooden bridge, which had stood 200 years, was carried away by the stream. On the accession of Henry I. in 1100 a new charter was granted to the city, which restored its ancient privileges, as they existed before the Norman conquest, relieved the inhab. from many oppressive services, such as compulsory entertainment of the king's household, and abolished several barbarous customs of the Saxon period. The citizens acquired by this charter the privilege of choosing their own ma-

gistrates. The Norman monarchs, it is true, seldom respected corporate privileges, even when conceded by themselves; but still this charter was valuable as furnishing a standard to which to refer in future disputes with the crown, and it is said to have served as the model from which Magna Charta was taken. About the middle of the 12th century, it was determined to build a stone bridge over the Thames. The first wooden bridge having, as already stated, been carried away in 1091, was replaced by another, which was burned down in 1136. The bridge erected instead of the latter became so ruinous in less than 80 years, that it was thought a stone bridge would be less costly in the end than the continual repairs required to keep up these unsubstantial, though cheaper structures. The latter, begun in 1176, and finished in 1209, was an extraordinary work for the time; and may be said to have been the very bridge taken down in 1832, though frequent alterations, additions, and repairs, had materially impaired its identity. Three years after its erection a dreadful loss of human life was occasioned by a fire on the bridge, described in Stow's Chronicle:—"The tenth of July at night the city of London upon the S. side of the river of Thames, with the church of our Ladie of the Canons in Southwarke, being on fire, and an exceeding great multitude of people passing the bridge, sodainely the N. parte, by blowing of the S. winde, was also set on fire, and the people which were even now passing the bridge, perceiving the same, would have returned, but were stopped with fire, and it came to passe, that as they protracted time, the S. ende was fired, so that people thronging themselves betwixt the two fires, there came to aide them many ships and vessels, into the which the multitude so undiscreeetly pressed, that the ships being drowned, it was saide, there were destroyed about three thousand persons." About this time an order was made by the court of aldermen that no house should be built without party walls 8 ft. in thickness, and 16 ft. in height. This order, dated in 1191, was doubtless intended to obviate the recurrence of the fires by which the city had been often partially destroyed; but it was little, if at all, attended to, and is interesting principally from its being the first document in which the chief magistrate of London is designated Lord Mayor. He had hitherto been called Chief Bailiff.

In the year 1211 the citizens began to form a deep ditch, 200 ft. in width, without the city wall on all sides, as a means of defence against King John. In 1218 the forest of Middlesex was cleared, and the citizens of London were permitted to purchase land and build thereon. Thus was begun that part of the metropolis which stands N. of the city, and is now so populous. In 1221, Henry III. laid the first stone of the present Westminster Abbey. In 1236, water pipes began to be laid down in the city, which had previously been supplied with water from wells and rivulets running through it into the Thames, the names, at least, of some of which are still preserved. The pipes now referred to brought a copious stream from springs at Tyburn, a village on the site of the present Oxford Street, near its W. end, to the city of London. Various leaden cisterns, named conduits, were afterwards constructed for the reception of the water, whence it was drawn by the inhabitants. In 1282, during a great frost, such masses of ice were brought down the Thames, that 5 arches of London Bridge were destroyed. In 1804 the first recorder was appointed.

Early in the 14th century coal began to be im-

* In a note on this passage Broetier says: "Urbs opibus ingenioque celeberrima. — Quod autem in eadem retrò memoria unicuique est exemplum, per tot sæcula crevit semper ejus celebritas, nunc ferme immensa."

ported into London; and a notion having got abroad that its smoke was injurious to the public health, parliament petitioned the king, Edward I., in 1316, to prohibit the burning of coal, on the ground of its being an intolerable nuisance! But experience served, in no very lengthened period, to dissipate this groundless prejudice. The imports of coal have continued progressively to increase; and its ample supply has been one of the circumstances that have contributed most to the unexampled magnitude of the city, and the comfort of the inhabitants.

In 1328, in consequence of the facility with which felons made their escape from London across the bridge into the adjoining village of Southwark, which, until then, was beyond the mayor's jurisdiction, Edward III. granted a charter assigning this village to the city for ever, and empowering the city magistrates to act in Southwark as in London.

In 1349 the kingdom was scourged by a pestilence which is said to have raged with extreme severity in London. The city was again visited by the plague in 1361; and it is worth notice, that this visitation was ascribed, and probably with good reason, to the corruption occasioned by the slaughter of cattle, sheep, &c., in the city. In consequence his majesty, Edward III., issued a proclamation, forbidding the slaughter of all animals nearer than Stratford and Knightsbridge. But the butchers, tavern-keepers, and others, interested in the support of the Smithfield nuisance, had then, as now, influence enough to set at nought the authority of the monarch, and to perpetuate their pestilential abomination. (*Stow's Survey*, i. 2, ed. 1754.)

In 1381 the rebellion of Wat Tyler, and his death by the hands of the lord mayor, occasioned the addition of the dagger to the city arms, where it still appears. During this century various reforms were effected in the cleaning and paving of the streets. But an effectual stop was put to these and all other improvements in 1392, when, in consequence of the refusal of a loan of 10,000*l.* to King Richard by the corporation, the mayor, sheriffs, aldermen, and principal citizens were imprisoned, heavy penalties exacted, the city franchises abrogated, and the courts removed to York. Heavy bribes effected a removal of several of these grievances; but the city did not recover its proper influence till the accession of Henry IV.

In the following century the progress of improvement was still more rapid. Lamps were introduced in 1416. Holborn, a part of the Strand, and other principal thoroughfares, were paved; additional conduits and water-pipes were laid down; and wooden houses began to be replaced by others of brick, made in Moorfields. Stocks, for the punishment of disorderly persons, were erected in the different wards. And Guildhall, Leadenhall, and Crosby-house, in Bishopsgate Street (a portion of which has recently been restored), were built.

In the 16th century the advance was much greater. An unusually long exemption from those civil wars which had, under the Plantagenets, inflicted great injury on London, and the kingdom generally, gave leisure to introduce those improvements which distinguish a modern town from a town of the middle ages. The city watch was improved, various nuisances were removed, and street paving became more general. The removal of monasteries had also a great effect in improving London: 54 large and many smaller establishments made way for factories, schools, charitable asylums, and hospitals. St. James's Palace was built, the park was laid out, and many new build-

ings were erected in Westminster. The two cities were now first joined by a number of mansions of the nobility on the N. side of the river; one of which, Northumberland House, still keeps its place. The streets S. of the Strand indicate by their names the site of other mansions that have disappeared. The Royal Exchange was built, and commerce began to flourish. Towards the end of this century water began to be conveyed by machinery into private houses, and the New River was projected.

In the 17th century London assumed its present form, with the exception of the part destroyed by the great fire of 1666. Spitalfields was covered with houses; and before 1666 the space N. of the Strand as far as Holborn, and from Temple Bar to St. Martin's Lane, had been extensively built upon. The parts of Westminster, also, from Charing Cross to St. James's Palace, began to have the appearance of a town. The New River was completed, and many houses were supplied with water. Sewers were dug, smooth pavements were laid down for foot passengers, and hackney-coaches became general.

But, after all, these were but imperfect palliatives of all but incorrigible disorders. We have previously noticed the narrow, dirty, and filthy state of the streets and houses of the city in the 17th century, and the ravages committed in it by the plague, from which it was then rarely, if ever, wholly exempted. And it would have been extremely difficult, or rather, perhaps, impossible, to have introduced a different and improved state of things by legislative or municipal regulations. But what they could not effect was effected by widely different means. On the 2d of Sept. 1666, the great fire broke out in Pudding Lane, near the spot where the Monument was subsequently erected in commemoration of the occurrence. It raged till the 5th, when it ceased, rather by pulling down houses in the line of its course, than by the success of the exertions directly to extinguish the flames. The ruins, covering 336 acres, comprised 13,200 houses, 90 churches, and many public buildings; the property destroyed being estimated at 10,000,000*l.* Though productive of great loss, and of much temporary distress and suffering, this conflagration was, in its results at least, of signal advantage. Its destructive agency was required to get rid of the vast mass of old wooden houses, and narrow and filthy lanes and courts, that had for centuries been the permanent abode of the plague and other pestilential diseases. No doubt it must ever be regretted, that the designs of Sir Christopher Wren for the renovation of the city were not adopted. But notwithstanding the numerous defects of the new plan, it was a vast improvement on that by which it had been preceded. Though still too narrow, the streets were materially widened; the new houses were constructed of brick instead of wood; party walls were introduced; the old practice of making each story project over that immediately below was abandoned; obstructions and filth of all sorts were removed; and the sewerage and pavement of the streets were vastly improved. A fire which happened in Southwark ten years afterwards, afforded an opportunity for carrying similar improvements into that part of the metropolis. The pop. and trade of the city now increased more rapidly than before. The revocation of the edict of Nantes occasioned the immigration of a great number of French, who settled in Spitalfields and St. Giles's. The parishes of St. Anne and St. James were formed, the district called the Seven Dials was built, Piccadilly began to extend W., and Soho Square and Golden Square were laid out

St. Paul's Cathedral was almost completed; the parish of Wapping was formed E. of the city; the Penny Post-Office was instituted, and several miscellane-ous asylums (such as Abetia and the Mint), where robbery and crime had been protected, were abolished.

From this period the increase of London and the progress of improvement have continuously advanced. In the early part of the 18th century an act was passed for building 50 new churches in and about the metropolis, most of which were completed within a few years, and some of them are still among its ornaments. Houses sprang up on every side, and by the middle of the century the W. and of the town, as far as Hyde Park, became a compact mass of buildings, reaching beyond Oxford Street on the N., and extending E. from Portman Square, across Tottenham Court Road, past Montagu House and Gray's Inn Gardens, through Clerkenwell, Finsbury Square, Spitalfields, and Whitechapel to Wapping. Before this time water-works had been formed at Chelsea in aid of the supply furnished by the New River. Sewers had become more general, lamps had been fixed in all the principal streets, the Bank of England and Westminster Bridge were built, St. Paul's completed, and Fleet ditch arched over. In the last half century Blackfriars Bridge was built, the houses encumbering London Bridge were removed, the Mansion House was finished, and Somerset House erected. At the same time, many unsightly and inconvenient buildings were removed; lamps were much increased in number, and lighted during the whole night; raised footways became universal, and the shops, which before were mere stalls, assumed a clean and splendour evincing the wealth of their occupiers, and greatly contributing to the ornament of the town.

The citizens of London have, generally speaking, been distinguished by their orderly behaviour and respect for the laws. In 1780, however, the peace, and even, in some degree, the existence of the metropolis, were compromised by the excesses of the mob. Certain concussions made in the course of the previous year to the Roman Catholics, had provoked a good deal of religious excitement in all parts of the kingdom. The contagion spread to London, and the weakness of the government, and the folly, or rather madness, of Lord George Gordon, and other leaders of the ultra Protestant party, led to a dangerous riot. The mob were, in fact, for about two days masters of the city. They took possession of the prisons, and turned the inmates out of doors; destroyed the chapels of the ambassadors of the different Catholic powers; many private houses, including that of Lord Mansfield, were plundered and set on fire; a great distillery belonging to a Catholic firm shared the same fate; and an attack was made on the Bank, which, however, was happily repelled. At length, this formidable riot was effectually put down, though not till a considerable number of the rioters had been killed and wounded. Since this disgraceful epoch, the peace of the city has not been seriously endangered, and the troops in and about town, added to the effective police force that now exists, seem quite adequate, under ordinary circumstances to assure the public tranquillity and the safety of the peaceable part of the community.

During the present century London has made great advances. Within that period four bridges have been built, extensive docks have been excavated, gas has been introduced into every street and alley; steam, on the river, the sea, and on railways, has given it an almost unlimited power

of intercourse with every part of the kingdom, and of the world; new and handsome markets have been erected; arcades lined with elegant shops have been formed; and wide lines of communication have been opened through close and densely crowded neighbourhoods. Two new parks have been laid out, an improved police has given additional security to person and property; abundant supplies of water have been furnished to every separate dwelling; and the formation of spacious cemeteries in the suburbs is leading to the removal of interments within the town. At the same time the establishment of colleges and proprietary schools has increased the facilities (which are still, however, very deficient for procuring good education), the formation of savings banks, by affording a safe and convenient place of deposit for the smallest savings, has tended to diffuse habits of economy among the lower classes; while the institution of a National Gallery and School of Design has done something to improve the national taste, and to add to the intellectual pleasure of the people. The spirit of improvement, moreover, is still suggesting extensive and useful works. The nuisance of Smithfield market, notwithstanding the protection given to it by the Corporation, cannot fail of being abated; and no doubt, also, provision will be made for having all sorts of animals slaughtered at some distance from the city. And these, with the improvement of the sewers and

at these of streams, will be citizens, and add to town.

of an immense variety of by far the Survey of 1800), with additions in 1784. The Account by Brayley Nightingale, 1814-15, is, in some respects a great deal of the subject, and which is omitted. Consulting-surveyed, ancient, and

in antiquities and street history. But, though there are several valuable works on detached topics, there is not, in point of fact, any good or even respectable general account of modern London.

LONDONDERRY is a walled town in the N. of Ireland, over Ulster having N. Lough Foyle and the Atlantic Ocean, E. Antrim, from which it is separated by the Lower Bann and Lough Neagh, S. Tyrone, and W. Donegal. Area, 514,370 acres, of which 134,000 are unimproved mountains and bog, and 5,000 water, being mostly included in the portion of Lough Neagh, belonging to this co. Surfers in some parts mountainous and uneven; but there is, notwithstanding, a great extent of low, fertile ground. With the exception of lands belonging to the church and to corporations, the entire property of this co. was granted by James I. to 12 of the principal London companies, from whom most part of the land is now held, partly under tenure, and partly under leasehold tenure. Farms vary in size from 3 to 100 acres, but the average may be from 5 to 10 acres. "Where there has been a perpetuity or a long lease, it is said, that is, the children are settled upon divisions of the father's land, by which means lands of 40 acres come to be parcelled, in two or three generations, into patches of 4 or 5 acres. It seems as if the newly let lands were disposed of under some similar system of parceling. I could give instances where whole districts are subdivided into patches of 4 or 5 acres, and rarely can meet a farm of 12 or 14." (Anon. Survey of Londonderry, p. 205.) Some landlords have exerted themselves to reclaim and improve this wretched system, but without much effect. It is almost superfluous, saying the way in which the land is subdivided, to say that agriculture is in a very backward state. Lately, however, some improvements have been effected. Oats, potatoes, and flax, are the principal crops, but a good deal of wheat is now also raised. Condition of the small farmers and cottiers very unsatisfactory. Average rent of land 21s. 6d. on acre. Various minerals have been discovered, but they are of no great importance. The linen manufacture was, a few years ago, widely diffused, but has lately been a good deal curtailed, the mill-spin yarn being cheaper and better than that spun by hand wheels. Exclusive of the Bann, the principal rivers are the Foyle, Faghlan, and Roe. Principal towns, Londonderry, Coleraine, and Newton-Lisenoey. The co. is divided into 4 baronies and liberties, and 21 parishes; and sends 4 members to the H. of C. (being 3 for the co., 1 for Londonderry and 1 for Coleraine). Beg. electors for the co. in 1845-46, 5,255. In 1841 Londonderry had 28,257 inhab. houses, 51,114 families, and 228,374 inhab., of whom 105,000 were males, and 113,374 females.

Londonderry, or Derry, a city, port, bur., and river.

port of Ireland, cap. co. of same name, and a co. by itself, advantageously and beautifully situated on the W. bank of the Foyle, about 3 m. above where it falls into Lough Foyle, 191 m. N. by W. Dublin; long. 7° 19' W. Pop. of par. bor. in 1841. city was originally confined to the hill greater part of it still stands; and which, section into the river, is called the "Island." This portion is surrounded by the old city is now rapidly extending beyond its former limits particularly along the river towards the Lou also a suburb on the opposite bank of the Waterside. The communication between the city is kept up by means of a wooden bridge 120 ft. in length, and 40 ft. wide, erected in 1780 of above 16,000*l.* and rebuilt in 1814-15 at of 16,800*l.* Derry is well built; many of the main streets within the walls are old-fashioned high pyramidal gables; but many modern houses, of late years, been erected in this part and without the walls rows of mud cabins superseded by respectable houses. The streets are broad and clean, well paved and some of them, however, are inconvenient; there are many narrow lanes and closes. In the centre of the city is an open square space, called from each side of which a handsome street leads to the four city gates. The summit of the hill is occupied by the cathedral, court-house, and bishop's palace. The cathedral, which is also the parish church, built in 1683: it is a large, handsome, Gothic structure, 240 ft. in length, and has a tower and spire erected in 1778; but this having become decayed, it was taken down in 1802, and was soon after replaced by the addition of Gothic pinnacles. The view from the tower is very fine. In the interior is a handsome altar, the late Bishop Knox; and in it also are preserved some colours taken at the siege of Derry. The bishop's palace is a large plain building, with extensive grounds. There are two other Protestant places of worship, the chapel of ease and the chapel of the city. The latter, which is without the city, was built by Bishop Knox, and was intended for the poorer classes, but it is no longer used. There is also a R. Catholic chapel, and places of worship for Presbyterians, Primitive and Wesleyan Methodists, Covenanters, and Independents. Among the public buildings, exclusive of churches, and classical edifices, may be specified the Corry in the centre of Diamond Square; it was constructed in 1692, but received so thorough a repair in 1823, as to be tantamount to a re-erection. The house, adjoining the cathedral, erected at an expense of 30,000*l.*, is a spacious and a partly constructed on the model of the theatre at Athens. The new goal is a vast structure, being 243 ft. in front, by 400 ft. in depth, built on the radiating or panoplic principle, at an expense of above 30,000*l.* Among the chief ornaments in the city is the fluted column, erected, in 1827, to the Rev. George Walker, its heroic defender, the central W. bastion, and is a well-proportioned structure, 81 ft. in height, bearing a statue of Walker. It cost 4,300*l.*, raised by subscriptions.

The diocesan school, called Foyle college, is an eminence near the river; it is a plain building, erected in 1814, having accommodated 100 resident pupils; it was built by subscription, the bishop of the diocese, the Irish Society, and other sources, and is maintained by similar means. The master's salary, from these sources, is 400*l.* ann. There is a parish school connected with the church, for the education of 100 boys &c. The Presbyterian congregation also support a school; a school, called St. Columba's, was established by the R. Catholic bishop, but it is now under the National Board. In 1829, a Mr. John Gwynn left the sum of 40,000*l.* for the education of as many as 120; as the funds will afford in the useful practical English education; and, exclusive of the above, an infant school, and a number of Sunday schools. Templemoyle Agricultural Seminary, in 1827, is within 5 m. of the city. The building to accommodate 80 boarders, and the farm contains 172 acres. The institution is well managed. Among the charitable institutions, a district lunatic asylum for the counties of Donegal, and Tyrone; it was opened in 1806, 1807*l.*, it can accommodate about 150 patients; the number admitted in 1845 was 214; the establishment for that year was 2,037*l.*, besides. Here is also an infirmary and fever dispensary, a charitable loan fund, a mission, and a clergymen's widows' fund, with institutions of a similar description. The Derry union, opened in 1840, has accom-

1,100 inmates. Among the literary institutions, is the Literary Association, with a reading-room and a pretty good library; the Literary Society, in which lectures are

and would be unworthy notice, were it not that each of them enjoyed the privilege of sending 2 mems. to the H. of C. from the reigns of Edward VI. and Elizabeth down to the passing of the Reform Act, when they were both disfranchised.

LORCA (an. *Clitocroca*), a considerable town of Spain, prov. Murcia, cap. of a partido of its own name, on the Guadalentin, a tributary of the Segura, 42 m. W. S. W. Murcia, and 116 m. E. N. E. Granada. Pop., according to Miliano, 40,366. The vale of Lorca is remarkable for picturesque beauty and great fertility; and the town, close under the Sierra del Cano that bounds it on the left, and the fine old castle on a rock hanging over it, adds greatly to the beauty of the picture. This has evidently been a considerable place; but, the lower part of the town being concealed by trees, nothing is seen on approaching it but a number of low houses crowded on the side of the mountain, and from the similarity of colour seeming almost to belong to it. This is the old or Moorish town, and is very irregular and mean in appearance: but the new town, on the plain, is much more regularly laid out, and better built. A collegiate (once episcopal) and seven parish churches, two hospitals, an episcopal palace, and a royal college, are the chief buildings and establishments. Saltpetre is manufactured on a large scale, and soap, thread, and linens, are produced in small quantities; but the chief resources of the town consist in its great September fair, its markets, and the produce of its neighbourhood, both in flocks and agricultural produce. Mr. Inglis gives a lively picture of the market and its attendants:—"All the women here wear a square white woollen shawl, worn like a mantilla: the men are dressed in short white drawers loose at the knees, and instead of stockings use sandals made of rope; and their heads are covered with close-fitting tapering black caps, others from the higher countries being enveloped in blankets of gaudy colours. Among the numerous things exposed for sale, were dried and shell fruits, Catalonian cloths and calicoes, shoes and rope sandals, quantities of Esparto rush and rush-baskets, beads, rosaries, trinkets, &c., in short, every thing that one either eats or wears in Murcia. The show of pigs was extremely fine, and no where in the world are these animals found in greater perfection than in Spain, fed, as they are, on the ilex nut. The price of a hog weighing 23 stone was 240 reals (2l. 8s.), and that of a sucking pig 14 reals. Mutton sells at 12 quartos, a fowl costs 20d., a hare 10d., and bread is 1½d. per lb. The price of labour in the vale of Lorca is 5 reals or 1s. a day." (*Inglis's Spain*, ii. 206.)

Lorca, supposed to be the *Clitocroca* mentioned in Antonine's Itinerary, was exposed to frequent attacks during the contests between the Moors and the crown of Castile, and has at various times sustained sieges. It was nearly destroyed at the commencement of this century. In 1792, a speculator, with the permission of government, collected at a great expense all the waters of the district into a common reservoir (*pantano*) resembling that of Alicante. The basin was said to be "superb," and capable of containing water sufficient to irrigate for years the entire vale of Lorca. Ten years afterwards (30th April, 1802) the waters, which had for some time been undermining the reservoir, rushed out with an impetuosity that swept every thing before it, men and cattle, public buildings, and even trees and rocks. About 600 houses, a church, 2 convents, 2 hospitals, several mills and fountains, were at once swallowed up and disappeared, about 6,000 human beings, 24,000 cattle, &c. being at the same time destroyed. The agricultural districts were covered over with sand, rubbish, &c., and the total loss occasioned by the catastrophe is supposed to have exceeded a million sterling. A like disastrous event is said to have destroyed the ancient city of Mareb in Arabia Felix, an account of which will be found in the *Modern Traveller, Arabia*, p. 28. (*Inglis; Laborde*, vol. ii.; *Miliano*.)

LORETTO, a town of the Papal States, cap. of a commissariat of the same name, on a bold and commanding eminence, about 3 m. from the Adriatic, and 12 m. S. E. Ancona. Pop., with its suburbs, about 5,000. It is surrounded with walls, constructed by Sixtus V., in 1587. This celebrated but poor town is wholly indebted for its fame, and even existence, to its having the good fortune to possess the *Santissima Casa*, or house occupied by the Virgin Mary, in Nazareth, conveyed by angels, first to Tersato in Dalmatia, and thence, by the same agency, in 1294, to its present site! This miraculous edifice is a mean-looking hovel, about 30 ft. in length, by 13 or 14 ft. in width, and 18 ft. in height; apparently built of Apennine limestone, with a modern vault of timber-work. It is incased in a shell of marble, sculptured with bass-reliefs, representing the history of the Virgin; the whole being under the dome of a splendid church, built to protect the sacred edifice. In a niche within the latter, once fenced in with gratings of solid gold, but now with pieces of gilt wood, is the image of the Virgin, affirmed to be the work of St. Luke, to

whose talents as an artist it does little credit, being "a little old woman about 4 ft. in height, with the features and complexion of a negro." (*Moore*.) Her dress is tawdry, and in the worst possible taste: she literally glitters in jewels and brocade, and reigns "amid the continual glare and smoke of lamps and candles, held by figures of angels." The church, which encloses the *santissima casa* is said to have been designed by Bramante. According to Eustace, it is a "very noble structure;" but it is less favourably spoken of by Woods and others. Its gates, which are of bronze, are embellished with *basso-reliefs* of the most admirable workmanship; in the area before it, is a handsome marble fountain, and a large statue of Pius VI. The riches formerly accumulated within this sanctuary, were a subject of astonishment to all travellers; and were, most probably, much exaggerated. The popes are believed to have occasionally abstracted some of the gold offerings, and to have substituted false for real gems. But, when the French acquired possession of Loretto, they acted with less reserve; and, undismayed by the sanctity of the place, rifled its repositories, and carried off every article of value, applying them to secular and really useful purposes. It has since, however, received several considerable benefactions.

A lucrative trade was formerly carried on at Loretto in rosaries, crucifixes, *agnus Dei*, and such like articles, partly taken off by pilgrims to the shrine, and partly exported. But this trade has now much fallen off. The number of pilgrims, though still very considerable, has also greatly declined; and they are now mostly of the lowest and poorest classes. On their arrival in town, they are received into an hospital, where they are boarded and lodged for three days; and this privilege has probably as much to do as superstition in attracting them to Loretto. (*See Addison's Travels*, p. 94. ed. 1726; *Moore's Italy*, i. 291.; *Eustace's Classical Tour*, i. 200.; *Forsyth*, 321., &c.)

L'ORIENT, a strongly fortified sea-port town of France, dép. Morbihan, cap. arrond., at the confluence of the Scorff with the Blavet, at the head of the bay of Port Louis, about 3 m. from the Atlantic, and 29 m. W. by N. Vannes. Lat. 47° 45' 11" N.; long. 3° 21' 2" W. Pop., in 1846 (ex. suburbs), 19,106; but, according to recent statements, the pop. of the town and suburbs may now (1840) amount to 21,000 or 22,000, nearly 5,000 of whom are employed in the dock-yard and its appendages. L'Orient is clean, and regularly built: the streets are wide, straight, and well paved, and the houses well constructed and handsome. One of its public squares, the *Place Royale*, is planted with lime-trees, and it has other good promenades. The principal church* is very large, and has a lofty spire, which is a conspicuous landmark. The prefecture, auction-hall, town-hall, and theatre, are handsome edifices. The public slaughter-houses (*abattoir*) are remarkably clean; and the meat, fish, and bread-markets are, next to those of Rennes, the best constructed, and most extensive in Brittany. In the centre of the market-place is a granite column erected to the memory of the commander, Bisson. Some years ago, a bridge, also of granite, was commenced over the Scorff, but the design was abandoned, lest the clearance of the port should be thereby impeded.

The port of L'Orient, about $\frac{1}{2}$ of a mile in length by nearly $\frac{1}{2}$ m. in breadth, is secure, commodious, and of easy entrance. It is bordered by fine quays, on which are some extensive buildings and establishments connected with the government dockyard; an observatory 120 ft. in height, which serves also for a telegraph and a light-house, and a very handsome public fountain. The naval establishment is on a smaller scale at L'Orient than at Brest; it has no *bagne*, but it has a place of confinement for soldiers guilty of insubordination. More ships of war are now built in the dockyard of L'Orient than at any other in France, 16, of the estimated cost of 8,652,390 francs, having been constructed here in 1840. L'Orient has slips enough for the construction of 30 vessels of all sizes; frigates are, however, the class of ships chiefly built. Towards the end of 1840, 9 slips were occupied each with a frigate in course of active preparation; and, according to the report of an English traveller, 3,000 workmen were exclusively engaged on these 9 frigates. Many of the subordinate artificers get only 26 sous a day, and few of the better workmen receive more than from 30 to 40 sous a day; but taking into account the cheapness of living in Brittany, they are, perhaps, fully as well off as the workmen in the English dockyards. The foremen (*chefs d'ateliers*) are not paid by the day, but receive from 1,500 to 2,000 fr. a year, according to circumstances. L'Orient has excellent sheers for masting vessels, &c., and good block sheds, the machinery in which, as well as a portion of that for cable-making, is wrought by steam. At the end of 1840, establishments

* Hugo says that this church was originally planned and begun on so immense a scale, that after 30 years labour had been spent in its erection, the builders, despairing of being able to finish the work as commenced, found it necessary to demolish a portion of it to complete the rest.

were in course of being erected for the construction of steam engines for ships of war, and new forges, &c., were about to be commenced. The buildings formerly belonging to the French E. I. Company, are now converted into barracks. The arsenal and naval stores are very extensive, and the artillery barracks are capable of accommodating 1,800 men. The lazaret is on a small island to the S., between L'Orient and Port Louis. L'Orient has a school of naval artillery and a spacious artillery ground near the town, a school of hydrography, established 1771, a large and well-arranged commercial college, a preparatory school for training for the government schools, a communal college, gratuitous schools of drawing, geometry, arithmetic, &c., a public and a pretty good naval library, museums of chemistry and mineralogy, an agricultural society, and various educational societies. It is the seat of tribunals of primary jurisdiction and commerce, a chamber of commerce, &c.

The manufactures of L'Orient, chiefly consisting of hats, linens, gold lace, earthenware, &c., are not very important. Its trade, though not so flourishing as in 1789, has latterly begun to increase. In 1830, only 6 merchantmen belonged to the port; it has now (1840) more than four times that number, some of them trading to the French colonies. The chief exports are wax, honey, butter, corn, cattle, and pilchards, the latter being taken in great quantities on the adjacent coast, are sent to Nantes to be prepared for exportation.

Though at present so little eminent for trade, L'Orient owes its origin and former importance almost wholly to commerce. It was but an insignificant village when, in 1728, the French E. I. Company made it their principal naval *dépôt*; and such was the influence of the change, that in 1738 its pop. is said to have amounted to 14,000! On the dissolution of the Company in 1770, L'Orient was made one of the stations for the French navy, and a free commercial port. (Hugo, art. *Morbihan*; *Letter in the Times*, 7th Oct., 1840.)

LORRAINE (Germ. *Lothringen*), one of the largest of the an. provs. of France, in the N.E. part of the kingdom, now distributed among the depa. of Meurthe, Meuse, Moselle, Vosges, and Bas-Rhin.

LOSTWITHIEL, or LESTWITHIEL, an an. bor., market-town, and par. of England, co. Cornwall, hund. Powder, on the W. bank of the Fowey, 5 m. S.S.E. Bodmin, and 211 m. W. by S. London. Area of bor., 120 acres. Pop., in 1841, 1,186. The houses are chiefly of stone, roofed with slate; but the streets narrow and ill-paved. The church, a curious old building, has a large E. window, and a fine tower and spire at the opposite end: the living is a vicarage, in the gift of Earl Mount-Edgcumbe. It has also places of worship for Independents, Wesleyan and Primitive Methodists, with attached Sunday schools. The corporation support a grammar and writing school; another school, for poor children, is slenderly endowed by the trustees of the late Rev. St. John Eliot; and there are a few money bequests. Near the church, an ancient building, supposed to have been either a palace of the Duke of Cornwall, or a court-house for the stannaries, was, till very recently, used as a prison during the winter and summer sessions, now removed to Bodmin. There is a town-hall, where petty sessions are held, and under it is a small gaol. Tanning and wool-stapling are the principal trades, and the town derives some importance from its situation on the Fowey, by which iron and copper ore, &c. are exported. Lostwithiel was made a free bor. by Richard Earl of Cornwall, and incorporated by James I.: it sent 2 mems. to the H. of C., from the 19th Edward II. down to the Reform Act, by which it was disfranchised. It is not included in the Municipal Reform Act; but is now, as formerly, governed by a mayor, 6 capital, and 17 inferior burgesses. Markets on Friday; cattle fairs, July 10., Sept. 6., and Nov. 13.

About 1 m. N. of Lostwithiel, on the summit of a hill, is Restormel castle, the ancient seat of the baronial family of Cardinan, and subsequently of the earls of Cornwall; it was ruinous even so early as the time of Henry VIII., but was repaired and occupied during the civil war. (*Mém. Corp. and Char. Rep.* &c.)

LOT, a dep. of France, reg. S., chiefly between lat. 44° 15' N., and long. 1° 30' E., having N. Corrèze, E. and S.E. Cantal and Aveyron, S. Tarn-et-Garonne, and W. Lot-et-Garonne and Dordogne. Area, 525,280 hectares. Pop. in 1846, 294,568. The dep. is mountainous, with a general slope towards the S.W. Its mountains are ramifications of those of Cantal, and rise in the E. about 2,500 ft. above the sea. Its chief rivers are the Lot, and the Dordogne; from the first of which it derives its name. The Lot, which rises in Lozère, about lat. 44° 30' N., long. 3° 45' E., runs with a very tortuous course generally W., through Aveyron, the S. part of Lot, and the centre of Lot-et-Garonne and Gironde; uniting with the Garonne at Aiguillon, about lat. 44° 18' and long. 0° 19' E. It is navigable, during 4 months of the year, for nearly 190 m.; Mende, Cahors, and Villeneuve d'Agen

are on its banks. There are an immense number of narrow valleys, watered by small rivulets: these have frequently an alluvial soil of great fertility, but the soil in most parts is either calcareous, or stony and gravelly. In 1834, it was estimated that 252,533 hectares were arable, 25,825 in pasture, 58,627 in vineyards, 87,255 in woods, and 71,284 occupied by heaths, wastes, &c. Lot produces more corn than is required for its own consumption; but chestnut-flour forms an important article of food among the rural pop. The corn grown is principally wheat, maize, and rye; and the total annual produce of all kinds is estimated at between 1,500,000 and 1,600,000 hectol. Agriculture is extremely backward, and there is a great want of capital, a consequence mainly of the splitting up of the land into an immense number of small properties. In 1835, of 111,948 properties subject to the *contribution foncière*, 50,471 were assessed at less than 5 fr., 18,731 at from 5 to 10 fr., and 17,652 at from 10 to 20 fr.; while the number of properties assessed at 1,000 fr. and upwards amounted to only 18. The plough employed is a fac simile of that described by Virgil, and is drawn by oxen: the spade or hoe is, however, used in the culture of thin soils. The produce of wine amounts to about 600,000 hectol. a year, a third part of which is consumed by the inhab., and the rest sold or converted into brandy. The wines known in the market as *vins de Cahors* are strong and very dark-coloured, and are principally employed to give body and colour to other wines, for which purpose they are principally sent to Bordeaux. Tobacco is grown in this dep., and in 1833 about 1,850 hectares were appropriated to its culture, and 933,330 kilogs. produced. The climate is favourable for the mulberry, but the silkworm does not thrive. A few proprietors have flocks of Merino sheep, but the pastures are badly irrigated and attended to, and most kinds of live stock are indifferent. The goats' hair of the dep. is, however, highly esteemed. The produce of sheep's wool is estimated at 500,000 kilog. a year. A great many hogs are fattened for sale in the neighbouring depa.; and about 60,000 turkeys and geese are annually exported, preserved in their fat. A considerable proportion of the truffles used in *pâtés de Périgord* come from this dep. There are some iron and coal mines; but both mining and manufacturing industry are little attended to. A few copper and iron forges, woollen, cotton, and linen cloth factories, paper-mills, and tanneries, are the chief manufacturing establishments: these, however, are so few, that the inhab. are usually supplied with cloths and leather in exchange for their wool and skins from the adjacent depa. There are nearly 1,000 flour-mills in the dep. Lot is divided into 3 arronds.; chief towns, Cahors, the cap., Gourdon, and Figeac. It sends 5 mem. to the Ch. of Dep. Number of electors (1838-39), 1,366. Total public revenue, in 1831, 4,765,687 fr.; but the expenditure in the same year amounted to 5,060,508 fr. (Hugo, art. *Lot*; *Official Tables*, &c.)

LOT-ET-GARONNE, a dep. of France, reg. S.W., formerly included in Guienne; chiefly between lat. 44° and 44° 40' N., and long. 0° and 1° E., having N. Dordogne, W. and S.W. Gironde and Landes, S. Gers, and E. Tarn-et-Garonne and Lot. Length and breadth about 50 m. each; area, 530,711 hectares. Pop. (1846) 346,260. The surface is mostly level, with a slope to the W. The Garonne intersects the dep. from S. E. to N.W., and receives about its centre the Lot from the E. The banks of these rivers may be classed among the most productive portions of France; but 265,496 hectares consist of a chalky soil, and about one eighth part of the surface in the W. of the dep. is composed of *landes*, or sandy plains, sprinkled with marshes, analogous to those in the adjoining depa. of Gironde and Landes. According to the official returns, it comprised, in 1834, 286,100 hectares of arable land, 42,323 do. meadow, 69,349 do. vineyards, and 68,613 do. woods. This dep. is principally agricultural. The corn grown exceeds what is required for home consumption: it is chiefly wheat and maize on the richer lands, and rye on the poorer. The produce of wine is estimated at about 650,000 hectolitres a year, of which nearly a half is exported. The N. part of the dep. produces about 40,000 hectol. a year of chestnuts, from 7,000 to 8,000 hect. of which are sent to Bordeaux and the neighbouring depa.: 2,030 hectares are occupied with tobacco, which produced in 1833 746,526 kilogs., valued at about 860,000 fr. Excellent hemp is grown. The prunes of Agen are highly esteemed, and are exported to the value of 600,000 fr. a year: the dried figs of Clairac are also celebrated. On the *landes* are many fir plantations, which furnish about 800,000 kilogs. of resin, and 300,000 kilogs. turpentine a year, besides pitch, deals, &c. The cork tree grows in a few communes, and its produce is valuable. Artificial pasture lands are rare. According to the official tables, there were in 1830 in this dep. 188,000 head of sheep, and 107,000 head of black cattle. Large flocks of geese are reared, especially near Agen; they are fattened on maize, and preserved in their fat. In 1835, of 123,558 properties subject to the *contribution foncière*, 51,246

with modern brick houses, meeting the principal arteries on the great London road. The market-place, in which is the town-hall, was formerly narrow and confined, but has been recently laid open by the pulling down of the old market house. The church, a large and handsome structure in the perpendicular style, has a lofty and well-proportioned tower, the belfry in a square tower (140 ft.) to the gill of Somerset College, Cambridge. There are places of worship likewise for Presbyterians, Independents, Baptists, Unitarians, Wesleyan and Primitive Methodists, and the Society of Friends, connected with which are 7 Sunday schools, furnishing religious instruction to between 1,000 and 2,000 children of both sexes. Besides a well-endowed grammar school, Loughborough has a charity school for clothing and instructing 60 boys, a reformatory school attended by the boys, and a school of industry with 100 girls. A dispensary and several charitable societies confer essential benefits on the poor, and there is also a large public library and opera-house. Flaxy industry and trade are here the chief branches of industry; the former employing nearly 1,000 hands in the town and neighbourhood; several persons are employed in flaxing within town and places; there are many makers of machinery and a considerable number of draperymen, working for the London market. In 1855 there were two woollen mills, giving employ ment to 215 persons. The prosperity of the town has been increased by the facility of transit afforded by the Leicester Navigation and Loughborough Canal; and it has derived still greater benefit from the opening of the Midland Great Northern railway which brings it within a short distance of the metropolis. Fairs are held every twelve days. Loughborough is the station town and principal polling place for the N. division of the co. Leicestershire on Thursday, large fairs for horses, cattle, and sheep Feb. 14, March 25, April 25, May Thursday Aug. 10, and Nov. 10. cheese fairs, May 25 and Sept. 25.

LOUGHREA, an island town of Ireland, on Galway bay, Connemara, on Loughrea Lake, 31 m. S. by S. Galway. Pop. in 1851, 1,425, mostly S. Cath. The town, which was formerly fortified, consists of several irregular streets and lanes. The public buildings are—the par. church, the site of which was shown down by lightning in 1695, S. B. Cath. chapel, several large schools, and a hospital. General sessions are held twice a year, petty sessions on Thursdays. It is a constituency and returns four members. Markets on Thursday, fairs on Feb. 11, May 25, Aug. 25, and Dec. 5. Post-office revenue in 1855, £381. In 1856, £351. A branch of the National Bank was opened in 1855.

LOUISIANA, a large river of the U. States of N. America, rising though not the top, the principal place to the name of Mississippi, and the top of the judicial district and co. of the same name, admirably situated on the Mississippi, 10 m. below the mouth of the Missouri and nearly 250 m. above the mouth of the Ohio. lat. 32° 30' N., long. 90° 30' W. Pop. in 1855, only 1,100, but an extraordinary has been its progress in the interval, that it amounted, in 1855 to 13,000. It extends for 3 or 4 m. along the margin of the river from which the ground rises by a gentle ascent to a second plateau, about 20 ft. above the level of the first. Fortifications were erected on this terrace at an early period in the history of St. Louis, but these have been removed to make way for the new buildings, and their site is now in many parts occupied by streets and houses. In the upper part of the town, by the break of the river, which is the chief seat of trade, the streams are narrow and impassable, but of late they have been much improved. The more modern edifices, on the high grounds, are laid out in broad squares and streets, in which are some of the residences of the merchants and professional men. A few years since St. Louis was chiefly built of wood, but a large portion of these having been burnt down in a great fire in 1855, they are now being constructed of a kind of stone found on the spot, which is soft when first quarried, but becomes very hard and durable after exposure to the air. Many of the warehouses in the lower town have 2 or 3 stories, and there are some large established private mansions.

St. Louis has a handsome Roman Cath. cathedral, founded in 1681, 125 ft. in length, 50 ft. in breadth, with a tower 80 ft. high surmounted by a spire. The office is of the same order and is roofed with copper. It has several bells, and in November one of which weighs 1,100 lbs. and some paintings, which are well spoken of one of them being said to be by Paul Veronese. There are churches belonging to the Episcopal, Episcopalian, Presbyterian, Methodist, Unitarian, &c. many of them large and commodious buildings. There is also an African church under a black pastor. St. Louis is C. university founded and conducted by Jesuits, but, in 1855, 100 converts. It is intended chiefly for the study of the sciences and belles-lettres but has also a medical department. Its library comprises 15,000 vols. St. Louis has a convent, an hospital, an orphan asylum, a

female charitable association, several primary and grammar schools, &c. Among the most commodious public buildings are the court-house and market-house, with the town-hall square &c. It has also two theatres. Nearly all the houses are supplied separately with water from a large reservoir. Vessels of the largest class come along up to the quays, and St. Louis has become the great emporium of the commerce on the Missouri and the Upper Mississippi. The value of the produce received at her quays in 1855 was estimated at 10,000,000 dollars, and it is not easy even to imagine what it is likely to be in a few years hence, when the great commerce on the Missouri seems to be settled. Flax is brought to the port on the 25th June, 1855, 25,000 tons shipping, mostly steamers. She is, also, the principal seat of the American fur trade, and of the overland trade with Mexico. The boats are now chiefly American, but till lately they were principally descendants of the French, by whom the city was founded, in 1764. (Harvey's *History of Great America* ed., *Large America*, *Small America*, &c.)

LOUIS (St.), a town of Western Asia, and the cap. of the French possession in Smyrna, on an island of the same name to the S. of the city about 7 m. from the coast. lat. 38° 30' N., long. 26° 15' E. W. Pop. in 1855, 100,000, of whom 11,000, of whom 5,000 were slaves. It is laid out on a regular plan, nearly a mile in length, by about 100 yards broad. Fort St. Louis, with its equipments, occupies the centre of the town, and from each of the opposite sides, a street is prolonged and crossed at right angles by several others. The town has about 600 brick houses, half of which have only a ground floor and the other half rarely more than an additional story; the other dwellings are more built of mud and straw. The chief public buildings are the governor's residence, the barracks and the new hospital. The last is a superior edifice of the kind for a colony of such inferior rank, and has 120 beds, a number sufficient to accommodate the great and average number of sick. There is good anchorage in the river on both sides the island, but especially in the S. channel, where ships may be quite close to the quay. There are neither bridges nor public fountains in St. Louis, and the water for daily use, which has to be brought from the river is brackish. St. Louis is the seat of a tribunal of primary jurisdiction and of an inferior court. It is also the residence of the bishop, and the chief tribunal of the colony, and the chief tribunal of the colony, and the chief tribunal of the colony.

LOUISIANA, a large river of the U. States of N. America, rising though not the top, the principal place to the name of Mississippi, and the top of the judicial district and co. of the same name, admirably situated on the Mississippi, 10 m. below the mouth of the Missouri and nearly 250 m. above the mouth of the Ohio. lat. 32° 30' N., long. 90° 30' W. Pop. in 1855, only 1,100, but an extraordinary has been its progress in the interval, that it amounted, in 1855 to 13,000. It extends for 3 or 4 m. along the margin of the river from which the ground rises by a gentle ascent to a second plateau, about 20 ft. above the level of the first. Fortifications were erected on this terrace at an early period in the history of St. Louis, but these have been removed to make way for the new buildings, and their site is now in many parts occupied by streets and houses. In the upper part of the town, by the break of the river, which is the chief seat of trade, the streams are narrow and impassable, but of late they have been much improved. The more modern edifices, on the high grounds, are laid out in broad squares and streets, in which are some of the residences of the merchants and professional men. A few years since St. Louis was chiefly built of wood, but a large portion of these having been burnt down in a great fire in 1855, they are now being constructed of a kind of stone found on the spot, which is soft when first quarried, but becomes very hard and durable after exposure to the air. Many of the warehouses in the lower town have 2 or 3 stories, and there are some large established private mansions.

The soil of Louisiana is of every quality, from the

most productive to the most sterile. Some portions of the great alluvial plain, and of lands on the banks of the rivers, are as fertile as any in the Union; but the prairies consist for the most part of second-rate lands. The red colour of the soil on Red River, and some of the other streams, is owing to an admixture of oxide of iron, which, with salt, is very largely dispersed through it. Iron is found in the W., and coal in the N.; but, except these, the mineral products are insignificant.

Both heat and cold are experienced in a greater degree than in the other states in the same lat. The orange and sugar-cane, which are cultivated on the Atlantic coast as high as $33^{\circ} 30'$ N., are not met with here much above the 31st deg. In the S. the winter is usually characterised by a short period of N.W. winds and white frosts at night; but in the N. and central parts sharp frosts, and sometimes falls of snow, occur. In summer the climate of the N. is mild and comparatively healthy; while in the S. intense heats last for a long time, thunderstorms and hurricanes are frequent, and the yellow fever and other pestilential diseases are prevalent.

Cotton and sugar are the great staples of Louisiana: rice, maize, and tobacco come next in order; but the raising of these has been neglected for that of cotton, and the culture of indigo is now almost abandoned. The crop of cotton, which is of various kinds, is estimated to amount at present (1850) to 300,000 bales a year. It is raised principally in the N.E. part of the state. Sugar is the principal product as far N. as the 31st deg. of N. lat., except on the lands immediately adjacent to the Mississippi, which, being easily irrigated, are appropriated to rice. The cane, however, though more precarious, is raised still farther N., and its culture has latterly extended in the higher parts of the country. The crop for 1845-46 amounted to 186,650 hhds., but, at an average, it may be taken at about 160,000 hhds. Maize yields sometimes 70 bushels an acre, and barley and oats thrive pretty well; but the climate is not suitable for wheat and rye. The vine arrives at perfection, and many kinds of wild fruits are met with, but the apple does not succeed, and the cherry is wholly unproductive. (*Darby*.) Neither the palmetto nor the long-leaved pine, which grow in the other Atlantic states, are met with. Pine-wood is, however, an important article of export, and the pine-forests afford great quantities of pitch, tar, and turpentine. Some cotton is grown in different parts of the prairies, but these tracts are mostly appropriated to the feeding of large herds of cattle and horses. The sheep supply good mutton, but their wool is coarse. Vast herds of elks, deer, and buffaloes wander wild over the prairies on the banks of Sabine River. Louisiana is almost wholly an agricultural state, its manufactures being quite unimportant. The commerce of this state is wholly centred in New Orleans (which see). The exports to foreign parts amounted during the year ended the 30th of June, 1849, to 36,957,118 doll., being a larger amount than the exports from New York or any other state of the Union. But, in point of fact, only a comparatively small portion of these exports really belong to Louisiana; the far larger proportion being the produce of the states of Arkansas, Mississippi, Tennessee, Kentucky, Missouri, Illinois, and other states bordering on the Mississippi, sent to New Orleans for shipment. To facilitate internal water communication, various canals have been cut between the Mississippi and the lakes of the low country. Railways have also been completed from New Orleans to Lake Pontchartrain and Carrollton, and others of much greater extent are in progress.

Louisiana is subdivided into 2 great districts, — the E. and W.; the former comprising 22, and the latter 10 parishes, equal in point of extent to the counties in the other states. New Orleans is by far the most considerable town in the state, and is, indeed, one of the greatest emporiums, not of the Union merely, but of the New World. Baton Rouge, also on the Mississippi, is the seat of government. The latter is vested in a governor, with a salary of 6,000 dollars, a senate, and House of Representatives. The senate consists of 32 members, chosen every four years, each of whom must be resident in the district, and possessed of landed property of the value of 1,000 dollars. The House of Representatives consists of 98 members, chosen every two years, each of whom must be 21 years of age, and have landed property worth 500 dollars. The right of election is in every free, white, male citizen, who has resided in the county for which he claims to vote for the year next preceding the election, and has paid a state tax in the last six months. The members of the House of Representatives receive each four dollars a day during the session. The governor is chosen, by the joint ballot of both houses, for four years, and is ineligible to office during a similar succeeding term. The resolutions of 2-3rds of the members, in both houses of the legislature, become law without the concurrence of the governor. The legal code of Louisiana is a modification of the old French and Spanish laws, interwoven with those in force

in other parts of the Union. Justice is administered in a supreme court, circuit courts, and inferior tribunals, presided over by judges appointed by the governor, with consent of the senate, and who hold office during good behaviour. The judges of the supreme court have each 5,500, and those of the circuit courts 3,500 dollars a year. Education is not conducted on any uniform plan in this state: but it has a large extent of valuable reserved school lands, and three colleges, Louisiana College at Jackson, Franklin College at Opelousa, and Jefferson College, par. of St. James, to each of which the general assembly voted, in 1835, a grant of 15,000 dollars a year for 10 years, exclusive of 48,775 dollars to Jefferson College, to assist in payment of its buildings. In 1849, 550,000 dollars were appropriated for the support of the free public schools of the state, and 1,000 dollars for schools for coloured children! The debt of this state amounts to about 16,000,000 dollars, partly absolute, but principally contingent, that is depending on the returns of canals, railways, and other public works.
